FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 6, 1895.

VOL. XLV.—No. 1 No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page vii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

FAN-TAIL DEER AND PINE-NUT BEAR.

FOR a good many years hunters have been hearing of little deer killed in the Rocky Mountains, which were variously called fan-tails, flag-tails and gazelle deer. For quite as long a time naturalists have known of deer called *leucurus, macrurus, mexicanus* and *couesi*, the zoölogical standing of which was uncertain. The characters on which these different sorts of deer, English and Latin, seem to have been based are more or less intangible. Size seems to be one of the chief distinctions, but there are others, such as length of tail, the way in which the tail is carried, the small and supposed differently shaped antlers. The subject was brought prominently before the notice of our readers by the letter in last week's FOREST AND STREAM from Capt. H. F. Kendall, which is of great interest. It seems to imply that there is a zone or region in the section where his observations were carried on in which the "flag-tail" deer occurs and only the flag-tail. This, however, does not appear to be true of all other regions where this deer is reported. We are told that fan-tail and gazelle deer exist in the northern Rocky Mountains and in localities where Virginia deer of ordinary size are commonly found. There seems to be little doubt that in southern North America, say in parts of Mexico, Arizona and Texas, the white-tail deer average smaller than in other regions, and there appears to be there a valid species—not a Virginia deer (*Dorcelephus couesi*). The largest white-tail deer we have ever seen was killed on the plains of Nebraska, at the head of the Dismal River. Yet, in the belief of the hunter, latitude does not seem to have much bearing on this question, since we hear of gazelle and fan-tail deer in Montana.

Size alone is a character of little or no value in determining species. It may have a certain force in confirming other specific characters if such characters exist, but in itself it is a small matter. We quote from an article published some years ago: "There are big deer and little deer just as there are tall men and short men, and until some characters more tangible and constant than size can be given it is scarcely worth while to dignify small specimens of the Virginia deer with varietal names. In the year 1874, during the first expedition of the late Gen. Custer in the Black Hills of Dakota, deer were found there in great numbers and most of them were of this species (Virginia deer). It was a common thing to kill on the same day adult bucks which one man could without difficulty lift and put on a horse, and others two or three times as large which required the united strength of two men to put in the same position."

This particular matter turns on the meaning given to the English terms used to designate these little deer. If the name fan-tail deer is supposed to have the same value as the Virginia deer, mule deer, or Columbian black-tail deer, its use is not justified by any proof of its existence hitherto adduced. In other words, it has not been shown that the fan-tail stands apart from all other deer, that the offspring of two fan-tail deer will be fan-tails and not ordinary Virginia deer. The pairing of male and female mule deer will produce mule deer always; not white-tails nor elk nor Columbian black-tails. This is a rough illustration only, but we cannot here go into the question of what constitutes a species.

We cannot think that the existence of this little deer as a distinct species or variety in the North is proved until a series of specimens shall have had examination and been pronounced on by a competent naturalist.

If the existence of the fan-tail deer is doubtful, much more so is that of the pine-nut bear. This beast, which is said to inhabit the Rocky Mountains and to live very high up, near timber line, is written about by Mr. Hough, and many singular details of its ways have been related by him. Until very recently specimens were absent, but some months ago Mr. A. Gottschalk, of Bozeman, Mont., wrote us that he had the skulls of two pine-nut bears. At our request he sent them to us. They were duly received and examined at our request by Mr. Arthur Erwin Brown, of the Philadelphia Zoölogical Gardens, a gentleman who has devoted considerable attention to the bears, and whose confirmatory opinion we desired to obtain. One of these skulls is quite small and is clearly that of a wolverine, an animal that belongs to the family *Mustelidæ*, and not in any sense to the bears. The other is a bear skull, very small, quite aged, and unfortunately very badly broken at the base, as if the person who killed it had chopped the head off with an axe, having chopped away the angle of the lower jaw on one side and all the base of the skull. The specimen was interesting on account of the very great wear to which the teeth had been subjected, and also because, though old, it was practically without sagittal crest, such as is usually found in aged bears. Mr. Brown advised us that this skull is of the pure *americanus* type. He calls attention to the fact that the bear had had difficulty in getting along; that its food had been of such a character as unduly to wear down the teeth, and that the bad food had probably reacted on the general system, because the bones of the maxillaries were more or less diseased and spongy. Mr. Brown, however, is perfectly clear that the bear is a black bear, and that the skull is slightly abnormal. We are, therefore, still without the fan-tail deer and the pine-nut bear for which we have long been seeking, and which we had hoped the energy of Messrs. Hough and Hofer would long before this have provided us.

"ACCOMPANIED BY OWNER."

IN a constantly increasing number of States the principle is gaining recognition that one effective means of conserving the game and game fish stock is to prevent shipment to market and to the homes of "game hogs." The principle is embodied in many laws, where provision is made either against any transportation at all or against carrying game by others than the owners of it. Reference to the *Game Laws in Brief* shows that the Maine statute reads:

SEC. 13. No person or corporation shall carry or transport from place to place any moose, caribou or deer, or part therof, in close time, nor in open time unless open to view, tagged and plainly labeled with the name of the owner thereof, and accompanied by him

New York has a similar requirement that venison must be accompanied by the owner:

SEC. 46. Deer or venison killed in this State shall not be transported to any point within or without the State from or through any of the counties thereof, or possessed for that purpose, except as follows: One carcass or a part thereof may be transported from the county where killed when accompanied by the owner. No individual shall transport or accompany more than two deer in any one year under the above provision. This section does not apply to the head and feet or skin of deer severed from the body.

And the same rule applies to woodcock, ruffed grouse, quail, trout and landlocked salmon.

In Wisconsin:

SEC. 27. It is unlawful for any person to ship, carry or transport or receive for shipment or transportation to any point or place out of this State, any fish taken in the inland waters of this State, exceping that when accompanying and having in his personal charge the owner of such fish may carry out of the State 20lbs. or two such fish. To transport any carcass or carcasses of deer, buck, fawn or doe, except when such carcass or carcasses are accompanied by the owner or owners thereof, and each such owner so accompanying shall not be entitled to more than two carcasses, as aforesaid, upon such trip.

When the law says that game must be "accompanied by the owner," what does it mean? If the fish, or the venison, or the quail is carried in the bagggae car of the train on which its owner goes as a passenger, the custom has been to regard this as complying with the law, and reasonably so. But if the game be handed over to an express company for transportation and delivery in the regular course of business, whether or not the owner happens to go on the same train with the express car, does that come within the letter of the law? If within the letter, is it within the spirit of the statute? Should the courts hold that the American Express Co. might receive game for transportation from Maine, as related by "Special," we can see nothing to prevent an unrestricted traffic in venison and trout, if only each consignment shall be delivered to local express agents by the owner. An action was once instituted against one of the express companies for carrying venison from the Adirondacks, but it never reached a stage where the point in question was adjudicated.

Sportsmen in the Adirondacks have been subjected to the same treatment complained of by Boston men on the Maine Central. Quite aside from the legal considerations the system is open to criticism. It appears to have been adopted in the line of the policy of some roads to squeeze the last cent out of the sportsman-tourist and to make no account of his convenience so long as that last cent can be extracted.

MOWING MACHINES AND FISH.

WHEN the people of the Great South Bay on Long Island were confronted with the problem of rescuing their fish supply from the ravages of nets, their ingenuity saw in the worn-out mowing maching an engine of usefulness. The machines were gathered up and were floated out into the bay and dumped overboard, to serve as discouragements of netting. For when a net gets well tangled up with a mowing machine on the bottom, there is no particular satisfaction or profit in trying to do anything with it. Old anchors were added to the mowing machines, crib-works were built, and a regular system of submarine fortification was laid out. It stopped the drawing of nets, and it preserved and restored the fishing.

There must be some thousands of mowing machines in this country which have outlived their usefulness on land and might now with profit be consigned to a watery career of fish protection.

Dump them overboard.

SNAP SHOTS.

ONE may not read without sympathetic appreciation the note of tribute which a friend pays to the late E. M. Brown, of Preston, Conn. In his welcomed contributions to our columns Mr. Brown reflected those qualities of man and angler upon which his fishing companion dwells. He was a type of the busy men of the community, to whom these brief outings in the field and on the stream mean so much; and he was only one of thousands. It is for these men, those of us who cannot afford to go off to distant resorts, that the fishing resources of the home waters should be defended and maintained. There never was a more senseless position than that of the foolish people who oppose fish protection as class legislation, devised for the benefit of the rich alone. The truth is, as exemplified in this case, that when the vandals wreck a stream, they are striking at the right of the entire community.

The new taxidermist license law of Maine provides that "the Commissioners of Inland Fisheries and Game may, upon application, issue a license to such persons as taxidermists, who, in their judgment, are skilled in that art, of good reputation and friendly to the fish and game laws of this State. Such licensee may at all times have in his possession at his place of business fish and game, or parts thereof, lawfully caught or killed in open time for the sole purpose of preparing for, and mounting the same; and such fish and game, or parts thereof, may be transported to such licensee and retained by him for the purposes aforesaid, under such rules, restrictions and limitations as shall, from time to time, be made by said Commissioners and stated in such original license and additions made thereto from time to time by said Commissioners. Section 2. Such licenses may be revoked by said Commissioners at any time after notice and an opportunity for a hearing; and every licensee and carrier violating any of the provisions of this act, or of the rules, restrictions or limitations set out in said license and additions thereto, shall, on complaint before any trial justice or municipal or police court, be fined."

The Sportsman Tourist.

A FEW REMARKS ABOUT A LIVE WESTERN TOWN.—II.

BY GEORGE KENNEDY AND HORACE KEPHART.

ON opening this week's number of FOREST AND STREAM I find the first chapter of a serial under the above heading, signed by our jolly friend Kennedy, who blandly assures you that No. II. will be contributed by myself. It strikes me that George could have found a better mate for so risky a venture, but on his head be it. As a mark of appreciation, I give him full liberty to tell all the turkey stories he knows.

His indications of the course I am to pursue are a little hazy, but, as near as I can make out, he wants me to give the details of that episode in the Ozark village to which casual reference was made in "Notes from Camp Nessmuk, No. I." Now, what is Kennedy driving at? Has he a sequel to my story up his sleeve, as it were? Hardly. To the best of my knowledge, it had no sequel, for the affair was a finality, and the only people who might have desired a continuance were—overruled.

No; Kennedy has a story of his own to tell about some place in the Ozarks, perhaps this very town, and I am as anxious to hear it as anybody. Besides, there seems to be a slight tone of banter in his request for those details. Is this a challenge? Bismillah! I accept it; and here goes.

But first let me worry Kennedy a little. He hates preambles and explanations, for you remember his sly dig at long-winded people. Now, any story of the Ozarks needs an introduction, for that region is almost unknown to the outside world, and has its little peculiarities that must be understood before one can appreciate the natives at their full value. For instance:

It is not so very long ago since all the West was "wild and woolly," from the Eastern standpoint. Then somebody took it into his head to come and see for himself. He traveled by drawing-room car across the continent and back; found the appliances and customs of civilization everywhere; saw no wild Indians, no buffalo, no bandits, no sign of savagery at all. He returned disillusioned, and declared that the romantic interest of the West had fled. Everywhere it was civilized, flat and commonplace.

And he told the truth—about what he saw from the car window. Nevertheless, there are still a few oases left where worn-out souls can taste primitive pleasures, and where sometimes they can actually enjoy thrills of the thrill-a-minute variety that Mr. Hough experienced on *skis*.

A good part of southern Missouri and the land over the border is still a trifle fuzzy. The local newspapers do not say so, nor do the seductive boom books; and a due regard for the truth obliges me to confess that I would not go down there and say so myself. Yet it is a fact that you do not have to go far from St. Louis to satisfy a yearning for the unconventional, from legal procedure to the culinary art.

Take Missouri below the "Big Muddy," add Arkansas to it, and then piece on as much of "the Nation" and so forth as you care to investigate; now subtract a dozen or so of the larger towns with their immediate vicinities, and you will have left enough wild country to get lost in for a moon or so, and never know that you are anywhere in particular. You will see some pretty rough travel. There will be leagues and leagues of razor-backed ridges, of rich but uncultivated bottoms, of yellow pine forests, of prairie, and table-land, and mountain. To the south east are the immense swamps of the overflows, gloomy, weird, rank with cypress, tupelo and gum, fringed with jungles of cane, and adjoining these are level uplands thick with white oaks, tall and straight as pines. You will marvel at the clearness of the mountain streams, until you run across a spring like a young lake, its surface blue as indigo, its outlet a river, its white bottom distinctly visible fifty feet below. You will discover caverns, and sinks, and mineral outcrops, and the chigres will discover you.

You may or may not find game. That depends upon whether you know where to look for it. I have hunted through the heart of Shannon for a week without seeing a deer track; and on the other hand it was only last fall that seventeen bucks were shot in four days within a small area not fifty miles from St. Louis.

Probably you will form low estimates of the men who publish maps, and will even have doubts about the veracity of Uncle Sam. For example, Round Spring on the map is a spot as big as Boston; in the postal directory it is a post office; in reality it is a round log cabin with one window, inhabited by old man Heine, his family, and a pack of hounds. You can't buy an ounce of salt within ten miles of this metropolis.

Now and then you meet the sallow native, find him "just tol'able," with everybody else the same, except "the old woman—she's a-chillin'." You notice that his rifle is heavy for its caliber, and wonder why he wears a cowboy hat in a wild hog country.

The log cabins have no windows sometimes, and no floors occasionally. The chimneys are built of sticks and mud (rocks are plentiful, but it is a weary business picking them when sticks will do), and they rise no higher than a man can reach without straining his buttons. There is only one room and one bed; but that bed is yours if you want it, while the family takes the floor, and your offer to pay for the hospitality is indignantly declined. Nobody ever hurries, nobody seems to work; if there is a plow it is rusting in the furrow, and nobody frets about it. Ask a question, and then sit down and light your pipe; but don't forget what the question was, or it may be awkward for you when the answer arrives—it is such a long, weary way to an answer in that country. Be choice of speech. Don't mention a boar or a bull in the presence of ladies, but call it "the male," and then there will be no trouble. I once spent two hours of hard thinking wondering what the U. S. mail was doing in a certain cane brake nine miles from a trail.

(Now, Colonel, don't you know that I'm not talking about your place? Everybody recognizes your people as cultivated, industrious and law-abiding—the very salt of the earth. But over in the next county—now, just between ourselves—you know that they are "prohibition" for the sake of the moonshiners, and that they rub snuff, and hold up trains, and shoot oftener than is decent; and I haven't said a word about that. This is no place to tell about our electric cars and eighty bushels to the acre. These hunters have no more use for "natural resources" or "well ordered communities" than they have for a corn-stalk fiddle or a rag baby. They are looking for something wild. Come, Colonel, let's h'ist one, and then I'll stop the geography and go on with the story.)

Date, October, 1894. Place—we will call it Due West.

As you may remember, I had gone to bed in the little hotel and was sleeping the sleep of a very honest man, when at 2 o'clock of the Sabbath morning, right outside my window, there was a pistol-shot.

"Good-bye, pussy!" I thought, and rolled over.

Then again—bang.

"Somebody gunning for a burglar, perhaps."

Bang—bang.

Then a woman's voice, ringing out clear and dreadful in the still night air: "It's all a lie! I won't let you in. If you want to search this house you kin go an' git an orficer, an' I'll let him search, but I won't you uns."

Bang.

"Oh, God! I ain't got nobody to defend me but jist my little lame brother, an' him a cripple. An' here's my two pore little childern, an' them a-down on their knees a-prayin'—don't cry so, honey; they sha'n't git in."

I arose from bed, chilled to the heart. Nothing could be seen from my window, for the night was pitch dark.

Crash—the door went in. The sound of heavy boots upon bare stairs. Two sharp cracks from a self-cocking revolver of small caliber. Two heavier ones from a navy. Shrieks, curses, pistols and shotguns indiscriminately. Then a lull.

They were coming down stairs. A few stones through the windows. The woman's low moans gradually dying away. Utter silence.

It was horrible. I dressed hastily, rushed down stairs, strode into the office and lit a lamp. Somebody in the next room was evidently struggling to get under a feather-bed; otherwise no sound. Stepping out on the sidewalk, the raw air made me shiver. Never was there quite so dark a night. Not a light was to be seen anywhere, save at the railway station. Yet all the town had heard that infernal din. What kind of place could this be that no one was astir? I went over to the station and found the night operator, pale as myself.

"What's all this row about?"

"Don't ask me. All I know about it is that when the shooting began I crossed the tracks and started to go in back of the hotel where the noise was, when a man rose in front of me with a double-barreled gun. He said: 'You go back!' And I came back."

There was no more to be learned here, and I returned to the hotel mystified, and not knowing whether to look after the woman or not. Just as I had about made up my mind to do so two men flitted by, each with his coat turned inside out and with a black mask over his face. Presently another came carrying a long bowie that he seemed too excited to conceal. As he passed the lighted window the blade glittered. Seeing me he halted and boldly removed his mark. He was pale and perspiring.

"What does this mean?" I asked.

"Well, it was this way. [He placed the point of his knife against my chest and began describing diagrams, as if to illustrate his remarks.] You see there was a no-account white woman lived back there in the alley. [Here followed some local history, which may be summed up in the one word miscegenation.] Public decency couldn't stand it. The best citizens in town got together with some tar and feathers. But when we called she began to shoot; an' of course nobody can't preserve his dignity when somebody's a-shootin' in his face."

"Did you kill her?"

"No, I reckon not."

"How about him?"

"Shucks! how do I know."

An hour later several men and one woman assembled at the station to take the early morning express. Not a word was spoken by anybody. To all appearances the operator and myself were the only people in town who had noticed anything unusual, or were in the least perturbed.

Come, Kennedy. HORACE KEPHART.

ST. LOUIS, June 21.

THE FOURTH OF JULY IN NORWAY.

BY AN ENGLISHMAN.

ONE of the most noticeable features observed in passing through almost any valley in Norway is the accumulation of boulders which have from time to time fallen from the adjacent mountains. In some places a huge talus has been formed of rocks heaped higgledy-piggledy in rough confusion, but presenting from a distance the appearance of a straight and even line reaching from the valley to some 1,000ft. up the mountain's side. Not infrequently, when spending some months in my favorite occupation of salmon fishing, I have witnessed considerable falls of stones. On one occasion a large fall took place at a spot where we were in the habit of fishing when visiting the upper waters, and had we been present escape would have been impossible. The farm-houses are built where from the experience of generations the situation is known to be safe, but now and then an accident occurs. I remember a few years ago a single stone of about 5ft. square went right through a cottage, killing one poor woman and injuring another. A cow was struck by a stone while feeding high up on the talus, opposite the little hotel where we stay, and stone and cow rolled down together for some distance. A man went up and put the animal out of its misery, but the meat was too bruised for even the peasants to eat. All new stones which fall on or near the road are carefully covered with bushes, for otherwise the ponies would shy, they having an instinctive dread of stones. But these are small matters in comparison to the great fall which occurred last year.

Right opposite to our hotel there is a talus running up into a point more than 1,000 feet up the mountain, as measured by the anaroid. It was on the Fourth of July last that there occurred a memorable fall of stones, which threatened to overwhelm the little cluster of houses of which the village consists. An American gentleman (who was fishing with me) and his family were present; for, having first ascertained that my British *aumor propre* would not be seriously hurt, a supply of fireworks and bombs had been obtained from Bergen, and the young folks had determined to devote the day to burning powder, in commemoration of July 4, 1776. The fireworks were reserved for the evening in the vain hope that it would be dark, and the bombs were let off to inaugurate the great day. I cannot tell if these bombs had the effect of attracting the storm which soon broke over the valley; suffice it to say that, after months of dry weather, a deluge of rain descended almost immediately. Very shortly a report, like that of a cannon, high up in the mountains, here 4,000ft. high, told that a huge mass of rock had given way and was coming down the various gorges which led to the top of the talus opposite. Clouds of spray from a small watercourse indicated the progress of the roaring mass, until at last the rocks could be seen leaping and rolling down toward us, while the torrent brought with it a stream of smaller stones and mud which turned off to the left, devastating all before it, burying potato fields, and finally making its way into the river. But the bigger rocks, many of them as large as a good-sized room, came straight for the hotel, and apparently nothing could save us. But somehow or other each big stone turned aside or stuck fast before reaching the bottom, though some came much too near to be pleasant. This lasted a couple of hours. The rocks seemed to accumulate in the gullies high up in the mountains until one of extra weight would set the whole lot in motion. Then the noise was tremendous and the narrow valley re-echoed with the din.

When at last the storm subsided we went to see what damage had been done. The road was obliterated by stones and mud some yards thick. Potato and other cultivated patches were buried; a grove of young trees had disappeared. Of course, all traffic was stopped here, and also at another spot a mile up the valley, where the road had been covered by another stream of stones and mud. Gangs of men were soon at work making some kind of a track over the debris, but it was some days before they could remove sufficient to enable a cart or cariole to pass over. Just at the time a visit from H. I. M. the Kaiser was imminent, and every effort was made to clear the road, without success, however, and H. I. M. and his party were forced to leave their carioles and walk over the inundated parts of the road. I do not think that my American friends will soon forget the Fourth of July, 1894, and I am quite sure it will be long remembered in the valley. H. T. B.

TWO MONTHS ON THE ST. JOHN'S.

[*Concluded from page 527.*]

THE young man who was so courteous to us was Emmet McGraw, and we were camped at Buffalo Bluff. We sat around the fire very late that night swapping yarns with our new acquaintances, and I must acknowledge that we had to stretch the truth out of all proportion sometimes just to keep pace with them. The McGraws were Washington, D. C., people. Liking Florida, they had bought and settled on this place. There was a nice grove loaded to its full capacity with oranges. Besides, there was a banana grove in the rear of the house. Then they had strawberries, yams, and other fruits and vegetables in great profusion under cultivation. Directly in front of the house there were seven islands, and on firing a rifle or shotgun these islands would send back eleven distinct echoes. While we stayed here we set lines between the islands and caught turtles weighing from 30 to 50lbs. Sometimes we would find our hooks broken in two, apparently by something of great size and strength, as they were large shark hooks. The lines we used were nearly the size of clothes lines, and yet we would find even these lines broken sometimes. I suppose it was done by hooking alligators or large catfish. We caught one of the latter one morning after we left Buffalo Bluff that weighed in the neighborhood of 50lbs.

One morning, while Tom and I were sailing on the river a short way from camp, I shot an alligator a trifle over 10ft. in length. This was the largest one we shot on the trip.

Sam came in very handy here in the culinary line. He would cook about everything he laid eyes on, both meat and vegetable. After he tried these dishes we would wait a while, and if they didn't make him sick we would try them, too. One day he cooked some alligator for us and I must say it was a surprise to us to find that the flavor was almost identically the same as that of veal. If Sam had only removed the hide a little further from camp our appetite for alligator might have lasted longer. As it was, we would take a mouthful of alligator, then our eyes lighting on the hide the sight was altogether too suggestive to suit even our cast-iron stomachs. One meal completely satisfied our longing for alligator. We also tried water turkey. While I wouldn't recommend it, still it is much better than alligator.

Emmet made it a point to call every day and have a sociable chat. He was generally accompanied by a large, ferocious looking, black dog, called Gulliver, which, according to Emmet's description, was very bloodthirsty and dangerous. He kindly informed us that it would be just as well for us to tree as quickly as possible if we should happen to have the pleasure of meeting Gulliver alone some time on the place, for he was generally in the habit of disposing of anything in the shape of a biped or quadruped in about two gulps.

This glowing description of Gulliver's good points naturally made us hold him in great respect, especially when he would glide suddenly and swiftly behind one of us and poke his chilly muzzle against the calf of our legs. It is needless to tell how sweet and musical Emmet's "Come huh, Gulliveh," would sound in our ears on such occasions.

We always kept the pointer, Rake, chained near the tent. As Tom had parted with a pretty snug sum for him when he was a pup, we were naturally more or less worried about him when Gulliver was around, especially as Gulliver seemed determined on making a meal of him. Much to our surprise and fear, Rake, instead of trying to conciliate this huge fierce monster, made matters worse by snapping, growling and tugging at his chain until we thought it would break, and showing in other ways the utmost contempt for this sausage machine. Poor Rake. We feared his end was near. Poor foolish dog, to come one thousand miles to be eaten by a wild cannibal of his own species. It was awful.

One warm day, while we were lying in the shade trying to keep cool, and thinking of nothing in particular, we were startled by sudden manifestations of excitement and great agility on the part of Rake. We never saw him so

worked up before. He would bark, growl and tug at his chain as though his very life depended on it. When in the height of one of these spasms the chain suddenly snapped and away went Rake before we could stop him. He took a bee line for the orange grove. We couldn't understand what made him act in such a manner when suddenly, horror of horrors! there was the bloodthirsty monster Gulliver standing in the grove and Rake was rushing to sure and sudden death. For hadn't Emmet kindly advised us more than once "to put a double fastening on Rake, as he would be sorry have him to get away some time while Gulliver was around. He was such a pretty dog it would be a pity to have him die, as Gulliver would kill him so quick he wouldn't have time to repent.'

I guess Rake must have taken him unawares, as that is the way Emmet explained it that night, anyhow, when he came over to the camp without Gulliver.

When we got there we more than had our hands full extricating Gulliver's hind leg from Rake's mouth. When we did finally succeed he put for the house on three legs as fast as he could "scratch gravel." Although he was a big brute, his voice was way out of proportion to his size. He never came near our camp after that the whole time we stayed there, with or without Emmet. We even got reckless, and whenever we came across him afterward we wouldn't tree.

As for Rake, he rose high in our estimation after that. He was the hero of the camp. Nothing was too good for him. No matter if he was eccentric and had a way of deliberately rolling overboard while we were under way, he being chained to the foot of the mast, thus allowing himself to be towed through the water by the neck while lying on his back with all four feet doubled up on his breast and his tail streaming out behind like a comet. He generally made it a point to go through this performance about four times a day, when there was a good sailing breeze; not so often when the breeze was indifferent—as there wasn't as much excitement in doing so then, it didn't make so much trouble to fish him out.

Rake just enjoyed such occasions, as he would show when pulled on deck, by trying to tangle his chain around his rescuer's legs, in his wild cavortings and gambolings of joy, and pitching him head first overboard, which he succeeded in doing to perfection on two or three occasions, both to Tom and myself.

One day while camped at Buffalo Bluff we witnessed a serious phenomenon. It was a warm, bright afternoon, without the least indication of rain, when suddenly a small cloud appeared in the south, directly over the river. As it gradually drew nearer and nearer, we noticed that it seemed to follow every crook and turn of the river, also that it was accompanied by a heavy downpour of rain. Finally it passed the camp, and while there was a perfect deluge on the water, not half a dozen drops fell on the shore that we could see. All this time the sun shone on the camp as though there wasn't a cloud in the sky. What appeared stranger, there was only a slight breeze on shore, while the cloud traveled at great speed. It wasn't over twenty minutes from the time we first observed it until it had passed by and beyond us, around the sharp bend north of camp, and out of sight.

This was the only rain we had the whole time we were encamped in this delightful place. Every day was as bright and pure as possible, being just warm enough through the day to make it comfortable lying in the shade, or sailing on the river. The evenings were just cool enough to make it enjoyable sitting around a good camp-fire. The owls would gather in the near-by hammocks and hoot and jabber away to each other like a lot of mixed politicians at a hot caucus. Or there would be sudden grunts or groanings, followed by splashes in the river, flowing darkly and silently within a few feet of the tent. Then some one of the many river steamboats would pass up or down, her lights glowing and twinkling in the darkness like some huge fiery monster just out of the infernal regions. As the sides of some of these boats, between the upper and lower decks, are completely open, this effect would be heightened when the doors of her huge furnaces would be thrown open, and the crew of darkies would begin to pile in heavy sticks of cord wood. Then the heavy flood of light issuing from the mouths of these furnaces would disclose the whole interior, the red glow upon the dark, red-shirted crew giving the appearance to a person with a vivid imagination of a crew of fiends engaged in some devilish midnight revel.

It seems queer, when I look back on those days, that the possibility of some lurking reptile or other animal crawling and secreting itself in our bedding during the day never seemed to enter our heads, although the place was overrun with rattle snakes and moccasins. With the exception of a blacksnake, which Sam caught one day while Tom and I were away from the camp, and which bit him on the hand in the operation, the only creature we ever saw in the tent was the cheerful and companionable little green "chameleon," which was so tame and cute as to make our camp all the more cheerful and enjoyable.

We would often sit inside during the day with a newspaper spread in our lap and catch flies and put them on the paper, when presently one of these little fellows would make his appearance from some secret nook or corner, and crawling up on the paper would stop just before a dead fly, turn its solemn little head to one side and look up into our faces with its small, cute, sharp eyes, as much as to say, "Mister, if that fly is of no use to you, and you don't object, with your kind permission, I would like to dispose of it myself." Then making a sudden dive, it would swallow the fly in a twinkling, then look up in the most solemn, comical manner, as much as to say, "How is that for high?"

We led this free, careless life for three weeks, then Sam accepted an offer of Mr. McGraw to stay with him. So one morning Tom and I regretfully pulled down our tent for the last time in Florida. We slept on the boat altogether afterward. After storing everything aboard and bidding our new friends a regretful farewell, Sam especially, who looked rather wistfully after us, we made sail, and in half an hour's time had seen the last of what was the brightest and happiest three weeks I ever spent under canvas. But though the reality is a thing of the past, fond memory will treasure and keep it fresh and green as long as life and memory last.

There was but little wind; when darkness came we had made only eight or ten miles. Running up close to the shore so as to be out of the way of passing steamers, we anchored for the night.

We felt so lonesome that evening while eating our supper that we were half inclined to turn back to Buffalo Bluff again. After making up our beds, however, and hanging the lantern in the cabin, it looked so cheerful and homelike that the feeling partly wore off.

We had left our trunk in Sam's charge at McGraw's, and with that and Sam's valise gone we had ample room to live aboard. We would have fared badly if we had had to depend on the tent for shelter, as we met with very few places on which to pitch a tent from Buffalo Bluff to Sanford.

We were under way the next morning by 8 o'clock, and about 10 we sighted Lake George. There was very little wind, so it was fairly noon before we entered the lake. This lake reminded us of the ocean, for we were unable to see across.

About 1 o'clock we sighted what we presumed was the south shore, but on getting closer we were greatly surprised to find that what we had taken for land was a huge flock of ducks. There were thousands upon thousands of them, and when we got near they arose like a huge black cloud, fairly darkening the southern horizon. The roar of their wings sounded like a heavy gale of wind. They left the surface of the water covered with feathers.

Just before reaching the lighthouse, which stands on a framework of spiles near the southern entrance of the river to the lake, a sudden puff of wind nearly capsized us. We managed to pull through by a small margin, however.

When we entered the river again we were confronted with a puzzle by coming to another stream which branched off to the right. As it was a larger stream than the one we were on we didn't know which one to take. We finally decided, however, to keep to the right, so we entered the larger stream. We didn't sail a great way before we began to doubt whether we were right or not. As it was nearly sunset we decided to anchor for the night. Before turning in we had our doubts set at rest by hearing a steamboat pass down the other stream.

The next day dawned with scarcely no wind at all; and as the current of the river grew stronger and stronger the further south we advanced, and at the same time the river became more crooked and narrower, we made very poor headway. Sometimes we had to resort to sculling, which was very hard and unpleasant work in the hot sun. After sculling a mile or so beyond Astor, we anchored close to a small island in the middle of the river so as to be out of the way of the traffic.

The next morning while we were eating breakfast we were startled by hearing quite a commotion and racket in the swamp, which sounded like a couple of cats fighting, only the noise was about ten times as loud. These catawaulings would be followed by the crackling of vines and and branches, and splashes and flounderings in the waters of the swamp. Tom took the oar and I the gun. Working the boat cautiously in the direction from which the sounds proceeded, we had almost reached the shore when we were considerably startled and surprised to see a large, lithe, tawny body drop out of one of the trees that lined the river's edge into the water. We quickly saw that this animal was a panther. How it came to fall in the river I don't know; but there it was right in front of us and not over 10yds. away, exerting itself to its utmost to reach the shore. I brought the gun to my shoulder pretty quickly and gave him a charge of buckshot in the head. He disappeared under water, only to reappear soon after, but further out in the river. He acted as though he was stunned.

By this time Tom had got his gun, and at the word we both fired; he showed us such an ugly wicked set of snapping teeth that we were perfectly satisfied to be no nearer to him. The water was quite bloody where he disappeared. We tried to feel him with the oar, but the water was so deep we couldn't touch the bottom, so we never saw him again.

After the panther excitement was over Tom thought he would take advantage of this chance to give Rake a run, as he had been cramped up on the boat ever since we left Buffalo Bluff. Loosing the dog we sat down on the cabin top and watched him floundering around in the swamp for awhile. There was no wind, so we were in no hurry. Forgetting all about the dog, we entered into conversation about the panther. When we finally did think of him, he had disappeared entirely. We called, whistled, and shouted at the top of our lung's for fully an hour, but to no purpose. Then we sculled the boat up and down the shore for a mile or more; still no dog.

Finally it was decided to return to the spot where we had turned him loose, and wait until afternoon; then if he didn't make his appearance, to proceed without him.

When afternoon came, however, he was still missing. We hated to leave without making one more effort to find him, so it was decided that one had better stay by the boat, while the other went into the swamp to see if some trace that would lead to his whereabouts could be found. We drew lots to see who would do the exploring, and it fell to me.

I must confess that I didn't relish the prospect much, and when I started I vowed to myself that I would make the trip a short one. The panther adventure of the morning was too green in memory to make it enjoyable roaming around in that dismal, dreary swamp. I took my gun and a dozen cartridges loaded with buckshot, and I took a small but excellent pocket compass.

The experience of that afternoon will satisfy me for a lifetime. It required more than two hours to get through the swamp from the river to the dry forest land. It was dark and gloomy in there. The huge cypress trees rose high overhead, their giant branches heavily draped with the crape-like Spanish moss, which produces an effect of gloom so deep that to be realized it must be seen.

The trunks of these trees rose out of damp, reeking, miasma-polluted ground, littered with the decaying trunks of fallen giants, which were overgrown with green briers and other vines in such profusion as to make it almost impossible to get through them in some places. In other places there were dark silent pools of stagnant water, the bottom of which could not be seen. Part of the time I would be wading through these treacherous pools up to my waist, not knowing what moment I might tread on a moccasin or some stray alligator. At other times the undergrowth and dead soaking fallen timber were so thick that I would almost have to go on my hands and knees to force a passage through them. When I did finally reach the dry forest land, I was a sight. I was soaked and covered wtih mud and scratches from head to foot. Looking to the south, I spied a cluster of small log houses. I walked to these houses, and after knocking on the doors of two or three of them, and receiving no answer, I concluded that no one lived there, and was about turning away when a young darky appeared at the door of one of the cabins.

I told him about losing the dog, and asked if he had seen him. He answered "No." I then told him that if he would find him and bring him to us we would give him $5. This offer made a very expansive grin overspread his face, and he said, "I reckon dat I'll start huntin' for dat ar dorg right orf," and he suited the action to the word.

I thought it would be as well to start for the river, if I intended to reach there before dark. It was the same old story going back. If anything it was worse, as the afternoon was so far advanced that the sun was nearing the end of his day's journey when I entered the swamp again. The darkness and gloom under these conditions was greater than ever. It was considerable after sunset when I reached the river. I had to fire the gun half a dozen times before I received an answer from Tom. I had struck the river so much farther to the north than I had left it that it took Tom quite a while to scull the boat to where I was. When it finally appeared to view it is no exaggeration to say that the sight was a most welcome one. By the time I changed my clothes and supper was ready it was pitch dark.

It was a very gloomy supper we sat down to that night and neither of us cared to talk much. We had no idea of the hold a dumb animal could gain on the affections until we lost that dog. We had both wished him inside an alligator on a number of occasions during the trip, but now, when he had actually gone, we found the hold he really had on us, without knowing it almost.

We had almost finished our meal in silence when there was a sudden splashing and floundering in the swamp, and before we dared hardly to hope, a deep, sudden bark awoke the vault-like echoes of the swamp, followed by more rushing back and forth along the edge of the river.

We got the anchor up quicker than we ever did before, and the old oar was doing good execution before the anchor reached the deck. Before we had made half the distance to the shore the dog plunged into the river and was on his way to meet us. When we pulled him aboard he was the most tickled canine I ever saw, fairly boiling over with joyful exuberance. We found a piece of rope around his neck, which some one had tied there hoping by this means to keep him, I suppose. This, however, is where they made a monumental mistake, as Rake knew how to gnaw a rope in half—as Tom had discovered to his disgust on several occasions. However, the knowledge stood him in good stead this time.

Next morning while breakfast preparations were under way we baited one of the large shark hooks and dropped it over the stern. In about ten minutes the boat began to sag sideways through the water. Tom grasped the line, which was ¼in. in thickness, and began to haul in. The line cut his hands so that I had to assist him. We thought we must have hooked an alligator by the way we had to pull, but we soon had a river catfish flopping on the stern of the Rambler. It weighed, as near as we could judge, in the neighborhood of 50lbs.

We had to kill it with the axe. It seemed as though it was his last ambition to pound the very deck in. This was the only fish of the kind we caught on the trip. But by the way he pulled when we hauled him aboard we concluded that it was his kind that had broken so many of our hooks and lines.

For the next three or four days it was one continual drudge with the oar, through a river that was so crooked and disagreeable that it seemed impossible to duplicate it. The banks were nothing but damp, reeking, malaria-infested swamps, with an insignificant dry spot here and there, on which would be perched a few log cabins. These places generally sported names bigger than themselves. Just before entering Lake Dexter we came to one of these dry places, on which there was a log cabin. We stopped here to make some inquiries, and found that this was a mossers' camp. There were six men here, who were engaged in collecting the gray Spanish moss. The moss is buried under the ground for a certain length of time, when the gray outside skin drops off, leaving the inside fiber, which resembles horse hair. It is then cleaned and shipped North, where it is used in upholstering establishments for stuffing lounges, chairs and other furniture. At that time mossers made very good money. We met with quite a number of persons engaged in this business while we were on the St. John's, the majority of whom were West Indians.

In places the river was literally covered with water lettuce, making it the hardest kind of work to force a passage through with the use of the oar. This lettuce, or cabbage, as it is sometimes called, is so thick in places as to cause the stoppage of steamboats by clogging the paddlewheels so that they can not turn. We were always sure to find plenty of ducks in this lettuce, however, and as they were not very wild we would shoot them whenever we felt duck hungry. We made it a rule never to kill game of any kind unless we intended to eat it. We couldn't see any sport in the practice indulged in by some so-called sportsmen of killing for killing's sake that which had no power to defend itself. I remember quite well, one day as we were making our way laboriously against the current with the oar, we counted twenty-three squirrels in one large cypress tree on the shore, and then stopped counting. These squirrels are not as large as the Northern gray, but larger than the red squirrel.

The day we entered Lake Dexter we had a hard time finding where the river entered the lake on the opposite side. We sailed and sculled around the lake two or three times, keeping a sharp lookout all the while, but could find no river. The lettuce formed one unbroken line, extending hundreds of yards out in the lake. But just as the sun disappeared back of the moss-covered cypresses that lined the low damp shores of the lake, we saw a steamboat coming, as it seemed, right through the woods.

There are a great many islands, some with small trees and underbrush growing thereon, to be met with in the small lakes of the upper St. John's, which look firm and substantial enough, but a person must be very careful and not attempt to land on them without proper investigation beforehand, for they are very apt to prove to be nothing but a lot of floating weeds, brush and other vegetable matter which a person would sink through into the water beneath and so stand a good chance of being drowned. The first time we noticed one of these islands was the

afternoon that we entered the river after leaving Lake Dexter.

We had anchored alongside a nice well-behaved appearing little island of about a quarter acre in extent when, as a steamboat passed, much to our amazement, the island began to move rapidly up the river. After the boat passed, however, the island moved back to its original position. The cause of its moving in the first place was due to the suction of the paddle-wheels of the steamboat. We were going to land on this island but changed our minds after the steamboat passed. On investigation we found that we could shove an oar clean through what appeared to be solid ground into the river.

The river got to be so narrow and crooked and the trees were so dense on either bank that unless there was a heavy wind blowing we wouldn't get enough to fill our sail. We had to use the oar almost continuously until we reached Blue Springs one night after dark. Our hands were so sore from the drudge at the oar, and we were so much discouraged and disgusted, that we had almost decided to give up the trip altogether at this point.

The morning after reaching Blue Springs we emerged from the cabin of the Rambler to find the sky all clouded over. A gale of wind was blowing from the north which bent and swayed the branches of the trees on the river bank as though determined to tear them from their very roots. The roar of the wind was as sweet music in our ears, however, and we hurried through with breakfast so as to take all the advantage possible of this chance.

After we got under headway it commenced to rain very hard, but that didn't bother us any, as we were clothed in heavy oilskins. Besides, we were making grand headway, and fairly flew through the water, which was almost perfectly smooth on account of the river being so narrow and crooked. It stopped raining by the afternoon, but the wind seemed to blow harder than ever, fairly picking the swaying moss off the giant branches of the trees, and skurrying it in gray patches through the cheerless air.

It was regular sharpie weather—a fair wind, in fact, a gale, and smooth water. The little Rambler acted like a wild horse that had been confined against its will and was now suddenly loosed.

We passed through considerable marsh land that afternoon, where the river spread out in innumerable shallow lakes on either hand. These lakes were literally alive with ducks, which on account of the high wind acted very wild. Flock after flock would arise and fly from spot to spot in the wildest, most unsettled manner.

We reached Lake Monroe that night shortly after 5 o'clock. After a most exciting sail across the lake in a gale of wind, which made us strain every nerve and muscle more than once to keep from turning turtle, we anchored to the leeward of the dock at Enterprise, while the ragged clouds were chasing each other in the wildest conceivable manner across the pale face of the crescent new moon.

The next day was spent in exploring Enterprise, and after two or three days here we sailed across to Sanford, where we received letters and papers from home.

While we stayed here, which was about a week, Tom was taken so seriously ill with chills and fever that the doctor ordered him to get out of the country, off from the river anyhow. So after staying in Sanford long enough to dispose of the little Rambler, which we did with many regrets, as we hated to part with her after she had carried us safely through so many hardships, trials and pleasures, and after selling the rest of our outfit, including Rake (Tom realized a good price for him and so knew that the new owner would give him a good home), one morning, when it seemed as though all nature smiled, with the sun casting his warm rays over the sparkling, laughing waters of the lake, we boarded the motherly looking old steamboat Rosa, bound for Jacksonville, *en route* for home. The little Rambler, anchored near by and looking so deserted and lonesome that it went straight to our hearts, bowed and bobbed us farewell as we watched her from the deck. Our steamboat pulled out from the wharf and headed down the river, and we realized that our dreamed-of, wished-for, Florida trip had come and gone, and was a thing of the past.

WM. H. AVIS.

A WORD ABOUT CRACKERS.

Editor Forest and Stream:

I have taken your paper for the last eight years, have read it very closely, clipped from it quite copiously and now for the first time do I ask for space and to be heard.

It was with the greatest pleasure that I read the first installation of "Two Months on the St. John's." It brings to my mind pleasant recollections of "days gone by," recollections of my experience in Florida and my experience with the "Florida Cracker." But I can't say my reading of the second number was quite so pleasant. It would have been a great deal more pleasant if the writer had not cast odium on the whole piece by his reflective rubbish on the "Florida Cracker"—as it was my reading it was with a feeling of disgust and deepest pity for him. It has always seemed a little queer to me that the Northern visitor will take his trip South only to return home and spend his time complaining of the laziness of the white people and the industry of the "handsome and intelligent" negroes.

Now I have traveled in every State east of the Mississippi River, I have fished and hunted, been in the woods and in the backwoods of many of the States, and I have been nearly all over Florida from Tallahassee and Jacksonville to Key West, but I have never yet run afoul of the "unwashed, thin, humpbacked, concave-chested, long-haired, bewhiskered, vermin-covered, lazy, trifling, good-for-nothing exister" that Mr. Avis claims the distinction of having discovered in northern Florida. But I must confess that the nearest to it can be found right there in Florida, but as I understand it a "Florida Cracker" is a person born and raised in Florida. Now let me state by way of explanation to our erring brother that people born and raised in Florida are used to the heat and climate and are therefore no more "lazy, trifling or good-for-nothing," etc., than is the "cracker" of Maine, New York or any of the other Northern States. If our friend had investigated things a little while down here (and not formed "snap conclusions") it would "stand him in hand" as a writer, and he would have discovered that ninety-nine cases out of a hundred of the creatures that tallied with his glowing description were emigrants from Northern States; too lazy to make a living at home, they had come to the South and were scraping out an existence without working—and if he had taken the trouble to inquire of them their birthplace (as I have done in Georgia and Florida), I am sure their answer would have been Philadelphia or other refined and cultured centers of the North, and not Patagonia, as he tries to intimate.

There is one thing certain, we are a hospitable people, and the hospitality of the South is noted. When I am in Florida or any other State my chief reliance is in the Crackers. They always appear desirous of helping me out of trouble and always moderate in their charges.

It is very distasteful for us (I mean all of us) to see a journal of so much importance and value to the sporting fraternity as is the FOREST AND STREAM used as a vehicle for dissatisfied writers to vent their spleen and prejudice on any particular section.

Now, Mr. Editor, it is certain that if Mr. Avis has ever been in Florida he has enlarged on the Cracker question to the proper extent to make his article readable with a relish by your Northern readers, or he was too young and verdant to have the power of observation necessary for a good descriptive writer.

Trusting this is not too great an intrusion on the magnanimity of our editor, and promising to be more agreeable next time I write, I am proud to be able to sign myself A GEORGIA CRACKER.

ATLANTA, Ga., June 25.

NORTHWARD TO THE FAR WEST.—I.

"All things move westward ho! It is bound up in the heart of man, that longing for the West."—*Kingsley.*

"ALEXANDER THE GREAT having conquered the world, sighed for new worlds to conquer," and no doubt there is hidden, deep though it may be, in the breast of the average man, that same ambition to do, to conquer, to control. All may not care "to seek fame at the cannon's mouth," or to amass great fortunes, or to become learned, or to travel, but each mortal probably has some pet ambition which he cherishes.

Twenty years ago the writer dreamed of the West, and his dreams became realities, and "the appetite has grown upon that which it has been fed on" and has not become satiated. Each tour of the West but paves the way for the next, and so, having been over most of the western portion of the United States at various times, "new worlds to conquer" were longed for. They were not hard to find, as the boundless expanse of the Northwest Territories and British Columbia were virgin fields.

When planning former western jaunts the better half of the family had never been included, but this time she did not want to be left at home, and having heard so much of the glories and grandeur of the West, was anxious to see for herself some of the beauties and discover some of the charms that were so seductive and which proved so alluring that they could not be resisted, but took the man of the house off so often for long months. This being the case it was necessary to plan a little different programme from the ordinary hunting trip.

After much cogitation and discussion a plan was agreed upon which would give madame an introduction to the West that would never be forgotten and under the best of auspices, and the writer would get a little chance to "rough it" in his beloved mountains.

The middle of August came and with it the time set for our departure, and we were off on what proved to be one of the most pleasant tours of our lifetime.

As we crossed the broad and clear flowing waters of the Detroit River on the graat car ferry of the Canadian Pacific we looked back at the beautiful City of the Straits, wondering whether all would be well with us until we again beheld its shining spires and towering electric lights. A shade of sadness came over one of the party as she was going into a new country and to her mind a rough one, but when once seated in the speeding train, reclining in the luxurious chairs of the parlor car, home for the time was forgotten, and only the enjoyment of the future was thought of.

Toronto, "the Queen City of the West," as the Canadians love to call it, was reached on time and a day was spent running about, though it had been visited several times before. We of the States would dispute the right to the title of the "Queen City of the West," but we will let it be the queen city of western Ontario and give it all the honor we can. The city is a queer mixture of English and American customs and manners and inhabitants. It has many of the characteristics of our cities over the border, and yet it is not like them. It is a pleasant place to visit and in summer is quite a center for tourists doing Canada, as the boats running the St. Lawrence start from there, and it is also the most central point for tours of the great Muskoka and Georgian Bay countries.

Northward from Toronto we go to Owen Sound, where we take the steamer for Lake Superior. This is the most pleasant way of travel in the summer and we never fail to go by boat when we can avail ourselves of the privilege.

It is only 122 miles from Toronto to Owen Sound and the steamboat express soon takes us through a very charming country. The nearer one approaches the Georgian Bay region, the more picturesque the country becomes. High rolling hills, deep gulches and brawling trout streams abound, and ever and anon rough and rugged rocks crop out and lend a charm peculiarly their own to the scenery. The Georgian Bay country is a charming one to spend the summer in and possesses a charm foreign to most resorts.

It is the cheapest place to spend a vacation ever found. This is true also of Muskoka, but the two sections go hand in hand.

Owen Sound is a great summer resort, and one can find good fishing near by, and better by taking one of the numerous steamers that ply on the bay and go further north.

Many fine excursions by water can be taken from here, as all the bay steamers call, if they do not make it a point of departure. The Canadian Pacific has a fine line of steel steamships, consisting of three boats; two of them were built on the Clyde and brought over the Atlantic, being cut in two, so as to pass through the canals up the St. Lawrence, the third is a home production and the largest of the fleet. These vessels are built more on the model of ocean steamships than most lake boats.

If one wishes and has the time, arrangements can be made to take one of the local steamers that run through the Georgian Bay to the Sault Ste. Marie and take the regular Canadian Pacific steamer at that point. By doing this all the principal ports along the eastern shore of Georgian Bay can be visited, and the sail in among the thousands of islands is very charming. There is great bass fishing at numerous points, and at Parry's Sound one can take a stage for the head of Lake St. Joseph, one of the Muskoka chain. Having visited this region on a former tour, we took the regular boat, the Athabasca, one of the Clyde-built steamers.

The scenery after one leaves Owen Sound as viewed from the hurricane deck of one of these steamers is very fine, as the town is situated on the head of the sound and is surrounded by high hills, covered by dense timber or rugged rock. The scenery of Georgian Bay is not unlike that of the St. Lawrence, "only," as a person expressed it, "more so."

The steamer usually leaves about 1 o'clock in the afternoon, but we were a little late, so that the sun was on the decline as we pulled in the gang-plank and threw off our lines.

To the left lies the western coast of the Indian Peninsula, and we pass the high headlines of Cabot's Head, and as we pass the lighthouse a salute is given by our whistle. Evening is with us ere we pass from the waters of the bay into Lake Huron proper.

The great Manitoulan Island is away to the right, and the outer course is taken. The night is cool and we are glad to retire early, as the air so pure and fresh has had a soporific effect. That is one of the great charms in traveling on our great lakes, one is always assured of a good night's rest, and it is far superior to be in a commodious stateroom than in a narrow berth in a sleeper.

Morning comes all too soon and we are loath to arise, even to go on deck to see the scenery of the far-famed Ste. Maries River. Maybe we would have been more eager had we not seen it many times before, as it should not be missed; and even though it had been very familiar to us some years before, we found its charms still held us, and the novel we intended to read was not opened, Twenty years ago a writer who visited this region wrote: "The scenery of the Ste. Maries River seems to grow more attractive every year; there is a delicious freshness in the countless evergreen islands that dot the river in every direction, from the falls to Lake Huron, and I can imagine of no more tempting retreats from the dusty streets of town in summer than these islands. I believe the time will come when neat summer cottages will be scattered along the steamboat route on these charming islands. A summer could be delightfully spent in exploring for new scenery and in fishing and sailing in these waters."

The writer of the above was an old man seventeen years ago, when I met him on the steamer in Ste. Maries River, and has since gone to his rest; but he was a true prophet, for many cottages, hotels and summer resorts are to be found on the river now.

The beautiful sail of fifty-five miles is too soon over, and we are in sight of the "Soo" Rapids, with the Canadian Pacific bridge, the great locks and the two towns, one in the United States, the other in Canada, spread out before us, a living panorama.

The "Soo" is a great tourist resort and an old and reliable "stamping ground" of the sportsman. The trout fishing at and near the "Soo" is very fine, and by engaging Indian guides and going up the shores of Lake Superior nearly virgin waters can be found. A short distance in Canada, via the Canadian Pacific's Soo Line, are a great number of small lakes which teem with black bass, and in September the bass fishing down the river near the Neebish Rapids and in other localities can hardly be surpassed. Ruffed grouse are abundant, and many ducks breed in the little bays and inlets along Lake George and Mud Lake. There is always something to see at the "Soo," and even if one does not stop off time is generally given to run about, as the lake traffic is so great that a steamer cannot lock through at once. Some of our fellow voyagers wander about town and purchase Indian curiosities, the handiwork of the natives who live near by, others catch grasshoppers to feed the trout in the fountain near the lock, others watch the Indians in their canoes out in the rapids, scooping up the far-famed "Soo" whitefish, while others more adventurous hire some red man or half-breed to take them through the rapids in a canoe. "Shooting the rapids" it is called, and a great sensation it is.

It is a pastime more dangerous in appearance than reality, but it is an experience worth having.

The Government locks are stupendous examples of engineering skill, but a technical description might weary—they must be seen to be appreciated by the layman.

In 1846 J. G. Whittier visited this region and was presented with an eagle's quill, whereon he wrote the following, which is quite appropriate in view of the present situation:

THE SEER.

I hear the far-off voyager's horn,
I see the Yankee's trail—
His foot on every mountain pass,
On every stream his sail.

He's whistling round St. Mary's falls
Upon his loaded train;
He's leaving on the pictured rocks
His fresh tobacco stain.

I hear the mattock in the mine,
The axe stroke in the dell,
The clamor from the Indian lodge,
The Jesuits' chapel bell.

I see the swarthy trappers come
From Mississippi's springs,
And war chiefs with their painted brow
And crests of eagle wings.

Behind the scared squaw's birch canoe
The steamer smokes and raves,
And city lots are staked for sale
Above old Indian graves.

By forest, lake and waterfall
I see the peddler's show:
The mighty mingling with the mean,
The lofty with the low.

I hear the tread of pioneers
Of nations yet to be,
The first low wash of waves where soon
Shall roll a human sea.

The rudiments of empire here
Are plastic yet and warm;
The chaos of a mighty world
Is rounding into form.

Each rude and jostling fragment soon
Its fitting place shall find—
The raw materials of a State,
Its muscle and its mind.

And westering still, the star which leads
The new world in its train
Has tipped with fire the icy spears
Of many a mountain chain.

Whittier's dream in poetry has come to pass, and as we leave the locks and slowly steam up the canal we pass great modern steamships laden with the results of the Yankee's thrift and toil, aided by the host of "furineers" we have invited to this land of the free. We leave the canal and the Upper St. Mary's River is before us, and we settle down for a quiet afternoon's sail, fifteen miles of river is soon passed over and the bold headlands 600 or 700ft. above the level of the lake mark where the river ends and the Great Lake begins. This headland was named by the old voyageurs Gros Cap. Parisian, Maple and Sandy Islands are passed in turn.

Taquamenon Bay or White Fish Bay, as it is called, is off to our left, and it is only after we are fairly across it and White Fish Point, forty miles above the "Soo," is passed, that we feel fairly afloat on the waters of the "brother to the sea."

The twilight deepens and one by one the stars shine forth and the crescent moon shows dimly through the fleecy clouds that drift so slowly over the sky. The dark waters, as black as ink in the gloom, are thrust aside by the steel prow of the Athabasca and break into a wave, foam crested, on either side of the huge hull. We stand at the bow of our ship, and as we gaze ahead over the vast expanse of water, that has been the theme of poet's pencil and artist's brush, we feel the spell comes stealing o'er us in the breath of the summer zephyr which is wafted over the crystal waters of this unsalted sea. Poetry, not prose, seems to be the fitting manner of expression and all we have read comes back to us with double meaning. We do not remember the authors always, but the lines are fresh in our memory:

"Father of lakes, thy waters bend
Beyond the eagle's utmost view,
When, throned in heaven, he sees thee send
Back to the sky its world of blue.

"Boundless and deep, the forests weave
Their twilight shade thy borders o'er,
And threatening cliffs like giants heave
Their rugged forms along the shore."

We turn from the bow, and as the evening air is cool—it always is on Lake Superior—we pace up and down the deck, and for fear our better half will become satiated with poetry, we fire off a few dry statistics. The lady in question does not like statistics, and says she hates maps, but sometimes she gets cornered where she cannot run away, for instance on a boat on Lake Superior, and then she has to listen. Will the reader listen, too? If not, skip a little. Lake Superior is the largest of our inland seas, between 46° 30′ and 49° north latitude and 84° 30′ and 92° 30′ west longitude from Greenwich, and is situated at a height of 600ft. above the Gulf of St. Lawrence, distance therefrom about 1,800 miles by its natural course. It is 460 miles long from east to west, and 170 miles broad—extreme breadth—with an average of 85 miles; to travel round it you would go 1,200 miles. Its extreme depth is 900ft., which makes its deepest waters 300ft. below the ocean's level. Thirty-one thousand five hundred square miles is its estimated area and it is the largest body of fresh water on the globe. Its waters are as clear as crystal and as cold (nearly) as ice. If you fall overboard you will become chilled so suddenly that your chances of rescue will be nil. (This causes a shudder and a tighter grip of the lecturer's arm.) Many a strong man has gone down into the blue depth owing to this fact. The tonnage of vessels now sailing on this great sea and passing through the "Soo" Canal is greater than passes through any other canal in the world. The ——, but what followed was lost in the clanging of the steward's bell, and that ended the lecture, for we are all human, and who can resist the call to supper on a Lake Superior steamer; so in we go, and with appetites sharpened by the ozone laden breezes of this northland, we discuss something more tangible, if not more solid, than statistical facts.

Of course the "Soo" whitefish is always on the bill of fare, and of course we do not miss it, for to the writer's taste it is the finest of fishes. We call for a generous portion, and as it disappears we say to the companion of our joys (no sorrows at this time), "When we finish supper I will read you some poetry on the 'Whitefish.'" "Never mind," is the reply, "the fish is good enough without poetry as a sauce, and my physical being is more in need of food than my mental." However, when supper was passed and we sat in the bright and warm social hall of the ship, and while listening to the musical efforts of some of the passengers, she had to listen to the lines of Schoolcraft, who evidently had eaten "Soo" whitefish, too:

"All friends to good living by tureen and dish
Concur in exalting this king of a fish;
So fine in a platter, so tempting a fry,
So rich on a gridiron, so sweet in a pie,
That even before it the salmon must fail,
And that mighty '*bonne bouche*' of the land, beaver's tail.

"'Tis a morsel alike for the gourmand or faster,
While white as a tablet of pure alabaster;
Its beauty or flavor no person can doubt,
When seen in the water or tasted without;
And all the dispute that opinion e'er makes
Of this king of lake fishes, this 'deer of the lakes,' *
Regard not its choiceness to ponder or sup,
But the best mode of dressing or serving it up.

"Here, too, might a fancy to descant inclined
Contemplate the love that pertains to the kind,
And bring up the Red man in fanciful strains
To prove its creation from feminine brains." †

"Ther., what do you think of that?"

"Oh! did you speak to me, dear?"

Now, wasn't that too much, and a compliment at the end to the female race and thrown away. The Lake Superior air, the whitefish supper, the music, the poetry, or all, had been too much and my partner had been "nid-nodding."

"Oh, yes," I replied. I said we had better retire early if we want to be up in the morning to see the glories of the north shore.

"Very well, dear, I do feel sleepy; I think it's the air."

F. F. FRISBIE.

DETROIT, Michigan.

[TO BE CONTINUED.]

* The Indian name for this fish as ad-dik-keem-maig, the "deer of the lakes," is a literal translation.

Natural History.

BIRDS OF EASTERN NORTH AMERICA.*

WORKS on North American ornithology are sufficiently numerous, but most of them are so technical in character and so expensive as to put them out of the reach of a very large proportion of those persons who are interested in birds. The latest work on this subject, from the pen of Mr. Frank M. Chapman, assistant curator in the departments of mammalogy and ornithology in the American Museum of Natural History, of New York city, is, however, neither technical nor expensive. Mr. Chapman has made, as he tells us, "an honest attempt to write a book on birds so free from technicalities that it would be intelligible without reference to a glossary, and . . . to do this in a volume which could be taken afield in the pocket." He has given us what his personal experience with students of birds has taught him to believe would meet their wants.

The present volume deals with the species found east of the 90th meridian. It contains keys to the families and species, descriptions of their plumages, nests and eggs, their distribution and migration, and a brief account of their haunts and habits, with introductory chapters on (1) the study of ornithology, (2) how to identify birds, and (3) how to collect and preserve birds, their nests and eggs.

Mr. Chapman is well qualified to write a popular book on birds. He has long been associated with Dr. J. A. Allen in the American Museum, has had access to its large collections and has had a very large field experience, having made frequent trips and extensive collections, chiefly in the South, in Florida and in the West India Islands. In the preparation of this work he has had the assistance of Dr. Allen, Mr. Ernest E. Thompson, Miss Florence Merriam and others, and the result is a most useful volume of 421 pages, which covers the whole of the North American continent east of the Mississippi River.

The opening chapters of the work treat of the study of ornithology in general, the study of birds out of doors, and the collecting of birds, their nests and eggs. Of these chapters the last two are especially practical and useful. For example, the second is subdivided into several heads, as "How to Identify Birds," "How to Find Birds," "When to Find Birds" and "Hints on Keeping Note Books and Journals." Here, too, are given tables covering the spring and fall migrations of birds about New York, giving the dates of arrivals and departures; a table of the summer residents, giving the dates at which they leave us, and a table of dates at which certain birds begin to nest in the vicinity of New York. Here, too, are explained to the student many practical and labor-saving devices which the practical ornithologist has worked out for himself and which his experience has taught him to value.

The chapter on collecting is also full of information of great value to the student. Mr. Chapman warns the young collector not to make the accumulation of specimens his object, and quotes an admirable extract to the same effect from Captain Bendire's "Instructions," published by the U. S. National Museum in 1891.

Coming to the body of the work, we find begun on page 41 a key to the orders and families of the birds included in this work, which occupies fifteen pages. This key is illustrated by outline drawings of heads and feet of the more characteristic species of the different orders, about fifty-five figures being used, in some of which there are seven or eight different sketches. The keys to the species of any genus seem to be very simple and very complete, and should make the identification of any specimen an easy matter to the student who has made himself familiar with the terms applied to the different parts of the figure of the bird shown on page 33. Following the Latin and English names of any species come descriptions of male, female and young, the measurements, the breeding and winter range, a description of the nests and eggs, with the measurements of the latter. With each description of a species is found a very brief biography of the bird, which usually describes one of its characteristic features, often in the form of a quotation from some author who has given special attention to the species; but many of these paragraphs are written by Miss Merriam, Mrs. Olive Thorn Miller, Messrs. E. P. Bicknell, Jonathan Dwight, Jr., E. E. Thompson, Bradford Torrey and others. Here is one from Mr. Chapman's pen, very happily put:

"The cowbird is an acknowledged villain, and has no standing in the bird world. English sparrows, either because they are not aware of the customs of New World bird life, or because of a possible and not unlikely affinity, associate with him, but no self-respecting American bird will be found in his company.

"As an outcast he makes the best of things, and gathers about him a band of kindred spirits who know no law. There is an air about the group which at once tells the critical observer that their deeds are evil. No joyous song swells the throat of the male. His chief contribution to the chorus of springtime is a guttural bubbling produced with apparently nauseous effort. In small flocks they visit both pasture and woodland, and are given to following cattle, clustering about the feet of the herd, presumably to feed on the insects found there. They build no nests, and the females, lacking every moral and maternal instinct, leave their companions only long enough to deposit their eggs in the nests of other and smaller birds. I can imagine no sight more strongly suggestive of a thoroughly despicable nature than a female cowbird sneaking through the trees or bushes in search of a victim upon whom to shift the duties of motherhood.

"The ill-gotten offspring are born with the cowbird character fully developed. They demand by far the greater share of the food, and through gluttony or mere size alone starve or crowd out the rightful occupants of the nest. They accept the attention of their foster parents long after they could care for themselves, and when nothing more is to be gained desert them and join the growing flocks of their kind in the grain fields."

The volume is very fully illustrated and in a most useful way. The frontispiece is a colored plate of male and female Bob White, and besides this there are twenty other full-page plates, of which two are color charts and the others half-tones, showing groups of birds, many of them from beautiful mounted groups in the American Museum. Besides these the volume is very fully illustrated by 115 figures in the text, of heads, feet, wings and tail, each one of which tells some story to illustrate the type. The volume is one which must be in the library of every student of birds.

* Handbook of the "Birds of Eastern North America." By Frank M. Chapman, New York: D. Appleton & Co.

BREEDING WILD DUCKS.

COLD SPRING HARBOR, N. Y., June 21.—*Editor Forest and Stream:* The exposé of the great duck egg fake is quite a relief to the writer. For the past twenty years my hobby has been the breeding of our beautiful wild ducks in confinement, as you have known, but the greatest obstacle is to get the ducks. It seems strange, but is true, that I can buy some American species in Europe that are difficult to get here, and the reason is that over there the zoölogical gardens breed them and sell the surplus, while there are "waterfowl clubs" and a regular demand for ornamental wildfowl. Therefore this great duck egg business, which no one seemed to doubt, suggested to me a possible source of supply of certain species, and I have been on a wild duck chase for a long time, expending time, stationery and postage with no return to date. Your exposé is therefore a relief.

A dozen years ago I could buy wood ducks by the dozen pairs, but none are to be had now from those who used to get them, but for the last six years I have bred enough to maintain my flock, and do not care to buy wild ones. I have two broods, of 7 and 8, under my window as I write, all hatched on June 7. I always suspected the men in Michigan, Wisconsin and Iowa, who sold me many wood ducks years ago, of netting them for market and of getting a better price from me for live ones; but my object being to get breeding stock, I did not ask further than "how many and how much?" I believe this summer resident has been exterminated in many places by the small boy with a gun who knows no seasons when he sees a "wild duck."

My pintails and teal have been mainly wing-tipped birds sent by gentlemen who know my hobby, but I have bought a few. I have only one pair of pintails now and they were shot at Chincoteage two years ago. They were expected to breed this year, but did not so far. The nests of my green-winged teal were robbed this season by crows, rats or other vermin, and I will not raise one. A young green-winged teal is funny, but he, or she, does not know it; about as large as the last joint of a man's thumb—a mere ball of down colored black and yellow—a little girl said "they look like bumble-bees," and last year's crop were "bumble-bees" until in full feather.

It has been an off year with my pets; the black ducks and mallards have not laid, the gray and the white call ducks either refused to set or left their eggs after spoiling them, and only one of the Chinese mandarins has laid. Yet with fifteen little woodies to look at in the morning, and to come to the food box later, we are not entirely disconsolate. They are quite tame and will be so until a few weeks older, when I will catch them and with scissors snip off one little wing just back of the thumb; after that they are wild enough and it is the catching, not the clipping, that they fear, for when again tamed they go wild after handling.

From the great egg fake I had fancied to get some old birds, for young ones would not stand the long journey. In my vision I saw breeding flocks of canvasbacks, redheads, blue-winged teal and some others; but my eyes are opened, and while the dream will never materialize, it was enjoyable at the time. What of it if we discover that Santa Claus does not come down the chimney, and later on that there are other cherished beliefs snapped short off; we sigh and look to other sources of pleasure, more or less real, and look back on the fun we had when we did believe that the reindeer of Santa Claus leaped to the housetops, that the storks brought the babies, and that the great Northwestern duck egg company might furnish us with handsome birds as well as albumen for our cakes and candies. After all, it is pleasant to believe that we will catch a creel full of trout when we start, and to look back on the pleasant time we had when we return with our faith in that stream as strong as ever, but lay failure to the wind, the moon, the sun, clouds, or any other thing that comes to hand. The dream of ducks galore has been dispelled as far as the great Northwestern egg fakers are concerned, but it was enjoyable, and is now transferred to a market-shooter who writes every summer to know how many live canvasbacks I will take, and who has never sent one. I tell him to send all he can get up to fifty pairs. This encourages him and does not impoverish me, and it cheers us both. Why not? FRED MATHER.

An Aged Parrot.

ITHACA, N. Y.—The death of a parrot owned by Wm. A. Bennett, of this city, removes an interesting specimen of bird life. Polly was a bit over sixty years of age and possessed a memory that was wonderful. Her command of language was little short of marvelous. Some fifteen or twenty years ago Polly lived in Scranton, Pa. Her attachment for an old lady of that city was maintained to the day of poor Poll's demise. She tirelessly persisted in lavishing upon "Grandma Atwood" finely modulated terms of endearment. A few years ago she witnessed a melée participated in by railroad employees, and her terse and vivid description of the "scrap" and the solid chunks of Anglo-Saxon hurled about was a startling revelation of mimicry and power of memory strangely out of the common of what we are usually taught to expect as inherent characteristics of our feathered friends.

M. CHILL.

Forest and Stream Outdoor Scenes.

PHILADELPHIA, May 21.—*Forest and Stream Pub. Co.:* The pictures came yesterday and I am very much pleased with them; they are the best of the kind I have ever seen. J. G. BEATH.

LARGE MOOSE ANTLERS.

SEVERAL very large sets of moose antlers were spoken of in a recent issue of FOREST AND STREAM. Almost invariably these large antlers (by large I mean spreading upward of 60in.) were of bulls killed many years ago. Forty years since, moose, both large and small, were quite plenty and much easier to find than now. The early settlers on the Magalloway River depended to a certain extent on moose meat. To them antlers large or small were of no value. Usually the whole head was left where the moose was killed. To the sportsman of the present day the head and horns are by far the most valuable part of the animal.

On my hunting trips after moose I have never been fortunate enough to get a shot at or even see a bull with very large horns, and I have been where moose were quite plenty. The first bull I shot had a large finely colored head with very good antlers spreading 40in., blades and brow antlers very even, with twenty points in all. A large bull was killed about four years ago near Clearwater Lake in Nova Scotia. This head is in the gun store of William Read & Sons, of Boston. The antlers spread 62 or 63in. The head was set up by Carnell, of St. John, N. B. At the time of the killing of the moose I was hunting within a few miles of where it was shot, and the story as I heard it is as follows: A party of native hunters had called up and killed a good-sized moose and were at work skinning it when the big bull walked out of the scrub timber quite close to them and was shot. Some Indians told me later that it was caught in a snare, but Indians will lie and white men too, sometimes. I spoke of this big bull to Mr. Edward Read, and after some correspondence he bought it. Mr. Read has several photographs taken from different points of a moose head with a monstrous set of antlers. The head in question is owned by a gentleman in St. Louis, Mo., and I would suggest to the FOREST AND STREAM writing to Mr. Read for a loan of the photographs and to print an illustration, and give the readers of FOREST AND STREAM a chance to see what immense horns a moose can have. The dimensions are given with the photographs.

On my last trip to Nova Scotia an old-time moose hunter who had killed a great many moose came to our camp and naturally the talk was principally on one subject. He said: "It appears to me that bulls nowadays don't have such big horns as they used to." He spoke of a couple of sets of very large horns which he had seen years before lying on a certain barren. The horns and skulls together. The former were firmly locked together and a tine of one brow antler was driven into the eye-socket of the other and imbedded in the bone at the back. They had laid there for years and were much bleached and crumbled. Our oldest guide also said he had often heard of them. I said I would be glad to pay well for such a specimen. The old man replied: "I suppose they'd be worth something nowadays, but they weren't then. The sportsman of to-day may hear stories of these big bulls, but that will be about all. Should he be fortunate enough to kill one with antlers between 40 and 50in. he will do better than the majority of the brotherhood.

A companion of one of my trips said on starting: "I will be satisfied with a set of horns of 40in., but I don't want a head without antlers." After a week of unsuccessful calling he thought he would shoot a cow if he got a chance, and at the end of ten days he said, "I will shoot a sick calf if I see one." I thought my moose-hunting days were ended, but I have a longing to go at least once more; and when the next season opens I think I shall go to my friend Peavey, in Aroostook, and try and get a big bull—that is, a moderately big one, 50in. or so spread of horns. Peavey writes: "We will get him sure if you come."

C. M. STARK.

DUNBARTON, N. H., June 20.

DO ANIMALS PRACTICE HYPNOTISM?

IT is only of late years that some naturalists ascribe to animals the power of hypnotism. They claim that, by means of this power, certain animals are able to throw their prey into a hypnotic state. Otherwise, how could a bird be "charmed" by a cat? How could a dog be transfixed in its tracks by a snake?

A curious instance is recorded by Mr. Bates in his book entitled "A Naturalist on the Amazon." He says that one day in the woods a small pet dog flew at a large rattlesnake. The snake fixed its eye on the dog, lifted its tail and shook its rattle; it seemed in no great hurry to strike at the dog, but as if waiting to put the dog into a more suitable position to be devoured. As to the dog, it neither continued the attack nor retreated; it stood spellbound, and could not or would not move even when called. It was with some difficulty that the animal was dragged away.

Some years ago the writer watched two boa-constrictors charm a rabbit that was put into the cage. At first the poor victim seemed in great terror, gave a jump or two, and then stood perfectly still. The snake simply lifted its ugly head and seemed waiting for the rabbit to jump down its throat. Poor bunny shivered all over, and actually moved toward the snake, which seized him.

Many of our readers have seen cats try to charm birds in the trees. Last summer where I was visiting the family had a beautiful Maltese cat called Tom. He was a great hunter, and was continually bringing in various kind of small game.

One bright morning I saw Tom creeping around the big elm tree in the yard. High up among the branches a family of red squirrels had its little house and home. The frisky fellows were seldom molested, and they would come to the window sill.

This morning I saw a red squirrel running down the main trunk. Then he would run back again. The next time he ventured a little further down the tree. He seemed anxious to reach the ground, but he was afraid of Tom. For fully half an hour the play went on, and I wondered whether or not the squirrel would abandon his efforts.

Finally the squirrel came down slowly to within five or six feet of the cat, that stood with raised head and tail out straight and his neck fur on end. This time the squirrel did not scamper back, but there he hung to the bark, fixed, motionless and waiting. I am not sure whether the squirrel dropped toward the cat or whether the cat sprang for the squirrel—it was all done so quickly—in a second.

These and other examples would seem to prove that the power commonly called "charming" is a kind of hypnotism. Snakes and cats possess this strange power to a greater degree than most other animals.

There is another curious point. As those who have studied hypnotism know, one of the most common ways of inducing the hypnotic state is by means of a rotating light or mirror. The "subject" is told to look at the light; by and by the rapid, monotonous motion produces a feeling of fatigue and then sleep. Perhaps this may furnish some clue to the mystery of birds beating out their brains against the windows of the lighthouse on the sea coast. Again, buffaloes, wolves, coyotes and wildcats will stand on the railroad track, face the glare of the headlight of the locomotive and get run over.

V.

[We know so little about the mental processes of reptiles, birds and mammals that as yet it is difficult to draw any conclusions from such occurrences as our correspondent mentions, or even to assign to them their proper name. We have seen performances by squirrels which appeared to parallel those mentioned above, but which we understood in quite a different way. In a large place on Manhattan Island gray squirrels are very abundant, and there are three or four dogs about the house. These dogs devote much of their time to efforts to capture squirrels, but rarely succeed in doing this. We have seen them chase a squirrel into a tree and then sit on the ground gazing wishfully at the animal perched only a short distance above them. Sometimes the squirrel who has been through this experience will come slowly down the tree almost within reach of the dog, and there will chatter at it, apparently wishing to tease the animal. This performance we have watched many times and have always imagined that the motive governing the squirrel—which sometimes ventured down almost into the jaws of the dog—was malice and a desire to worry the animal on the ground below. We never saw a squirrel let itself be caught. There are examples enough of this fascination exercised by snakes and cats especially, but actual facts are not abundant.]

FOREIGN BIRDS IN AMERICA.

MR. HUGH L. FORD takes issue with me upon the question whether Europe or America can claim to possess the best feathered songsters, and asserts that the European birds do not compare with the American in singing qualities. He further advises Americans of foreign birth, or foreign gentlemen, as he puts it, to cultivate the acquaintance of foreign birds in America.

Now I for one never rush into print and express an opinion on a subject unless I know of what I speak, unless I believe that I understand the subject upon which I dwell, and that I am entitled to a hearing. Mr. Ford is an Ohioan; he resides in a State where I have lived a great number of years and where I assisted in having a law passed for the protection of all birds, American and European. I have studied the habits and singing qualities of American birds, and I doubt whether Mr. Ford has had as good an opportunity as I had to do the same, and whether he has traveled as extensively in America as I did, not only on railroad cars or steamboats, but on foot, marching in the ranks of Uncle Sam's army during our civil war. Has Mr. Ford ever had occasion to compare the singing qualities of the birds he refers to? I fear not. He bases his opinion on his own belief—on hearsay. I have now in captivity our mockingbird and our redbird. They are fair representatives of their respective species. I compare their song every day with that of the best European singing birds and those of other foreign lands.

I cannot agree with Mr. Ford that the mockingbird is the best singer among the feathered world. The Schama thrush of India is by far the superior of the two. Our brown thrush does not at all compare with the nightingale, unless our "Way Down on the Swanee River" can be compared with a song of Schumann. Of course Mr. Ford would not change his mind if he were in a German grove, field or forest. I take his word for that, and this because Mr. Ford is evidently prejudiced; he does not care to change his mind on the subject.

I agree with Mr. Ford that our birds excel in gayety of plumage. Here he is right. So do our American flowers flatter the eye, but all those who know will tell Mr. Ford that they do not have, as a rule, so sweet a smell, so fine an aroma, as the European flowers. I admit further that "young America" is not the sole fiend of our birds; "old America, too, is not free from blame; but I venture to say that all those who mercilessly slaughter our singing birds are free-born American citizens or such who look upon foreigners as inferior beings.

ARMIN TENNER.

Springfield's Birds and Animals.

WE have at Forest Park a considerable number of young pheasants, over fifty all told. There are four varieties represented, the Mongolian, the golden Japanese the ring-neck and the common English variety. The Mongolian variety has its home in the north of China and the Siberian plains, and is very hardy. It is with this that New England is to be stocked if the plans of the society are carried out. As soon as the work of breeding is completed it is proposed to let loose in the region of Forest Park the male and female birds a few at a time in the hope of having them make this region their homes. The Legislature will be asked to prohibit the killing or exposing for sale of these birds, and Connecticut will be asked to co-operate with us in this matter.

If the looked-for result happens, the other portions of this commonwealth will become interested, it is expected, and even the other States, so that in time New England may be populated with this new game bird. At Forest Park they are fed hourly on boiled custard unsweetened, with a flavoring of red pepper. Of eighteen ring-neck pheasant eggs of this variety under a golden pheasant every one hatched and sixteen of the young pheasants are still living. Still better is the result of a hatching of the Mongolian variety, for of a setting of thirteen all hatched and are living. These varieties were got from eggs obtained from the State Commission in exchange for the other varieties sent them. There are six or eight eggs in the nest of the one of the female ring-neck pheasants, but she has not yet begun to set.

Among other additions to the Forest Park collection are two varieties of deer, one of the Japanese deer and the other an example of the American elk. Messrs. Graves and Wilder of this city recently presented the park an excellent specimen of the blue heron and the black-billed heron. The litter of prairie dogs are also prospering and fifteen of the little fellows are ready to stand on their heads at a moment's notice. The litter of five coons now nearly weaned bid fair to grow to maturity. The raising of coons in captivity is rather rare and the managers are much pleased at their success in this line. Unfortunately both badgers have died, and it looks now as though the wolf might soon follow. Little Red Riding Hood's companion seems to have a sort of St. Vitus dance.—*Springfield (Mass.) Republican, June 26.*

Bob White in Town.

PEEKSKILL, N. Y., June 28.—Within 75ft. of where I write this a quail is whistling. We are in town, with houses all around us, and about one-half mile from the Depew Woods of "Our Chauncey." It is a large piece of woods and surrounded with meadow and swamp land. There has been a flock of quailin the nighborhood for years, but for the last two or three years the number has been very small. This bird must have been started this afternoon with others and flew into this big elm, and seems perfectly at home and whistles as if enjoying itself.

WM. MABIE.

P. S.—Children and whole family are studying him as a curiosity.

That Buffalo Chip Suggestion.

OKANOGAN, Wash.—*Editor Forest and Stream:* Your suggestion is a good one in regard to the buffalo chip. When I read that short paragraph it carried me back forty years, and in my mind I could see from fifteen to twenty boys out with gunny sacks gathering chips to do the cooking for our train or to set the tires on our wagons, and sometimes to build a social fire, where the boys would gather around and sing songs or spin yarns until the wee sma' hours. Yes, by all means get the genuine chip, and we will be indebted to FOREST AND STREAM for one more favor to our already long list of good things we appreciate, but can never fully repay.

LEW WILMOT.

Elk Antler Measurements.

MR. CHARLES PAYNE, of Wichita, Kan., gives us these dimensions of a pair of elk antlers owned by him, the measurement in inches: length of right hand main beam 61¼in.; circumference between third and fourth prongs 7⅛in.; length of first prong 21½in.; length of second 20¼in.; length of third 16⅜in.; length of fourth 24½in.; length of fifth 15⅜in.; length of left hand main beam 59⅜in.; circumference between first and second prongs 8¼in.; length of first prong 23½in.; length of second 21½in.; length of third 18½in.; length of fourth 23½in.; length of fifth 15½in.

A Goose and a Hawk Fight for Possession.

OKANOGAN, Wash., June 9.—*Editor Forest and Stream:* Two weeks ago, while on my way to Oroville, when near the town, my attention was called to a fight between two large birds. On going closer I saw a large goose and a fish hawk fighting for a nest. Whether the goose was trying to rob the hawk or was merely trying to retake its original nest I could not tell, yet it looked strange to see a goose on a limb more than 100ft. from the ground, where it is supposed to belong. Finally the goose flew away, leaving the hawk sitting on the limb near the nest.

LEW WILMOT.

The Tinamon.

MACOMB, Ill., June 20.—*Editor Forest and Stream:* Can you or any of your readers tell where a person can get the game bird tinamon? It is said that this bird is a native of South America. It is a little larger than a quail, but is not as large as a pheasant. It is a deep olive color, slightly and narrowly blended with black, with a red crown.

W. O. B.

[Perhaps some reader may advise "W. O. B."]

Game Bag and Gun.

THE OLD WIZARD—OR WHAT?

IN about the year '53—I was then in my teens—I concluded to visit my great-uncle, who lived at Wattsburg, Pa. He was one of the pioneers of that part of the State, and was regarded as one of the foremost hunters of bears and deer. And, incidentally, I must declare that he was a man strict in morals and religiously conscientious, even beyond the character of generally reputed good men; and there seemed to be no admixture of superstition with the sound and sensible piety of John Duncombe.

His children were all married and comfortably settled around him, while he and his wife—a helpless invalid, whom he attended with the utmost assiduity and patience—lived alone in their humble little cottage.

Observing my fondness for hunting, he said to me one day, "Let me tell you my experience once while deer hunting."

"O do, John, stop telling about that old wizard," said his wife with some degree of submission, however.

"O, well, let me tell it to Nelson—it was such a strange thing."

"Well," continued the good trapper, "I started one morning early, fixing my point of operations at a certain spot on the mountains. On my way along the road I came across some wood choppers with whom I had some conversation which turned upon an old German who the superstitious people declared was a genuine wizard. 'Aint you afeerd he will put a spell on your gun?' said one of the men. Of course I ridiculed the idea; and just at that moment, looking along the road, we saw the old man coming.

"When he came up I began talking with him, and asked him if he knew where there was a good place for deer. 'Yes,' said he, 'do you see that place on the mountain?'

I said I intended to go there.

"'Well, that is the place to find deer. Before you can eat your breakfast I warrant you see a deer.'

"When I arrived at the spot alluded to I began to feel pretty hungry and sat down to eat the cold bit that I had stowed in my game-bag. Just as I began my open air repast I raised my eyes and what should I see but a magnificent buck! I could count the prongs of his antlers and fairly look into the depths of his clear, moist eye. I

was used to such sights, so of course my nerves were not unduly affected. Carefully I raised my rifle and sighted along the barrel. The next moment another monarch of the woods would fall to my unerring aim. But no. Just as I was about to pull the trigger he vanished. Ah, he saw me, cunning old fellow! Chagrined, I picked up my traps and started to get his track, for there was a fine covering of snow that had recently fallen, but no track could I find. Persevering in the search, I began walking in a circle, enlarging the same as I proceeded, but all in vain. What does it mean? thought I, and while wondering the old wizard popped into my mind. But I banished the thought and went for more game. I had not gone far when just before me rose another fine deer. His broadside was toward me, and a fine mark he was. I got a shot and brought him to his haunches, but he rallied and ran, apparently badly wounded. Wondering that I did not kill him instantly, I loaded and started to trace him by his tracks and blood. But neither tracks nor blood could I find. I adopted my circuit dodge, but without success. There, Nelson, that is what happened to me. I can't say what it was—you may call it witchcraft or optical illusion, just as you see fit."

N. D. ELTING.

CENTRAL CITY, W. Va.

CALIBER FOR BIG GAME SHOOTING.

IN general terms the best caliber would be described as the one that with accuracy and a fairly flat trajectory would combine good killing and stopping power. Or, in other words, a projectile that would have sufficient penetration to inflict a mortal wound and whose area of impact would be large enough to cause sufficient shock to stop an animal, whether running deer or charging bear. Men become wedded to the old, and new things come strangely to them. Sportsmen are very conservative, as far as their armament is concerned; and each one is apt to uphold the thing which has brought him success. So that the armament of the American sportsman, both as regards weapons and projectiles, does not cover a few years, but many. In this large western country we find many of the old men clinging to the "old reliable" Sharp's with its great weight of metal, or the '73 Winchester, and they look with doubt—not to say suspicion—on the locking bolts and safer action of the '86 model. One old fellow will tell you: "I killed 84 elk in one day with that ere old gun, and I reckon she's good enough for purty much any killin' I want to do."

Early in my professional career I saw a case that impressed the question of calibers very forcibly upon me. A man shot another man through the left lung just above the heart with a .22cal. pistol. The man who was shot took the pistol from the other and beat him over the head with the butt of it so hard that he fractured his skull. Then he walked home and four days later died of pneumonia caused by the bullet. The cases where hunters have been killed by dying bear are numerous enough.

I have always been in favor of large calibers for big game. Nearly all of my shooting at big game has been done with the .50-110 Winchester with the 300grs. explosive ball. The longer I use it the more confidence I have in it. I find it accurate, with a good flat trajectory, dropping say 2in. in 150yds., and above all it stops the game, so that a deer will not run off for miles in the brush or a bear charge several hundred yards with a mortal wound. I many times have seen this weapon spoken of as a "cannon" and "inaccurate," and it has seemed to me to be due to ignorance of the gun and its qualities.

This particular military reservation under a wise system of game protection has more deer on it to-day than any other locality I know of. They are nearly all the Virginia deer, commonly known in this country as the "white-tail" mule deer, and antelope are fairly numerous in the broken country. The antelope are increasing, more particularly since the decline of sheep raising in the immediate vicinity. I think, with the exception of the grizzly bear, it is commonly conceded that no animal will carry off more lead or go farther with a killing hit than the white-tail deer. This being true, the great desideratum in hunting these animals is a weapon with "stopping" power.

During this last winter I did a great deal of my hunting with Mr. Harvey Robe, the son of an officer at this post. He is one of the best running-game shots I have ever seen. His experience with me has been a marked one in this point. He shot a .40-82-260 while I shot the .50-110-300express. I recall one day when we were carefully working a narrow strip of brush about 50yds. apart. A great white-tail buck jumped from cover about 70yds. away and ran off quartering. As quickly as ever I heard a gun shoot, four shots rang out and the buck disappeared in the thick of the brush. We found him dead about 100yds. from the point where he was shot. Two of the shots were within 3in. of each other behind the left shoulder ranging forward, and a third shot was higher up near the spine. The two shoulder shots had torn through the heart, one through the junction of the auricles and ventricles, and the other through the auricles, yet that buck had run a 100yds. He had received the worst sort of a killing wound, but the ball had not the stopping power. A few days later, after having hunted without success all morning, at about noon he had a shot at a large ten-point buck. The deer squatted as the gun cracked, ran into the brush some 20yds. and lay down in the densest part of the thicket. On carefully working to the place we found hair, and blood in three large pools, one on each side of the trail and one in the middle, indicating of course a severe lung wound. We trailed that buck for five hours by the blood sign alone and then had to give up on account of darkness. Several times we came near enough to hear his labored breathing. On another evening at dusk, when just about able to make out his front sight, he shot another buck. He came into camp while I was irritating the fire into a more vigorous blaze, quite jubilant.

"Doctor, I just shot a buck with horns so big they looked like a pile of brush on his head." It was too dark to get him, he said, but he had marked the place and we would get him in the morning. The next morning bright and early we started and gave up after trailing him by his blood for six miles. Harvey was very unhappy over this and I do not blame him. I think if anything can spoil a hunter's pleasure it is to wound game and not to get it. Just at the time when he should be enjoying the best part of the camping day, when the pipes are lit around the cherry fire, he begins to think of that poor wounded thing lying out in the brush. If he is a human it hurts him and spoils his evening, and he is glad to roll up in his blankets and try to forget it.

I want to add to this, as a graphic expression of results with the .50-110 Winchester, a deer profile on which I have marked off the shots in my last winter's deer hunting. It is not inserted in any boasting spirit, but is given simply as an accurate record of carefully noted shots. This is as good average shooting as I have ever done yet; although I know it is my best, it is a long way from being the gun's best. During the winter I fired twenty-six cartridges at deer, making seventeen single hits and one double hit. All these with one exception were running shots, and every deer hit was bagged; making eighteen deer with expenditure of twenty-six cartridges, or one and four-ninths to each deer. The range varied from 30yds. to 140yds. The average range was about 50yds. The average distance run after being hit was not more than 10yds. The double hit was at a young buck standing, the first hit of which is the one plotted at the edge of the neck. The ball cut his throat like a knife. He bounded off and a second shot in the shoulder dropped him. This is a good showing when the circumstances are taken into account. These deer were not hunted in the runways, but were still-hunted in the brush. As said before, all but one were running shots. The post game law limited us to killing bucks and only one a day; so that a man could not take the easiest shots offered, because they were usually does. Many of these deer would never have been brought to bag with a smaller caliber.

How well the small caliber high velocity guns will do as game guns is an open question. It seems from all accounts that it will be a very uneven gun. A hit in a solid organ within the shorter ranges should stop an animal

26 SHOTS—17 SINGLE HITS, 1 DOUBLE HIT.

immediately—that is to say, up to 300 or 400yds., where the bullet exhibits its shattering effect. A shot through the brain, heart, liver or the solid muscular structure of the neck and surrounding the spinal column would cause such extensive comminution as to almost instantly drop the animal from shock. On the other hand, a lung or abdominal wound might not be fatal for hours. I have shot the new Government rifle, .30cal., nickel steel jacketed bullet propelled by Peyton powder, giving in round numbers a 2,000ft. per second velocity, at a buck antelope. The animal flinched badly at crack of the gun and was manifestly hit. He lagged behind a while, then closed up to the bunch with a rush and scampered with them for miles over the prairie until they disappeared from view.

CHARLES F. KIEFFERS,
1st Lieut. and Ass't Surg. U. S. A., Fort Buford, N. D.

THOSE ADIRONDACK DEAD DEER.

Editor Forest and Stream:

When I wrote the letter which you published on June 1 containing the facts told me by Robert P. Froelich and William Clark I had no idea that any member of the League would do otherwise than thank me for bringing to their attention the unusual mortality of deer in the Moose River region—things which it appeared and appears they did not know. Much less did I fear that the testimony of my friends would be doubted and characterized as "tattlers'" tales. But since their words are at present under a shade I must respect those of a prominent League man, Mr. W. T. Finch.

He came out from Moose River, where he had been fishing on the day that I sent the letter to the editor, and so I had not heard him speak on this subject at that time. He said when asked about the carcasses of deer found there: "I never saw such a sight in all my life. Why, they lay everywhere."

Mr. Finch's friend, Wm. Cassler, had the same story of dead deer everywhere, and William Pardy, their guide, said that he had never seen so few signs in that region before, and that seven carcasses lay between the river and the pond hole where young Pell was shot for a deer some years ago.

Mr. Finch told me that the League constables took the last dog from the lumber camps between Canachagala Lake and Moose River, and that the deer therefore could not have been killed by a lumber camp dog. Any one who knows the average lumberman will say that they are the most reckless of woodsmen. They are of a restive nature, and though they work hard six days in a week, on the seventh work harder yet—or play. In parties of two, three, a dozen, they wander about the logging roads. A deer starts from under a topping and away it flounders. Who has not seen children chase one another through the snow? The lumbermen are as children at times. They chase the deer and a cruel death winds up the sport. Then on they go again. And so deer after deer is slain. The bosses at camp forbid venison or the regular hunter supplies it, so there is no use of carrying the meat to camp.

"The deer lay everywhere," said Mr. Finch. On the ridges and in the swamps. Some deer left the yards in the thick dark swamps and fled far for their lives, but in the end died. In the spring the knife wounds in the throats have rotted away, a pile of dismembered bones and gray hair is all that remains of the deer.

"Say, ye'd orter hev been thar," said an old-timer. "He wa'n't sech a big buck, we'd killed lots bigger, but ye'd orter heve seen him caper clean tew his ears in the snow every time we'd cut him with a birch whip." That is sport for a lumberman. Suppose now that a deer had had a few such trials during the winter, in the spring would not his hips be weak? Suppose that a doe heated by a wild race for life in zero weather with a troop of lumbermen and at last escaped, then lay down exhausted. I have known men to get diseased lungs and throats even in warm weather for lying down in a draft.

From the West Canada creek lakes very favorable reports are coming as to the number of deer. A letter from there, less than two weeks old, said: "There are lots of deer here. We haven't got anything here but an old shotgun and we loaded that with nails." The letter came to Northwood direct from the camps I think about nine days ago, but it may have been written a week or so before it was mailed.

That the deer are so plenty there and so few over on Moose River is taken as evidence by some that the deer were so persecuted in the river region that they fled to the Canada creek lakes, near where the arrest of two deer killers as told in the FOREST AND STREAM last spring had made the lumbermen cautious.

"There is reason to believe that both the hunting and fishing will be bettered by the scientific lumbering which this club has specified and secured," said Mr. W. H. Boardman in FOREST AND STREAM of June 29. Mr. Finch will take the stand again.

"Two years ago I alone caught more than enough trout to supply camp, but it took hard work for three of us to get sufficient to eat from Moose River this trip," were the things that he said to-night in the store, being just out to-day from his camp on Moose River. He saw one deer on this trip and his camp is on Canachagala stillwater. He laid the scarcity of trout to the lumbermen who are now culling out the spruce from about his camp.

If I remember correctly, and if Mr. Wm. Light also remembers correctly, the League does not forbid camping on or crossing League lands, but the signs say that hunting and fishing is prohibited on those lands. By the recent decision of a Utica court, Moose River and its tributaries are a public highway, for State moneys have gone to opening up the rocks, etc., that the logs might go through, and also that it is a public highway to high water mark. When Mr. Froelich and Mr. Clark were at Moose River it would have taken better fly-casters than they to have reached the river's water from League lands with their casts.

The indignation of the woodsmen against the Adirondack League is increasing. It is even believed that so many deer died because some aggrieved one dropped heaps of poisoned salt about. Others would not in the least be surprised to learn that the dried spruce tops along Moose River had been fired and the region burned over. I have heard that talked of, and some of the men are capable of doing it.

I am sorry that the meaning of my previous letter may have been misconstrued. I said at the end of my last letter: "It is earnestly recommended that the Adirondack League take steps to see that such slaughter does not again take place on their territory." I sincerely meant what I wrote then and I mean the same still. I cannot believe that deer are increasing on League territory as a whole, nor in the Adirondacks. A strange disease carried off all the deer along the Tug River between Kentucky and West Virginia about the time the Hatfield-Macoy feud broke out there, years ago. Maybe such another disease has come to this region and is about to devastate it because men cannot agree.

RAYMOND S. SPEARS.

NORTHWOOD, N. Y., June 30.

In the Old Days.

"Jacobstaff's" letter was, as you suggest, the best reading for a fortnight. I well remember the old bored out rifle, with its long birds-eye maple stock and trap trimmings, which was the first percussion "shotgun" I ever used. I had begun with a flint-lock, but a neighboring blacksmith, a great friend of my boyish days, who was the terror of the country at the annual turkey shoots, lent me a rifle from which, it not suiting him, he had bored out the lands.

It could not have been over .50 caliber, and as, like all small boys, I believed in big shot, I used No. 4, and consequently had very few in the regulation charge of a finger, and though the gun carried true and close, its killing was problematical.

I remember one foggy October morning, when a companion and I treed four gray squirrels in an isolated oak, in a newly cleared cornfield. He had an excellent fowling piece, made by Pratt, of Roxbury, a local maker of celebrity in those days, a 12 or 14 gauge, as I should think now. He secured his brace of squirrels, though having only one barrel he had to reload between shots; but mine both got away in safety to the woods.

After that I either fell back on the old flint-lock, or used a little "Windsor rifle," which was made in our immediate vicinity, and with which I was moderately successful. My only trouble with this was, that the lock being under the barrel, the caps were apt to drop off unless they were a perfect fit, and thus cause an occasional misfire, the dull "click" of which, when I had a good aim, was fearfully aggravating.

I could match "Jacobstaff's" experiences almost word for word, all the way through, and you may believe I enjoyed them.

VON W.

"Jacobstaff" writes that the readers of his reminiscences in our issue of June 22 might infer that he was still using the Manton given to him in the '60s. That arm was laid by years and years ago for a Scott.

REPORT YOUR LUCK
With Rod or Gun
TO FOREST AND STREAM,
New York City.

MAINE GAME AND FISH BY EXPRESS.

A GOOD deal of indignation is manifested among sportsmen who go to Maine as to the attitude of the Maine Central Railroad in regard to the refusal the present season of that road to forward boxes of fish caught by these sportsmen as baggage. Perhaps sportsmen would never have thought of such a thing as their trout and salmon being forwarded as baggage but for the peculiar reading of the Maine game laws, which specify that fish and game can only be transported by the person taking the same in prescribed quantities, as his own property, or wording to that effect, and from the fact that the Maine Central has always forwarded these boxes as baggage and free of charge, up to the present season. But early last winter that road issued a notification to sportsmen that no more fish or game would be forwarded as baggage. Sportsmen returning soon after began to find their deer in the hands of the American Express Company, and the company's servants demanded very round charges for the forwarding and delivery of such game. As soon as the trout season opened returning fishermen began to find that their boxes of trout were not to be checked by the Maine Central, as on former seasons. I then wrote the officials of that road for an explanation of their position. In reply I received, in substance, the following: General manager's order, to which you refer, has not been rescinded, and is still in effect, the idea being that the express company, under their contract with us, claim the privilege of carrying the fish and game in question, it not being, for instance, baggage in the generally accepted sense.

The officers of the Maine Central expressed, in the same reply, the idea that some slight inconvenience may be caused to the sportsmen who visit Maine, "but we believe that they can readily accommodate themselves to the situation."

Early in the season that road issued the following circular, or was about to issue it, giving an abstract of the game laws, and mentioning the fact that landlocked salmon and trout are not to be transported, except in possession of the owner. The circular was addressed to agents and baggage masters and others interested, and reads:

Especial attention is called at this time then, as the opening of the fishing season, to Order No. 125, issued by the general manager Dec. 15, 1894, directing that fish and game offered for transportation must be referred to the express company, and inasmuch as the 25lbs. of trout or landlocked salmon must be in possession of owner, *i. e.* on the same train, as must also be the case with one bull moose, one caribou or two deer, and in the case of transportation of birds, etc., they must be open to view, tagged and plainly labeled with owner's name and accompanied by him, it would seem as though the freight department could not, except in rare cases, handle, and that reference must be had to the express company in nearly all cases.

The circular is peculiar or, the proof—the above is only a proof—as will readily be seen, and legal minds will doubt the right of the express company to handle the fish or game in question. If it is in the hands of an express company how can it be in possession of the owner at the same time? Prominent Boston sportsmen declare that they shall yet test the right of the "express company" to have anything to do with forwarding of fish or game in Maine, except as especially directed by the owner; indeed as to their right to forward it at all. It is asked: "If the express company can forward fish or game, who is to be responsible for the possession of the owner? Or, if they can forward it at all, what is to hinder their doing a general forwarding business for anybody who sees fit to hand the company game at any station in the game sections of the country, and who is to be reponsible for the owner's being on the same train?"

The Portland & Rumford Falls Railroad, though also having a contract with the American Express Co., is forwarding sportsmen's boxes of trout as baggage, and free of charge, as has already been mentioned in FOREST AND STREAM. The Boston & Maine Railroad has not declined to forward these packages of trout as baggage, and its officers say that they do not intend issuing any such orders. It seems to be the desire of the Portland & Rumford Falls road to make matters as pleasant as possible for sportsmen, and it may be mentioned here as already noted that the Rangeleys may be reached by that road in connection with the Boston & Maine, or Boston and Portland steamers. All the Colonial railways, so far as I have been able to learn, are willing to forward sportsmen's fish or game and outfits as baggage.

So far as the American Express Co. is concerned its position is not strange, but simply a matter of business. If fish and game are not forwarded as baggage, that company can reasonably expect to get the forwarding of it on roads with which it has contracts. But its position in regard to handling this fish or game after it reaches Boston is one that causes sportsmen a good deal of trouble. Generally these sportsmen reach Boston in the evening—about 9:30—and formerly, when their fish were forwarded as baggage, the packages could be obtained at once and taken home. The express company is in the habit of taking packages to its storehouse, if they are directed to points in the suburbs, and in the morning giving them to local express companies. In such cases sportsmen have not received their trout till late on the day after their arrival. Some very vigorous objections have been raised against this position of affairs, and even to the express company having the forwarding of fish and game under any conditions. One returning sportsman, I hear, has gone so far as to take his box of fish into the passenger car in his hand and to refuse to deliver it to the express company. He persisted in his right to the fish, and since the company would not forward it in the baggage car, he claimed the right to carry it in his hand. He was not deprived of this right. Sportsmen declare that the attitude of the express company is that of compelling them to have their trout forwarded. "Since there is no other way you are forced to give us the forwarding of your fish and game."

It is fortunate that this attempted monopoly of the forwarding of sportsmen's fish or game exists only on the Maine Central Railway, so far as I have been able to ascertain. The other routes that sportsmen from Boston or New York would naturally take to reach and return from the Maine and provincial hunting and fishing resorts have no contract with the American Express Co., so far as I have been able to learn.

The Grand Trunk Railway is disposed to be very liberal with sportsmen as to what that road will forward free in its baggage cars. I have the following from Mr. N. J. Grace, New England passenger agent, under date of May

Copy of extract of rules in regard to sportsmen:

Excess baggage tariff, clause 18: "For the accommodation of sportsmen, their outfit, consisting of wearing apparel, tents, canoes and skiffs (provided they are under 20ft. in length and can be handled conveniently in the baggage cars of regular trains), camp utensils, including also fish and game, catch of 50lbs. in weight, will be carried free to the extent of 200lbs. for each sportsman, whether traveling alone or with a party, between stations on the Atlantic district. One dog will be carried free between the same stations for each sportsman. An excess ticket must be issued, on which endorse 'Sportsman's Dog,' and the number of the passage ticket held by the passenger."

The Canadian Pacific Railroad also makes matters as easy as possible for sportsmen who travel over its lines. The following is extracted from its baggage regulations:

"200lbs. of baggage, consisting of wearing apparel and sportsmen's outfits, including tents, camp utensils, also including fish or game—catch of 50lbs. in weight—will be forwarded free to and from any C. P. stations in the territory as below, for each passenger carried, when ticketed to stations between Pembroke and Nepigon. Canoes and skiffs under 20ft. long can be included as a part of the sportsmen's outfits, at actual weight. All over 200lbs. in weight will be charged for according to ordinary excess baggage rates. One dog will be carried free for each sportsman, for which an excess baggage ticket must be issued, marked 'Sportsman's Dog,' etc., etc. Guns must not be carried in the passenger cars, except in wooden, leather or canvas cases; otherwise they will be conveyed as baggage at owner's risk."

The steamer lines running out of Boston in the directions taken by sportsmen are very polite and desirous of securing the patronage of the hunters and fishermen who go to Maine and the provinces. The Portland Steamship Co. will not only carry sportsmen's boxes and packages of trout, but they will put them in the refrigerators during the trip, if sportsmen will take the trouble to inform the proper officers as to the contents of their packages. This will be done free of charge. The International Steamboat Co., or St. John steamers, as they are familiarly called, will carry the sportsmen's fish and game free up to a reasonable extent. The officials are not willing that anybody should attempt to do a fresh fish business over their line free of charge; but the sportsman who brings home a box of trout of his own catching, or venison or game birds, can do so free of charge, and the officers of either of the steamers will put such fish or game into the coolers, free of charge, when desired to do so.

The Yarmouth Steamship Co., running from Boston to Halifax and Yarmouth, Nova Scotia, has the good will not only of sportsmen, but of bicyclists also. Sportsmen's fish or game will be forwarded free of charge up to any reasonable amount. Besides the forwarding, the Boston agent, Mr. J. F. Spinney, assures me that his steamboat people will willingly put either fish or game into the boat's refrigerators, if sportsmen will make their wishes known to the steward. For bicyclists special customs arrangements have been made, whereby the steamboat company is responsible to the Government for the deposit required on each bicycle. The same is also true of guns and rifles. Hence these deposits can be received and returned at the wharf.

I have several times called at the office of the American Express Company here, and at last found the general superintendent in. He admits the contract with the Maine Central; a contract as to express matter, fish or game not being mentioned. The length of time the contract is to run he does not state. In stating the case to him, as to trout arriving on evening trains, and that it was desired by sportsmen that they be allowed to take possession of the fish at the station, he said that he would at once issue an order that, where so specified on the way bill, sportsmen's boxes of fish might be delivered at the station. Hence it will now be only necessary for sportsmen to specify at the point of shipment that they desire to take their boxes of trout at the Union Station on its arrival in Boston, and they will be delivered by the officers of the company there. Superintendent Dwight suggested that such a proceeding was contrary to their methods of doing business, but that his company was desirous of pleasing its patrons as far as possible. He was also desirous that I should see General Superintendent Carr, who has charge of the division including the Maine Central Railway, but who was absent at the time.

SPECIAL.

Game Transportation by one Maine Road.

GEN. PASS. AGENT GEO. M. HOUGHTON, of the Bangor & Aroostook R R., writes to the *Railroad Gazette*, that the game shipped over his line in October, November and December, 1894, comprised:

From.	October.			November.			December.			Total.

He adds that he estimates that "the above is about 50 per cent. of the number killed during that period that was not shipped."

Ring-Necked Pheasants in Michigan.

L. C. SHELLEY, of Bancroft, Mich., has just received seven Mongolian pheasants which were shipped him from Shanghai, China, last March. Sixteen were shipped, but nine died on the journey.

E. M. S.

Game Laws in Brief.

THE *Game Laws in Brief*, new edition, now ready, June 27, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

CHICAGO AND THE WEST.

[*From our Staff Correspondent.*]

CHICAGO, Ill., June 26.—A couple of million or more of people saw and admired the American sculptures of American wild animals which mounted guard at the divers bridges of the lagoons at the World's Fair. These great and beautiful figures were among the accepted things which everybody loved and felt that he owned. All the world knows that the two sculptors who did these figures were Mr. Kemeys and Mr. Proctor. Perhaps some who saw the big bears down toward the Administration Building may have recognized them again in the bronze miniatures which their parent, Mr. Proctor, was good enough to place in the FOREST AND STREAM exhibit at the recent Sportsmen's Exposition in New York.

Mr. Proctor's studio is in New York, but Mr. Edward Kemeys, who did the great panther figure known as the "Still Hunt" at the west end of the bridge between the Manufactures and the Electricity buildings, established his studio in Chicago after the Fair, declining to go to London and become still more famous. "I love the West and its creatures," said he, "and at Chicago I shall be 1,000 miles nearer my hunting grounds than anywhere in America, and I will not leave America." So Chicago, which first heard of Mr. Kemeys years ago, when he was emerging from the wilderness of the Rockies after years of study among the Indian tribes and among the great game of the West, is to-day the chosen home of an artist whom she can never honor too much as one skilled in his art, and moreover thoroughly in touch with his theme. The one theme for Edward Kemeys is the wild life of the West. He has lived in it and loved it, and knows it as few have known. To-day there is melancholy in his eye as he talks of the fading of the West.

Mr. Kemeys came up to my office the other day, and later I went over to his studio (in the Monadnock block) and there had such a treat in bronze and clay and plaster as has not been possible since Mr. Kemeys came to Chicago with his grizzlies, his buffalo, his mountain sheep and panthers, and wolves and Indians, more than ten years ago. And now the numbers of all these have grown, so that one may have far rarer opportunities of seeing the wild animals and wild men of America done in such fashion as only a sculptor who loved them could command. On these, of course, one fell eagerly, and so we went to talking, and I forgot an engagement I had. To hear Mr. Kemeys tell how he killed his first grizzly is a liberal education. And there is among numbers of other trophies a great black bear skin, killed by Mrs. Kemeys—whom he declares to be a better hunter than he is himself. So among the trophies and the figures—what wonder if we talked. Most of all, of the glorious West of the past, of which Mr. Kemeys could talk books full of much better sort than we commonly see in print. So I told Mr. Kemeys of the land where I think I have discovered my big bear that has been lost, and maybe—who knows?—we are both some day going there after this bear, and will kill him, and measure him, and build him into pictures of bronze. All of which is at least good to dream about. And in a studio full of great and beautiful things, done by a man who follows his art because he loves it—as few men in these days dare say—it is for once in a way permitted to have dreams.

Got his Musk Ox.

I find a letter at hand which has in its corner "The Ranchmen's Club, Calgary." That sounds pretty good. All the way from the far British Northwest, and with some news in it, as is customary with its writer, Mr. Thos. Johnson. Mr. Johnson writes entertainingly of meeting Mr. Casper W. Whitney, of Harper & Bros., of New York, who has been in the far North for some months. He says Mr. Whitney had had an awful tough time of it, and on his arrival was "the wildest looking animal ever seen." Mr. Whitney had been plucky and successful, though, and had gone where he intended to go—to the Arctic barren grounds—and had killed six head of musk ox besides getting some photographs of that animal. The journey was one of the most extreme hardships, being made practically without fire, with the thermometer 40° below most of the time. Mr. Whitney was out fifty days from Ft. Resolution, twenty-four days on the true barren grounds. He got his musk ox heads back all right, reaching Ft. Resolution in April, since which time he has been coming back to civilization gradually. Of course, a lot of us will feel a little envious and jealous of Mr. Whitney, and be disposed to sniff at his trip, but the enterprise was genuine and not a fake, and the manhood necessary to carry it out is of a sort to deserve only hearty praise from the newspaper profession at least.

Snakes with Horns and with Feet.

I am prepared to shed some more light on the subject of snakes, which has been much obscured by science. I have no science, but I have snakes—or rather, some of my correspondents have snakes, or have seen them—and snakes are stubborn things. Mr. F. E. Whittemore, agent of the Texas & Pacific Railway, at Petty, Texas, writes me:

"I notice in FOREST AND STREAM of June 8 something in regard to the 'horned' tail snake. I have just returned from a visit to my father, in the Chickasaw Nation, Indian Territory, and while there one of my brothers told me of killing a horned-tail snake, and he gave me a description of the snake, which he had killed three or four days previous, and he piloted me to the spot in the hope that we might find the horn, as I wanted it to send to FOREST AND STREAM. We found the battle ground with the weapons used (which were a couple of dead limbs), also the signs of the combat, the weeds and grass which were broken, remaining intact; but we could find no part of the snake, and came to the conclusion that some scavenger bird had appropriated his snakeship.

"I will give you a short description of the encounter as he gave it to me: Two of my brothers were going through a strip of timber, when one of them, by some unknown power, became conscious that danger was at hand, and on looking before him he saw the snake about 2ft. from him. The snake became alarmed and commenced to 'strike' in all directions with its tail (much the same as other snakes strike with the head). They retreated and procured some clubs and struck the snake, when he became more violent; but after half a dozen well-directed blows he seemed to 'sull' like the possum, and tried to go in the ground, but they despatched him. They examined his horn, which was about 2½in. in length and was very keen at the point. The snake was about 2ft, or

perhaps 2½ft. long, about 1in. in diameter, the head small and very blunt, body striped (light and dark), horn light colored, with the point merging into a brown color and black for ¼in. at the extreme point.

"I would like to know through FOREST AND STREAM what kind of a snake it was. I can vouch for the correctness of this, and was told that such a snake had never been seen in that part of the country before.

"Quail are very plenty there, the season is favorable to nesting and there will be a large crop of young this year. The song birds of all varieties common to this section are unusually plenty this year. I hope to have your opinion on the above snake."

I am of the opinion that the evidence in favor of the horn snake is too overwhelming to be denied. (The editor of the Natural History department of FOREST AND STREAM admits the existence of the "horn snake," but does not think it can split a wagon tongue by striking it with its "stinger.") If the above evidence, added to that which I got from Dr. Taylor, Mr. Miles and others, of Brownsville, Tenn., be not sufficient, the following letter from Mr. W. H. Wilson, of the Pennsylvania Railroad Co. at Barree station, may serve as a further drop in the bucket. Mr. Wilson writes:

"In 1873, while with an engineer corps in Susquehanna county, seven miles north of Carbondale, Pa., we killed a gray and dark spotted snake about 8ft. in length, and were all surprised to find its tail terminated in a spur ¾in. in length, not very sharp, but hard and smooth. Sorry I had not then the interest in the matter that FOREST AND STREAM has since created.

"Some years ago I shot the head off a large black snake that was coiled on a large oak limb twenty or more feet from the ground. I hung it up by the neck, and passing it an hour later found it quite dead and its muscles relaxed. At intervals along its belly either two or three sets of small curved spurs were hanging from beneath its scales. These folded neatly under the lap of the scales, points toward each other, and being so concealed are seldom seen. I imagine any snake that can climb would show them if killed and suspended as above."

Here again we fall upon mystery. Yet that snakes have legs appears to be the next proposition susceptible of proof. It may be remembered that I mentioned the specimen of "blue racer" snake showing two "feet," sent me by Dr. Taylor, of Brownsville, Tenn. This specimen I sent in to the Natural History department of FOREST AND STREAM, where it has proved a serious puzzle, though it is thought the projections are not really feet, but possibly certain organs not connected with locomotion. But how about the feet on Mr. Wilson's black snake? Has anyone else any help on this? I want a full specimen of the "horn snake," also of any snake that has legs or feet. If I can get hold of actual specimens of this sort, I shall be prepared to do business with these scientific folk who don't believe a horn snake can kill a tree with its stinger. Of course it can. If not, what has it got the stinger for?

Fantail Horns.

Moreover, I am so close on the trail of the "fantail deer" that I can see its horns. Mr. Phillips ("El Comancho") writes me:

"Write to Mrs. E. Jose Ansley at Westville, Ind. Mention my name and tell her to send you that pair of fantail deer horns that I was going to bring to Chicago. She will let you have them for examination and to photograph if you wish. Take care of them and return them when you get through, as she prizes them as part of a collection. They came from Belle Fouche river, Wyoming."

Of course they are fantail horns, and of course there are fantail deer. I want a whole fantail deer, too. When I get this and all my snakes in line I shall make plenty of trouble with science. I believe in William Tell, me!

Destructive Fishing.

Mr. Norman Fletcher, writing from Kalamazoo, Mich., sends a clipping from the Minneapolis *Journal*, which reads: "A large delegation of Aberdeenites has just returned from Big Stone Lake, where they have spent several days fishing. They tell some pretty big stories, but since the gentlemen are representative business men and have brought home their catch, there is no occasion to doubt the veracity of their statements. The party consisted of Messrs. F. W. Brooks, H. H. Sabin, S. M. Salisbury and W. F. Hall. In four hours one day they caught 124 pike and bass, and on the following day, reinforced by two more gentlemen, on the same ground, they caught 511 fish, weighing 1,000 pounds, and caught them all with a spoon hook, trolling. The catch has been photographed by an Ortonville artist, and will be used in a pamphlet to advertise this lake as the fishing pond of the West."

In regard to this Mr. Fletcher justly says some severe things, with which any real angler must cheerfully agree. There is no sport in such butchery. In regard to it Mr. Fletcher says:

"When I see such reports I think that the sooner all game fish are exterminated in the United States the better. I am fond of fishing, and have had experience from southern Florida to northern Michigan. Wherever I go, however, I find people who seem desirous of killing everything that swims, and think it a big thing to show a large string of fish, even if caught in a net or by a guide. And these people think they are sportsmen. The idea of six grown men, who are reported to be 'representative business men, going out on a lake and killing fish to the extent of 511 in one day—truly the fish hogs are at large in Minnesota! Are these persons of average intelligence and do they consider their performance sport?

"The laws here in Michigan are very badly enforced. I was out on Gull Lake (about thirteen miles from here) last week and caught a few small-mouth bass. I caught one of 3½lbs. with a spear wound on his back. I made some inquiries and found that the natives speared the bass when on their spawning beds in the spring. It was reported to me that as many as twenty boats had been seen out on this lake this spring spearing bass at night. Gull Lake is the natural home of the small-mouth bass, having a good deal of sandy and pebbly bottom. The lake is about seven miles long and quite wide. With proper protection this would be a fine lake for bass in a few years. If the spearing continues for a few years more there will probably be few, if any, bass found in this lake."

Not a Brook Trout.

Mr. A. N. Cheney in his interesting notes recently had the following: "There was an exhibit at the Exposition which interested me, as it was a mounted trout said to have been a native brook trout, and its weight was given at 13½lbs. I had no opportunity to examine the mounted fish, but I would be glad to know where the fish was caught, who caught it, etc., if any of the readers of FOREST AND STREAM can furnish the information."

This trout was shown in the exhibit of another paper, and was labeled "brook trout." This was not a brook trout. It is the same fish which was displayed at the FOREST AND STREAM exhibit at the World's Fair. It was there pronounced by Dr. Henshall to be a Dolly Varden. Mr. G. W. LaRue, who owns the specimen, insists it is a genuine brook trout. As the fish was caught in western Montana the chances are rather against that. The fish was mounted for a brook trout. In life it was not such, but *de mortuis nil nisi bonum*. It is not the fate of all Dolly Vardens to be thus translated into a higher sphere in re-incarnation.

The Diving of Pelicans.

Mr. John Bludworth, of Rockport, Tex., writes me to correct a statement about the diving of the white pelican, which I had indirectly alleged. He says:

"I think you are mistaken about the white pelican diving (May 18), as is Mr. Bell, writing from Florida (April 27). They do not feed that way, as the gray ones do. I have often watched them in the early morning or late in the evening forming a line across the mouth of some small bayou or inlet and gradually closing up (as fishermen would with a short seine) they snap up the fish as they try to escape. They may dive from a height in Florida, but they do not here, and they are here by thousands in winter.

"Tarpon are very plentiful here this season; the cold weather did not seem to effect them any. A good many have been caught at the Pass, and I have seen lots of them here in the channel, but have not fished for them any."

"Forest and Stream" Emigration Bureau.

FOREST AND STREAM should establish a Texas emigration bureau. After I came back from my trip South last winter I sent five different parties to the gulf coast of Texas for sporting purposes. This spring I heard of a lawyer of Atchison, Kan., who has moved from his old home and located in San Antonio on the strength of the FOREST AND STREAM story. At Cleveland, last week, Mr. W. B. Higby, of that city, told me that he intended moving from Cleveland and making San Antonio his permanent home and place of business. He said that the "Sunny South" story of San Antonio was the only argument impelling him thereto. I hate to depopulate the North, but really must keep on going South and writing about it if I have luck. Of one thing be sure, people in the North don't know how to live.

Texas Cat.

Very beautiful are the little spotted "leopard cat" (ocelot) skins which one sometimes sees in Texas, and no American fur is more ornamental, though good specimens are rarely seen, as the Southern hunters are so careless in taking off the skins. Last winter we killed one of these little creatures, but it was only 3ft. long—full grown, as we then supposed. Much to my surprise and delight this week I received from an unknown friend (Mr. T. H. Glover, of San Marcos, Texas) a perfect and extremely large specimen of this "leopard cat" skin. It measures 4ft. 1in., and has not a blemish. I did not know this animal ever grew so large, but here is the skin to prove it. It is a beautiful and much prized ornament in the FOREST AND STREAM Western office. Great cats and mighty fine men grow in Texas. I don't know how Mr. Glover happened to hit thus on my natural passion for furs, which have always been a delight to me ever since I can remember.

Travelers.

Prof. Edmund Orthans, of Toledo, O., the celebrated painter of field scenes and animal portraits, is in Chicago this week with some paintings which are on exhibit at the leading art store of the city.

Mr. H. B. Jewell, Mayor of Wabasha, Minn., a sportsman of the good sort and an old-time reader of FOREST AND STREAM, was East as far as Cleveland last week. He says the fishing is fine in Lake Pepin. It sounds odd to hear a Minnesota man talk of having to go 500 miles further West for his duck-shooting, but there is your story of the game of America. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Protz-Trotz-Froschbauer.

TWELVE years ago a wealthy peasant farmer was caught poaching on the forest preserves of Baron Rothschild, near Froschausen, which is not far from Frankfort-on-the-Main, in Hesse-Darmstadt, Germany. The head forester, whose name is Schlange, came upon him one day just as he was kniting a deer he had shot. The peasant sprang upon the keeper and plunged his knife into him. That peasant committed suicide last night, in a miserable room under the slant of the roof of No. 180 Second Street. His name was Adam Buser; he was sixty-eight years old and has a large family of married sons and daughters in Germany.

The case was reported as "just a bum suicide," meaning it was the end of a wretched person and contained no "story." But a countryman of *der alte Adam*, as the dead man was called in the neighborhood, gave the particulars of his friend's life already mentioned, besides others, showing the man to have been a type of the German peasant.

Adam Buser divided with his brothers the inheritance of a fat farm and its accumulated products of generations of cultivation. Adam was the older son and got the larger part, so that he was heir by general consent to the title *Froschbauer*, composed by the other peasants out of the first syllable of the name of the place, Froschauer, and the word for peasant, *Bauer*. He was not popular, however; he was ignorant, shrewd, purse-proud, and quarrelsome. Even when he married he did not settle down. He loved sport and preferred to poach, though he could have got permission to hunt in the neighboring forests or to pay for his pleasure. The knowledge that Schlange, the Baron's head-forester, was hunting him, while he hunted the rich city man's game, increased Adam's delight in the chase. He boasted over the beer-board that he would shoot Schlange if the forester caught him, and would then buy the family off. The villagers applauded the promise of a fight, but they despised the braggart and his money and gave him another title, *Protzauer*, or purse-proud peasant.

When the meeting did occur in the woods and Schlange was stabbed, not shot, Buser did offer to settle. He made two offers with assurance in the power of money, his friend here said, and he was pretty nearly right. Schlange, who recovered from his wound, listened to the overtures, but he asked so much that another weakness of the *Froschbauer* came into play. Adam offered 2,000 marks, Schlange wanted 5,000 marks; then the peasant raised his bid to 3,000 marks, and the forester came down to 4,000. There they stuck. The *Protzbauer* won another title by his obstinate meanness; his neighbors called him the *Trotzbauer*, the stubborn peasant.

The *Protz-Trotz-Froschbauer* had to run away. He made arrangements with his family to send him means and hurried away to America. Here he lived on the east side, leading an idle life and developing his original bad temper, and sustaining the reputation he brought from Froschauer. He made a few acquaintances among peasants from his part of the country, but they could not become his friends because of his disposition to quarrel. So he drank beer in silence and gloom, till age and weakness laid him open to disease. He was ill with many complaints, but he had brought with him his old prejudice against the *Spittal*, and refused to go to the hospital. Among his papers was a greasy order from Dr. Einhorn for his reception at the German Hospital. He had never used it. Moreover, he had complained that remittances from home had not come regularly of late. So in this year, when his time was out, his liability for the crime of stabbing the forester outlawed, he killed himself. He was seen last night. This morning he was found hanging by a strap to a clothes-hook in his dirty, dark and miserable room, and the neighbors told one another that the *Froschbauer* was dead (*todt*).—*New York Evening Post, June 21.*

About Spring Shooting.

Editor Forest and Stream:

I WAS glad to see your exposure of the "Great Duck Egg Fake" in the FOREST AND STREAM. When the infernal practice of spring shooting is put an end to we shall not need such Münchausenisms to account for the scarcity of wildfowl; and the selfish game hogs, who say that if they do not shoot in the spring they could not shoot at all, may be reminded that there is no law which compels them either to burn gunpowder or commit murder, for such it is, and that there are thousands of thorough sportsmen who feel it no deprivation to be entirely deprived of spring shooting by the absence of birds, and who are willing to take such chances as they can get in the fall, and those very slim ones. The slaughter of ducks and geese is by no means one of the necessaries of life. VON W.

Sea and River Fishing.

TROUT IN A CATSKILL LAKE.

NEW YORK, June 25.—*Editor Forest and Stream:* Most of the records of successful expeditions after trout seem to emanate from those only who have had the opportunity of visiting the wilds of Maine, the north shore of Superior, the Rocky Mountains, the streams of Canada, and such places as these, which may be visited by those who have time and money in abundance at their disposal; give us the assurance that there still remain in favored spots numbers of our earliest love, the brook trout.

Ten years ago I remember catching as many trout as I could wish, and as often as I wished, near the foot of Mt. Marcy, in northern New York State, but for six years since that time I have been living in Western Texas, and confining my fishing to the capture of the Oswego bass and channel catfish—not that these fish are to be looked down on, for they give a man plenty of work in landing them with light tackle. Still very often while lying in camp at night on the plains, the thought would come to mind that I should feel very happy in hearing again the rush of a mountain stream and having the opportunity of dealing again with my friend the trout.

In the spring of '93 and again in '94, after returning to New York city, I spent the few days at my disposal for such purposes in trips to northern New Jersey and Pennsylvania after my favorite fish, and although I always caught a few fish, I cannot say much for their size, or the excitement of landing them.

Of course, I enjoy fishing a trout stream, whether or not I catch fish, for the scenery and exercise repay one for his trip, to say nothing of the expectation, as you cast your flies just at the head of a deep, shaded, inviting pool, that some unwary denizen of the brook may yet respond.

I had begun to think by this spring that perhaps I had best save my days of vacation until I could afford the time to go away for several weeks and try the North Shore or some such locality; and I had about decided to give up my usual June outing, when on the 16th of this month a friend said to me: "Father and I have been invited to visit a preserve in the Catskills and catch all the trout we desire; will you go?" On the 3 P. M. train of the West Shore R. R. of the 17th inst. might have been seen Mr. T., a gentleman between sixty-five and seventy years; K., his son, and myself. We passed the night at Kingston, and the 7 A. M. train on the Ulster & Delaware R. R. took us through a beautiful valley and over the mountains forty-eight miles west by 10:30 A. M., where we were met at the station by the manager of the estate we were to visit with a wagonette and fine team of grays. After a ten-mile drive over the hills we reached our destination in time for dinner.

Imagine a small lake of about thirty acres, surrounded on all sides, excepting the southwest, by hills of 500 to 600ft. rising directly from the shores and densely wooded. On the southwest a slight elevation, partially cleared, on which stood a two-and-a-half story house of 100ft. front, with a 20ft. verandah almost encircling it and a lawn of 300ft. stretching down to the lake, and you have our surroundings. The lake is about 2,000ft. above the sea level, I should think, but in the middle of the day we felt the heat, and so waited until 4 P. M., when K. and I took a canoe from the boat house, and jointing our rods started around the shores.

For two hours we whipped the waters by turns, one

paddling and the other fishing, but caught only about fifteen trout, running a trifle less than 10in. in length, and then we returned to the house for supper. Just before dusk we were out again fishing with white-miller and red-ibis; and as darkness came on the surface of the lake was fairly covered with leaping trout. We fished with three flies and often caught two trout at a cast. They all ran about the same size—10in. We threw back into the lake of course a great many trout, as we had no use for them.

At 4 A. M. the next morning K. and I were again on the lake, but the trout would not rise. After breakfast we took Mr. T. out on the lake and gave him some instructions as to casting a fly. He caught one trout and was well pleased, as he had never before had that pleasure.

During the morning an elk came down from the hills to stand in the lake for coolness and relief from the flies, and K. and myself paddled to within 30 yards of him before he would move away. We had the same experience later in the morning with two Virginia deer, one yearling and one two-year-old buck.

The bucks, however, when they did start, ran much faster and further than the elk, which did not seem particularly anxious to escape from our vicinity.

In the afternoon K. and I walked about three-quarters of a mile across the hills to a trout stream, and brought back from an hour's fishing 34 good trout to take home with us in the morning, and I suppose we threw back into the stream 40 more trout.

Before going on the lake that evening we secured a box of wire netting, with a wooden lid. This we dragged in the water behind the boat and placed in it such trout as we desired to take with us. We fished that night until 9:20 P. M., when the trout stopped rising and retired to bed I presume, as we did shortly after. Five o'clock the following morning found us packing up. We took our 34 trout from the ice box, and enough from the box in the locker to make up 90, which we packed in grass. After breakfast and a pleasant ten-mile drive, we took the 9 A. M. train on the Ulster and Delaware, and arrived in New York city at 3 P. M., well satisfied with our trip. I cannot say that I did not enjoy myself fully, nor catch enough trout, but I find that I shall visit the Pacific slope on business this summer, and I confess that I am planning a little fishing out there, where I can camp out in the mountains and feel at home again.

H. L. BURDICK.

DR. EDWARD SPALDING.

CHARLESTOWN, N. H., June 25.—*Editor Forest and Stream:* Yesterday's mail brought me the sad tidings of the death of an old and dear friend, Dr. Edward Spalding, of Nashua, N. H. Dr. S. was a veteran member of the Anglers' Guild, being in his eighty-second year, and died on his annual fishing excursion to Parmachene Lake and the Megalloway, from which he had expected to return to-morrow.

Dr. Spalding was not only an enthusiastic angler, but had been a prominent feature in the business life of the State for many years. A graduate of Dartmouth College, he was one of the Board of Trustees, he had been a member of the State Senate and the Governor's Council. Educated as a physician, he had given up practice to devote himself to business, and was identified with the banking interests of his city, as well as president of the boards of directors of both the large manufacturing companies there.

He aided me in revising the fish and game laws of the State in 1878, and succeeded me as chairman of the Fish and Game Commission in 1881, but soon gave it up to a younger man.

A strong churchman, he was prominent in all religious and educational work, and his life was marked by his good words and deeds.

Yet with all this active life, he never allowed himself to be "chained to business," but regularly took his June and September outings to the Megalloway and Dear Diamond region.

And now among his much-loved streams he has made the final passage, and crossed the dark river from whose shores no voyager returns. SAM'L WEBBER.

NASHUA, N. H., June 25.—*Editor Forest and Stream:* I send you the Nashua *Telegraph*, June 24, and Manchester *Union*, June 25, containing an account of the death of Mr. Edward Spalding, of this city, who died at Megalloway Meadows, June 22. While the articles contain a fair account of his life and work, they but feebly state the universal respect and esteem in which the Doctor was held, not only in this community, but by all those with whom he came in contact. Especially was this the case with the guides and residents in the Rangeley and Parmachene regions, where he had passed at least one month each season for more than forty years. Long after he had retired from active practice here he found plenty to do in the woods each year, it being the current opinion of his friends that all the broken legs and arms, as well as events of a strictly domestic nature, were sacredly kept for the Doctor's annual visit, and no one else was allowed to touch them—if he was expected within six months. His sympathies were broad, and no sacrifice of personal comfort was too great for him cheerfully to render aid to all in distress, whether personally known to him or not. His large means and high education were at the command of any one in need. He was, in short, the highest type of a true sportsman I ever knew or ever expect to know.

The continued freedom from serious ills and the unclouded intellect for 82 years must be largely attributed to his love for the woods and the frequent opportunities he had for long stays in the Maine woods. While he enjoyed all field sports, trout fishing was his hobby, and that at a time when a man who "went afishin'" was regarded with suspicion, or was until he made the retort, "Well, Dr. Spalding goes too;" that always settled the right or wrong of the question.

P. S.—He was, I believe, a subscriber to FOREST AND STREAM from the first number. W. H. BEASOM.

The *Union* correspondent gives these particulars of Dr. Spalding's death: "Three weeks ago to-morrow morning he left his home in this city to go on his annual fishing vacation, in company with Mr. Van Wagenen and his wife, a member of the Lake Parmachene Club; they were also accompanied by a guest of the club, Mr. Van Woert, of Morristown, N. J. Dr. Spalding joined the party at the Concord station on June 11, and together they went to Camp Cariboux in Oxford county, Maine, which is the last Maine camp of the club mentioned, and is at the lake. On the journey out Dr. Spalding stood the travel well and appeared in the best of spirits, and the entire party arrived at this point in the wilderness in apparent perfect health. He with his guide and members of the party started homeward on Thursday morning, intending to stop over at the camp in the meadows on the Megalloway River until to-day, and pass the time in fishing with the guests of the club in that vicinity. The party arrived at the camp, which is sixteen miles below Cariboux, all right Thursday night; his friend, Van Wagenen, seeing the party off all right over the four miles, at which time he bade the Doctor good by, and all were in the best of spirits. They arrived at the meadows on Thursday night. Friday Mr. Van Woert and party left on a fishing tour to Lincoln Pond, Dr. Spalding remaining to enjoy himself at the camp and fishing in that vicinity. He was about as usual, and at night retired after a fine day's sport. Later the guests returned from Lincoln Pond, and no one for a moment realized that the death angel was hovering about the camp in the stillness of the depths of the forest, to claim one of the party before the sun should rise again. The first indication of trouble was Saturday morning, between 3 and 4 o'clock, when Dr. Spalding called for help, and his friend immediately called his guide, who went to his assistance. The Doctor was conscious, and was lying on his bed. He asked for assistance to change his clothing, and also made a request for a drink of medicine. He then apparently gradually sunk away, and in fifteen minutes was dead, without the utterance of another word. The men who work about the camp as helpers were aroused and sent out to notify the friends at Cariboux, and Mr. Van Woert immediately started for a telegraph station at Colebrook, which point he reached Saturday night in season to send word to Nashua.

"The guide arranged the body and took it down the river sixteen miles in the club's steamboat, then a distance of forty miles in a carriage to Colebrook, arriving at 11 o'clock in the night, when the remains were placed in charge of the undertaker. The medical examination showed that Dr. Spalding died from cerebral apoplexy.

"The guide, Robert Storey, in conversation with the *Union* man, was visibly affected at the loss of his friend, and stated that he never saw the Doctor in apparently better spirits than that Friday before his death and the evening he went to his room and retired for his last night in the camp, where he so thoroughly enjoyed an occasional visit."

NOTES FROM FISHING WATERS.

PARLIN POND, Me., June 26.—Seeing one of your blue signs tacked on the hotel here, I thought that perhaps your readers would like to know of a catch of trout which ex-Senator and Mrs. A. P. Williams, of San Francisco, Cal., took from the pond here Monday morning. One of the fish weighed 3¾lbs., one 2lbs., two 1¾lbs., and one 1¼lbs. There were also twenty-five of ordinary size. This is the favorite resort of Mr. and Mrs. Williams for fly fishing, and here they have spent their summers for many years. EARLE MURPHY.

CANTON, N. Y., June 29.—Canton does not advertise as a fishing resort. Nevertheless the local fisherman is now and then well rewarded for his labor. So thought Homer Womack and Frank Healy last night when they landed a 24lbs. muskallonge. The fish measured 44¼in. in length, and was a beauty. It was caught at the mouth of a small tributary to the main river half a mile above the village by still fishing, the bait being a 1lb. mullet. When hooked it made several leaps clear from the water. J. H. R.

THREE LAKES, Wis., June 25.—Messrs. H. V. Vogel and F. R. French caught last week 9 maskallonge, largest 28lbs.; 92 pike, largest 9lbs.; 70 bass, largest 4½lbs.; 172 pickerel. The prospects look good for next week. H. V. VOGEL.

Some Lake St. John ouananiche scores: L. C. Flint, A. D. Norcross, F. G. Nelson, 79 weighing 119lbs., largest 3¼lbs. June 19 to 26, A. W. Hooper 171, weighing 256lbs., largest 3¾lbs. June 19 to June 26, E. B. Mayo, 152 weighing 225lbs., largest 3¼lbs. June 26, M. D. Rothschild, 45 weighing 60lbs., largest 3½lbs. June 26, M. D. Tyson, 80 weighing 150lbs., largest 3lbs. June 26 (3 days), E. C. Quiggle, 59 weighing 100lbs., largest 3¼lbs. June 25–26, J. E. Nichols, 56, largest 3¼lbs. June 27 (2 days), H. D. Hotchkiss, 39 weighing 63lbs., largest 3lbs.

Babies and Fish Protection.

PORT HURON, Mich., June 20.—At the last meeting of the Anglers' Protective Club the following officers were elected: President, Henry N. Botsford; Secretary, Chas. Weichsler; Executive Committee: Fred D. Sanborn, J. B. McGregor and Alex. R. Avery. It was the largest and most enthusiastic meeting the club has ever held. The reports of the executive committee, giving in detail the work done by them during the past year, was submitted, and it was the unanimous opinion of all the members that the work had been most judiciously done. The club purposes to have several fishing tournaments during the coming summer, which are looked forward to with a good deal of pleasure. Bait and fly-casting contests will also be held. As the action of the past Legislature was adverse to the interests of sportsmen, the club has decided to take aggressive steps toward the enforcement of the fish laws. Arthur McDonald, son of Ambrose McDonald, was last night elected mascotte of the club. His age is 1½ years and his weight 22lbs. "Look out for him," says the *Times* of this city, "for he's likely to take after his dad."

Bass at Swartswood Lake.

BERGEN POINT, N. J., June 20th.—I have just returned from a week's fishing in Swartswood Lake, New Jersey, and met with very good luck. I have been staying at Emmaus Grove and found everything as well and comfortable as of old. I enclose a picture of three bass and two pickerel, the five largest fish I caught last week, and as you can see, they were all of very large size. The weight of the bass were 3½, 3 and 2¾lbs., the pickerel 2¾ and 3lbs. I used live bait shiners. I also caught two good size bass with the fly. Some other angler may like to try Swartswood, which is a mighty good place for fishing and not a great many fish there. P. M.

An Angler's Tribute.

NORWICH, Conn., June 28.—*Editor Forest and Stream:* Your correspondent, E. M. Brown, of Preston, who has written many pleasing sketches for your very interesting paper, was killed by the cars here on the 19th inst., while in pursuance of his duties as conductor on the N. & W. R. R. He leaves a wife and four children, the youngest five years of age.

Of him as a man I can say that he was upright and honorable, a devoted husband and loving father, universally loved by all that knew him, enjoying the full confidence of his employers.

As a sportsman he was my ideal; whether it was the breech-loader or the rod, he was ever the same, always considerate with his friends, the personification of generosity, and a day spent in his company was sure to be fraught with pleasure. His quotations of the Gentle Izaak (of whom he was a worthy successor), and little anecdotes of his own childhood and happy days spent in the woods and along the rippling streams, added to the delights of the outing. He knew the names of all the wild flowers and birds, and would discourse at length on their beauties or peculiarities.

It was the height of his ambition to some time visit the Rangeleys, but never to be realized; for, like many other lovers of the gentle art, he was so unfortunate as to be poor and dependent on his daily earnings for sustenance. Two years ago he had by self-denial and the aid of a loving wife saved up enough to take a two weeks' trip in that region with myself and two friends; but a sudden and fearful sickness compelled him to stay behind. Yet ever patient and expectant he looked forward to the time when he might satisfy his longing.

I knew him at work, for in my capacity as engineer I was daily thrown into his company, and neither of us would accept a day's outing if the other was unable to get away. I have lost my chum. I loved him as a brother, and time can never obliterate from my mind the happy hours spent in his company.

Brother sportsman, if you could have stood by my side and looked down on that poor crushed form (with a smile still on his lips, for he was laughing when death overtook him), your comrade, I think you would have joined me and wept.

I have placed my rods high on the rack, and the dust will be thick on them before I can again take heart to follow the stream; for every ripple, every fall, will sing to me of one that is gone, and there will be no pleasure in it for me. F. D. PALMER.

Braddock's Bay and Thereabouts.

"I have paid close attention to the river this season," said Constable Marshall to a Rochester (N. Y.) *Herald* reporter, "and I am glad to say that the violators of the law are getting tired of their vocation as fishermen. Last season I was comparatively alone in seizures and arrests on the river, but since Game Protector Brooks has taken an interest in that neighborhood and made several seizures and arrests, the poachers are getting quite shy. When I began patroling the river last season it was a common occurrence for me to seize from three to five and as high as seven devices on one trip, but now it is not unusual to make a long trip and find not a single net.

"As I rowed back to Charlotte yesterday I saw quite a number of men and boys fishing along the river with hook and line. Several of them with whom I had conversation said they were having excellent luck and said that they were glad nets were being kept out of the water. I have been surprised at the quantity and quality of fish I have found in the fyke and gill nets in the river this year. Next to Braddock's Bay, the fishing in the river is the best to be found around here.

"At Braddock's Bay the fishing is splendid. Nearly every man who has gone still fishing or whipping has captured a fine string. Perch and bass fishing has never been as good in my recollection as it is at present off the pier at Manitou. The other morning I met a man from McCrackenville who was whipping in the bay. He said he had landed thirteen noble pickerel that morning and that he had been catching from eight to ten every morning for a week. Manitou is a great place to enjoy a good day's sport with rod and line. I am pleased to say I have been rewarded to a certain extent for my labor for the past two years in keeping the waters of Braddock's Bay and Salmon Creek free of nets, of which I have seized and destroyed over 125 fyke and gill nets. Devices of any kind are hard to find in any of those waters at present."

Promising Youngsters.

SEBEC, Maine.—Master Eugene Wyman, a thirteen-year-old boy, fishing with a 7oz. rod, hooked a fish, and after being fast some time said his arm ached. But his father, P. H. Wyman, of Sebec, told him to stay by the fish, that it was a large one, and was his to save or lose. Gene "was there," and after a long and hard fight brought the fish to net, and was the proud owner of a landlocked salmon weighing 6lbs. 14oz. Mr. Wyman has mounted the fish and Gene will have it in some conspicuous place when he has a home of his own.

The same day Master Eddie, brother of Gene, age seven years, landed with a light rod two good salmon weighing 2lbs. or better each. The party took nine fish in all for the day.

On another day, in the same waters, a party with me took eight good salmon before 9 A.M., the smallest of the eight weighing over 2lbs. These fish were taken to Waterville and were seen by many sportsmen at Newport Junction. FRANK A. JORDAN.

Shad taken with Minnows.

HAMPTON, N. H., June 23.—While waiting for a dense fog to clear away in Hampton River to-day, Charles F. Peel and Charles E. Foy, two expert fishermen of Boston, made a most remarkable catch of nineteen adult shad. An occurrence of this sort is seldom recorded. The shad were captured with a hook, with live minnows for bait, on sixty feet of line. The shad is a fish that is not caught with a hook, but by nets, as their mouths are not formed for grabbing a bait, as other game fish. Their action is described by the captors as that of a bass, which is invariably full of fight and tricks when hooked.

Texas Tarpon.

A Ropesville, Texas, correspondent writes that tarpon fishing has been excellent there, some fifty odd having been landed to the date of his letter.

NEW ENGLAND FISHING NEWS.

BOSTON, Mass., June 29.—W. A. Macleod and Charles F. Randall, two of Boston's prominent lawyers, have just returned from a fishing trip to the Northwest Miramichi. At Fredericton they were joined by J. Henry Phair, commissioner of fisheries for that province; James S. Neil, F. B Edgecombe and Rev. Henry Montgomery. Sea trout fishing was the main object, and they were very successful, the fish abundant and of large size. Mr. Macleod captured an 11lb. salmon, and Mr. Edgecombe a ten pounder. The party camped for ten days at Brown's place on the Sevogle, a branch of the Northwest Miramichi. Their best fishing was had at Big Hole, a pool situated a little below where the Sevogle empties into the river, and at Exbow on the Southwest Miramichi, nearly down to the junction of the two branches with the main stream. The Sevogle country is described as picturesque beyond description. Mr. Macleod and Mr. Randall, with Jim Maddock and Sandy Johnson as guides in charge of their pirogue, went up to the square forks of the Sevogle, one of the beauty spots of the region. The canoeing on this trip was exciting enough to please any enthusiast, but the party found that they were ahead of the fish, and did not get a large catch on these upper waters. On returning to Fredericton Messrs. Macleod and Randall crossed over to Nova Scotia and visited the Gold River country. A large interest in this stream has been purchased by Mr. Macleod, and from the Cumberland pool down very good fishing can be enjoyed. Beginning in April and lasting through May and June, salmon are caught. The sea trout fishing begins early in June, and grilse enter the river about June 15. The stream takes its name from the mines in that locality, and with a fair degree of protection, which the Government ought to furnish, but at present does not, would be again, as it once was, one of the finest of Nova Scotia's salmon rivers.

Mr. G. N. Talbot, his two sons and Mr. Olmstead, all of Boston, and Mr. Currier, of Lynn, leave on July 1 to fish the Barnes pools on the Grand Cascapedia. July is not so good a month as June to fish this stream, but good enough to repay the angler, and there is always sport with sea trout.

Mr. C. D. Boss, Jr., of New London, leaves July 1 to try the salmon. He goes to fish the Adams pools on the rough waters of the Nepissiguit.

Wm. P. Church, of Malden, and Jas. C. Gibbs, of New York, at Belgrade took 230 bass in one and one-half days' fishing with the fly, and returned nearly all to the water. The Glezen party, of Providence, just returned from the same place, also had great luck. Mr. Glezen was high line among all the fishermen present during his visit, and took bass almost beyond count. His style of fishing was much admired, and contributed largely to his success. His largest fish were taken on the St. Patrick fly, and he handled them all to perfection. He is a fine sportsman and has a record for tarpon fishing in Florida waters to be envied.

The former custom prevailing at Belgrade of shipping the bass to city markets is now stopped by the application of the new Maine fish laws in Kennebec and Somerset counties, which absolutely prohibits the sale of white perch and black bass under a penalty of $10 for each fish. This will do much to bring these ponds back to their former prosperous condition. Simply tons of bass have been shipped during the last three or four years, and it is a wonder that any fish are left. I understand that a Boston man who captured a 6lb. salmon and shipped it out to the city was heavily fined for the offense. In his case it was probably an innocent transgression, but to escape penalties in Maine this year as regards fish and game one must live pretty close to the letter of the law. The excuse of "not knowing" will not pass, and is sure to lead into trouble. The old system of fines had no terrors for many men who could not resist temptation; but the penalty of imprisonment, which is now attached in some cases, sets them to thinking.

Chas. G. Haley and A. Carroll Briggs, of Boston, have been down to the Commodore Club, near Hartland, Me. They fished in Moose Pond for black bass, which run to 3 and 3½lbs., and are taken best with the fly. Pickerel and very large perch are frequently caught, and the perch are said to be quite gamy. There is fair trout fishing in the brooks near by. It is the intention of the club to put 12,000 salmon in the pond this fall. Moose Pond is a beautiful sheet of water, divided in the center by narrows, each part five or six miles long. The bottom is sandy and the water very clear. The club have a large number of good boats and a fine steam launch for the accommodation of members. An elegant club house graces the shore of the lake, containing everything to increase the enjoyment and add to the comfort of members. There are 240 names on the roll, mostly Boston men. The club is about ten years old, and the first signature obtained at its founding was that of General Benj. F. Butler. Ex-Governor Russell, Adjt.-Gen. Dalton and many other men of prominence are members, and the club is in a very prosperous condition. Large game is often seen near the house, and the bird shooting in the fall is pronounced excellent.

The very sudden death of Dr. Edward S. Spalding, of Nashua, N. H., which occurred in the Maine woods a few days ago, cast a gloom over many New England sportsmen. Dr. Spalding was one of the original members of the Parmachenee Club, and had been there twice a year for thirty-five years.

Salt-water fishing along the shore is now quite the fashion, and the sport is not confined to any one class of anglers. High and low, they are found from the wharves of the city to Portsmouth on the north and to Plymouth on the south. Excursion parties to go outside for deep sea fishing are numerous and nearly all are having good luck. Mr. Samuel Williams, one of Boston's greatest financiers, greatly enjoys this kind of fishing, and his yacht is often seen a few miles out, where the cod, haddock, etc., are thickest. Dr. Maurice H. Richardson, New England's great surgeon, has no time for long vacations, so steals away over Saturday to Buzzards' Bay to have a good time with the bluefish or bottom fishing, as fortune wills. Whether fishing is good or bad makes little difference to the Doctor, the outing is enjoyed just as well. The largest tautog of the season up to date was taken off the rocks at Nahant in front of Senator Lodge's estate a few days ago. It weighed 14½lbs. and was hooked on light perch tackle early in the morning at low tide. The two gentlemen fishing waded into the water up to their waists to save the fish and had quite an exciting time. Mr. Frank H. Benson, of Salem, is having a good time fishing for big pollock off Newcastle, N. H. He is catching them up to 15lbs. in weight and says it is great sport.

Dr. C. E. Prior, of Malden, has gone to Sunapee Lake for ten days' fishing. On his return he will leave for King and Bartlett, and will spend a few weeks there taking a much needed rest.

Julian K. Viles, of Tim Pond, Me., found time to visit Boston for two days this week. It is quite unusual for him to get away from his camps at this time of the year, and his many friends in the Hub were both surprised and pleased to see him. He says business is good, and the trout in "Old Tim" are still rising to the fly at all times of the day in the same phenomenal way that they always have risen. HACKLE.

IN THE ADIRONDACKS.

LAKE KOSHAKA, June 23.—The Kushaqua Lodge has been opened for the craft four weeks now, and some very good catches have been made in the meantime. Dr. A. W. Saunders, of New York, brought home five brook trout one afternoon, after two hours' casting, the weight of each being a little over a pound. Ralph S. Townsend, also of New York, killed 101 brook trout in one afternoon. Mr. W. H. Barrett has a record of 40 in three hours; and so it goes, the scores all being excellent.

Some of the good fishing must be ascribed to the fact that the energetic proprietors of the Kushaqua Lodge in the last three years have put in no less than 3,000,000 fry, and have watched carefully, so that no netting has been done during the winter. The guests at the Lodge are reaping the benefit of their farsightedness.

The lake trout are plentiful and are biting very freely. They will average about 3lbs. in weight, and afford good sport either with a fly or with a spoon. T. T.

CHAZY LAKE, June 23.—Fishing in and around Chazy Lake has been fine for the past few weeks. Several very large strings have been brought in. The famous comedian, John Queen, did his first brook trout fishing here Saturday, and came in very much pleased with his day's work. He and Mr. Isaac Schlesinger, of New York, caught 296. Mr. Queen says it is great sport.

Several deer have been seen near the Chazy Lake Hotel lately, and a bear weighing 300lbs. was killed not a mile from here last week.

Judge Bailey and Rev. A. B. Flanders, of St. Albans, Vt., were successful in landing 77 good-sized lake trout in a single day. I. H. MURDICK.

A Night Fishing Incident.

MOUNTED Policeman Heyer, of the Kingsbridge Station, who recently earned an honorable mention, which was added to his record at headquarters, for stopping a runaway, saved a life early yesterday morning at the imminent risk of losing his own. He has a beat about seven miles long, extending from Riverdale, on the Hudson, to the interior. Shortly after 1 A. M., after sending in his signal "All's well" from a box on Riverdale avenue, he turned his horse down River avenue toward the railroad station.

Heyer once found a man unconscious late at night in the roadway there, and since that he has regularly taken a look over the road clear down past the bridge. He let his horse walk down to the bridge. Just as he came to a halt, he heard a cry that sounded as if some one was calling for help from the river.

He listened. Again came the gurgling cry from near the dock back of the Riverdale railroad station. He galloped down the drive and leaped from his horse.

On the southwest corner of the dock was a lighted lantern, a fisherman's basket and a rough hat. Down and in the black darkness overboard he could hear some one splashing the water. He picked up the lantern and held it over the edge of the dock. By its light he distinguished a man in the lee of the dock making his last efforts to keep above water. Without hesitation the policeman leaped into the water, and swam toward him.

Hyer caught him just as he was about to sink. The drowning man was hardly conscious, and, fortunately, did not grapple with his rescuer. Policeman Hyer is a fair swimmer. He missed the collar of the man's coat and caught him by the hair at the back of his head and set out for shore. It was fortunate that the man had fallen in the lee of the dock, out of the reach of the swift current. As it was, the policeman had all he could do to keep himself and his burden above water and drag the man toward the dock, 25ft. away.

He was nearly exhausted when, hardly knowing where he was, his hand struck a float belonging to Mr. Samuel D. Babcock, who has a summer home at Riverdale. He climbed aboard the float and lifted his man after him. He then carried him up to the dock. There, in accordance with his instructions in such cases, he placed the man face downward on the ground, and, placing his hands underneath the stomach, lifted up and down to force the water out. He also placed him across his knee and continued the regular movements for recuscitating drowning persons till the man showed signs of life. In the fisherman's pocket was a half-pint flask of whisky. This he poured down the man's throat. The man finally revived enough to warrant Hyer's leaving him.

The policeman then ran to the railroad station and awakened George and Edwin Algeo. They came out and took turns at treating the man. One of them ran down the track to a signal tower near by, and a message was telegraphed down to the Grand Central station and thence to Police Headquarters and then back to Fordham Hospital for an ambulance. It was nearly 3 o'clock before the ambulance arrived. By that time the man was out of danger. He told them that he was George Madden, 31 years old, of 615 Lexington avenue, New York.

He had been doing some night fishing alone, and had fallen asleep on the edge of the dock. Two large eels were found on his line after the excitement was over. Hyer thinks that the eels tugged on Madden's line and the fisherman moved in his sleep and rolled overboard.

Madden was taken to the Fordham Hospital, not much the worse for his bath.

Hyer went to the station house and then had to go home. His ducking gave him a chill that sent him to bed. —*New York Sun.*

A new club house belonging to the Comet Fishing Club, of Milwaukee, and situated at Pewaukee, Wis., was opened last week with 200 guests present.

Striped Bass on the Jersey Coast.

Editor Forest and Stream:

Never within the past eighteen years, which period about covers my experience in salt-water angling, has striped bass fishing been better on the New Jersey coast. There is occasionally a day when none are taken, then the following one, perhaps, will give results of an astonishing nature. To give names and weights of all would be impossible. The conditions have changed somewhat. The medium weights mentioned in my last article have given place to the larger sort. Within the last week the following heavy weights have been taken, nearly all of them from the Ocean Grove pier: J. H. Van Riper, 10¼ and 13¼lbs.; Walter Clayton, 13½lbs.; H. H. Brown, 15½lbs.; Wm. Brumaker, 16½lbs.; Willard Reid, 14lbs.; Dr. G. B. Herbert, 18lbs.; L. P. Streeter, 11¾lbs. Of course dozens have been taken ranging in weight from 3 to 8lbs. The excitement is intense, and day and night the sport is continued. Every large fish, so far as I can learn, has been taken between 4 P. M. and midnight. While at first the bloodworm was the only successful bait, the conditions are changed, and they take the shedder freely.

A rod infirmary could do a rushing business now. To the man who has never taken the bass in the surf the strike and first rush is something of a revelation; the first impulse is to block the reel with the thumb and hold the fish; the result usually is a broken line or crippled rod—sometimes both.

The kingfish are now with us in abundance, although nearly two weeks later than predicted; still they are none the less welcome, and good catches are being made nearly every day. The continued east winds have thrown great sandbars across the mouths of both Manasquam and Shark rivers, entirely destroying the fishing in those streams; but they will soon open, and then fine fishing is to be expected there. To the observant our good fishing is easily accounted for. The surf has been kept in a turbulent condition for the past two months by the east winds, and the bloodworms and small crustaceans on which the bass feed have been washed from their beds and the fish attracted thereby.

During the past week I have received visits from Warden Tooker, of Perth Amboy, and Chief Shriner. Both men are working hard in the interest of protection and propagation, and should receive the warmest assistance from all who are at all interested in the good work so recently begun by the State. LEONARD HULIT.

Didn't Want no Dude Tackle.

SWISH! swash! kerslap! was what I heard as I rounded a point extending into a well-known bass lake, and what I saw was a man standing up in a boat, firmly grasping a 16ft. cane pole to which was attached what appeared to be about 20ft. of chalk-line with a gang of hooks baited with a frog at the further end. Swish! He swung the pole back over his left shoulder and the frog flew through the air until extended at the end of the line far behind. Swash! He brought the pole forward with the force of a catapult and froggie shot ahead. Kerslap! The bait struck the water 30ft. or more from the boat, and to my surprise was seized by a 3lb. bass of the open countenance variety. With a yank that made his pole crack the man hooked his fish and pulling in his pole hand over hand, pushing the butt end overboard, he continued until the whole pole floated on the water and he held the line in his hands. Without paying any attention to the struggles of the poor bass he "snaked" it into the boat and the deed was done.

I rowed up and asked what he called that style of fishing. He said it was "skitterin'." I asked him if he had ever used a light rod and quadruple multiplying reel for casting frog or minnow. He said he didn't "want no dude tackle." I spoke of my preference for the small-mouth to the large-mouth bass and he replied to the effect that the man who thought he could tell the difference between the two species when they were cooked was a "darn fool." I said that to me the reverse appeared to be the case, but as his opinions seemed to be so firmly seated I would not further discuss the matter, only hoping that in the course of the advancement of an ever progressive civilization he might some time be led to modify his views in regard to fish and fishing in general. He said, "Mos' prob'ly," and fishing his pole out of the lake, went to "skitterin'," and as I rowed away the last I heard from him was, Swish! swash! kerslap! W.

Cayuga Lake Fish.

ITHACA, N. Y.—According to the common speech of people and to the local dailies as well, illegal fishing in the waters about Ithaca has not been confined to Memorial Day. The *News* charges that it is carried on in Fall Creek in broad daylight. It asserts that 700lbs. of fish were taken out of waters leading direct into Cayuga Lake, June 4. The commoner kinds of fish are said to be hawked about town for 10 cents per pound. Muscallonge and pickerel, with not a mark to signify their having been taken in a lawful manner, are peddled about at prices that would make the poor man envious.

The city is evidently infested by a rapacious gang too lazy to earn an honest living, who hold a respect for law as the least important token of citizenship, and who are bent on cleaning out every decent vestige of a fish supply in open and notorious defiance of statutory enactments.

Perch fishing at Carr's Cove, near Union Springs, has been very enticing. M. CHILL.

One Minnow, two Togue.

BOSTON, June 24.—Trolling for togue, the bait a minnow fastened with three hooks, two lines out, a lady who occupied the stern seat had a strike. The fish was rather a lively one, and kept her busy. The boat was kept moving and the fish seemed to be getting tired, when suddenly a short rush was made, and about the same time my line caught on the bottom. The lady now tried to land the fish, while I simply reeled in slack line. Soon the guide caught hold of the line, and much to the general surprise of all, we found two togue on the line, caught by the tail hook and the middle hook. The second fish had gone over and over my line, dragging it to the bottom, and the hooks had caught. Both fish were saved. Weights about 4lbs. and 5lbs. First fish must have torn minnow from tail hook; the second fish struck the middle hook. This case is only of interest in that the two fish were caught at one casting of a single minnow.

F. M. JOHNSON.

Why did this Fish Take the Fly?

NEW YORK, June 27.—*Editor Forest and Stream:* Perhaps you have thought, as I have, that the discussion of why a trout takes the fly is exhausted. Nevertheless, the following experience is new to me, and I assure you that the incident is circumstantially true:

A few days ago, at the dock of the Adirondack League club house on Little Moose Lake, a large salmon trout was seen pursuing a 9in. brook trout in the shoal water. The salmon took him in tail foremost, held him nearly enveloped for a few moments, and then released him. He doubtless released him in order to turn him around and swallow him head foremost, which, I observe, is considered to be the proper caper among swell trout. *Fontinalis* was not, however, entirely disabled, and he made another race for his life, turning sharply and whirling back and forth in a few inches of water. John Commerford, who was watching the struggle, then dropped a fly in the troubled waters, and *fontinalis* immediately took it and was promptly landed. He was badly cut and scratched by the salmon's bite.

Now, dear editor, you know all the precedents and have heard all the fish lies. This is true. You know that a trout takes an artificial fly sometimes for food, sometimes for play, and sometimes from a feeling of hostility, as the bass does while guarding on the shoals; but did you ever before know of his taking a gaudy fly as a harbor of refuge? W. H. B.

Leaping Bass.

IN his discussion about leaping bass, and his estimate that, with a leap 5ft. high "it would figure up more than a quarter of a second that the bass was in the air," "Kingfisher" recalls some things which I was taught in school about forty years ago.

As I then learned the "law of falling bodies," a bass 4ft. above the water could not reach the surface of the water by even getting on "a double move" or "a double hustle" in less than one-half of a second. And it would be just as impossible for him to get from the surface of the water to a point of rest 4ft. above the water in less than the same time, one-half a second.

Now, unless I was wrongly taught the law of falling bodies, or have forgotten what I was taught, or unless the law has been abrogated since, neither a bass nor any other fish could get out of the water, climb 4ft. high in the air and get down to the water again in less than a second. And the figures which I have given leave the resistance of the air out of consideration. Whatever delay might result from this cause would have to be added.

Now, a man who, in one second of time, at 20 or 30yds. distance, cannot take in with clearness and accuracy the movements of a bass out of water, had better have his eyes taken out and sand-papered, or refitted with new lenses, or else he should confine himself to fishing for bullheads with a hand line. C.

An Erie County Association.

THE Erie County (N. Y.) Fish and Game Protective Association has organized with these officers: President, Richard H. Hoyt; First Vice-President, C. W. Miller; Second Vice-President, Dr. F. F. Hoyer, Tonawanda; Third Vice-President, Judson Bennett, Angola; Secretary, Thomas Cary Welch.

New York Fish Commission.

AT the last meeting of the New York Fish, Game and Forest Commission the resignation of Secretary E. P. Doyle was accepted, and Franklin B. Mitchell, of Norwich, was appointed to the place.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 3 to 6.—Kingston Kennel Club, Kingston, Ont. H. C. Bates, Sec'y.
Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.
Sept. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.
Sept. 24 to 27.—New England Kennel Club's second annual terrier show, Boston, Mass. D. E. Loveland, Sec'y.
Oct. 8-11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris Man. P. T. Madison, Sec'y, Indianapolis, Ind.
Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.
Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.
Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.
Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.
Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster Sec'y, Saratoga Springs, N. Y.
Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.
Oct. 29.—New England Field Trial Club, at Assonet, Mass. S. R. Sharp, Sec'y.

THE RANELAGH SHOW (ENGLAND).

THE formation of the Ladies' Kennel Association in England last winter excited much interest in the United States at that time, and much praise was bestowed on the promoters and organizers of the Association, and the attention of the ladies on this side of the water was specially called to this new movement, with encouraging advice to them to do likewise.

The success of the Ladies' Kennel Association's show, held on June 8, proves that the organization is an active body, quite able to take independent flights of its own. Of course it would not be a live dog show if there was no dissatisfaction, nor would the ladies relinquish their claim to equal capability with man by ignoring the much honored protest. Of the organization of the Association the *Stock-Keeper* says:

"Whatever may be the verdict on the success of the Ladies' Kennel Association show as regards having been an improvement on the best kind of dog shows or the reverse, it is certainly an event in kennel history that an exhibition of such size could have been got together in spite of limiting it to lady exhibitors. For this reason, if for no other, we think it apropos to say a few words about the origin and growth of the society which accomplished this extraordinary feat. The first appearance of what may now be considered a star of the first magnitude in the kennel firmament was of a somewhat nebulous character at a meeting called by Miss Darbyshire at the Inns of Court Hotel. There were present, besides a lady convener, Mrs. Thomas, Mrs. Mackenzie and Mrs. Stennard-Robinson.

"The plan which was put forward at this reunion seemed, however, to the majority of those present to be unworkable. Mrs. Stennard-Robinson then came forward and undertook to call a meeting on behalf of Miss Darbyshire, and at that meeting, which was attended by about fifty ladies, Mrs. Stennard-Robinson gave an outline of the club which she had in view. Her listeners were so favorably impressed with what Mrs. Stennard-Robinson told them that twenty-five at once agreed to become members on the condition that she undertook the management of the whole thing, and thus Mrs. Stennard-Robinson became hon. sec. of the Ladies' Kennel Association, with all the heavy work, responsibility and honors of the office on her willing shoulders.

"The result of the energy which Mrs. Stennard-Robinson has expended on her self-set task is shown by the fact that the Association numbers now about 300 members. The executive and officers are, however, only elected from among the founders, of whom there are about 200."

The presence of the Prince and Princess of Wales and Princess Maud was considered a most felicitous feature. Of this the *Stock-Keeper* remarks:

"On the arrival of the royal party at the handsome pavilion specially erected for the occasion, Miss Myrtle, Mrs. Stennard-Robinson's little daughter, tastefully dressed in two shades of blue, which are the Association's colors, presented to the Princess of Wales a bouquet, which was also an arrangement in blue, to harmonize with everything concerning the society.

"We have the pleasure to announce that Her Royal Highness the Princess of Wales has expressed to Mrs. Stennard-Robinson her willingness to become the patroness of the Ladies' Kennel Association."

Of the competition for the "champion of champions" prize the same journal says:

"The judging of the 'champion of champions' prize was an unmitigated and undignified farce from start to finish. To begin with, it is impossible that an award for the best dog among a number of varieties could ever be otherwise than nonsense, and it is certain never to give satisfaction. We never saw the ludicrous side of such specials so conspicuous as at Ranelagh, where so many of these specials were donated.

"But the 'champion of champions' was the champion Muddle, and promises to end in a very tangled dispute. The schedule announced that five judges would be selected by the L. K. A. committee to dispense this particular honor, but the judges at the show did not themselves appear to know which of them had been so honored with the committee's confidence.

"At 'Special' time there were several crowds in the grounds. We betook ourselves to one, and learned that the 'champion of champions' had just been found in the fox-terrier Despoiler. That news spread all over the show, and the award, good or bad, became the gossip of a quarter of an hour. Soon after we espied another crowd, and hied ourselves thither, to find a mass of men, women, and dogs, some exhibitors, some judges, and many amused spectators. Three judges wanted to help, but were told that they were not on in this scene, so they gladly retired. 'What is going on?' we asked another judge. 'This is for the champion of champions,' he replied. Continuing: 'The Prince of Wales wants the judging done in front of the Pavilion. He wants to see how it is done.' We retorted that the award had already been made, and Despoiler had got it. 'Ah! but that was all wrong,' was the reply, 'because Redmond helped to judge, and he had no right to.' We do not know what His Royal Highness thought of the scene, but we are certain he could not see what was passing in such a mixture of dogs and people. All we could see was Mr. Taunton trying to evolve order out of chaos, like a Nonconformist parson marshaling together a lot of unmanageable schoolboys. *Que diable allait il faire dans cette galère*, we do not know, he was not one of the chosen, but there he was. The judging looked as if it was being done chiefly by Mr. Astley.

"A cry arose from the crowd, 'The Jap's got it!' and then the blushing Mrs. Addis is led up to royalty to receive at the hands of the fairest princess in Christendom the honor won by her little spaniel Dai Butzu II. The crowd clapped the lady—did the little dog laugh to see such fun, we wonder? Behind the lady followed a beaming and proud gentleman, who appeared surprised that he was not allowed to accompany her up the steps. We are told the gentleman was Mr. Addis, and shall be delighted to learn that he and Mr. Stennard-Robinson have received the honor of knighthood.

"Mrs. Lawrence writes to us saying that she has claimed the champion of champions cup at Ladies' Kennel Association and Kennel Club. Mr. Redmond told her, 'The cup is Despoiler's, we gave it him, and under K. C. rules it cannot be taken from him.' This promises to be a very pretty dispute."

The criticism of "A Lady Journalist" in the *Stock-Keeper* is reprinted as showing how the ladies wield the pen of criticism in the new departure in canine matters:

"Whatever their other failings may be, and being mortals they must have some, there can be no doubt that the members of the Ladies' Kennel Association possess plenty of courage. It was a bold stroke to attempt to manage a big dog show entirely upon their own responsibility; and though, as might have been expected, they did not appear to have succeeded to perfection, they may be congratulated upon having done much towards proving that women are capable of transacting some kinds of business almost as well as men themselves. Perhaps the omissions were due to inexperience, perhaps to a desire to effect improvements upon the ordinary dog show, but my experience of the latter is only limited to such exhibitions as the Crystal Palace and Aquarium, and therefore it is beyond my power to draw comparisons. It seems to me, however, that, whatever their qualifications as experts upon dog-flesh may be, the members of the Ladies' Kennel Association have yet a good deal to learn before they can claim the honor of being considered qualified to entertain the public and make them comfortable. The difficulty to procure a chair for love or money for many a weary hour was itself an oversight which was not conducive to good temper; while the management in the ladies' tents, in which water to wash in was as scarce as the precious fluid is stated to be in the Sahara Desert, was absolutely the worst I have ever seen. This is a sad assertion for a woman journalist to have to make when writing of the doings of her sisters, but we members of the weaker sex are perhaps a little spoiled by the consideration we receive from the sterner one, who, I will say, with all their horrid failings, are usually solicitous of the 'ladies' comfort,' and treat us with an amount of hospitable attention which we ourselves are apt to overlook when associating with each other.

"It was a little bit humiliating, too, to notice that not a single lady judge was busy in the rings, and, so far as my investigations bore me, the comparatively easy duties of stewardship were all intrusted to members of the sterner sex. Possibly the last-mentioned arrangement was deliberately designed in order to show man in his proper place—the administrator to female needs and humble henchman of our sex; but the absence of the lady judge was indeed a blow. In other respects the show was certainly a very charming gathering, and few more pretty sights could be seen than the mingling of the gaily colored dresses with the varied coats and figures of the dogs."

POINTS AND FLUSHES.

Manitoba Field Trial Matters.

It is very gratifying to learn that the differences which existed so long between the Northwestern Field Trials Club and the Manitoba Field Trials Club have been buried, and that they will now proceed in friendliness and with a common purpose in promoting the interests of the dog and gun.

Manitoba is exceptionally favored with a beautiful game supply, the upland shooting being chiefly on pinnated and sharp-tailed grouse, concerning which the province has wisdom enough to protect their birds by laws which are much more stringently enforced than are similar laws on this side of the boundary line. The field trial clubs have grounds and birds in their midst, at its very doors as it were, thus insuring good sport and field trial facilities for an indefinite number of years. This is in sharp contrast to the impoverished game supply of the United States, and the constantly lessening available area for field trial purposes. It would be a very difficult matter to hold a field trial on chickens in the United States, owing to the great destruction of the birds illegally accomplished before the season opens, and the still greater and more uniform destruction which is wrought on the opening day and afterward. Probably no satisfactory trial could be held unless a long trip were taken into the country beyond the range of the average shooter.

Returning to the club matters, the Winnipeg *Free Press* of June 25 has the following concerning the recent important club meeting:

"A very satisfactory meeting of the Manitoba Field Trials Club was held at the Manitoba Hotel last evening, at which a large number of members were present. Encouraging reports of entries in all the stakes for the forthcoming trials in September were given. Mr. Thomas Johnson was unanimously elected a member of the club. It was also agreed to join in the grand challenge stake for the Lonsdale Challenge Cup with the N. W. F. T. C. and the Continental F. T. C., to be held at Morris at the conclusion of the Manitoba F. T. Club's meeting.

"To encourage the interests of amateurs, the honorary patron, Mr. C. C. Chipman, has donated a silver cup value $50) to be competed for by the amateur members of the club. Mr. Thomas Johnson has consented to judge this stake.

"The prospects are that the forthcoming trials on the 10th, 11th and 12th of September will be the most successful in the history of the club.

"The Northwestern Field Trials Club have decided to run a championship stake in conjunction with the Continental and Manitoba Field Trials clubs' trials. The stake will be open to any dog having won a first or second prize in any field trial anywhere, entry fee $10, starters $15 more; entries close Aug. 1, except to winners in the Manitoba or Continental trials; the latter will be eligible up to the time of the draw, which will take place the evening the Manitoba trials are concluded, and the stake will be run near Morris, commencing the following morning. The prizes will be:

"First—The trophy presented by the club's patron, Mr. A. C. Heywood-Lonsdale, and forty per cent. of the total amount received for starters and entry fees. Second—thirty per cent. Third—twenty per cent. It is anticipated that the stake will have twenty starters, which would give the trophy and $200 to the winner, $150 to the second, and $100 to the third. The club will also donate a handsome engrossed diploma, setting forth that the winner is entitled to the honor of 'Field Trial Champion.'

"Mr. W. S. Bell, of Pittsburg, Pa., and Mr. W. B. Wells, of Chatham, Ont., the judges of the Manitoba and Continental trials, respectively, have been invited to judge. The rules of the Continental Field Trials Club have been adopted by the Northwestern Club, except heats to be at least one hour each. Entries are to be made to Thomas Johnson, Hon. Secretary, Winnipeg, Manitoba."

Undoubtedly the coming field trial events of Manitoba will be one of the greatest, if not the greatest, combinations ever held in America, and in the variety of the interests and the purity of the sport as a sport they stand without a rival. Taking the events of the three clubs, they offer inducements which appeal strongly to the sportsman who loves sport for its own sake, to those who are interested in breeding, and to those who engage in it professionally.

I am glad to see that that sterling sportsman Mr. Thos. Johnson will act as judge in one of the stakes. It has been a source of some surprise to me that his services have not been engaged sooner. Mr. Johnson has done much to make the dog and gun popular in Manitoba. His energy and interest have made a large part of the history of field trials prior to the last year or two. As a judge, every competitor can have the most implicit confidence that the most rigid observance of fair play will be enforced. Mr. Johnson is not a good man for those who in competition are looking for short cuts to the money.

Canadian Customs and Dogs.

When at the meeting of the U. S. F. T. Club last winter I suggested that there might be many unpleasant customs obstructions to overcome in holding a United States trial in Canada. I was alone in the opinion. Every one had a rose-colored view of the matter apparently, and

one handler thought he had influence enough to carry the whole matter easily across the boundary. From several sources I have been advised that the customs regulations will be enforced with a closer observance to the letter of the law this year. According to the customs laws, dogs can be brought in for exhibition purposes—that is, field trials, bench shows, etc.—but the customs officers claim that large numbers of dogs are brought in which are not intended for exhibition purposes. The American officials too complain that Canada is not keeping up to the letter of the law.

I have been informed, furthermore, that the stringency of the customs officers, in respect to American dogs, is largely the result of past abuses of their courtesy, abuses which caused much annoyance to them and some expense. If any one feels guilty of having abused the special courtesies and favors bestowed by the customs, such one will now perceive the ill effects of it and the hardship it works on all owners and handlers entering Canada with dogs. It will require a lot of extra effort to secure concessions from the customs granted freely before, even if they can be secured at all, and in any case the customs would probably feel painfully apprehensive in granting much concession outside of the strict interpretation of the law, without having most ample security. They have been very kind and obliging heretofore. For any care and precaution they now see fit to observe they have good warrant. Those who go over with dogs from this side have no cause of complaint if the letter of the customs laws is enforced. A strict and conscientious observance of the laws should now be uniformly observed by the owners and handlers, as it should have been in the past, and eventually their confidence, so badly shattered, may be restored.

Foreign Competition.

Every sportsman will be glad to learn that it is definitely settled that Mr. Brailsford will come to America this season. He intends to participate in the grouse trials in Scotland on July 25, and will leave immediately for Manitoba after those trials are concluded. Mr. Heywood-Lonsdale will send out Musa and Bonny Dan to compete in the champion stake in the Northwestern Club's Champion stake, and will have a string to run in the other Manitoba trials.

B. WATERS.

DOG CHAT.

Mr. John Davidson has a letter in the *Breeder and Sportsman* of recent date, referring to the recent Pacific Kennel Club's show and denying the published surmises of Mr. Heffernan and explaining the impossibility of any just grounds for such surmises. Mr. Davidson's character and integrity are so well known that comment in that relation is unnecessary; but the brethren on the Pacific coast will learn in good time the harm such childish and peevish disturbances produce. Many men value their good name and peace of mind more than they value the ownership of a dog or the possible honors to be gained by competition. When the kennel world is largely made up of brawlings and bickerings, it is not a very attractive one for gentlemen and ladies to enter. If all that has been bandied to and fro were true, what is the onlooker to think?

Dog owners should be careful to observe the laws governing dogs. Violations of the laws often result in harm and a popular sentiment which is against all dogs, good and bad. In Rochester, N. Y., the presence of dogs in the parks seems to be a cause of much annoyance. Of this the Rochester *Democrat and Chronicle* says: "There has been a great deal of trouble lately caused by dogs running loose in the parks. Everybody who owns a dog seems to be fond of taking the animal to the parks in spite of the fact that there is a park ordinance prohibiting the visitations of these dogs. In Genesee Valley Park dogs have fallen into a habit of chasing the sheep, and this became such a nuisance a short time ago that the shepherd was ordered to shoot any dog that might annoy the flock. He has already killed several dogs, and proposes to kill quite a number more. The shepherd is armed with a shot gun. Park Commissioner Maine said yesterday afternoon: 'It seems to me that it is quite as necessary to protect the children in the parks as well as the sheep. In fact, it is a good deal more necessary. The commissioners adopted a humane policy as first, and provided that all dogs, except those caught chasing the sheep, should be captured and taken to the city pound, but this is rather an awkward business. Last Sunday one of the park policemen while trying to take a stray dog to the pound was severely bitten. It may soon become necessary to have the park policemen shoot all the dogs found in their territory. The public parks are not the right places for dogs, and people visiting them should leave their animals at home. The commissioners have abundant authority to take active steps to stop the nuisance, even to going so far as having the dogs shot.'"

The following reprint from the New York *Sun* will be of interest to married women who think they own dogs, but do not. There seems to be a long felt want for a genius who can make *bona paraphernalia* out of a dog:

"The General Term of the Common Pleas handed down a decision of interest to married women who own dogs. Judges Bookstaver, Bischoff, and Prior have had under consideration for some time the question who is the owner of a black cocker spaniel bitch valued at $150. The court hold, in an opinion written by Judge Bischoff, that, 'as between husband and wife, the possession of the dog, which was not shown to be a chattel in the nature of *bona paraphernalia*, imputed title in the husband, the enabling acts in connection with married women notwithstanding.'

"This decision was rendered in a suit brought by Mrs. Annie Reddin against James Lawlor before Judge Joseph H. Stiner in the Eighth Judicial Court to recover the dog. Mrs. Reddin said that her husband took the dog away from her and gave it either to the defendant or to some one who did give it to the defendant. In his opinion, which is concurred in by the other Judges, Judge Bischoff says:

"'The evidence in support of the judgment established the fact that the dog was in the possession of the plaintiff's husband after she had temporarily left their common home, and that in her absence he had presented the animal to the defendant, who in turn made it a present to another person.' Then follows the decision quoted above.

"At the trial in the District Court Mrs. Reddin testified that the dog was given to her as a Christmas present in 1893 by a Mr. Curtin, of Buffalo, and that she had cared for it since it was six weeks old. The suit was decided in favor of the defendant, and the General Term affirmed that decision.

"*Bona paraphernalia* are 'personal articles reserved to a wife, over and above her dower or marriage portion, as apparel or ornaments suitable to her rank and condition in life.'"

The field trial supporters of the Pacific coast are quite pleased with their field trial prospects, and are confident that their next trials will be a great success.

Is it not rather conspicuous concerning dollars and cents that all the contributions to the E. Bardoc Elliott fund have been from residents of the United States and Canada, notwithstanding that several of the English kennel papers commended the matter to the attention of their readers? There is a cold indifference manifested which is in sharp contrast to the good fellowship of empty words.

The action of the Manitoba Field Trials Club in adopting the rules of the Continental Field Trials Club for the government of its competitions is quite a compliment to the new club's skill as law makers.

Mr. R. B. Morgan, Akron, O., informs the public through our business columns that he wants a brace of dogs to teach retrieving. West Philadelphia kennels offer terriers and collies. A. L. Bailey, Plymouth, Mass., offers pointer puppies. J. Feulner, Cherry Valley, N. Y., offers English setters. William Child, Glendale, Pa., offers cocker. The Mere Kennels, Tarrytown, N. Y., offer fox-terriers for sale and in stud.

Mr. Fred Mansell, London, Eng., writes us that for a friend he purchased the wire-haired fox-terrier Roper's Nutcrack, a famous winner, for 121 guineas, at the auction sale of Sir Humphrey F. DeTrafford, Bart.'s, kennel of wire-haired and smooth fox-terriers, retrievers, collies and Irish water spaniels on June 21.

We have been informed that Des Moines, Ia., will give a fall bench show this year.

Mr. Ed. Warner, manager of Mr. Geo. J. Gould's kennels, will leave for Manitoba about July 8. He will be accompanied by Mr. Armstrong, the trainer and handler, who will prepare the dogs for the chicken trials. The party will make the journey in a private car, a pleasant manner of traveling.

Of the special prize nuisance, the *Stock-Keeper* (England) says: "It is not easy to foresee what will be the solution of the growing nuisance of special prizes. They have become far the most difficult part of a judge's task, and are attended with much ambiguity, and often also with some heart-burning. It would be most desirable if generous givers would let their presents be added to the prize fund to swell the number and the value of the ordinary prizes. We know the drawback to this plan, the special being divested of the personality of the donor; but, for the general good of dog shows, we wish that the publication of the donors' names in the catalogue might suffice."

R. I. S. F. A. Dog Show.

IN the first place the bench show of the Rhode Island State Fair Association is to be enlarged and rendered, if possible, more attractive to fanciers and the public generally. This feature of our annual fair has proved a great success. Last year the exhibition was of excellent quality, a large percentage of the 500 dogs on the fair grounds coming from the leading kennels of the country.

The management has within a few days contracted with the Spratts Patent people of New York, who will bench with their metallic benching, and feed the canines this year. Mr. E. M. Oldham, of New York city, has been engaged as superintendent, and he will have entire charge of the show, from the arrangement of the premium list to the very smallest details. Mr. Oldham is at present at work revising last year's premium list. Several important changes will undoubtedly be made and a number of new classes will be added. There is some talk of raising the entrance fee from $2 to $3. The prize money allotted to each class will be divided into three parts, so that the third best dog will have a finger in the pie.

It is the aim of the Association to have a much larger exhibition this year than ever before. Accommodations are being arranged for over 600 entries, and from present indications all the room will be occupied. Owners from all parts of the country have announced their intention to compete, and everything looks bright for a successful and excellent show.

A. C. RIDER, Corresponding Secretary.

Toronto Show.

TORONTO, Can.—From present prospects the seventh annual dog show of the Industrial Exhibition Association, to be held at Toronto, Sept. 10 to 14, promises to be the best yet held. I am receiving applications from all over the United States and Canada for premium lists, which will be ready about Aug. 1. This year we have a Canadian circuit consisting of Kingston, which will be held the week previous to Toronto, and Montreal the following week, which show draws a large American entry.

C. A. STONE.

Yachting.

IT is hardly necessary to state that the Great Steam Yacht Race that has been paraded before a defenseless public ever since last winter was on the same low level as all the previous contests. Three yachts were present at New London on June 28; on the eve of the race one broke down, or claimed to have done so, another sneaked away over night, and the third, Vamoose, ran over the American Y. C. course alone; her time for the 80 nautical miles to Milton Point being 4.11.00, or 23m. 35s. better than the record, an average speed of 19.12 knots. Both the original and the present owner of the Vamoose have shown a disposition to race, and have had the boat at the line on every occasion when they have promised, and we believe that they have honestly desired a fair trial, and taken reasonable trouble to bring their boat to the start in good season and in racing trim. The other alleged fast yachts for the past five years have made but a lamentable record of backdowns, breakdowns, bad faith, and blunders so childishly stupid as to seem inexcusable.

SO FAR as originality and distinctive meaning are concerned, there is not much to brag about in the name Defender; but there are good grounds for thankfulness that it was not even worse. One can write it without affixing a string of Roman numerals, and there is no suggestion of the Trilby craze about it—a disease to which untold numbers of owners of new boats have this year succumbed.

THREE of the four gentlemen who are paying for the defence of the America's Cup this year have the doubtful honor of having been the recipients of more virulent and unstinted abuse from American newspapers than has ever been heaped upon any other American yachtsman. Mr. W. K. Vanderbilt, who is paying the greater portion of the cost of building and running the Defender, and who is likely to be out of pocket some $150,000 by the time that the final settlement of the syndicate's account is made, has been for three years held up to the public execration because he went to England for a steam yacht after the best estimates of American builders had shown that it would take nearly a year longer to build on the Delaware than on the Mersey. Mr. E. D. Morgan, another of the three owners of the Defender, who will also draw some large checks this season, getting no dividends in return when the final account is settled, has long been known as a spirited and patriotic yachtsman, but this did not save him when he committed the unpardonable sin of bringing to this country such model craft as May and Ituna instead of building something that looked like a brass-mounted tugboat. Mr. George Gould's experience with the American press, and American yachtsmen too, is too recent to be already forgotten: how he was charged with throwing away races for the sake of toadying to royalty. This year Mr. Gould, of his own volition and with very little encouragement, after being snubbed for his first generous offer to pay half the cost of a new defender, is spending money in the most liberal manner in putting Vigilant into the best condition as a trial boat to sail against Defender; and if necessary through any mishap, to defend the Cup against the new Valkyrie. There is no better means known of sinking good money without hope of a return than in building a modern racing yacht, and the contributions, voluntarily and generously made by the owners of Defender and Vigilant, can bring them in no return other than the knowledge that they have performed a patriotic duty that cannot be too highly appreciated by the American people.

THE latest contribution to the interesting subject of steam yachting is a syndicate article from the pen of Mr. Charles H. Cramp, who, as the head of the concern which built Columbia, Peerless, Atalanta and many other steam yachts, should certainly be qualified to discuss them. The most important statement which which it contains is that the firm has now an order for a steam yacht "bigger, faster and better than the Giralda in every way." If this order is filled, as Mr. Cramp promises, it will be through the adoption of different methods from those which have produced the three yachts named, or even the St. Louis; there is absolutely nothing in the model of one of the four to warrant the assertion that "perfection has been almost attained on our own American shores." So far from this being the case, it is a fact too painful plainly and patent to be hidden under any amount of boasting and buncombe that this country has actually retrograded in the important field of naval design within the past forty years; and that it has nothing afloat to-day that can show the superiority over foreign craft of the American clipper ships and the old Collins Line steamers in their day.

In sailing yachts, America has, within the past ten years, come to the front with such successful craft as Puritan, Mayflower, Volunteer, Gloriana and Vigilant, and there is no fear that she will not hold the first place in the future, now that all old traditions have been thrown overboard. In steam yachts, save in the smaller class of cruising craft, not even a beginning has yet been made, and owners are hardly yet awake to the inferiority of their pet craft to such yachts as Rona Giralda and Maria. On the high seas there is a fleet of serviceable coasting steamers running to Cuba, South America and Southern ports, good boats for their work, but showing no marked individuality or superiority to similar craft of other nations. In the trans-Atlantic trade there is one vessel, as yet untried, but to the eye at least anything but a matter for pride and congratulation beside the foreign vessels of her class. In the inland passenger service on the great rivers and Long Island Sound, a fleet of very elegant and comfortable vessels has grown up, but even in them the art of the decorator, the cabinetmaker and the engine builder is years in advance of the modeler of the hull. One remark of Mr Cramp we can agree with, "there has been but little notable change in the model for fifty years." This is, alas, but too true, and the time has come for a change in mercantile models just as radical and extreme as that which has replaced the old centerboard sloop by such yachts as Volunteer, Lasca, Iroquois, Ariel and Emerald.

ONE of the pleasant sights at Bristol on Saturday was that of Capt. Haff about again in good health and spirits, though still feeling the effects of the painful operation which he bore so bravely. He is improving steadily, and will be ready to go into commission on the new boat by the time she is ready.

JUST at this time, when so much is heard in connection with the smaller classes of "stealing length" and "cheating the rules," by means of freak distortions of lines, it is gratifying to see that the two great designers, who are pitted against each other in the battle of the America's Cup, have kept clear of all tricks and juggling, and have been content with a legitimate use of the measured length. We noted a short time since how in Valkyrie III. Mr. Watson had drawn a sheer plan free from any downward distortion of either stem line or hornimber, the buttock and bow lines showing the same characteristics. In Defender Mr. Herreshoff has done the same; neither in the bow nor the stern is there any attempt to force an excessive amount of unmeasured length into the water; and further, the waterline, while of course round and convex, as in all modern boats, shows none of the excessive fullness that is the main characteristic of Wasp, Vigilan and some of the smaller fins. In the fair sweep of all fore and aft lines, and the absence of a heavy quarter, Defender is perhaps more allied to the fin-keel Pilgrim than to any other American yacht.

The Sinking of the Say When.

THE steam yacht Say When is the largest of the different yachts built by the Herreshoffs for the late Norman L. Munro, a finely built craft with double skin, the outer planking all of polished mahogany, 138ft. over all, 115ft. l.w.l., 14ft. beam and 6ft. draft, with quadruple expansion engines. For several years she has been owned by W. J. White, of Cleveland, who has used her on all of the Great Lakes, where she is well known. On June 19 she was under way off Cleveland, in charge of Capt. J. B. Todd, with Mrs. White and her children on board, with other ladies and children as guests, eighteen in all. When near the breakwater the yacht struck a piece of wreckage or some floating obstruction and a hole was made in the starboard bow. The engines were reversed and the yacht quickly beached stern first on the sand, the ladies and children, who behaved with remarkable self-possession in spite of the fact that the forward part of the yacht was flooded, being landed in boats, the schooner Priscilla lending assistance. Efforts were made to keep the yacht on an even keel, but as she sank she heeled to starboard. Some of her furniture was removed, but the interior was all damaged by water. She has been raised and will be repaired at once.

Seawanhaka Corinthian Y. C.

THE officers of the Seawanhaka Corinthian Y. C., including the race committee, have been particularly active this season in planning that the club may do its full share in the Sound racing, the opening races of the club covering practically the ten days up to July 4. The date of the annual regatta was set for June 24, the fleet sailing next day for Morris Cove and on Wednesday for New London, the time for the two runs being cumulative. On Thursday, June 27, the fleet was invited to take part in the regatta of the Pequot Casino Association, while on Friday the yachtsmen could witness the Harvard-Yale boat race. The return programme was to be decided on at New London, one or two days' racing, allowing time for the fleet to reach Oyster Bay on Monday, July 1, and on the following day a special race was arranged from Oyster Bay to Larchmont, the course being from off the mouth of Oyster Bay Harbor around the easterly buoy of the Larchmont courses, then around the Prospect Point buoy, again around the easterly buoy and in to a finish off Larchmont Harbor, 22 miles. The race to be open to yachts of the American, Atlantic, Brooklyn, Corinthian, Eastern, Larchmont, New York and Pavonia Clubs and the clubs of the Yacht Racing Union of Long Island Sound; each rig, schooner, cutter and cat, to sail as a separate class, with a first prize in each and a second prize if four or more start. The prizes for the New London races were to be, for the race to New London:

For Schooners—First prize offered by the commodore, value $150; second prize offered by the rear-commodore, value $50.

For Cutters—First prize offered by the vice-commodore, value $150; second prize offered by the rear-commodore, value $50.

For the race from New London:

For Schooners—First prize offered by the rear-commodore, value $150; second prize offered by the vice-commodore, value $50.

For Cutters—First prize offered by the commodore, value $100; second prize offered by the vice-commodore, value $50.

A special prize of $100 for all schooners, and one of the same amount for all cutters over 43ft.

On Monday, June 24, there was a large fleet at anchor off the station, the flagship Oneida, Com. E. C. Benedict; the schooner Iroquois, Vice-Com. H. C. Rouse; the sloop Indolent, Rear Com. S. V. R. Cruger; the steam yachts Sapphire II., formerly Cleopatra, Vision, Allegra, Reverie, Clermont, Alcedo, Nada, and Nirvana; the schooners Emerald, Alcaea, Ramona, Mon Reve (late Thetis); and the cutters Uvira, Queen Mab, Wasp, Gossoon, Norota, Infanta, Katrina and Hildegard. Among the many smaller craft were the new 34-footers Dragoon, Adele and Vorant II.; the 21-footers Celia and Houri, the 1 raters Wave and Shrimp, the 15-footer Trust Me, and the Senorita, Indolent, Maud, Feydeh, Beatrix, Mary, Nameless, Dove, Lurline, Oconee, Kittie, Ethel and others. Most of those present were bent on racing, the starters numbering 32, a very good fleet as regattas go to-day. Unfortunately this fleet was distributed among 16 different classes, so that several yachts were obliged to sail over, the full prize being given, however. In no case were there more than the necessary three starters, so no second prize was given. The Leland Challenge cup was this year given in the 85ft. schooner class, but failed to bring out more than one entry.

The starting line and finish was off the mouth of the harbor, the courses being, for the larger yachts, down to the 43ft. class of single-stickers, two rounds of the "Sound triangular course," five miles N. W. by W. to a mark buoy off Greenwich Point; five miles E. ½ N. to a second buoy off Long Neck Point, and five miles home; the 21-footers sailing one round of the same course. For the 36, 30, 25 and 34ft. special classes the "Shippan course" was sailed twice, five miles N. around the Cows Buoy, 2 miles E. ½ S. around the Long Neck Point mark and home over the last leg of the "Sound" course, 24 miles in all. The 20 and 15ft. classes sailed one round of the "Shippan course."

There was a light northerly wind when the fleet left Seawanhaka Harbor just before noon for the starting line, the tide being ebb. A special class was made of Ramona and the steel schooner Alcæa, under charter for the season to Mr. James Ross, of Montreal, a member of the club. Iroquois was swinging a new and wonderful mainsail, an experimental sail lately made by Wilson & Griffin, on the plan devised by Mr. Gilbert L. Wilson, the seams running from the leach inward, but at all angles, no two cloths being parallel. She, as well as the new Norota and Vorant II., carried jibs cut after the same system, but less peculiar in appearance, the cloths being wider and less divergent. Norota in particular has a very fine jib and staysail. The 34ft. class for the first time this season showed more than one starter, there being present besides the victorious Dragoon the new McGlehan boat Adele and the new Olmstead boat Vorant. The little Wave sailed with her English rig, but her sister boat, Shrimp, was under a new and larger sail plan. The fleet was started in two divisions, all above the 60ft. singlestick class in the first, the smaller craft in the second; the starting interval being five minutes to cross, the handicap signal for the first division marking the start of the second. A very fine start was made, though the line was well inside the mouth of the harbor, leaving little room for maneuvering such deep yachts as Ramona, Alcæa and Wasp in the middle of a lot of small fry. In spite of this the yachts crossed very promptly and without mishap, the times being:

Wasp	12 50 52	Houri	12 56 49
Queen Mab	12 51 10	Vorant II.	12 56 58
Ramona	12 51 52	Dove	12 57 03
Hildegard	12 52 19	Feydeh	12 57 04
Alcæa	12 52 40	Mary	12 57 27
Iroquois	12 53 02	Dragoon	12 57 33
Emerald	12 53 03	Kittie	12 57 41
Wave	12 55 35	Shrimp	12 57 50
Nameless	12 55 51	Infanta	12 57 51
Dodo	12 55 55	Ethel	12 57 58
Beatrix	12 56 03	Oconee	12 58 53
Indolent	12 56 05	Senorita	12 58 41
Maud	12 56 10	Adele	12 59 04
Norota	12 56 21	Gossoon	12 59 19
Celia	12 56 35	Trust Me	12 59 53
Lurline	12 56 42	Uvira	1 00 00

The larger yachts had a reach to the first mark, but the smaller had to make a tack, some doing so shortly after crossing, getting a lift under the shore of Lloyd's Neck. Wasp set the pace, followed by Queen Mab; and Alcæa, crossing to windward, but a little astern of Ramona, soon ran by her. Iroquois started ahead of Emerald and up to windward of the fleet, a very pretty race resulting before the latter got by after a little luffing. Wasp and Queen Mab overstood the mark and sailed more water than necessary, but it made little matter, the former sailing alone and the latter being well ahead of Hildegard and steadily gaining. The times at the Greenwich Point mark were; Wasp 1:39:47, Emerald 1:40:33, Queen Mab 1:42:17, Iroquois 1:43:17, Alcæa 1:44:17, Ramona 1:45:15, Norota 1:46:48, Hildegard 1:48:37, Uvir a 1:48:50, Gossoon 1:49:34.

Alcæa had no balloon maintopmaststaysail aboard, and when Ramona set hers she ran up very fast on the smaller boat. Dragoon set the pace for the Shippan division, sailing very fast indeed.

Just after the schooners rounded the first mark, the wind went to the eastward and made a beat to the second and a reach home. The first round was timed:—

Emerald	3 18 20	Uvira	3 42 42
Dragoon	3 26 12	Ramona	3 43 44
Wasp	3 27 38	Indolent	3 44 36
Queen Mab	3 29 39	Gossoon	3 46 30
Senorita	3 32 15	Kittie	3 47 44
Iroquois	3 32 30	Dodo	3 47 45
Infanta	3 33 00	Ethel	3 51 30
Vorant II.	3 34 40	Norota	3 52 16
Alcæa	3 36 11	Feydeh	3 54 56
Mary	3 39 40	Shrimp	4 00 06
Adele	3 41 09	Nameless	4 00 38
Beatrix	4 01 15	Dove	4 19 25
Maud	4 06 45	Wave	4 19 54
Lurline	4 18 48	Houri	4 26 01
Trust Me	4 32 05		

The first leg of the second round was sailed quickly, but then the wind fell and the fleet drifted for a time in the middle of the Sound. Ramona was in hard luck for a time, being becalmed while the other boats held a little breeze. Just as the greater part of the fleet was approaching the finish the sky blackened ominously and a very hard squall swept over the Sound. Fortunately it was of short duration, though much rain fell in a little time. Topsails were struck on the larger yachts and the smaller ones doused everything, while their crews sat and took the deluge as best they could. Gossoon went through it bravely, tearing along under three lower sails, and the little fin-keel Feydeh fairly flew along. The wind soon dropped to a moderate breeze that brought all in safely. The official times were:

SCHOONERS—CLASS I.

	Start.	Finish.	Elapsed.	Corrected.
Ramona	12 52 12	6 38 17	5 46 05	5 46 05
Alcæa	12 52 40	6 31 19	5 38 39	5 32 12
SCHOONERS—95FT. CLASS.				
Emerald	12 53 03	6 07 18	5 14 15	5 05 06
SCHOONERS—85FT. CLASS.				
Iroquois	12 53 02	6 19 49	5 26 47	5 12 40
CUTTERS—70FT. CLASS.

30FT. CLASS—CABIN CATS.				
Mary	12 57 27	6 26 37	5 29 10	5 29 10
Oconee	12 58 23	Withdrew.		
25FT. CLASS—CABIN CATS.				
Kittie	12 57 41	3 47 44	2 50 03	2 50 03
Ethel	12 57 58	3 51 30	2 53 32	2 45 28
20FT. CLASS—CABIN CATS.				
Dove	12 57 03	4 19 25	3 22 22	3 22 22
20FT. CLASS—SLOOPS.				
Wave	12 57 35	4 19 54	3 24 19	3 24 19
Shrimp	12 57 50	4 00 06	3 02 16	3 02 16
Trust Me	12 59 53	4 32 05	3 32 12	3 24 18

The winners were: Schooners—Class 1, Alcæa; 95ft. class, Emerald; 85ft. class, Iroquois. Cutters—70ft. class, Queen Mab; 60ft. class, Wasp; 50ft. class, Uvira; 34ft. special class, Dragoon; 36ft. class, Infanta; 30ft. class, Feydeh; 25ft. class, Dodo; 21ft. special class, Houri; 20ft. class, Shrimp. Cabin Cats—30ft. class, Mary; 25ft. class, Ethel; 20ft. class, Dove.

Emerald won the Leland cup and special schooner prize, and Wasp the special cutter prize.

The rain continued through the evening and interfered with the festivities ashore to a certain extent, though the club house was full and there was music and dancing.

Tuesday morning was clear and very calm, and not untill 1:25 P. M. was the start given, eleven yachts crossing the line: Emerald, Wasp, Norota, Ola, Katrina, Gossoon, Dragoon, Hildegard, Indolent, Iroquois and Alcæa, the latter being becalmed up the harbor and starting an hour after the fleet. Ariel arrived on Monday from New London, having started on Saturday morning and met calm weather, and she and Clytie started, but did not cross the line. The wind was light for a time, but finally came in from the south, and the boats started at a good pace over the 39 miles to Morris Cove. After passing Stratford Point a rain squall with a strong breeze came from the eastward, followed by a fog, which delayed the fleet. The times taken were:

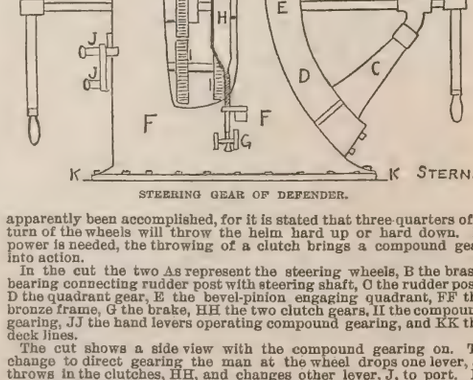
SCHOONERS.

	Finish.	Elapsed.	Corrected.
Alcæa	Allows.	Not timed.	
Emerald	3 02	6 44 37	5 19 37	5 16 35
Iroquois	8 46	7 34 20	6 09 20	6 00 34
CUTTERS.				
Katrina	Allows.	6 33 19	5 08 19	5 08 19
Wasp	27 46	6 26 02	5 01 02	4 33 16
Gossoon	36 17	7 32 40	6 07 40	5 31 23

A wind factor of 65 per cent. was used, based on the average force of the wind during the race. The regatta committee accompanied Com. Benedict on the Oneida.

An early start was made next morning at 10:05, there being a moderate breeze from S.E. which held all day, though light and variable at times. The fleet was timed at New London:

	Allowance.	Finish.	Elapsed.	Corrected.	Cumulative Cor'cted.
Alcæa	Al'ws.	6 11 05	8 06 05	8 06 05	.. .. ..
Emerald	03 43	5 41 55	7 36 55	7 33 12	12 49 47
Iroquois	10 12	5 59 00	7 54 00	7 43 48	13 44 22
Katrina	Al'ws.	5 10 50	7 05 50	7 05 50	12 14 09
Hildegard	12 40	Withdrew.			
Wasp	28 23	5 02 35	6 57 35	6 29 12	11 02 28
Gossoon	42 08	5 26 53	7 51 53	7 09 45	12 41 08
Norota	55 43	6 12 43	8 07 43	7 12 00	12 59 32



The wind factor for the run of 39 miles was 60 per cent. The first prizes go to Emerald and Wasp, and the second to Iroquois and Katrina.

Defender's Steering Gear.

From the Boston Globe.

Like some other carefully guarded secrets about the boat, the secret of the improved bevel steering gear, of which mention has previously been made, is a secret no longer. The accompanying cut and description give an excellent idea of it, and show that in this as well as in many other things the boat is away ahead of anything else in her class.

The main idea of the gear is to secure such speed of movement as is found in a tiller, while at the same time getting power enough to steer the boat should she prove at all hard headed. This object has

STEERING GEAR OF DEFENDER.

apparently been accomplished, for it is stated that three quarters of a turn of the wheels will throw the helm hard up or hard down. If power is needed, the throwing of a clutch brings a compound gear into action.

In the cut the two As represent the steering wheels, B the brass-bearing connecting rudder post with steering shaft, C the rudder post, D the quadrant gear, E the bevel-pinion engaging quadrant, FF the bronze frame, G the brake, HH the two clutch gears, II the compound gearing, JJ the hand levers operating compound gearing, and KK the deck lines.

The cut shows a side view with the compound gearing on. To change to direct gearing the man at the wheel drops one lever, J, throws in the clutches, HH, and changes other lever, J, to port. In changing either way, the helmsman places his foot on lever, G, which keeps the boat on her course while the change is made.

The wheels are so arranged that four men can be put at them if need be. The wheels are on the same shaft and work together. The gear is boxed over, so that none of its parts are in ordinary view. The invention is that of Nat Herreshoff, and is patented.

Cohasset Y. C. Second Championship.

COHASSET.

Saturday, June 29.

THERE was a strong breeze and heavy sea off Cohasset on June 29, but the yachts of the Cohasset Y. C. sailed a fine race, the times being:

FIRST CLASS.

Defender.

THE uncertainties of yachting were never more clearly and conspicuously demonstrated than on the afternoon of Saturday last, at 12:54 Eastern time. The new challenger, Valkyrie III., was nearing the Skelmorlie mark on the second round of the Royal Northern Y. C. regatta, her maiden race, with a lead of over half an hour over Britannia and still more over Ailsa; at the same minute the new Cup defender, with the champagne dripping from her bows and her name Defender still echoing through the shops, was gathering rapid way as she cleared the doors of the south shops and felt the water surging round her bronze keel. When the Clyde race finished, two hours later, Britannia was flying another winning flag, and the unlucky Defender was perched almost high and dry in a dangerous position on the launching ways, just outside the shop, after all efforts to move her had failed.

In the case of the challenger, the result was in no way serious; she had sailed her first race in variable weather without mishap, and to all appearances quite realizing the expectations of her designer as far as the test went. At times she had profited by the flukes of the wind, and in the end the chances of war were against her, she was becalmed for a long while, Britannia meanwhile coming up and just saving her time.

With the new defender the matter was more serious, at best it meant a great disappointment to many people, with the disheartening effects which always attend an unsuccessful launching; and what is of more practical consequence, the loss of time, which is growing more valuable each day. Furthermore, the yacht lay in a very dangerous position, perched up high on the new ways, with only her fin immersed at high water, the average rise of the tide being but 5ft., and inadequately cradled for any such emergency. In event of a strong N.W. wind and a sea, the consequences might easily be very serious: the sinking of a part of the new ways under the continued heavy strain, the failure of the cradle, if it can be called such, or the overthrow of the huge hull through the force of the wind and sea.

So many changes have been made and so many false reports set afloat about the date of the launch that up to the middle of last week there was almost as much uncertainty as a month ago. In the morning papers of June 25 an official statement was made that the launch would take place at high water, between 12 M. and 1 P. M., on Saturday, June 29, and that the public would be admitted to one of the docks of the Herreshoff works. There was a general feeling that this announcement was but a blind, and that the yacht would in the meanwhile be rushed quietly into the water; and this suspicion was strengthened by a report in a New York evening paper on the same day that it had just been decided to launch next day, June 26. On the strength of this latter report, some newspaper men and photographers took the night express for Providence and the first train on Wednesday morning for Bristol, being rewarded by a fine view of the outside of the Herreshoff works, with the regular watchman in the foreground, and of the beautiful expanse of water inside of Prudence Island.

As events proved, the Saturday story was true, the launch being really set for that day and a number of prominent guests invited; as for the photographers, newspaper men and general public, they wisely did not wait for invitations. Saturday morning was hazy and overcast, with a close atmosphere and no wind, the water being quite calm. Up to 10 o'clock there was only the little steam yacht Nautilus and the schooner Priscilla off the works, but Colonia was visible in the distance, under tow, coming from New London with an absence flag aloft, while a large white schooner was beating up slowly and many small sails were visible in the distance. A little later a good breeze sprung up, bringing in sailing craft from all quarters, and by 11 o'clock there was a large fleet at anchor about the two piers of the works.

The big Valiant came in from New York with Mr. W. K. Vanderbilt and a party aboard, anchoring well off shore. The Conqueror came in close to the piers, with the Ballymena and Sheerwater, on board the latter being Mr. E. D. Morgan and a party. In the road in front of the main shop was a bustling crowd of men, boys, wheelmen, fakirs, equestrians—all watching the closed gates and doors. Peddlers selling badges and souvenirs made from the punchings and clippings from the bronze and aluminum plates were about in numbers, and one dealer had a large display of aluminum cups, tableware and cooking utensils, all warranted to be made from pieces of the Defender.

From the shore side of the shops there was nothing to be seen but the busy and bustling crowd; many people have been admitted to the works during the past three weeks, and during the morning many more were passed in through the partly opened door, but the newspaper men were rigidly excluded, watchmen and policemen being plentifully distributed. The water doors of the shop were open, however, workmen being busy on the ways and about the stern, but rowboats were hardly to be had; a man was lucky if he could charter at any price a leaky bateau with portions of a pair of sculls. Early in the week a clever artist of the Providence *Journal*, with a companion, had rowed quietly up to these same big doors, almost the whole front of the building up to the gable having been cut out, first to pass Colonia in 1893 and now for the new boat. The pair laid by quietly for about an hour, the artist securing a very good sketch of the afterbody of the yacht, no easy matter when her great size and extreme proportions are considered. The sketch, however, is incorrect in one particular, a rib along the horn timber, an ogee to the foot of the frames; the frames of the counter make a fair sweep across at the after end, merging into an increasing angle as they go forward. The venturous artist had nearly finished his picture before his object was discovered; then he was greeted with a shower of washers and bolts and other missiles, including coal tar, and finally vacated his position after attaining his end. In the morning the stern of the yacht was surrounded by a light and lofty scaffolding used by the painters, but this was quickly taken down, disclosing the entire afterbody from the water. Two steam derricks and a pile driver were close in to the shops, a diver working steadily under water and sending up bundles of old and rusty rails from alongside the ways, the derrick lifting them out. About noon Mr. and Mrs. C. Oliver Iselin, with their children, arrived with quite a party of guests in carriages, and all were admitted to the shop.

By this time there was a noisy and excited but thoroughly good-natured crowd pressing against the gates leading to the north wharf, which was augmented a little later by the contents of a special train from Providence. When the gates were opened at 12:30, the sight was an amusing one—a footrace pell mell for the end of the dock, the crowd almost in an instant swarming over the pier, the pile driver and the roofs of the adjoining buildings. The South pier was reserved for the Herreshoff family and their friends, and for the owners of the yacht. Among the many vessels present were two tugs, one chartered by Stebbins, the Boston photographer, and the other by Bolles, of Brooklyn, while canoeists without number bristled from the piers and neighboring yachts and boats.

In their method of launching the Herreshoffs are quite as unconventional and original as in everything else, and to all appearances in this case, as in Wasp and other boats, the arrangements were simple and to the average eye inadequate. It was impossible to inspect them near at hand, and all that could be seen was during the brief moment while they moved from the end of the shop into the water; but even this glance was sufficient to show the absence of such long and carefully built cradling as is always considered necessary for a sharp and heavy vessel. The sliding ways apparently were not more than 20ft. long. On top of them were heavy oak cross bearers supporting the keel. From this foundation ran up almost vertically six spruce timbers, 6in. by 8in., on each side of the vessel, each abutting against the lower edge of one of the outer strakes of plating. The base was so narrow, probably not more than 9ft., that these long shores were almost vertical, and of themselves could afford little support. They were, however, held by long bolts through the cross bearers, drawing their heads against the sides of the fin. The calculations for the launching weights were based on the figures used in the larger class of vessel, the limit of weight per foot of surface being normal. It is to be said that probably two-thirds of the launching weight of the vessel was in her lead keel, some 75 tons or more, and that this itself had a very wide base; but on the other hand, the superstructure, the hull proper, is very lofty, and in a strong wind might be an element of danger; while the ways were new and in no way tested as to the weight they could safely carry on a very narrow and short base. As she passed out of the shop, the most striking feature of the whole launch was the disproportion between the big lofty hull and the match-like sticks resting against the lower part of the fin.

At 12:45 the tide was at its height and everything in readiness, and a few blows of mauls came from within the shop. Mrs. Iselin stood by the bows with a small hammer, and when the hull began to move, at 12:54, she promptly broke the bottle and christened the yacht Defender. The spectators outside, missing the musical rally that ordinarily announces the last ten minutes before a launch, were quite unprepared when the cry went up from inside showing that the vessel had started, but in another moment the long counter cleared the door and half a dozen nimble members of the new crew set a flagpole with a large new silk ensign. Then the bow cleared, and another pole went up forward bearing the burgee of the New York Y. C. and the private flags of Messrs. Iselin, Vanderbilt and Morgan. The crowd cheered, guns were fired on the yachts, and the scene became exciting; as she left the door of the shop the yacht gathered way, a square platform of planks, one side loaded with lead, was dropped from the bow to act as a drag, but before it had fairly caught the water the yacht began to slow up and of a sudden stopped, having run just about three times her own length, or one length clear of the house. At this point only her fin was immersed, up to the point where it flared into the body of the hull.

DEFENDER——TAKEN JUST AFTER SHE STOPPED ON THE WAYS——FROM A PHOTO BY C. E. BOLLES, BROOKLYN.

The programme, as arranged by the builders, was that no newspaper man should see the yacht before she was under water, and though there was no canvas hung over her sides and the idea of attempting to prevent the taking of photographs had been abandoned, it was expected that she would pass so quickly from the shop to the water that nothing more than a single snap shot at most would be possible. This time fortune favored the minions of the Press; there lay the yacht, the whole hull visible, while the tide, already beyond the turn, was each moment laying bare more and more of the treasured secrets of the designer. With a Samaritan-like spirit, too seldom seen in this sordid age, the first to come to the rescue were the photographers, who, without a moment's hesitation, hastened to heap figurative coals of fire in the very practical shape of stout wet hawsers on the decks of the unfortunate craft. Mr. N. G. Herreshoff, who was personally directing every detail of the launch, was everywhere, around the yacht in a yawlboat, on her decks and flying from place to place. Soon a stout hawser was led around under her bows, held by slings from the deck, and the two tugs were straining at the outer end. Still a third tug was added, and without the least effect. The twenty or more men on the deck were then sent forward and ordered to shake the boat, which they did; but this was at once stopped by Mr. Herreshoff.

The diver, who was still on the derrick, was sent down and came up after a time with the report that the cradle was all right, resting near the end of the ways, and no cause of the trouble visible. The big steam yacht Conqueror was now called into requisition by Mr. Vanderbilt; she ran off a little distance, directly ahead of the yacht, dropped an anchor from her bow and ran out astern a heavy hawser which was run along the deck, the bight being made fast to the stemhead just forward of the outer gammon iron. A pull here seemed to be a risky business, as it would have brought a heavy downward strain on the end of the counter; before the Conqueror was started up this plan was abandoned, and the hawser was passed around under the bows, below water, supported by three sets of slings from the deck. When the Conqueror started, the hawser first tautened, then the slings settled down with a jerk to their places and the steam yacht's capstans began to get in their work. A long pull and a strong pull—then a snap—and the bits of deck had pulled out of the Conqueror, the defender lying just where she had first stopped, over an hour before. The tide had now fallen over a foot, many of the spectators had left, the workmen had disposed of a generous feast in the North shop, provided by Mr. Iselin. The derricks busied themselves in getting ready shores and gear, as further proceedings were deferred until the midnight tide. The owners of the yacht and their friends had gone to a garden party in the town, in honor of the launch; the yachts, small and large, slipped away, a strong breeze now blowing; and the shipyard was practically deserted, the regular work having stopped for the day. Mr. N. G. Herresoff was still about the yacht and pier. It had been intended to step the mast at once, and during the evening it had been removed to the marine railway in the cove just south of the works, but of course all thoughts of masting and rigging out were abandoned before the one great problem of safely, if not speedily, launching the boat.

Late on Saturday afternoon a dispatch was sent by the builders to the War Department at Washington, asking the loan of pontoons to lift the yacht, the request being promptly granted. A message was also sent to New Bedford to the big wrecking tug Right Arm, which does most of the wrecking work about Nantucket Shoals, and she reached the works at 10 P. M. Saturday. It was decided, however, not to attempt the work by night, as the services of the diver might be needed and he could only work by daylight. On Sunday morning the Right Arm steamed into position just astern of the yacht and dropped two heavy anchors, some 7,000lbs. in all, from her bows. A heavy strap was passed around the yacht's bows and down around the cradle, and from this a 12in. hawser from the Right Arm was bent. The preparations were completed before noon, but the final pull was delayed until high water. The yacht's consort, the familiar Hattie Palmer, put in an appearance during the morning, Mr. Iselin sailed over to Colonia, and many yachts were present. At 1:20 the Right Arm prepared for a long pull, a strong pull and a pull altogether, her powerful steam windlass started up, and the cables and hawser were hove taut, the strain being maintained until the port cable parted; the yacht meanwhile being immovable. Then the tug backed in and steamed ahead rapidly, trying the effect of a sudden jerk, two or three of these attempts having no other result than to snap the 12in. hawser; bringing the proceedings to a temporary stop while repairs were made. Divers were sent down during the morning and reported that everything was apparently all right, and the fore end of the sliding ways about two feet over the end of the ground ways. A telephone message was sent, ordering pontoons, as the attempt at hauling off seemed hopeless.

Nothing more was attempted until Monday afternoon; then, the pontoons not having arrived, the Right Arm ran out four heavy hawsers to the yacht and backed in close, the slack of the hawsers being coiled down in a yawlboat. When all was ready the tug started ahead at full speed, attaining headway before the 200ft. of slack in the hawsers was taken up. The effect of the jerk was to pull yacht and cradle clear of the ways and then to pull the cradle from under the yacht, leaving her floating easily in the space between the pier heads. So far as could be ascertained, she is entirely uninjured, and none the worse for her unpleasant experience. The mast was brought up from the marine railway and stepped at once, and the work of preparation will now go on very rapidly, but it is a question whether she can be ready for the race set for July 10.

The dimensions of the defender are still a matter of doubt, and will be in all probability for some time; the exact beam will not be known until some reliable and disinterested person shall put a steel tape across her, and it may be even longer before the true draft is known. The over-all length is given as 124ft., but even if correct this means nothing as a basis of comparison with Colonia, Vigilant and Navahoe, or even with the yachts of other designers, because the two ends are treated in a very different manner from the other Herreshoff boats, to say nothing of Fife or Watson.

The fore overhang is comparatively short, and the over-all length is lessened further by the very straight line about the stemhead; if the sweep of the stem from the waterline to the stemhead were carried out fair, the length on deck would be from 1 to 2ft. greater. The same is true of the after end, if the lines of the deck and counter were carried out to the same pieplate finish as Colonia and Vigilant, some 4 or 5ft. would be added. The fore overhang does not look to be as long as in Colonia, even apart from the snubbing in of the line of stem near the deck; but the counter is quite as long as in the other Herreshoff boats, except that the extreme end is cut off to make a different finish.

The keel of the yacht could only be seen for a moment just as it entered the water, but from what was visible, taken with the hull itself, it would seem that the new yacht is in most respects much less of an "improved Colonia," as she is generally called, than a modified Valkyrie II. The midship section shows much greater draft on about the same proportionate beam, and the sides of the keel are narrowed in, swelling out lower down into a wide bulb. In the body of the boat proper the section shows a more regular sweep from the plankshear down to the hollow of the keel, the rather straight topsides, strong bilge and straight rising floor of Valkyrie II. being replaced by a flowing and continuous curve from the rail downward. There is nothing whatever of Vigilant or Colonia in the keel contour, their long straight keels being replaced by a continuous curve from the heel of the keel, very slight at first, but rising much as in Valkyrie II., crossing the waterline at about the same angle, but, as stated, snubbed in abruptly as it nears the deck at the stemhead. The rake of the rudder post could hardly be gauged in the short time the rudder was visible, only some 2ft. of it being out of water when the boat stopped. It is, however, very great, probably almost as much as Valkyrie II., and the rudder was set well under the boat to about the same extent, instead of just touching the waterline, as in all the older boats.

The strongest point of difference from the old craft and of likeness to Valkyrie and Britannia is on the bow and entire forebody. It would surprise no one to learn that the full waterlines and round frame lines of Vigilant had been relegated to the domain of the has-been, but the new yacht goes far beyond Colonia and in the direction of the Watson boats in the lines of the bow; clean, sweet and powerful, but free from the suggestion of force and effort that so characterized Vigilant and in a lesser degree Colonia. The boat is in-and-out plated, and the lines of the edges, themselves fair and true, show the clean and easy sweep of the diagonals; while the waterlines, both in the topsides and below water, show the same freedom from an excessive fullness. The afterbody is carried out in the same manner, a counter that would be called full, but at the same time not forced to an extreme.

Those who are familiar with Mr. N. G. Herreshoff's work in Gloriana, Wasp, Colonia and Vigilant appreciate the fact that he takes up the problem of designing as an engineer rather than as an artist; and, having certain definite and probably original ends in view, that he works directly for them with little regard to fairness of form, forcing a line into a hard curve here and a flat spot there to gain power above everything else. It has been frequently said that his yachts show their origin in the carved model and not in the paper design, and we understand that he uses the model to a greater extent than any modern designer, ascertaining the displacement and center of buoyancy from it by immersion in a tank. How true this may be we know not, but the majority of his boats indicate that the ordinary weights and splines have played but a secondary part in their origin. In the new boat there is more fairness of form, less apparent forcing of certain parts and more thorough harmony between middle body and ends than in the other big boats, the result being a craft in every way pleasing to the eye save in some superficial matters.

It may be that experience with the smaller fin-keels, in which power is of less importance and form more than in the large yachts, has led to this change; but it is also probable that two seasons' sailing in company with Valkyrie II. and Britannia has had a share in it. Be the cause what it may, and the dimensions right or wrong, the new boat has certainly a model that will compare favorably with anything yet launched at Bristol.

The stem we have already described, the stern is shaped much like Isolde and Niagara. The sterns of Vigilant and Colonia, as yachtsmen know, were formed simply by carrying out all the lines of the hull until they intersected the deck, practically coming together at an acute angle, the deck line being elliptical. It is not necessary to compare such a stern to that on Valkyrie II. or Britannia to realize how inartistic and ugly it is; but at the same time there is no avoiding the conclusion that it is strong, simple of construction, and in everything but appearance an excellent stern. In the new boat, what would be practically the same stern is cut off, the lines no longer continued until they meet, but joined by a transom, as in most modern yachts. This transom is like those of Isolde and Niagara, an improvement on the straight and awkward ends of Wenonah, El Chico and Dacotah, but lacking in that bold and decided sweep necessary to give character to the end of the counter. It curves a little, but it falls far short of what it might be—an ornament and finish to the whole yacht.

The freeboard is moderate and the sheer slight, the deckline shows a pleasing round carried down through each successive waterline, and the yacht promises to be an exceptionally handsome craft save for the short and awkward fore end and the finish of the stern.

The length on the waterline is of no importance just now, as it may be safely assumed that it will come out very close to 90ft. when the yacht is in measuring trim. It would be indeed unfortunate if either yacht should exceed this limit; but with the care that has been taken to this end by both Herreshoff and Watson, there is little danger of such a mishap. The extreme beam is still unknown, though Mr. Iselin is credited with the statement that it is 24ft.; others insist that it is 23ft. 8in. The draft too is unknown, though safely fixed between the limits of 18 and 19ft., probably nearer the latter. The bottom of the yacht, from a foot below the top of the lead keel up to the waterline, is plated with Parson's Manganese Bronze, manufactured by Cramp & Co., at Philadelphia. The topsides are plated with aluminum, manufactured by the Pittsburgh Reduction Co., of Pittsburgh. All the plating is in-and-out, there being five strakes to a side in the hull proper. The plating, caulking and finishing is very well done. The bowsprit will ship in two heavy steel tubes strengthened with angle

VALKYRIE III.——FROM A PHOTO BY ADAMSON.

iron, bolted to the deck about 8ft. apart. There is a short piece of bulwark abreast the forward gammon, but beyond this there is only a low rail, probably 6in. high, formed of an aluminum half-bulb beam. There are seven hatch openings in the deck. The interior of the yacht has not yet been profaned by the irreverent eye of a newspaper man, and there are contradictory reports of what it contains. The mast is a fine stick of Oregon pine, the spar dimensions, for which we cannot vouch, being: mast, over all, 100ft.; boom, 100ft.; topmast, 60ft.; gaff, 62ft.; masthead, 19ft. The masthead work consists of two bands, one above the other, connected by three arms, the shrouds going over the upper band. There are no oak cheeks, as in the old style of rig. The boom looks very small in diameter and very light, a solid stick.

Practical Construction.

THE New York *Herald* discusses the interesting question of racing construction in the following off-hand and superficial manner: "Valkyrie III. is a composite yacht of fine construction, but of a type of marine architecture old, and in most part not the best for the most trying service. What motives induced the owners of Valkyrie III. to adopt the most economical form of construction admissible is not known; but when compared to the Defender, it sinks deep into the oblivion of antiquity. Where the builders of Valkyrie III. employed wood in the construction of their yacht, the Americans used the finest manganese bronze, an alloy famous for its strength and its ability to resist the action of sea water and through all exposure to retain its smooth polished surface. In the Defender, where it is essential to make the lightest possible construction consistent with proper strength, the builders, with most highly commendable wit and boldness, have used a metal which until lately has been closed save to a very few uses, yet which science is to-day placing at our command in quantities and at such low cost that it will soon enter into very general use where the valuable factor of lightness is of prime importance."

All of this is rather hard on a method of construction which has been thus far the most elaborate and expensive known, and that has stood most perfectly the practical test. At the same time we doubt very much whether the composite yacht is quite such a back number as the *Herald* asserts. Up to the construction of Vigilant two years ago with a skin of Tobin bronze, the Clyde-built composite yachts, such as Genesta, Varuna, the two Valkyries and Britannia, were far ahead of any other yachts afloat. The wooden construction of Puritan and Mayflower was cheap and crude in the extreme compared with them; nor was the all-steel construction of Thistle and Volunteer much better. The hulls were strong, light and very durable; and, with all that has been urged against copper sheathing, it is, when newly off the ways, as in the Cup races, an admirable bottom, better than steel, and after a short time afloat better than black lead on wood. That a number of small sheets overlapping cannot be as good as a single smooth and unbroken surface of the same metal goes without saying, but taking the racers of 1893, the bottom of the composite-built Valkyrie II., when it came out of the Erie Basin after careful smoothing and polishing, was good enough for any racing in a moderate breeze and disturbed water. That it was inferior in smoothness and evenness to that of Vigilant was perfectly clear, but the difference would have been of moment only in very light airs and smooth water. It is further true that after two or three weeks' immersion, with possible damage from grounding or wreckage, the sheets might be inferior to the solid metal; but the Cup races, for which alone the Defender is intended, are likely to be over within a week or ten days.

In adopting the composite construction for Valkyrie III. her designer, with many other serious problems to trouble him, has lessened in a great degree the problem of construction by following a method familiar to him and the builders, the excellence of which was fully proved, and which could be carried out very rapidly, getting the yacht afloat at an early date. The saving in cost was probably not considered for a moment under the circumstances. The result is a yacht which, judged by long experience, should be safe for the Atlantic passage, secure from any necessity for subsequent strengthening, and capable of holding together for a generation. In adopting a totally different course in Defender, Mr. Herreshoff has shown a boldness and enterprise which are highly commendable; but at the same time he has accepted a serious handicap that is likely to affect the success of the yacht. The question of durability need hardly be considered in the case of these big and useless craft, but it must be admitted that the life of a yacht built of lead, manganese bronze, aluminum and steel, all subjected to salt water and salt air, is an open question, and to be very seriously considered before the composite construction is entirely rejected for all yachts in place of aluminum and its alloys. The question of strength is a much more serious one, and remains yet to be answered by practical trial. No amount of care and skill on the part of the designer can entirely discount the risk accompanying the use of an unknown and treacherous metal. If reports be true, a great deal of steel has already been used to replace or supplement the aluminum; and it is still a question whether further strengthening may not be found necessary.

The great disadvantage of the novel construction of Defender is the accompanying waste of most precious time. Possible seconds in a match have really been paid for by weeks taken from the already brief time of preparatory sailing, and in our opinion the price thus paid is entirely too high. We believe that, even if the new construction should finally prove fully strong, and as light as is anticipated, the defense of the America's Cup would be far safer with a composite yacht of the same construction and weights as Valkyrie III., afloat by the end of May, as might easily have been done, and sailing through the whole summer, than with a yacht of light construction and most perfect bottom, but perched high and dry on the ways up to the first of July and with no certainty as to when she will be ready for a trial trip.

Duxbury Y. C. First Regatta.

DUXBURY, MASS.—DUXBURY BAY.

Saturday, June 22.

THE new Duxbury Y. C. sailed its initial regatta on June 22, on Duxbury Bay, in a variable wind, the times being:

Pequot Casino Association.

THE Pequot Casino Association, of New London, includes a number of active yachtsmen who make that city their summer home, and who are desirious of making the Thames as interesting as possible for yachtsmen on the Sound. Under the leadership of Mr. L. Vaughn Clark, owner of the 40-footer Gossoon, the Association has organized a yachting department and this year a regatta was arranged, to fit in between the Seawanhaka C. Y. C. cruise and the Yale-Harvard rowing race. Invitations were sent out generally to the Sound clubs, and with the many yachts gathered for the rowing events there should have been a good field of starters, but the weather was very unfavorable; a mixture of rain, fog and strong winds, but of varying force, calling for reefing and shaking out. The new Hanley 30-footer, Ashumet, was classed with the Herreshoff fin-keel Memory, while in the class above was the fin-keel Drusilla, of 36ft. l.w.l. The trio sailed a very hard race, Ashumet finally beating Drusilla on elapsed time, no small achievement considering the difference in size. The times were:

The Clyde Races.

JUST a year ago the attention of all American yachtsmen was for the moment turned from their home affairs to the River Clyde, in anxious anticipation of the races of the Clyde fortnight. Keen as the interest was then, with an American yacht just ready for a trial with the foreign cracks, it is even keener to-day, though the Clyde racing will be limited to three home boats. Then it was, so to speak, a matter of pleasure, of ordinary sport in yacht racing; now it is business—the defense of the America's Cup. The interest in Vigilant, Valkyrie II. and Britannia was no keener than that felt to-day in Valkyrie III., Ailsa and the same Britannia; yachtsmen are figuring closely on the question of whether either of the new boats will beat the old craft; and if so, which will prove the better for the work off Sandy Hook next September. The interest is even heightened by the very uneven performance of Ailsa, first beating Britannia and then continually beaten by her. Since the Mersey regatta, June 20–21, the racing has been very dull, Britannia and Niagara sailing over alone in the Douglas and Ramsay regattas, Ailsa being on the Clyde for alterations and the 20-raters evidently having pressing business somewhere that Capt. John Barr and Niagara were not. The Clyde regatta began on June 29 with the Royal Northern Y. C., the same being continued on July 1. The Mudhook Y. C. has July 3 and 4, the Royal Clyde July 6 to 9, the Clyde Corinthian 10–11, Royal Western 13, Royal Largs 15, then the yachts go to Bangor for the Royal Ulster regattas on July 19–20. Ailsa was out and had six tons of lead removed from her keel, her mast shortened 5ft., boom 3ft. and topmast lengthened. The first day of the Royal Northern found Valkyrie III., Ailsa and Britannia at the line off Rothesay, with Niagara, Zinita and Dacotah in the 20-rating class. Zinita is of 20-rating, but a fast cruiser rather than a racer, and Dacotah is the Herreshoff 10-rater of last year canvassed up to 12-rating.

The course for the large yachts was the quadrangle between Rothesay, Mount Stewart, Largs and Skelmorlie, 12½ miles, sailed three times, then across diagonally, around the Largs mark and back, 50 nautical miles; the 20-raters sailing once around and to Largs and back, 31 miles. Valkyrie III. allowed Ailsa 2m. 59s., and Britannia 4m. 2s. The wind was light S. E. at the start, all carrying clubtopsails, jibtopsails were sent up just before the start, Ailsa setting a large one and the other two setting small ones; the first short leg, to Bogany Point, being to windward. Ailsa got the start, 15s. after the gun, Britannia being 20s. later. Valkyrie had to tack in order to get a weather berth, and was handicapped 2m. at the start. The wind was light and in patches, Ailsa being badly served at first. Valkyrie soon took the lead and stood for the Mount Stewart mark on a close reach with a better breeze, heeling until her plankseer was awash and pointing high. She had a long lead at the first mark, the times being:

Valkyrie	11 16 55	Ailsa	11 39 10
Britannia	11 24 20		

On the reach across to Largs the wind left the yachts for a time, then came in from N.W., catching Ailsa first and putting her in first place. Britannia held to the northward, close to Great Cumbrae Island, and caught the next fluke of a S.W. breeze, that sent her around the Largs mark:

Valkyrie	1 25 37	Ailsa	2 03 53
Britannia	2 00 15		

They set spinakers for Skelmorlie, Britannia gaining some 3m. on Valkyrie, the times at the last turn being:

Valkyrie	2 54 55	Ailsa	3 06 50
Britannia	3 03 35		

There was a nice breeze on the last leg, Valkyrie still gaining, the end of the first round being timed:

Valkyrie	3 20 35	Ailsa	4 06 45
Britannia	3 56 54		

Again they went off for Mount Stewart, where they were timed:

Valkyrie	4 06 57	Ailsa	4 52 50
Britannia	4 42 50		

There was more wind on the free reach across to Largs; from there they ran up to Skelmorlie, where the leaders were timed:

Valkyrie	5 25 30	Britannia	6 01 10

Ailsa gave up and was towed in from Largs. Valkyrie had nearly finished the second round when she was becalmed, lying idle for a long time; meanwhile Britannia picked up a light breeze and came up on her before she felt the new wind. The two made a fine race over the last mile or two, Valkyrie failing to save her time, the race being called at the end of the second round. The finish was timed:

Valkyrie	7 37 26	Britannia	7 39 15

The 20-raters started at 11:15, meeting the same variable weather. Zinita got the start, 10s. after the gun, Niagara being 20s. after her and Dacotah 1m. 20s. late. Zinita led for some time, but was finally passed by Niagara; the race was called at the end of the first round, the times being:

Niagara	4 27 38	Dacotah	4 35 22
Zinita	4 33 50		

The allowances were proportional to the shorter course, Niagara winning.

On Monday morning the rain was falling steadily, and though there was a good breeze from the East, Lord Dunraven decided not to risk the soaking of her news sails, so Valkyrie III. laid at anchor, while Ailsa and Britannia prepared for the start over the same course as on Saturday. Britannia crossed 9sec. after the gun and Ailsa 7sec. later to leeward. A short leg on the wind brought them to Bogany Point, from which the course was a reach with booms to starboard to Mount Stewart, Britannia turning at 10:51:10, Ailsa 10:52:00.

They sailed a good race in a strong breeze, Britannia steadily leaving the larger boat and winning by 2m. 41sec. without her allowance.

The 20-rating class had the same trio as on Saturday over the same course, Zinita giving Niagara a good race, but being finally beaten by her. Dacotah won the prize on her large allowance by 2m. 46sec. from Niagara.

YACHTING NEWS NOTES.

THE new steam yacht Washita, designed and built by Charles L. Seabury & Co., Nyack, N. Y., was launched Wednesday night, June 26, at high tide at 11:55. The yards and yacht were beautifully illuminated with electric lights and Japanese lanterns, and presented a novel sight. Her principal dimensions are length over all 100ft., l. w. l. 83ft., beam 14ft., draft 5ft. She is of the very latest design, flush deck, schooner rigged. There is a fine mahogany deck house forward, with a bridge overhead. The deck house is used as a dining room, with dumbwaiter from galley below. The owner's stateroom, guests' staterooms, saloon, bath room, etc., are aft. She is lighted throughout by electricity, and a search light is arranged on deck house forward. She also carries a small launch. The machinery consists of a Seabury triple expansion engine and a Seabury patent safety water-tube boiler, speed 15 miles per hour. She will be used by her owner, Mr. John P. Duncan, principally on Shrewsbury River, L. I. Sound and lower New York Bay. Capt. Downey is in command. She will be in commission in a few days.

The sloop Nepenthe, owned by Messrs. W. S. Dudley and Geo. Agar, sailed from New Orleans on June 18 for New York. She will go north to witness the trial and international races. Nepenthe is a very fast 45-footer; she was designed by Edward Burgess and built by Lawley in 1889. Mr. Barnes and Mr. Blair Jamison are guests of the owners.

Canoeing.

Marine and Field Club Regatta.

Saturday, June 29.

If anything could bring out a good gathering of canoeists it is the regatta of the Marine and Field Club; this organization, while in no sense a canoe club, having held some of the largest and most important races for canoeists, outside of those of the A. C. A. meets. No better test of strength, or rather the present weakness, of canoeing about New York could have been devised at this time, the event gaining interest from the presence of the Montreal canoeist, Mr. C. E. Archbald, who is in New York to challenge for the New York C. C. cup. The weather was very unfavorable, a close cloudy day with threats of rain that were realized in heavy squalls in the afternoon, and the racing suffered in consequence, but still there were not the men present who have made the former races of the club a success. The Vespers, all the way from Lowell, the old hands Butler, Goddard and Gray, with a novice, Butler Ames, nephew of Mr. Paul Butler, with the old Wasp, Bee, Fly and V., gave a familiar look to the racing; Yonkers sent three men, Quick, Hale and Goodsell; the Passaic River gave no sign of life, and even the New York C. C., with a deep interest in the races from the fact that they were in part to serve as trial races to select a defender for her cup, had but two men entered. The course for the sailing was a triangle with mile sides, on Gravesend Bay in front of the club house, to be sailed twice, six miles.

The first race called was that for the Marine and Field perpetual challenge trophy, the start being made at 11:20. Foggy Dew took the lead at the start, but was soon passed by Mab and later by Wasp, these two fighting it out, the victory finally going to the Canadian.

	1st Round.	Finish.	Elapsed.
Mab, C. E. Archbald	11 49 40	12 21 38	1 01 38
Wasp, Paul Butler	11 51 30	12 22 42	1 02 43
V., Howard Gray	11 49 55	12 22 53	1 02 53
Bee, D. S. Goddard	11 51 45	12 23 38	1 03 38
Fly, Butler Ames	11 51 47	12 27 02	1 07 02
Torment, F. C. Moore	11 53 12	12 28 33	1 08 33
Foggy Dew, H. L. Quick	11 52 45	12 29 03	1 09 03
Beta, Thos. Hale, Jr	11 53 20	12 29 55	1 09 55
Damosel, Wm. Whitlock	11 57 50	Withdrew.	
Bo Peep, D. B. Goodsell	11 56 30	Withdrew.	

The second event was for the new 15×36 class, with four starters, three of the new boats and a wide canoe, the old Mayflower. Two of the boats, Lark and Why Not, stood out into the bay and missed the mark, the third sailed the course, but turned a mark on the wrong side; the race being called off and postponed to July 2.

The third race was a sailing handicap in three classes, the first class, old sailors like Butler and Goddard, allowing three minutes to the second class, men who had never won sailing prizes, and six minutes to the third. The starters were all in the first class except Mr. Butler Ames, the only novice. The men who had sailed canoes, but had not won prizes, did not turn up. The race was started at 3:08. Mab carried a small rig and was thus handicapped. The times were:

CLASS A.

	Start.	Finish.	Corrected.
V, Howard Gray	3 14 00	4 22 33	1 08 33
Wasp, Paul Butler	3 14 00	4 23 13	1 09 13
Foggy Dew, H. L. Quick	3 14 00	4 25 15	1 12 15
Mab, C. E. Archbald	3 14 00	4 29 11	1 15 11
Bee, D. S. Goddard	3 14 00	4 29 40	1 15 40
Damosel, Wm. Whitlock	3 14 00	4 39 39	1 25 39
Beta, Thos. Hale, Jr	3 14 00	Withdrew.	

CLASS C.

Fly, Butler Ames	3 09 00	4 24 52	1 09 52

The tandem paddling race brought out but one crew, Messrs. Plummer and Mowbray, of the New York C. C. The final race was for the Marine and Field Club trophy, to be held permanently by the winner of two successive races, the present holder, Mr. Schuyler Schieffelin, not contesting. The result was:

	1st Round.	Finish.	Elapsed.
V, Howard Gray	5 16 40	5 44 50	0 59 50
Foggy Dew, H. L. Quick	5 17 40	5 45 13	1 00 13
Wasp, Paul Butler	5 18 00	5 45 35	1 00 35
Mab, C. E. Archbald	5 15 07	5 45 50	1 00 50
Fly, Butler Ames	5 22 50	5 51 58	1 06 58
Torment, F. C. Moore	5 16 22	Withdrew.	
Bee, D. S. Goddard		Withdrew.	

V fouled a buoy, making Foggy Dew the winner.

Commodore Witherbee was present, acting as referee, the judges being Messrs. M. V. Brokaw, Irving V. Dorland, Paul B. Rossire and Nelson Greenfield.

Under the New Handicap.

WHILE the sailing races of the recent Eastern Division A. C. A. meet were uninteresting, owing to lack of wind, the "unlimited" proved of interest since it was the first race sailed under the new handicap rule.

The course was three miles in length and the entries were four in number. Class A, Paul Butler, canoe Wasp; Class B, D. S. Goddard, canoe Bee, and Howard Gray, canoe V; Class C, Butler Ames, canoe Fly. Butler allows Gray and Goddard 1.30, Butler allows Ames 3.00, Goddard and Gray allow Ames 1.30. The race was slow, the three miles being covered by the winner in 53.45; second 58.20. Butler won over Gray, the second man, by 4.45, thus easily saving his time.

The classes were started a minute and a half apart, so that the first man to finish won the race. With so few starters the method was easily worked, but I have serious doubts as to the result when a large field comes to the starting line. The starting of the classes was greatly aided by using the megaphone, by means of which the regatta committee were enabled to speak to the competitors wherever they were.

ILEX.

Hints for Canoeists.

Editor Forest and Stream:

The following simple suggestions may prove useful to some fellow canoeists:

1. An old bayonet makes the best camp candlestick, a good poker and a good tent peg.

2. Butter will keep, and is easily carried, when packed in sausage skins; a half pound to a link. Your butcher will do the packing for you.

3. Dry toast is better than stale bread.

4. A sheet of unbleached muslin, 9ft.×7ft., waterproofed in lime and alum water, takes but little room in the knapsack, and is good for a shelter tent, a tent awning, or a floor cloth.

5. Vaseline rubbed on the hands and face before going out for the first day in the sun prevents blistering of the skin from sunburn. Keep applying it as it wears off. CANOE LORNA.

Rifle Range and Gallery.

The National Schuetzenbund.

The formal opening of the National Schützenbund of the United States of America took place at 8 A. M. on June 30. At that hour the gates of Glendale Park, L. I., were thrown open and a score of bands poured forth the inspiriting strains of "Die Wacht am Rhein." The greatest meeting of German sharpshooters ever held in this country, was thus inaugurated.

The contestants came from all parts of the United States: from Maine and from the Pacific Slope; from the cities that line the shores of the great lakes and from those whose homes look out upon the waters of the Gulf of Mexico. Marksmen were also present who claim Germany, Austria and Hungary as their home. It is a great meeting, and those who are taking part in it are enjoying themselves thoroughly, the local management apparently having left no stone unturned to render this the most successful and the most enjoyable Schützenfest ever held.

The official programme arranged for the ten days devoted to the Schützenfest is as follows:

Saturday, June 29, at 8 P. M., *commers* in honor of the visiting marksmen, at Central Opera house, Third avenue and Sixty-seventh street, New York.

Sunday, June 30, beginning of the prize shooting and bowling tournament at Glendale Park, games and popular amusements during the day, and distribution of prizes in the evening.

Monday, July 1, parade, opening of the contest at the Columbia target, first shot to be fired by President Cleveland.

Tuesday, July 2, designated at Volksfest-versios day. Reception of visiting organizations, popular amusements as on every succeeding day, and distribution of prizes in the evening.

Wednesday, July 3, known as veterans' day.

Thursday, July 4, national holiday; salute of 119 gun-shots and fireworks in the evening.

Friday, July 5, bowlers' day; bowling tournament and distribution of prizes.

Saturday, July 6, gymnasts' day; great gymnastic and calisthenic exhibition and contests for prizes.

Sunday, July 7, singers' day; chorus *en masse* by the United Singers of Brooklyn and New York.

Monday, July 8, distribution of prizes and proclamation of the "king" of the festival.

The officers of the National Sharpshooters' Union are: William V. Weber, of the Independent New York Schuetzen Corps, President; Lorenz Zeller, Henry Offermann, Adolph Richter and Christian D. Rehm, Vice-Presidents; Fritz Baumann, Recording Secretary; Charles I. Roedel, Corresponding Secretary; Henry J. Behrens, Financial Secretary; George H. Wehrenberg, Treasurer; Bernard Walter, Gebhard Krauss and William Hayes, Shooting Masters; Frederick Cook, Robert Henke, Otto Nehlein, Frederick Erxmeyer and George H. Fredericks, Trustees.

The charter societies of the National Sharpshooters' Union are the Independent New York Schuetzen Corps, the New York Schuetzen Corps, the New York Central Corps, the New York City Corps, the Harlem Independent Corps, the Zettler Rifle Club, the Williamsburg Schuetzen Gesellschaft, the New York Schuetzen Gilde, the Newark Schuetzen Gesellschaft, the Hoboken Corps, the Hoboken Independent Corps, the German-American Schuetzen Gesellschaft, the Brooklyn Schuetzen Corps and other local marksmen's clubs, the Miller Rifle Club, the Turtle Bay Schuetzen Corps, the Luetzow Rifle Club, the Empire Rifle Club, the Philadelphia Schuetzen Verein, and about a dozen clubs from Jersey City, Passaic, Hartford, Springfield, Cincinnati, St. Louis and San Francisco.

Notwithstanding the heavy downpour that took place on Saturday evening, Koenig's Glendale Schuetzen Park, or Glendale Park for short, presented a very gay appearance. Bunting, hundreds of yards of it, put a genuine holiday look on every portion of the park. It is a holiday, a German holiday, and the Germans know how to enjoy themselves. The park contains at present about all the devices known which help to make a day enjoyable to everybody that is capable of being amused or interested. Bowlers, as well as riflemen, are decidedly in it.

No really serious shooting was done on Sunday, June 30, although many thousands of bullets sped over the ranges and spread themselves on the targets. Gus Zimmerman, of course, was present and was the center of attraction wherever he went. A. Strecher, a member of the Columbia Rifle Club, of San Francisco, showed that he had not traversed the 3,000 miles which lie between 'Frisco and Glendale Park for nothing. His scores on the man target and on the ring target astonished the Easterners and correspondingly elated those from the West. Mr. Strecher will take a prominent part in what promises to be one of the features of the week's sport: a match of 100 shots each between George Gebhard, of the same club (the Columbia), and himself on the one side, and F. C. Ross and M. Dorrler, of the Zettler Rifle Club, New York city, on the other side.

On Sunday Gebhard Krauss, one of the shooting masters of the Union, was the fortunate man to make the first 25 points and also the first 125. His margin was a narrow one, as 90 seconds later a second shooter had duplicated his record, and within five minutes from the time he finished six more similar scores were recorded. All received medals, but Krauss's was the one that all had tried to get.

Monday morning's parade was a decided success, nearly 5,000 men being in line, among the number being a corps of veterans of the war of '70–'71, in which they took an active part in upholding the honor of the flag of Fatherland. It is impossible to particularize any further, or to give any detailed account of the different societies that were represented in the parade; but it is also impossible to pass on without referring to the appearance of the Independent Schuetzen Corps, of Brooklyn, N. Y., whose ranks were led by Miss Clara Bonne, attired in peasant costume. Mayor Schieren, of Brooklyn, N. Y., supported by Mayor Wanser, of Jersey City, N. J., and Mayor Fagan, of Hoboken, N. J., Sheriff Tamsen and Jacob Ruppert, reviewed the parade from a stand in Seventeenth street. The line of march was marked by crowds which thronged the sidewalks and cheered the various corps as they passed.

Some good shooting was done during the day, although many of the cracks refused to risk their reputations after the fatigue and exertions of the morning parade. G. W. Plaisted made the fine score of 72 out of 75 on the ring target, while the first festival silver cup for 300 points was won by G. Neuman, of the Miller Rifle Club, of New York.

Sumner Paine Accepts.

THE following letter, dated Boston, Mass., June 29, has been received, it being a response to Mr. Petty's communication which appeared in our last issue:

"I am glad that my friend Mr. Petty has recovered his health and I shall be much pleased to shoot him a friendly match when and where he wishes. I will accept all his terms as published in your last issue, but I do not entirely approve of them. In the first place, the subdivisions of the Standard American Bullseye are to my mind finer than the accuracy of the weapon warrants; certainly they are when I am holding it and I think that Creedmore count might be better. In the second place, I hope to be able to attend the shoot at Seagirt the first week in September, and if so I should prefer to shoot with Mr. Petty at that time. Still I am anxious to shoot a match, and so many unavoidable hindrances have interfered with our meeting in the past that I do not wish to interpose any more. A third suggestion is this: Lieut. G. W. Coulston, F. R. P. Twenty-third Reg't, N. G. S. N. Y., wrote at the time of our first attempted match and suggested our letting him in and making the match three-handed. Now, I have never had the pleasure of making Mr. Coulston's acquaintance, but I should like to do so, and should be pleased to have the match three-cornered; or if Mr. Petty objects I tell you what I will do: I have two brothers who can both shoot with a revolver, and I will get one of them to come down with me if he can spare the time and shoot a match with Lieut. Coulston at the same time and place as our match. If neither of my brothers can come I will agree to bring some member of the M. V. M. to shoot with Lieut. Coulston. I think, if it could be arranged for my brother to come, it would be interesting, as he and Lieut. Coulston are both F. R. P., one of the Twenty-third N. G. S. N. Y., the other of the First Infantry M. V. M.

"Let me know if Mr. Petty will wait till September; if not we will come any time in August he may name. Please communicate with Lieut Coulston, for at the time my attempt to get a match with Mr. Petty failed I wrote you I would shoot Lieut. Coulston instead at any reasonable time, place and conditions which he might name. I never got any reply from either him or you." "SUMNER PAINE."

Lyman Rapid-Fire Target.

The Lyman rapid-fire rifle targets are finding much favor. They are in two sizes, for 25yds. and 50yds. The smaller one sent post-paid for 15 cents a dozen, the larger one for 25 cents a dozen, by the Forest and Stream Publishing Co.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

July 10-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec'y.

July 16-19.—KANSAS CITY, Mo.—Tournament of the Schmelzer Arms Company in Fairmount Park.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

July 16-17.—BELFAST, Me.—Second annual tournament of the Belfast Gun Club; $125 in cash guaranteed.

July 24.—WORCESTER, Mass.—All day shoot of the Worcester Sportsmen's Club, under the management of Chas. E. Forehand, Sec'y.

Aug. 9-10.—NEW ORLEANS, La.—Tournament of the Inter-state Association, under the auspices of the Louisiana Gun Club; $200 added money.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

Aug. 27-29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Sept. 2-3.—UTICA, N. Y.—Two days tournament; live birds and targets

Sept. 2-3.—NEWARK, N. J.—Tournament of the South Side Gun Club; targets New Jersey Trap Shooters' League contest at 2 P. M. on the second day. W. R. Hobart, Sec'y.

Sept. 4-5.—SHEPHERDSTOWN, W. Va.—Morgan's Grove Fair Association's tournament, under the management of the Interstate Association

Sept (second week).—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

1896.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the management of Texas Field; $2,500 added.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week).—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Elmer Shaner has forwarded to us a very amusing effusion from the pen, or rather typewriter, of a live-bird shooter who lives in Central Pennsylvania. The letter, which has evidently been manifolded, is addressed to the Pittsburg Gun Club, and from the wording of the letter copies have been sent to other papers. The party writing the letter wants to arrange for a series of shoots with Dr. Carver for gate receipts. Part of the letter reads as follows: "I have shot a great many matches with members of gun clubs, they furnishing the pigeons, paying for the advertising, etc., and giving me 50 per cent. of the gate receipts. They usually charge 25 cents admission, and from 15 to 25 cents for the grand stand. Have you a man in your club who would shoot me a 50-bird race under the above conditions? We would make a *great drawing card*, shooting under the A. S. A. rules, 28yds. rise, from 5 unknown traps." (The italics are ours.)

The first tournament of the "Maryland and District of Columbia Trap-Shooters' League" will be held at Oak Crest, Md., to-day at 10 A. M. The tournament, which is open to all, will be given under the auspices of the Laurel Gun Club. The announcement of the tournament contains the following: "It is very desirable to get together at this tournament all shooters in Maryland and District of Columbia, especially those belonging to regularly organized gun clubs. It is proposed on this occasion to call a meeting and organize the Maryland and District of Columbia Trap-Shooters' League, elect officers and arrange for tournaments during the season of 1895." Mr. H. A. Penrose, of the Excelsior Target Company, 120 E. Baltimore street, Baltimore, Md., and Mr. George E. Baldwin, Laurel, Md., sign the call.

"Milt" F. Lindsley, inventor and late manufacturer of American Wood Powder, has severed his connection with the firm of that name, and has accepted a position as superintendent of the King Powder Company, of Cincinnati, O. "Milt's" specialty will be "King's Smokeless," a new powder which will shortly be on the market. Everybody wishes Lindsley and Mrs. Lindsley ("Wanda") success; but shooters in the vicinity of New York regret that the change of business necessitates a change of residence from West Hoboken, N. J., to Cincinnati, O. "Wanda" says she is going to take both her bears with her to the new home.

The Worcester Sportsmen's Club, of Worcester, Mass., will hold an all-day tournament on July 24 under the management of its secretary, Mr. Chas. E. Forehand. The main event will be a 100-target race, $3 optional sweep, targets extra at 2 cents, the first prize being a Forehand Arms Company's $75 hammerless ejector gun. The 100 targets will be shot as follows: two strings of 25, known angles; two strings of 25, traps in reversed order. Each 25 will be a sweep at $2 entrance. Anybody can shoot for the gun by paying for the targets. There will be no handicap and nobody is barred.

The management of the Pennsylvania State shoot at Holmesburg Junction, Pa., Aug. 20-25, is working hard to make the tournament the most successful in the history of the Association. Recording Secretary Harry G. Thurman, Germantown, Pa., and Corresponding Secretary John C. Shallcross will answer any inquiries that may be sent to them. A merchandise event will be a specialty this year; it will be open only to members of the State Association. Empire targets will be thrown during the tournament.

Mr. F. M. Dawson, of Lynchburg, Va., spent this week in the city. Mr. Dawson is connected with the Lynchburg Opera House and was here on business, booking dates for the coming season. From what he tells us the Gun Club's hoodoo is still paramount; even a dose of Hazard's Blue Ribbon had no appreciable effect upon it, except in isolated cases. They are talking Charlotte now down in Lynchburg.

Anent the recent Passaic City-Newburgh team shoot, Mr. David Brown, president of the West Newburgh Gun and Rifle Association, writes: "Well! we did them up and just enough too—five breaks. We had a splendid time, and though beaten they looked pleasant, hoping no doubt to have it different next time. The weather was as fine as the trip."

Altoona's tournament promises to be every bit as good as last year. Everything will be in readiness for a little preliminary practice on Tuesday afternoon, July 9. The 100-target handicap (100 to 120 targets) takes place on Wednesday.

Is the Wilmerding (Pa.) Gun Club the only club in existence around Pittsburg? Where are all those clubs which Manager Shaner tells us about, and what are they doing?

The Hollywood Futurity Handicap at live birds will be shot to-day on the grounds of the Hollywood Gun Club, West End, N. J. From the number of entries the affair promises to be a great success.

Jack Parker intends giving a tournament this year either in August or September; dates are not decided upon yet.

Don't forget Altoona—July 10-12.

Mr. A. S. White, of Syracuse, N. Y., took part in the recent championship meeting of the Inanimate Bird Shooting Association of Great Britain. Mr. White has the honor of being the first American to win a cup in a target contest in England. EDWARD BANKS.

The Vicksburg Interstate.

VICKSBURG, Miss., June 27.—The fifth tournament of the Interstate Association held here yesterday and to-day was an event which awakened more enthusiasm in shooting than anything in that line for years past. Manager Shaner and other officials of the Association perhaps never felt more gratified over a tourney than in this one. It produced that result which is most desired—an awakening of the back, sliders in gun circles. Vicksburg had more than its share of these boys, for two years ago one of those obnoxious laws was passed by the Mississippi Legislature. By it the shooting of live pigeons from the trap was expressly forbidden. The law held back the sport and many guns lay vaseline covered in their cases. They were out this week and it is a safe assertion to make that the cheery word "pull" will be heard oftener in this "city on the hills."

Manager Elmer E. Shaner, of the Interstate Association, was the advance guard of the boys, who began to arrive early in the week. While the Vicksburg boys were welcoming the visitors he was busy getting the grounds in shape. He soon had the traps in position, tent pitched, stands and blackboards erected and everything ready for the opening of the tournament. Dan Searles, D. M. Porterfield, J. W. Hayes and L. R. Pinkston, of the Vicksburg Gun Club, made all the boys feel at home the moment they arrived. The Carroll lobby was occupied by quite a number of shooters the night before the opening day. Among them were noticed W. M. Thomas, representing the Union Metallic Cartridge Co.; Lieut. A. W. duBray, representing Parker Bros., a firm that recently joined the Association; Col. Pipes, H. L. Baker, J. McDowell and Col. Wade, of Natchez; F. Waddell, of Chattanooga, Tenn.; H. L. Foote, of Rolling Forks, Miss., and several others.

The shooting took place at the Fair grounds, about one mile from the hotel. It was reached by a pleasant drive, and spinning along in a bus stirred up reminders of old time days. "U. M. C." Thomas made the crowd laugh one day when he said: "This reminds me very much of the rapid transit at the Charleston, S. C., tournament last October."

The out-of-town contingent once more enjoyed Southern hospitality. There is nothing to compare with it. Every member of the Vicksburg Club took off his coat and sailed in to make their guests at ease. They succeeded, and the visiting sportsmen carried away happy thoughts of the good jolly time they had had in the bright, busy city of Vicksburg. The scores follow:

	U	M	C																		
McDowell	16	9	18	15	13	14	16	12	13	12	..	..	..	..	..	..	..	..	..	..	..
DuBray	14	16	14	15	15	11	15	13	16	15	16	15	13	18	18	14	10	17	17	14

Pipes	..	..	..	..	..	..	9	..	..	..	..	..	..	..	..	..	..	6	..	..	..
P Katzmeier	..	..	..	..	..	..	..	6	..	..	..	..	..	..	..	..	..	..	..	..	..
Dorsey	..	..	..	..	..	..	..	..	10	..	..	..	..	..	..	..	..	..	..	..	..
Bradfield	..	..	..	..	..	..	..	..	12	10	13	..	..	..	..	..	16	15	17	19	w 14
Divine	..	..	..	..	..	..	..	..	14	..	15	..	..	..	..	..	..	..	..	..	..
Williams	..	..	..	..	..	..	..	..	12	..	..	..	..	..	..	..	..	..	..	..	..

Events 1 to 10 were the programme events on the first day; events 11 to 20 those on the second day. Each event was at 20 targets, $2 entrance. The w in the scores signifies that the shooter retired as soon as he had shot himself out of a place. BIX.

Worcester Sportsmen's Club.

WORCESTER, Mass., June 25.—The following scores were made today by members of the Worcester Sportsmen's Club in the sixth shoot of the cash prize series and merchandise handicap series, the handicap allowances in the latter events being counted in the totals:

Sixth shoot, Cash prize series, 25 targets, known angles:

Davis	1010111011111110001111111—18
Mascroft	0011110110111111111111111—21

CHAS E. FOREHAND, Secretary.

Brunswick Gun Club.

NEW BRUNSWICK, N. J., June 29.—Seventeen members of the Brunswick Gun Club took part in the regular monthly shoot this afternoon. Following are the scores:

Club shoot, 28 targets, unknown angles:

Fisher, J	1111010111101101011110101—18
Pettit, R. M	1111111101111011111111011—21

H. H. STEVENS, Sec'y.

Mr. Bacon Scored 383.

CLEVELAND, O., June 25.—In figuring the averages at our tournament by some oversight we neglected to carry out the average made by "Shorty" Bacon, and in consequence his name does not appear in your list of average winners. Mr. Bacon made a score of 383 out of a possible 420, winning the eighth average at our tournament, and we trust you will make this correction so as to give him credit for his excellent work. THE CHAMBERLIN CARTRIDGE & TARGET CO.,

per PAUL NORTH.

Niles Gun Club's Eighth.

THE programme for the eighth annual tournament of the Niles Gun Club, Niles, O., at Midway Park, July 8, calls for ten events, entries from 50 cents to $2, with four moneys in each. In all events targets will be thrown from known traps and unknown angles, except events Nos. 1, 6 and 10 will be known trap and known angle. Shooting begins at 8:30 o'clock, standard time. Headquarters for shooters at Sanford House. Shells and lunch for sale on the grounds. For information address JOS. RUMMELL, WM. TURNER, JOHN NAYLOR.

Circus in Belfast.

BELFAST, Me., June 25.—Will you kindly change the dates of the Belfast Gun Club tournament from July 17 and 18 to July 16 and 17. We are obliged to make this change in order to get clear of a large circus which has billed to be here the 18th. CHAS. R. COOMBS, Sec'y.

Saratoga.

THE thirty-seventh annual tournament of the New York State Association for the Protection of Fish and Game was brought to a close on Saturday last, June 29, after five days of continued shooting on the grounds of the Saratoga (N. Y.) Gun Club.

For some cause or other the tournament was not a success; that is, compared with the previous tournaments of this Association. Shooters were scarce, notwithstanding the fact that a programme of twelve open events was scheduled to be brought off on each of the four days devoted to target shooting. Compared with last year's shoot at Utica, the entries in the State merchandise event, No. 3, showed a wonderful falling off. This year there were but 55 entries; last year there were 85 who put down their names and shot for the merchandise prizes offered for competition. The greatest number of shooters on the grounds, taking the figures of the open events on Wednesday, was 87; a large number, it is true, but nothing like old times! So far as the comfort of the shooters was concerned, the management had looked well after that. They were protected alike from the sun or rain while at the score by a long shed roofed with hemlock boards. The posts which supported the front of this roof, however, were sadly in the way when it came to making the 10-gauge men (and there were two or three present) stand back at the 18 yard mark. The consequence was that one yard was all that could be exacted as a penalty from the 10-gauge guns.

The list of those present would be a long one if it was made complete. Here is a summary of those whom we noticed taking part actively in the shoot during the target days: K. M. Moore, Farmersville, Texas; W. R. Miller, Austin, Texas; A. Holzapfel, Cuero, Texas; Harry G. Lemcke and William M. Davison, of Savannah, Ga.; T. H. Keller and "Dutchy" Smith, Plainfield, N. J.; Gus Greiff, representing Von Lengerke and Detmold and Schultze powder, and doing the honors of the W. L. & D. test that many made their home during shooting hours; F. Van Dyke and his "pump" (as fat as usual); Harvey McMurchy shooting his Smith gun as well as ever (and that's saying a great deal); "Uncle Dan" Lefever and Colonel "Court" (no further introduction necessary); B. A. Bartlett, who handles his Burgess slicker than ever, and whose work with the gun, both in trap and trick shooting, always catches the crowd; G. D. Oliver, O. M. Paddock and W. H. Tallet, Watertown; F. W. Partis, Johnstown; T. C. Pegnim and Chas. Weeks, Canajoharie; Robert Hunter, of the Hunter Arms Company, Syracuse; the Browning Bros., J. M. and M. S., of Ogden, Utah, inventors and patentees of the Winchester repeating shotgun; C. W. Tuttle, J. J. Brinkerhoff and Corning, Auburn, N. Y.; Capt. E. B. Wadsworth ("Puck"), president of the Boston, Mass., Shooting Association; W. W. Bennett ("Jones"), of Boston, Mass.; W. H. Allison and "Herbert" Federhen, Hingham, Mass.; B. "LeRoy" Woodward, Campbello, Mass.; O. R. Dickey, Wellington, Mass.; Dr. Mosher and C. M. McFadden, of Greenville, N. Y.; George A. Mosher, of the Hollenbeck gun, Syracuse, N. Y.; M. F. Roberts, Rupert, Vt.; Wm. Wadsworth, Brigden and H. R. Sweny, Albany; H. B. Whitney, Phelps, N. Y.; W. C. Hadley, Sim Glover, Borst, Byer, Weller, Richmond and J. T. Norton, Rochester; E. Chamberlain, B. Tolsma, J. J. O'Brien, E. C. and C. S. Burkhardt and Heinold, Buffalo, N. Y.; E. F. Hammond, East Ashford; Gus Holloway, Ed Hudson ("Van Syke") and C. H. Mowry (of the *Sporting Goods Gazette*), Syracuse; A. M. Schemerhorn, Cortland; A. and B. Rickman, Greece; A. Paul, Choloes; Perkins, Troy; Seth Glover, Fredonia, N. Y. (talking the Glover trap, target and September tournament, $1,000 added); H. G. Wheeler, Marlboro, Mass.; W. P. Rayland, Rome; Kendall, Hobbie and H. W. Brown, Binghamton; E. D. Fulford, Hardie Richardson, A. S. Hunter, H. L. Gates, "Mort" Mayhew, Siebold and Utter, Utica; Allen Willey, Hartford, Conn.; W. J. Simpson, L. H. Schortemeier and H. P. Fessenden, of New York city; M. F. Lindsley and Mrs. Lindsley ("Wanda"), Hoboken, N. J. (soon of Cincinnati, O.); "Arnold," of Albany; F. D. Kelsey, Aurora, N. Y., etc. On Friday the attendance was increased by several live-bird shooters from New York and Brooklyn, among the number being McKeon and F. L. Train, of the Cobweb Gun Club; C. Furgueson, Jr., W. Lair, Dick Phister, Dr. Wynn, G. E. Nostrand, W. F. Sykes, of the New Utrecht Gun Club. Phister, Schortemeier and Fessenden were the members of the Emerald Gun Club, of New York city, who were present on Friday.

While on the subject of the shooters from New York and Brooklyn, it is just as well to refer to what was, in our estimation, the most unpleasant episode of the tournament. The episode referred to was the defection of the live-bird shooters from the northern part of the State on the evening of Friday. The affair is all the more regretable because it is evidently the result of a misunderstanding on the part of these gentlemen. Had they fully grasped the situation, the contest for the Dean Richmond trophy would never have been practically narrowed down to three clubs—New Utrecht of Brooklyn, and Emerald and Cobweb of New York. As we understand it, and as it was explained to us by some of the shooters who left Saratoga on Friday evening, their action was taken to show dissatisfaction with the action of the New York shooters; it was claimed that there was a lack of sportsmanship and good fellowship on their part because they did not shoot in the target events, not coming up to the shoot until live-bird day. The dissenting parties surely do not understand the case: Of all the members of the three clubs from the "Greater New York," Mr. L. H. Schortemeier is the only one that makes any pretension of shooting targets, and lack of practice tells on him as well as on others. The clubs named are live-bird clubs pure and simple, and possess no target shooters who could hope to break anywhere like even, except with constant practice, and that they cannot get at home. It seems to us, therefore, that there is some misunderstanding somewhere. It could hardly be meant that it was the desire of other members of the Association that these gentlemen should come up and deliberately throw away their money. The movement this year is all the more inexplicable, since there was no objection raised at Utica last year. It is sincerely to be hoped, for the good of the Association, that everything will be satisfactory at Buffalo next year. (Mr. Simpson, who is a member of the Emerald Gun Club, shot in the sweeps on both the first days.)

As for the target shooting itself, the scores made ruled very high, McMurchy and Glover being away up. On Tuesday Glover started the ball by running his first 122 straight! The contest for the E. C. Powder Cup is mentioned elsewhere and Whitney's great record is given due attention. Three sets of bluerock traps were used; Cruttenden's kingbird being the target adopted by the Association, was of course the target thrown. Jack Parker managed the shoot on behalf of the Saratoga Gun Club, and did all in his power to make everything work smoothly, but he seemed to be handicapped somewhat by his office force, which did not seem to be able to handle the rush of work entailed upon the cashier's department by a large tournament. Parker was ably seconded by Billy Hobart, of Newark, N. J.

A very pleasant feature of the tournament was a 10-men team race arranged between the guests of rival headquarters for shooters, the Saratoga and the Kenmore. The challenge was made and accepted, and terms were arranged on Tuesday night, the match itself taking place on Wednesday afternoon. Time did not permit of the race being shot as a separate 20-target event, so the scores made by the members of the teams in event No. 6 of the open events were agreed upon to decide the question of superiority. As the members were scattered about in different squads, a good deal of interest was lost; still it was a close enough thing to keep the Kenmores guessing until the end was almost in sight. The teams and the individual scores were as follows:

Kenmore Team.		Saratoga Team.	
McMurchy (Capt)	19	Glover	19
Kelsey	19	Fulford	19
Wheeler	19	Levengston	17
Whitney	18	Mayhew	17
Mowry	18	Lefever	17
VanDyke	18	Brown	17
Holzapfel	17	Tallett	15
Bartlett	17	Hobbie	14
J M Browning	16	Gates (Capt)	14
Hadley	14—175	Paddock	13—162

The result of the match naturally tickled Mr. J. N. Ramsdill, proprietor of the Kenmore. A defeat for his house at the hands of a team from the Saratoga Hotel would have been a black eye for him. A curious feature of the match is the fact that out of all the cracks on both sides not a 20 straight was made. It is still more curious that there was no straight in the whole event, 19 being high and seven men in for first money.

In the open events Nos. 2, 4, 6, 8, 10 and 12 were shot at unknown angles. The scores must now be left to tell their own tale. Unfortunately the paper used for the manifold scores was of a wrong material, the scorers being unable to press heavily enough to make clear and legible copies. Considerable difficulty was experienced, therefore, in making out the tables which appear below. In several instances it was absolutely impossible to do more than guess at the totals; in some cases not even a guess was possible. It has been deemed better in consequence not to give the averages as we usually do, as their correctness could not be vouched for. Where any averages are given, as in the State events, special pains were taken to verify the totals.

The following are the scores made on the

First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Tolsma	16	..	21	20	..	..
Fulton	16	..	19	21	..	..
C S Burkhart	15	21

Lefever fourth, Beyer fifth, Dr. Mosher sixth, Gates seventh, Corning eighth.

In the ties for the seventh class there were six with 19 breaks. The tie was shot off, miss and out, as far as Richmond, Tuttle, Lyons and Wagner were concerned; Willy and Fulton drawing for prizes, as they were not present when the tie was shot off. The shoot-off resulted as follows: Richmond 6, Tuttle 5, Lyons 1, Wagner 0.

THE TEAM RACE.

On Thursday afternoon the team race was the principal feature of interest in the programme. Only three teams competed, two from Utica and one from Syracuse. The Syracuse team won by the narrow margin of one break over the Utica No. 1, the scores standing as below:

Syracuse.			
McMurchy	25	G A Mosher	20
Mowry	32	Holloway	18—85
Utica No. 1.			
Fulford	23	Richardson	21
Mayhew	21	Rayland	19—84
Utica No. 2.			
Dexter	22	Utter	18
Siebold	18	Gates	13—71

State event, Lefever diamond medal, donated by Lefever Arms Co.; 30 targets, 20 singles and 5 pairs:

Wednesday was hot as Tuesday and there was really nothing in the way of a breeze to cool the air. During the morning the glare was very trying on the eyes and the records made by the shooters are more than creditable. The table of scores given below shows that 87 shooters were on the grounds, at least that is the number that took part in the open events. The scores made on this, the

There was some comfort in riding out to the grounds of the Saratoga Gun Club on the morning of Friday, the

Fourth Day

of the New York State shoot. The recent rains had laid the dust, previously many inches deep; the leaves of the shade trees tha line each side of the streets of Saratoga had been washed and looked fresh and nice in the morning sun; the whole country seemed refreshed and grateful for the much-needed moisture.

Noel Money was one of the most prominent arrivals on the ground this day. Noel has to stick to business pretty close just now. Capt. Money is away in England on business, and is incidentally trying conclusions with European wingshots at Hurlingham and the Gun Club, Notting Hill. The affairs of the American E. C. Powder Company, therefore, keep Noel Money's nose pretty close to the grindstone just now. He was obliged to come to Saratoga, however, to witness and take part in the contest for the beautiful cup, a silver jug, by the way, presented by the E. C. Smokeless Powder Company for competition at this tournament. This contest was the most interesting of the whole shoot, and was productive of the best shooting of the week, not excepting Sim Glover's run of 122 straight on Tuesday morning.

To begin with, Noel Money stipulated that the contest should be at 100 targets, unknown angles, targets to be charged for at 2 cents each He also made it a point to have the bluerock traps screwed up to their highest tension and lowered as much as the rules of the American Association permitted. The consequence was the targets flew some 80yds., skimming low over the long grass. The angles, too, were acute, and tried the skill of the shooters to the utmost. The shooting was in fact as hard as any we have ever seen. In the face of all this, Whitney's great score of 97 out of his 100 must be classed as equal to anything ever done by him or any other shooter. LeRoy with 92 was second, breaking 46 out of each 50. McMurchy and Levengston scored 91 each, while Noel Money and Tallett tied for fifth place with 90 breaks each. The scores given in detail below tell the story of the shoot:

E. C. Powder Company's cup, 100 targets per man, known traps, unknown angles:

Whitney	1111111111011111111011111111111111111111111111111111	48
LeRoy	1111111111111011111111111011101111111111111111111111	49—97

DEAN RICHMOND TROPHY.

Saturday, the fifth and last day of the tournament, was live-bird day. The Dean Richmond Trophy was the main event set for the day. This trophy is to be competed for annually by three-men teams from any club in the Association, the proviso being that the men composing a team shall be bona fide members of the same club, and shall be residents of the county in which the club has its headquarters. Owing to the defection of the majority of the northern New York shooters, referred to elsewhere, only seven teams were entered. These were: New Utrecht Gun Club, of Brooklyn, N. Y.; Cobweb Gun Club, of New York city; Long Island Gun Club, Brooklyn, N. Y.; Saratoga Gun Club; Emerald Gun Club, of New York city; Keystone Gun Club, of Buffalo, N. Y.; Onondaga County Sportsmen's Club, of Syracuse, N. Y.

The shoot resulted in the victory of last year's winners, the New Utrecht team, after a tie on 39 out of 45 with the Cobwebs, the Long Island team being close up with 38 kills. The birds were an excellent lot of flyers; as good birds as one could wish to see. It took 4 hours and 25 minutes to finish the shoot—slow time considering that only 313 were trapped. The scores in detail, showing the flight of the birds, run as follows:

Dean Richmond Trophy, three-men teams, 15 live birds per man, ties shot off at 5 birds per man:

Trap Score Type—Copyright 1894 by Forest and Stream Publishing Co.

NOTES OF THE SHOOT.

Seth Clover was completely upset on Friday morning. He ran 25 straight at unknown angles in his second string for the E. C. Powder cup, and couldn't account for it in any satisfactory manner.

Milt Lindsley and his wife, Mrs. M. F. Lindsley ("Wanda"), were present on Thursday and Friday. "Wanda" showed that she could break targets as well as she drops pigeons; when she broke 10 straight to Courtney's 8, the latter drew himself up and said he wouldn't beat a lady anyhow!

Nobody said anything about "dropping for place" at this tournament. Perhaps it was because there were no places to drop into.

The "Levengston system" of dividing the purses is hardly the thing for a big tournament; it doesn't afford enough incentive to make men shoot up. The difference between the size of first and fifth moneys is far to slight.

Buffalo gets the shoot next year. The "Bisons" promise us "a corker, sure."

"Dutchy" Smith was in danger of getting run in on Thursday night. While returning from the concert in company with a few friends, "Dutchy" saw a cop and thought to toy with him. Simulating a good, healthy jag, he embraced a tree. This is what he got: "Come out o' that, you there. Youse fellows can't come on Broadway and play us for suckers. If yer don't go home at once, I'll run the whole lot of yer in!" They went.

A report was started on Thursday that "Uncle Dan" had blown out the gas when he went to bed the previous night! The fact was, he didn't want to get up when the boys came around in the morning, so he just let them bang away at the door without saying a word. When they looked through the transom he lay still and smiled at them.

Jack Parker promises that his tournament in September shall please all the boys—if they will go to Des-Chree-Shos-Ka and give him a chance.

The three "Texas Steers" made lots of friends at Saratoga. It will be our loss if they don't come north again.

After the Kenmore team had won the team race, Mowry offered to bet Glover $50 that he could pick another team of 10 men from among the shooters at the Kenmore that could beat the Saratoga team. The bluff was a good one, because it went, Glover passing.

Tuttle will have his little joke; but it is hardly fair to ask the leader of the orchestra in a concert hall to bring you a sandwich. "Sare, I refuse the sandwich to bring you! I am zee leader of zee orchestra, Sare!"

Bartlett's exhibition of trick shooting took very well. Three cheers and a tiger greeted his efforts each day, while the squad lines were deserted during his exhibitions.

A noteworthy feature at this tournament was the abundance of seats for spectators and shooters. Another feature, not so pleasant, was the frequency with which one bumped one's head while passing in and out of the shooting lines and cashier's office.

George Mosher has got back into his old form and can knock out 20 straight with any of them, but Harry Lemcke beat him out of a bottle of Vichy by leading him in the E. C. Powder cup contest, George not being at his best.

The cheers were loud, hearty and well sustained which greeted the veteran, Dan Lefever, when he won his own diamond medal on Thursday morning.

Seth Clover gave practical lessons in the excellency of his trap and his new electric pull attachment.

"Crutty" as usual was here, there and everywhere.

EDWARD BANKS.

New Jersey Trap-Shooters' League.

LAST Saturday, June 29, saw the fifth contest in the series 1895 of the N. J. Trap-Shooters' League contests decided on the grounds of the Endeavor Gun Club, of Jersey City, at Marion, N J. The weather was very warm, and until the time for the State League team race the light was good. During the main event lowering thunder clouds made the light poor; as the birds were thrown low and at acute angles it was hard shooting; the black fence which is part of the background adding to the difficulty of getting on the birds quickly. The clubs represented in the League race were (besides the home club): Boiling Springs, of Rutherford, N. J.; Maplewood, of Maplewood; Elizabeth, of Elizabeth; South Side, of Newark; Climax, of Plainfield; Union Hill, of Hoboken. The Riverside G. C., of Red Bank, and the Union G. C., of Springfield, were not represented. The Climax team came out ahead, scoring 106; South Side was second with 103; Maplewood third with 98; Boiling Springs, Endeavor, Union Hill and Elizabeth finished in the order named.

Several sweeps were shot during the day, shooting commencing early in the morning. A perfect deluge of rain put a stop to the day's sport about 5:45. Among those who took part in the open events were three prominent shooters from Texas: K. M. Moore, of Farmersville; W. R. Miller, of Austin, and A. Holzapfel, of Cuero. Mr. Moore fulfilled the duties of referee in the League contest, duties that were rendered all the more arduous by the poor light, dark background and low flight of the targets. His work was very satisfactory; not one of his decisions being questioned.

Scores were as follows:

League contest, 5-men teams, 25 targets per man, unknown angles:

Onondaga Sportsmen's Club.

SYRACUSE, N. Y., June 20.—The contests for the medal in Class A. of the Onondaga Sportsmen's Club are growing very warm. Five wins entitle the winner to absolute ownership of the medal, and several members have won it four times. This afternoon it looked dollars to doughnuts that "Uncle Dan" Lefever or George Holloway would win it outright, as both have four wins to their credit, and Arno, McMurchy and Courtney being absentees. George Mann, however, a dark horse, saved the medal for another day by breaking 45 In the extra events after the medal contest some capital shooting was made, Lefever, Morris, Hunter and Mann shooting at 25 targets apiece, and breaking 95 out of the 100. Scores in medal contest:

Medal shoot, 50 targets, unknown angles:

Want to Shoot Team Matches.

KANSAS CITY, Mo., June 23.—*Editor Forest and Stream:* With a view of promoting the interest of trap-shooting a meeting was called of the representative sportsmen of our city, and it was decided to select and send a team of ten men to visit and shoot a contest against a like number of representative sportsmen in cities of 100,000 inhabitants or more. Would be pleased to hear from the following cities: Omaha, Minneapolis or St. Paul, Milwaukee, Chicago, Pittsburg, the Riverton Gun Club of Philadelphia, the Carteret, Westminster or New Utrecht Club of New York.

The following conditions to govern all matches, viz: American Association rules revised, 30yds. rise and limited to 12-guage guns, 50 live pigeons per man, two men up and shoot down, losing side to pay for birds; should gate receipts be charged at any point same to be applied on payment of birds, and if any surplus to be divided as follows: winners 60%, losers 40%.

Following the Chicago contest would be pleased to meet a selected team from the Dominion of Canada on Des-Chree-Shos-Ka Island, near Detroit. CHRIS. S. GOTTLIEB, Corresponding Secretary.

807 DELAWARE STREET, Kansas City, Mo.

Climax Gun Club.

PLAINFIELD, N J., June 26.—The attendance of members of the Climax Gun Club at the regular monthly shoot this afternoon was the smallest that has been recorded for many months. The following were the scores made:

J L Darby (7)	1001111110010111111111111110111	—26
Swody (6)	1101110111111111111111010001110111	—24
T Brantingham (0)	1011111101101101101111110	—19
Williams (4)	1111101101011100011111011111	—22
D Darby (5)	1001111100000101110101110111	—19
J Manning (2)	1110111101101111111110110	—21

Baltimore Shooting Association.

BALTIMORE, June 24.—It seems rather incongruous, with the sun pelting its red-hot rays upon the earth and the denizens thereof, and with the temperature at 98° in the shade, to see two score or more of men, presumably with their due proportion of intelligence, standing on a small platform dripping with perspiration, their only canopy the blue vault of heaven, holding in their hands steel tubes which ever and anon belch forth flame and smoke, thereby increasing the burden of the already overheated and stifling atmosphere. If this were a species of torture to which men were subjected, the victims thereof would be the recipient of our warmest sympathies. These men, however, are not the victims of torture, inflicted against their will; they are enjoying themselves; this is sport, fun, pleasure. Trap-shooting, when once it gets its tentacles around its votary, never lets go. The poor fellow becomes mesmerized, hypnotized, and if he does not keep his weather eye open, pauperized. No sacrifice is too great for him to make; no opposition but what can be overcome; whether the weather be freezing or baking, wet or dry, it is all one to the man suffering from the temporary aberration occasioned by "artificial birds" on the brain.

Baltimore has had its full share of equatorial heat and oppressiveness, but the Baltimore Shooting Association has gone right ahead in the good work, adding constantly to it's already large membership list, opening its new club house, giving tournaments, both at targets and live birds, and altogether demonstrating that the odor of burning powder is still pleasant in the nostrils of the natives of "Maryland, my Maryland."

On May 22 the Association gave a house-warming, on the occasion of the opening of the new club house. A description of this club house was given in a previous communication; suffice it to say that we think we have a club house and grounds complete, with all the accessories, that has not its superior anywhere in the United States. The morning hours were devoted to trap-shooting, and in the afternoon the boys demonstrated how easy it was to part with their money in an endeavor to stop the seemingly heedless yet rapid course of the wily pigeon.

The more I see of shooters the more I wonder how it is possible for any man to shoot well. The ordinary public have no conception of the tremendous difficulties to be overcome, the obstacles to be surmounted, by the aspirant for honors before the traps. It is about as uncertain as striking the winning policy combination.

I have jotted down a few of the reasons why shooters have not been able to break targets:

No. 1 misses because he allowed a friend to shoot his gun in the first event; will never loan it again. (The friend, however, happened to break every target; how could he put an evil hoodoo on the gun?)

No. 2 always shoots in an old slouch hunting hat, full of holes; he forgot it and couldn't hit the holes in a sieve. (We presume he is hot-headed and needs the holes for ventilation.)

No. 3 has been unable so far this season to find his "gait." (His missing excites no surprise. We often hear of the man who can't find the keyhole on a dark night, but when a man can't find a gate in the daytime, we can hardly expect him to see a flying target, much less "find" it.)

No. 4 broke his first two birds, but some one spoke to him, making a suggestion, and this "broke him all up." (We suggest that after this the party make his suggestion to the targets instead of to the shooter and perhaps it will break them up also.)

No. 5 said his breakfast did not agree with him; therefore, could'nt shoot. (We suggest that he change his boarding house or else settle up, and perhaps she'll give him the tenderloin instead of the choice "rump" cut.)

No. 6 never could shoot on Saturday, anyhow. (We presume Friday night is club night; not yet recovered from the nervousness superinduced thereby.)

No. 7 is going to apply to legislature for change of name or for privilege of changing same when occasion requires. When he shoots at live birds, always gets white ones and can't hit them; thinks the antithesis of white, viz., black, will break the spell, therefore enters as "Black." When he shoots at targets, they being black, he enters "White." (Who says there is nothing in a name?)

No. 8 is a bicyclist; can only shoot in bloomers. On one occasion recently he found himself in long pants; couldn't break a target, laid down his gun, rolled up his pants, displaying his stately Trilby propellers and after that broke everything he shot at. (Great feet.)

There are a hundred and one other reasons why birds are missed, and every man always has a satisfactory excuse, at least to himself; but we are of the opinion that you never get the real facts in the case until you get down to the green amateur, who is just beginning to shoot; he has not been at it long enough to acquire the art of scientific lying. He tells you he missed because he did not point his gun straight. That is the reason the balance of them missed; they simply employ different terms for stating the same proposition.

Here are the three club shoots to date:

May 25, the regular weekly club shoot was held. The score was as follows, 25 targets to each man, handicap by distance:

Twelve yards: Russell 21, Thomas 21, Harrison 19, Heiskell 19, Field 18, Parker 16, Woodward 14, Baker 13, Herbert 12, Henry 11, Collins 1.

Fourteen yards: Antique 22, Hamilton 21, Zolliner 21.

Sixteen yards: Claridge 24, Hall 23, Hartner 23, Lupus 23, Storr 22, Malone 21, Penrose 19, Cook 16, Coe 15.

On Saturday, June 1, the regular weekly club shoot was held, with the following scores:

12 Yards: Evans 23, Thomas 22, Russell 20, L. D. Thomas 20, Parker 18, Field 18, Law 16, Baker 12, Pryor 2.

14 Yards: White 24, Williams 22, Zollinger 20, Hamilton 20, Antique 20, Vance 13.

16 Yards: Penrose 24, Claridge 24, Hawkins 24, Coe 22, Bird 21, Hartner 21, Storr 21, Malone 21, Hall 20, Hood 20.

On Saturday, June 8th, the club score was as follows:—

12 Yards: L. D. Thomas 22, Thomas 21, Heiskell 21, Goldsboro 21, Henry 18, Parker 17, Russell 17, Fields 16, Gallagher 7.

14 Yards: Brown 24, Antique 23, White 23, Vance 17.

16 Yards: Claridge 24, Hartner 23, Coe 23, Hall 22, Penrose 21, Hawkins 18, Malone 15, Cook 15.

STANLEY.

Newburgh Beat Passaic.

PASSAIC, N. J., June 20.—On this date a team of 10 men came down the Hudson River from Newburgh, N.Y., for the purpose of upholding the honor of the Newburgh Gun and Rifle Association before the Passaic traps. Ten men of the Passaic City Gun Club met them and shot a match, the first of "a series of shoots for sport," at 25 targets per man, 250 to the team, everything known. "Wanda" (Mrs. M. F. Lindsley) was official scorer. The totals on the score sheets show that the visitors won by the narrow margin of 5 targets. The scores were as follows:

Passaic.

CHOKE BORE.

Trap-Shooting in North Dakota.

FARGO, N. D., June 14.—The first annual tournament of the North Dakota State Sportsmen's Association which closed to-day was thoroughly enjoyed by all that took part in it. The attendance was fully equal to the expectations of the management with respect to the number of shooters. The weather was almost perfect for trap-shooting. Bluerock traps and targets were used; the targets being thrown past the 50yds. flags, the shooting was hard enough to suit an expert.

The shoot in all respects was a gentleman's tournament. No disputes or wrangling occurred; no gambling or liquor drinking was observed, and the management had the details of the tournament at all times well in hand. Mr. C. W. Bowers's decisions as referee were unquestioned. The scores were kept in a systematic manner, and the cashier's duties were attended to with promptness by Secretary Smith. It was the universal opinion of the shooters that they never attended a better managed tournament or had so pleasant a time. The visiting shooters claimed that they never saw as even and regular work on the part of trappers and puller as at this tournament, and to show their appreciation they made up a purse of $10 and presented it to the trappers and puller. The Fargo Gun Club takes considerable pride in these boys, some of them have been drilled in this work for several years, and the club claims that for quiet, quick and conscientious attention to their duties they have no superiors. This report would not be complete without a mention being made that there was no "dropping for place." Every shooter tried to break as many targets as he could, and, while some shooters were not up to their average, there was an entire absence of combining for positions. No blackboard scores were kept and many of the shooters did not know their total score until it was announced by the secretary.

The scores made by all who shot in the ten programme 15 target events are given below. The scores of those who shot only part of the programme are omitted:

Events:	1	2	3	4	5	6	7	8	9	10	Total.
Carpenter	12	13	*15	*13	14	*9	10	7	6	14	112

Vine	10	12	13	7	11	14	*7	13	*10	9	108

* Shot at known traps, unknown angles.

The longest run made during the tournament was by Mr. Robbins of the Fargo Gun Club, who broke 84 targets straight. Photographers A. A. Bentley & Co. were on the grounds and have finished some fine pictures of all the shooters in a group.

The election of officers of the Association for the ensuing year was held last evening. The officers elected are as follows: C. E. Robbins, President, Fargo, N.D; J. J. Gokey, Dawson, N. D., 1st Vice-President; R. Ducke, Larrabee, N. D., 2d Vice-President; W. W. Smith, Fargo, N. D., Sec.; H. E. Magill, Fargo, N. D., Treas.; W. P. Miller, Fargo, N. D., Att'y. Fargo was selected as the place for holding the next convention and tournament.

LAST EVENTS OF THE TOURNAMENT.

The team shoot for traps donated by Fargo Gun Club. Same regulations as in the special event No. 6. First day resulted as follows. Two teams only competed.

Crookston Gun Club.		St. Cloud Gun Club.	
Morrisey	17	Theilmann	21
Thompson	18	Hill	15
Fuller	19	Landis	17
Vine	13—67	Flynn	16—69

The extra shoot for 500 loaded nitro shells, donated by a member of the Fargo Gun Club. Entrance, targets only, was won by a score of 22 out of 25 single targets, known angles. Score—Schirrman 13, Duke 22, Holt 20, Burke 18, Wapahasa 21, Whitla 20, Gokey 18, Roberts 20, Carpenter 18.

Special events were shot as follows:

First Day.

Special No. 6, team shoot, 25 bluerocks, known angles, entrance $4 per team, for targets (no money). The North Dakota Sportsmen's Association will give to the winning team in this event a set of three bluerock traps and electric pull, 1895 model, value $45. This event is open to all teams of four members of a regular organized gun club from any State. The shooters composing each team may be certified to by an officer of its gun club if required:

St Cloud Gun Club.		Crookston Gun Club.	
Thielman	23	Morrisey	22
Hill	21	Thompson	19
Flynn	18	Fuller	20
Landis	21—83	Vine	16—77
North Side Gun Club.		Brainerd Gun Club.	
Schirrman	16	Lane	16
Rentschler	21	Walters	17
Smith	12	Fox	23
Bowers	14—63	Willis	14—70
Fargo Gun Club.			
Lyon	22	Carpenter	19
Roberts	20	Robbins	25—86

Second Day.

Special No. 6, State championship contest, open only to members of the North Dakota State Sportsmen's Association, 25 single targets, 3 known traps, known angles, $2, divided 40, 30, 20 and 10 per cent. among shooters making second, third, fourth and fifth highest scores. The Association will give a Lefever hammerless gun, value $60, to become the personal property of the member making highest score at this event. No handicap in this event except as to guns: Robbins 19, Roberts 19, Gokey 21, Stratton 18, C. Smith 20, Ducke 17, Carpenter 23, Schirrman 14, Rentschler 13, Magill 15, C. Bowers 14, E. Bowers 17, Scofield 16.

C. E. R.

Endeavor Gun Club.

JERSEY CITY, N. J., June 22.—The Endeavor Gun Club held its monthly prize contest on the club grounds at Marion, N. J., this afternoon. The weather was favorable, but the scores were not as large as usual, owing to the hard flight of the targets and the acute angles at which they were thrown. All the events, the scores of which are given below, were at unknown angles, with the exception of No. 7, which shot under expert rules. Scores:

Prize shoot, 25 targets, unknown angles:

J. A. CREVELING, Sec'y.

New Utrecht Gun Club.

BROOKLYN, N. Y., June 22.—The E. C. Powder Cup contest this afternoon brought out ten entries. After a long struggle C. Furgueson, Jr., won the cup by killing 14 straight, Dr. Wynn and Coulston dropping their fourth birds in the shoot-off. In the $1 optional sweep which was made up after the shoot had commenced, Meyer and Furgueson divided the money. Other sweeps followed, the scores being as below:

E. C. Powder Cup, club handicap, 10 live birds, $3 entrance, also $1 optional sweep:

Lott	.....	10201—3	.....
Dr Littlefield	.....	.....	1•22 —2
C M Meyer	.....	.....	211222—6

Nos. 1 and 2 were 5 birds, $1 entrance, birds extra; No. 3, 3 birds, $2 entrance, miss and out after third round.

Weir City Scores.

WEIR CITY, Kan., June 19.—The medal contests of the Business Men's Gun Club at this place brought out nine shooters last week. The club medal allows known traps and angles, giving a bird allowance to even things up. McIlhany and Calhoun preferred to shoot unknown angles, and as the targets were quite swift this was in itself a handicap. The President's medal was won by Calhoun at 5 unknown traps and unknown angles. Should he or McIlhany win at double the medal will become their property. Below are the scores:

Club medal:

McIlhany * (0)	1111111111111011111100011—21
Calhoun * (0)	1111011111011111011011101—20
King (5)	0001011111011011111111111—24
Goddard (5)	0111001110011101110111110—22
Histed (5)	1011011111111011111111100—25
Morrison (4)	1110011111101111010111011—23
Abbott (6)	1011011110111111001110100—23
Beadle (7)	0011100011101011101101101—22
Granat (8)	1100011010111010110011100—22

* McIlhany and Calhoun shot at unknown angles, the others at everything known.

President's medal:

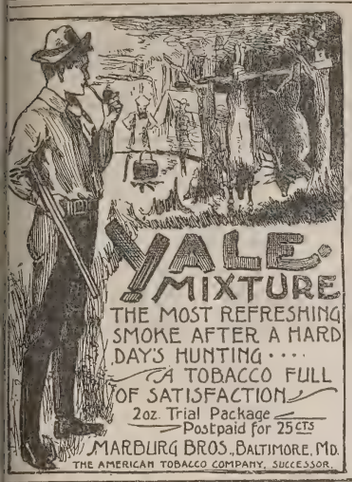
ANSWERS TO CORRESPONDENTS.

A CONSTANT READER.—We believe that there are good camping places on the lakes you name. You would come under the new subscriber offer.

NEW PUBLICATIONS.



"PLEASURE CYCLING," by Henry Clyde, is from the press of Little, Brown & Co. It is an extremely well written and comprehensive little book.

"FAMILIAR FLOWERS OF FIELD AND GARDEN," by F. Schuyler Mathews D. Appleton & Co., is a book of 300 odd pages, which deals with flowers chronologically from March to November. It is a well written guide to the floral kingdom, and is equally well illustrated. The book is provided with a systematical index of the names, colors and localities of familiar flowers of the United States, including a floral calendar.

"THE AROOSTOOK WOODS," by Charles C. West. A book of sketches of camp life, which, as its title indicates, deals with the woods of Aroostook county, Maine. The stories are all said to be true. His pictures of the forests and streams and lakes are vivid and breathes the spirit of the wilderness.

"FOREST, LAKE AND PRAIRIE, OR TWENTY YEARS OF FRONTIER LIFE IN WESTERN CANADA—1842-62."—By John McDougall. This is an unvarnished tale of pioneer life in the Canadian Northwest. The author's earliest recollections are of stumps, log heaps, great forests, corduroy roads, Indians, log and birch bark canoes, bateaux, Macinac boats, etc., of the discomforts of smothering snows in winter and myriad mosquitoes in summer. His father was a first settler, trapper, trader, sailor and local preacher. He himself, so his mother tells him, spoke Indian before he spoke English. His story is a simple narration of the hard facts of pioneer existence.

YACHTING CRUISES.—The Quebec Steamship Company will dispatch their fine passenger steamer, the Orinoco, from New York and Boston for special tourist yachting cruises July 13 and Aug. 7. This vessel is a fine modern steamship of 2,000 tons fitted with electric lights, baths and all the latest improvements. She will carry no freight whatever, and every effort will be made to insure the comfort and convenience of the passengers and make the trips in every sense yachting cruises. These tours will be northward to the cool breezes of the Bay of Fundy, Nova Scotia, the St. Lawrence and Saguenay, and will terminate at Quebec, though passengers desiring to do so may take in Lake St. John *en route*. Messrs. A. E. Outerbridge & Co., 39 Broadway, New York, or Thomas Cook & Sons, will send full particulars on application, including a handsomely illustrated pamphlet descriptive of the cruises. The cruise conducted last year was very enjoyable and successful.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

Publications.

Two Worthy Works.

Worthy of the subject, Worthy of the author.

Hunting Trips of a Ranchman.

Sketches of Sport on the Northern Cattle Plains. By THEODORE ROOSEVELT. Illustrated with 26 full-page illustrations. Cloth, 350 pp. Price $3.00.

In this work Mr. Theodore Roosevelt has given a spirited and vivid description of the great Northern cattle plains, and of the ranchman's life in the bad lands of the West.

The Wilderness Hunter.

By THEODORE ROOSEVELT. Illustrated. Price $3.50

"Mr. Roosevelt is sufficiently known by his earlier writings as a keen sportsman, and one who looks at sport of whatever description from the best standpoint. His first book on this subject, "Hunting-Trips of a Ranchman," was a charming volume, and the same may be said for the later, "Ranch Life and the Hunting Trail." To the present work he brings a riper hunting experience, and a literary style even more attractive than in his earlier works. There is a freshness and a breezy out-of-door flavor about it that calls up vividly to the mind the high dry country where the cattle range, and the lofty crags where the white goat lies on the snowbanks in the shade. 'The Wilderness Hunter' presents a series of accurate pictures of outdoor life in the West, and these pictures are so cleverly drawn that the book will be interesting to the reader whether he is familiar with such scenes or not. He who has taken part in such scenes add adventure will, as he reads the volume, be stirred over and over again by old-time memories."—*Forest and Stream.*

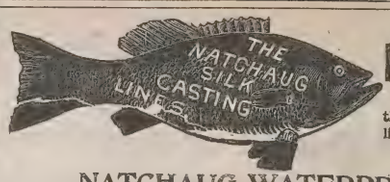
A New Authority on a New Fish.

The LEAPING OUANANICHE



What It Is

When, Where and How to Catch It

BY EUGENE MCCARTHY.

The Ouananiche is rapidly coming into prominence and is attracting the attention of anglers every where. Seven years' experience in catching and studying the Ouananiche has thoroughly fitted the author to speak with authority on his subject, and the work is a valuable one. The book contains a large number of half-tone cuts from photograph taken by the author, and a correct portrait of the fish itself. A line map of the St. Johns country, also made by the writer, is given. This work will be a recognized authority, and should be in the library of every angler. Paper, 66 pp. of text. Price 50 cents. Published and for sale by

FOREST AND STREAM PUBLISHING CO.

THE ONLY PERFECT FISHING LINE IS THE

Natchaug Braided Silk Line.

Made from the choicest stock braided 16-strand three-cord silk. They will outwear three ordinary lines. Spool perfectly when in use.
Never flatten or become water soaked.

NATCHAUG WATERPROOF BAIT & FLY LINES

will float on the water. The finish cannot be broken. Those who have used them will have no others. Send four cents for samples and prices and pamphlet containing our awards of prices for last season and cash prizes for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.
Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field.*
All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.
If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, JULY 13, 1895. | VOL. XLV.—No. 2. No. 318 BROADWAY NEW YORK.

A FAMILY AFFAIR.

THE great National Schuetzenfest, in Brooklyn, was a family affair. Our German brethren are not selfish in their pleasures, for they take their mothers, wives, sisters, brothers and friends with them to enjoy witnessing the competition or to indulge in the wholesome pleasure and recreation which are adjuncts to it. The competition of the individual is thus lifted above selfish oneness and becomes the common property of the family and its friends. All alike share in the pleasure of victory or the struggle for it, and all alike have equal benefit from the recreation.

In this respect the Fest differee widely from the competition of the average American. To him a competition is a serious matter. He may call it recreation, but in most instances it is merely the same serious business manner directed into another channel. He goes out for relaxation, but he does not relax. His play is quite as serious as his work. He carries the same fixed business face at all times. He is not responsive to the general good nature and chattiness, nor does he display much personal vivacity. To foreigners, with whom sociability is a polite art and duty, the pleasant diversions of the American seem to be periods of greater sadness. He is self-centered and serious, slow and cautious in mixed company, so much so as to be noticeably distinct in contrast with the vivacious deportment and sociability of the Germans.

Glendale Park during the past week has illustrated that at a German Schuetzenfest it is not all of shooting to shoot. The constant rattle of rifle shots, the almost equally loud and spitefully sharp noise made by the bullets striking the target and the whip-like crack of the echo, did not in the least mar the enjoyment of the thousands of men and women gathered there. High, strong fences securely inclosed the shooting grounds, thus guarding the careless picnickers from danger and the shooters from interference or annoyance. The long line of firing points, carefully arranged with every convenience of gun racks, each divided from the other in a stall-like manner, so that each firing point had its own individual arrangements, permitted a long line of competition all at the same time without confusion or disorder, though to the lay onlooker there was no evidence of system. Two or three reports would be heard, then a single one, then a whole volley, sounding much like a whole pack of firecrackers exploding at once, then shifting and changes of the reports from volleys to single shots the livelong day. The firing points occupied one side of a pavilion, the rest—the larger space—being used for tables where the shooters or onlookers could sit at tables and refresh themselves; while pretty girls, strong, robust, fresh and healthy, in the picturesque costume of Vaterland, filled and refilled the foaming steins.

But in the large grounds, so extensive and so filled with people, and having so many other amusements in action that on the opposite side the reports of the rifles could not be heard, the rifle shooting appeared but an incident. Small brass bands were here and there, the center of large groups of listeners who sat at the tables clustered about every attraction, and applauded each effort politely. A large dancing pavilion so swarmed with waltzers that it was a marvel that they could turn at all. Yet the broad mass whirled round and round and rarely was there a collision. On Singers' Day the park was filled to its full capacity. There were many thousands of people present. In every part of the wide grounds there was something to engage the eye or the ear. In one place was a large platform on which was a continuous performance of athletic feats—trapeze, tumbling, contortions, and parallel bars—some of them being exceedingly difficult, and all very good. A diversion which was particularly well patronized, though crude in its requirements, was a test of strength. A heavy beetle or maul was struck on a pin which by lever action threw a small weight upward between two parallel frames, which were fastened to a board structure about thirty feet in height. Young men and men not so young would take off their coats and work at this enticing device with a vigor and determination, costing five cents for two trials, which would have won their employers' undying confidence and esteem were they to use the same effort in business. While one was bending and swaying in swinging the ponderous mass of wood, a dozen would be waiting for an opportunity to show their strength. A shooting gallery of many targets and many rifles was running constantly up to its full capacity. Groups of singers here and there warbled forth melodies. There were the usual "fake" schemes too, which separate the good-natured money owner from his money—as the colored gentleman whose head is pushed forward through a hole in the canvas for any one to throw three or four balls at for the sum of five cents, not so easy a game as it looks to be, nor so certain of safety, as the colored gentleman often finds out to his hurting. The cheap photographer who takes pictures while you wait was crowded with customers, mostly the young man with a pretty girl who wished to show good faith. The merry-go-round, with its impossible horses and tigers and its machine music, was patronized alike by old and young, though a grown man, sitting with grave dignity on a wooden horse, going about in a circle to the weird notes of a steam organ, does not seem to enjoy it so much as he should. Every amusement was run up to its full capacity. Every one was spending money and seemed to be happy. Every one appeared to take his or her enjoyment in a social manner. The pleasure of each individual seemed to blend with the common pleasure of all.

"ACCOMPANIED BY OWNER."

IN our comments last week upon the Maine system of prohibiting the transportation of game unless accompanied by owner, it was said that similar provisions have been adopted in other States. A study of them is interesting. Here is an abstract, not, however, complete:

In Arizona it is forbidden for any common carrier or private individual to receive game animals, birds or fishes for transportation outside of the limits of the Territory.

Arkansas has a statute, which has been commented upon before in these columns, making it unlawful to export any fish or game from the State.

California forbids railroad companies, express companies and private individuals from exporting from the State deer and game birds.

Colorado forbids killing of deer, elk or antelope at any time except for immediate use, governed in amount and quantity by the reasonable necessity of the person or persons killing the same.

Connecticut forbids exportation of woodcock, ruffed grouse and quail.

Delaware forbids the exportation of game entirely.

Florida has just passed a new law forbidding the transportation of venison from one county to another, except that it may be carried home by hunting parties.

Idaho forbids the taking of deer or antelope at any time for the purpose of traffic in carcasses.

Illinois in a law which has been upheld by the Supreme Court forbids the sale or transportation for sale of quail, pinnated grouse, ruffed grouse, pheasant, squirrels or wild turkey taken within the limits of the State.

Indiana forbids exportation of deer, quail, pheasant, wild duck, grouse, prairie chicken or woodcock at any time.

Iowa provides that game may not be shipped out of the state no within the State, except that one dozen birds may be sent in one day, provided an affidavit is made that the birds are not shipped for sale or profit.

Massachusetts forbids the exportation of woodcock, quail and ruffed grouse.

Michigan forbids transportation, except for food consumption within the State, of deer, ruffed grouse, pinnated grouse, quail and wild turkey.

Minnesota, in a law which has stood the test of the Supreme Court, forbids the exportation of birds, animals, or fish killed in the State.

Missouri forbids the shipment of quail, prairie chicken, deer and turkey from the county where killed to any other county in the State or to any point outside the State.

Nebraska forbids the transportation or shipment of game animals, grouse, quail and wild turkey at any time.

New Hampshire forbids the killing of woodcock, ruffed grouse or partridge except for consumption as food within the State.

New Jersey forbids the export from the State at any time of any birds, game or fish unless in possession of the person who may have lawfully captured it in the open season.

New Mexico forbids the exportation at any time of deer, elk, antelope, wild turkey and quail.

North Carolina forbids the exportation from the State of any quail or partridge whether dead or alive.

North Dakota forbirds the exportation at any time of game or fish.

Oklohoma provides that it shall be unlawful to export game or fish, except that live birds or animals held for domestic or scientific purposes may be exported, though not more than one pair of such birds or animals at any one time.

Oregon also forbids exportation except for breeding or exhibition purposes.

The South Dakota law forbids the killing of birds for traffic, and limits the number which any one person may kill during one day to twenty-five. It also has a provision against the exportation of trout or other food fish.

Vermont forbids the killing of woodcock or ruffed grouse for the purpose of shipping or in any manner disposing to parties outside of the State for traffic or gain.

West Virginia forbids the exportation except alive of deer and wild turkeys.

Wyoming forbids the capture of game for the purpose of selling or disposing of the same, or of shipping it out of the State except by express permission of the State Game and Fish Warden, and then only for the purpose of supplying public parks.

In Canada the law in general forbids exporting into the United States, and most of the Provinces forbid also the export of game from one Province into others of the Dominion.

PROTECT IDAHO BUFFALO.

A NUMBER of years ago, soon after the extinction of the large herds of buffalo on the plains, several of the Western States in which mountain buffalo were still found passed strict laws preserving this game for a term of years. Such a law was passed in Idaho, being recommended by the Governor, whose attention was called to the matter by an earnest letter from Mr. Arnold Hague, of the U. S. Geological Survey. This law was in force in 1889, but it has since been repealed, and there seems now to be no provision on the statute books of Idaho providing for the protection of the species.

This is particularly unfortunate since a portion of the Yellowstone Park borders on Idaho, and it is perfectly possible for poachers to enter the park, kill buffalo, and—provided they are not captured within the jurisdiction of the superintendent of the park—to possess their spoils in Idaho without contravening the statutes of that State. Or if, as not infrequently happens, a bunch of buffalo wanders out of the park into Idaho, they can be legally killed there. It is only two or three years ago since something of this kind took place and one man butchered ten buffalo just without the park. Within two years a Montana taxidermist hired a resident of Idaho to procure some buffalo for him and six head were secured, probably all in the park. The killer is now suing the man who incited him to do the killing for pay for the specimens.

The southeast corner of the National Park is a great summer range for game of all descriptions, and should have all the protection that can be given to it. The force of troops in the park is small, and although they are handled to the very best advantage, it is a physical impossibility for them to cover the whole of this extensive territory.

Besides the actual killing of buffalo which takes place in Idaho or on its borders, more or less injury is done to the small herd by the capture of calves. A certain man named Dick Rock has now, we are told, three calves in Idaho just beyond the borders of the park. These, it is claimed, were captured in Idaho on Warm Spring Creek, but there is good reason for thinking that they were taken in the park and carried over the border line into Idaho, where they are now being reared in captivity.

The passage of a law to protect buffalo in Idaho should be recommended to the next session of the Legislature of that State by the Governor. Such a law could not interfere with the rights of any citizen, but might do much to strengthen the hands of the authorities of the National Park, who, by acting in concert with the authorities of Idaho, might put an end to the poaching which notoriously now takes place in the southeast corner of the Yellowstone Park.

CHARLES T. VAN SANTVOORD.

CHARLES TOWNSEND VAN SANTVOORD died suddenly at his home in this city last Friday. Mr. Van Santvoord was born in 1854, was a graduate of Rutgers College of the class of 1873, and manager of the Albany line of steamboats. He was a member of the Union, University, Seawanhaka and other clubs.

Mr. Van Santvoord was a sportsman of the highest type and had many close friends among shooting and yachting men. His was a singularly winning nature, marked by a great gentleness and sweetness of disposition, and those with whom he was at all brought in contact soon became strongly attached to him. His gentle manner did not imply any lack of pluck or hardiness. No man would longer face the bitter storm in the ducking blind, or more effectively handle oar or sheet in the gale when returning at night, or more unwearyingly tramp after the dogs all day through field and swamp. He had a keen appreciation of nature and cared far more for the contact with outdoor things than he did for the mere shooting of game. Mr. Van Santvoord was a rare man and will be sincerely mourned.

How delightfully human it all was. Two elephants in a Lawrenceburg, Indiana, circus parade fell out over a peanut, and then elephants and tigers and lions and hyenas all had a free fight. All for a peanut. Just like men.

Didn't-Think was one of the kindest, most tender-hearted and benevolent old gentlemen in all the world; but Didn't-Think killed his man. He didn't think it was loaded.

The Sportsman Tourist.

NORTHWARD TO THE FAR WEST.—II.

[*Continued from page 5.*]

THE next morning we were fast approaching Thunder Bay, and to the left the rock-bound shores of Isle Royale loomed up from the placid bosom of the lake. Thunder Cape, sometimes called the "Sleeping Giant," is before us. It raises its head 1,350ft. above the crystal waters which lave its feet, so gently when calm, or dashing against the rugged sides in vain attempt to beat it down when the "Storm King" rides forth from his home in the north. The old Indian tribes looked upon these mountain peaks with awe, and thought the thunder clouds were huge birds that had their homes or nests in these high hills or mountains.

The scenery now becomes grand and beautiful in the extreme, and the North Shore well deserves the encomiums lavished upon it. As we enter Thunder Bay we pass Pie Island in our unpoetical language, or "Mahkeneeng" or Tortoise in the ruder but more poetical dialect of the Indian. The island is about eight miles long and five wide. One point is elevated 850ft. above the lake. The French or English *voyageurs* gave it the name of Pie Island on account of this bluff or knoll being like an inverted pie in shape. The Indians thought it resembled a tortoise. This elevated point is basaltic, rising perpendicular near the top, like the Palisades of the Hudson.

We do not go into Port Arthur, which used to be called Prince Arthur's Landing, but continue on up the bay into the Kaministiquia River to Fort William. As we steam slowly up the river we have a fine view of McKay's Mountain, about three miles west and rising 1,000ft. above the lake level.

The Falls of Kakabeka can be visited by rail by staying a day at Fort William. The fall is about 200ft. high—higher than Niagara, but of course of much less volume.

Those going to try the far famed waters of the Nepigon leave us here and take the train back eastward seventy miles.

Almost every fisherman knows what fishing there is along the north shore of Lake Superior, and especially in the Nepigon.

We are sorry to leave the staunch Athabasca and our comfortable stateroom for the more confined quarters on a sleeper, but we must now take the only route, which is rail—and we were fortunate in finding the Winnipeg sleeper not full when the train pulled in from the east, and we secured good quarters. Fort William was built in opposition to Fort Arthur and hence "boomed" a little, but was now quiet. It was Hudson's Bay Company's post originally and some of the old buildings now stand.

The old fur house of the fort shelters the engine used on the coal derricks, and the great elevators of the Canadian Pacific overshadow them all. Whittier's lines are again brought to mind. The past and the present go hand in hand.

Again westward we turn our faces and leave the "brother of the sea" behind us.

We whirl along through a very rough but pretty country, with lakes here and there and rushing streams, that look as if full of fish and which are. When in 1870 Wolseley led his army to Fort Garry, now Winnipeg, he used those lakes and rivers much of the way, as many are connected.

At many of the stations we saw civilized Indians, or partly so, and the ladies were much taken with the papooses strapped up in the queer cradles their mothers use. One squaw stood looking at the train and rocked her babe with one hand, as the board it was strapped to stood on the ground. The little one was as content and as happy looking as if it was in a patent rocker, probably more so.

As we traveled west and evening came on the air became cool, and though it was August we never suffered from the heat again. There are no towns of great importance between Fort William and Rat Portage, but the ride is very interesting, as the country is so wild and rough. From Eagle River, where there are falls of some magnitude, to Rat Portage the scenery is wild and pleasing. Keewatin and Rat Portage are only four miles apart and are situated at the outlet of the Great Lake of the Woods, where the waters break through the rocks and plunge into the Winnipeg River. Two hundred years ago the Hudson's Bay Company had a post at this point, but the town is not yet twenty years old.

All these Hudson's Bay Company's posts were links in the chain which the company established, extending from Fort William through Fort Garry (Winnipeg) to York factory on the Hudson's Bay. Several millions of dollars worth of furs passed through these posts in their palmy days. One never realizes what a power the Hudson's Bay Co. must have been in the days gone by until they visit the Canadian Northwest and see the traces of their organization. The great company yet exists and has its stores in every town or city of any size, all the way to Victoria.

Rat Portage is fast becoming the fashionable summer resort of the Northwest (Canadian) and is honored with the title "Saratoga of the West." The fishing in the vicinity is of the finest, and the Lake of the Woods offers great attractions for the tourist. Several steamers ply on the lakes and our Canadian cousins camp along its shores and are great for canoe trips over it and its connections.

The amount of fish taken from the lake is stupendous. Ten cars of fish a day are shipped by one company from Rat Portage. Lake trout, mascalonge, pickerel and bass abound. For the finest bass fishing one wants to take a canoe to Bass Lake, which is reached by a short portage from the Lake of the Woods, and here they will find nearly virgin waters. Indians can be hired for one dollar per day and their grub. The lake is about ten miles long and is about forty miles from Rat Portage.

The Lake of the Woods is the largest body of water touched by the Canadian Pacific between Lake Superior and the Pacific, and is sixty-eight miles in length by fifteen to twenty-five miles broad; it is studded with islands, some claim thousands, but as to the truth of these accounts we will not vouch. One of the most noted is Manitou Island, and the Indians are very superstitious in regard to it. They think that the "Mache Manitou," or great evil spirit, holds undisputed sway on its rocky shores. It is not known that any Indian canoe ever went near its shores, and they will not look that way, it is said, or speak of it when near by. Their superstition is that if any one dares to speak within hearing of the evil spirit, or looks or points at the isle where his malicious and whimsical will rules, it will cause a storm to arise and overwhelm the daring one.

A summer could be well spent cruising about the Lake of the Woods and down the Rainy River into the Rainy Lake chain, but one must go prepared for the flies, which, at seasons, are very bad all through this country.

Westward from the Lake of the Woods we run into a more prairie-like country, but it is not the prairie of the South—there is plenty of brush and considerable water. As we are eating our breakfast in the dining car we gaze out of the windows and note the great number of prairie chickens and ducks which fly up from the grass and out of the little sloughs.

There is plenty of good shooting for the man with the "scatter gun" in this country.

As Winnipeg is the capital of the Province it is worthy of some notice. It is the site of old Fort Garry, and the stone gateway of the old fort still stands. In 1870 the population claimed was 215, not counting military forces there; the buildings, all told, in fort and out, forty-six. Population claimed in 1894, 35,000 and 1,100 business places. Winnipeg had a big "boom" with a capital "B" in 1881, but the collapse of said "boom" did not mean death to the town, and to-day it is going along in a very respectable fashion. There are several good hotels. The Hudson's Bay Company have one of their largest stores and storehouses here, and it is like visiting a museum to go through the establishment, as they deal in every conceivable thing.

A canoe trip up the Assiniboine River from its junction with the Red River is very interesting and the scenery of an order that is very pleasant to look upon, even if it cannot be called grand.

The Canadians are all great for sport, and Winnipeg boasts of a fine boat club, which was holding a regatta while we were there, and we had the pleasure of seeing races rowed in four-oared, double and single shells of the latest model on the historical Red River of the North, where only a few years ago floated the bark canoe of the aborigines.

The summer climate of Winnipeg would cause one to doubt the stories that up here is where our "blizzards" come from, as it is very warm and salubrious. The dryness of the atmosphere makes the heat and cold more durable than they are with us on the lakes. We had letters to one of the Government officials, who had come up to help put down the rebellion in 1870, and who became enamored of the country and never went back. He was very kind and showed us the Government buildings and explained their system, which in some ways the Canadians think they are ahead of us in, and candor urges us to admit that they think right—however, we will not dip into politics.

From Winnipeg west our afternoon's journey took us through a level country, but not the barren, treeless plains. What surprised me was that there was so much brush and vegetation, also the abundance of wild flowers. There were also a great many ducks in the sloughs and little streams, and chickens enough to please the sportsman. All along through this country the lover of the shotgun can find sport.

We are gradually climbing toward the great plains, which lead to the foot of the Rockies, and at Brandon we are up 115ft. above the altitude of Winnipeg and 133 miles west. The twenty-four-hour system in use on the Canadian Pacific west of Fort William is puzzling at first to those unaccustomed to it, but we soon learn how to figure, and it seems quite natural to say 16 or 17 o'clock.

We have followed the valley of the Assiniboine to Brandon and now we leave it. We pass through a fine farming country, and sometimes after dark we pass from this into a more open and rolling country, and during the night pass through Regina at an altitude of 1,875ft., and the capital of the Northwest Territories. Here also are the headquarters of the Northwest mounted police. Members of this body of soldiers are seen at nearly every point along the line, and with their jaunty and showy uniforms they are very noticeable individuals. They are all young, strong and athletic fellows, finely mounted, and they do most excellent service through this entire country. One would be apt to think they were play soldiers to see them about the stations with their shining top boots, silver spurs, skin-tight trousers with broad yellow stripes, the jaunty little red jacket and then such a cap, about the size of a pill box and worn just above the ear. One feels like crying "Where did you get that hat?" every time he meets a police. Their white belts are pipe-clayed as neat as can be, and their hands are generally covered with white gloves with huge gauntlets. Given a very, very small cane or crop and our mounted police is complete—when off duty.

There are 1,000 of these men in the Northwest, and it is doubtful if the same number of men distributed over such a territory would do as good service elsewhere.

About 7 o'clock the next morning we are ready for breakfast, and as we roll along over the great plains, which we have now reached, and which end only at the base of the Rockies, we gaze upon the numerous prairie dog villages and the usual alkali lakes of the Western plains.

This country was only a few years ago the range of the most northern or Canadian herd of buffalo, but they are all gone, and all that is left are the deep worn trails and wallows yet plainly to be seen, and the piles of bones at many of the stations, gathered up ready for shipment.

At about every station there are Indian women and half-breeds selling buffalo horns, polished and ornamented, with deer, antelope and coyote skins. A bunch of three or four pairs of horns can be purchased for $1.50. These squaws do not like to be photographed, and when they would see us point our camera at them they would cover their heads with blankets.

Late in the afternoon we arrive at Medicine Hat and find we are not as high as at Swift Current, having dropped from 2,400ft. to 2,150, showing the depression in the river valley.

We are now on the South Saskatchewan and cross it at this point. The river is navigable for 800 miles below to Lake Winnipeg. We have a half hour here to get out and stretch our limbs, and we find plenty to occupy our time. There are always a large number of Indians hanging about, and as they are genuine plains Indians, in full paint and native dress, they are objects of much curiosity. Then a squad of mounted police add color to the scene, and last, but not least, a large grizzly bear in a pen is worth seeing. We tried to photograph the Indians and the bear, but they were both shy, so we did not succeed very well. Mr. Lo knows the value of his ugly phiz, and has to be tipped as a usual thing. Westward still a few miles from Medicine Hat we pass one of the Canadian agricultural farms. It is night before we get to Gleichen, so we do not get the glimpse of the Rockies that can be had at this point; but we can see the sparkling waters of the Bow River shine in the moonlight as we follow its winding course toward Calgary.

[TO BE CONTINUED.]

A FEW REMARKS ABOUT A LIVE WESTERN TOWN.—III.

BY GEORGE KENNEDY AND HORACE KEPHART.

THIS is not quite so true a story as that one of Kephart's, but he has kindly agreed to vouch for it just the same. It is not so hard on the town either. Indeed, if I had been he I would rather have refused to tell the story and let me go ahead with those turkeys (and I have a notion to do that anyway now), because he can never go hunting at that town any more without having the leading citizens get after him after sundown with their coats turned wrongside out and their dander up. Mighty good hunting there, too. And I may as well admit, now the thing is done, that it was not a bad idea on my part to get as many other people to stay away from there as possible. Not that they kill much game, but they keep it so scared all the time that it won't lie to the dogs.

I feel bound to say in extenuation of the town in question that the misdemeanor referred to and called by the long name was not committed by a colored woman. If it had been the mob would have just naturally wrecked the place.

My remarks are about

The Calm Courage of Mr. Jim Hilliard,

which he kept the hotel at the same town some years before the miscalculators (I believe that is the word Mr. K. uses) came there. A little boy had been carrying my lunch basket and extra shells all Christmas day, and as we came in sight of the village he became loquacious.

"They's goin' to be a fight in town to-night."

"What about?"

"Oh, it's jest a ordinary fight. Them Lollards wuz over here Thanksgivin' from Long Prairie and cleaned the town out, and when they got through they 'lowed they'd be back Christmas.

"How many Lollards are there?" I inquired.

"Three, but they're right good fighters."

And so, after supper, while Mr. Hilliard was in the midst of a long account of his troubles and misfortunes as a cattle raiser, the fracas suddenly began in the neighboring saloon. Yells, retorts, cuss words, scuffling, falling chairs; and as a knife interfered with the cuticle of one of the over-sanguine Lollards and he gave a scream that made you almost feel the blade yourself, the fighting ceased and the sounds died away. A general fight seems to have two prime characteristics: it starts before you know what's up and stops before it's over. This one hardly broke one of Hilliard's sentences. He finished his story with imperturbable gravity. Tom felt like asking him if he knew there was a fight—if he had not heard that awful scream. Directly, however, he seemed to realize for the first time that there had been some little disturbance. He said,

"Well, I believe I'll go over and see what wuz all them fellers fightin' about. I think them Long Prairie fellers got the worst of it this time." And he sauntered out. He evidently knew something about it after all.

Perhaps half an hour elapsed before he came back. His thoughts, always calm and philosophic, dwelt upon the event and the curious ethnological aspects of the Lollards' principal antagonist.

"Well, sir, d' you know there ain't a man in this town can arrest that there Town Marshal of our'n but me? No, sir; there wasn't one of 'em dared touch hide ner hair of him. 'N so they came to me as soon as I got there 'n' says, 'Hilliard, don't you 'spose you could arrest Henery?' 'N' I allowed I could, 'n' so they says to go ahead, 'n' I says 'What for?' says I, 'n' they says, 'Well, it's a leetle uncertain who cut Lollard. Some says it was Henery 'n' some says it was another of the Lollards did it by mistake, 'n' some think likely Si Lollard cut himself; but if you don't lock Henery up they says he'll sure be fightin' ag'in inside of fifteen minutes. It ain't reasonable to suppose we're goin' to keep 'em apart all night, 'n' it ain't right to expect the Lollards to go as long as they've been cut and hain't cut back any.'

"Well, I see they would have trouble if somebody didn't take Henery up and arrest him, so I says, 'All that's in favor of me bein' Town Marshal pro tem. so I can lock up the present incumbent, say 'I.' And everybody voted for it, and so I went in and got him."

"He made no resistance?" I inquired.

"Why, he come along like a yoke of oxen."

It was the unconscious fearlessness of the man that impressed me and doubtless everybody else.

"Huh! why, he jest follered me along as if I wuz leadin' him to water. And what beats me is there wasn't another man in town dare rub up ag'in' him even. Why, he fairly weakened up there by the Baptist Church, across from the lockup. So I says to him if he is got enough, and will go home and not stir out till he comes to the Squire's in the morning, and will consider he is my prisoner, I'll be easy on him, and spare him the disgrace of actually bein' locked up in his own lockup; so I let him go home. But I wuz the only man in the hull town could arrest him. (With fatherly pride)—He's a son-in-law of mine."

I learned that the Lollards retired during the night bearing their wounded with them, and leaving word that they would be back either New Year's or Washington's Birthday and wipe out the place—Town Marshal's a specialty.

The latest fish story is told by John Troy, a Boston fisherman, who has just arrived in this port on the fishing boat Iolanthe. He says that early on Thursday morning last, while trolling off Chatham, Mass., in a 14ft. dory, a swordfish 12ft. long became tangled in the buoy line and carried the boat a number of miles out to sea. Troy says that he was not picked up until Saturday morning, until which time he was without food or water.—*Commercial Advertiser.*

A REJOINDER ABOUT CRACKERS.

Editor Forest and Stream:

While I do not wish nor intend to enter into controversy with "A Georgia Cracker" over the manner in which I described my first meeting with a "Florida Cracker," still if you will kindly allow me a little of your valuable space in which to defend myself, I promise not to transgress again.

Now, in the first place, if "A Georgia Cracker" will kindly look on page 507 of FOREST AND STREAM, in the first column near the top, he will find these words: "There may be a better class of this part of the human race than we met. I hope there is." I did not say that there was not a better class of these people. That I hoped there was. My assertion that we did not meet this better class, however, I still stand by. While I do not in the slightest doubt the word of your Atlanta correspondent when he says he has met this better class, still what he has met and what I have seen are "horses of different colors."

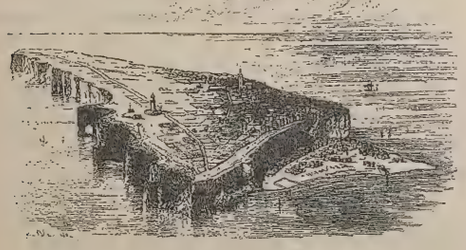
Secondly—I do not wish "A Georgia Cracker" nor any one else, from anything I may have written, to infer that I include all persons born in the State of Florida categorically as "Crackers." Far from anything of the kind. I always supposed that they were to be found exclusively in the lower class of Southern whites. And from all accounts of camping, hunting and fishing in that State that I have read (for I, too, have read FOREST AND STREAM very closely; in fact, as I write my eyes rest on more numbers of that valued journal than an able-bodied man could very well lift, as they date as far back as 1879), I do not remember having read anything that would lead me to infer to the contrary. I would not for one minute class the considerate Fernandina storekeeper with the concave-chested exister.

Thirdly—It puzzles my mind considerably, in fact, it is utterly impossible for me to get it through my head—how under the sun friend "Georgia Cracker" could investigate such cases so thoroughly as in one place to say that if I "had taken the trouble to inquire of them their birthplace," as he had done in Georgia and Florida, "I am sure their answer would have been Philadelphia or other refined centers of the North;" when in another place he distinctly says he never has run afoul of a case of the kind while hunting, fishing and traveling in every State east of the Mississippi.

Fourthly—Of the hospitality of the people of the South as a whole there is no question. But as to his inferring in one place that my article was written to suit the taste of Northern readers of FOREST AND STREAM; then again, in another place, of his distastefulness of my use of FOREST AND STREAM'S columns in which to vent spleen and prejudice against the South he simply is 'way off the track, as I have no feeling of prejudice whatever to vent against the South—for, list you, Sir Georgia Cracker, while I gently whisper in your ear the fact that every drop of blood that flows through my veins is Southern. My parents and grandparents, uncles, aunts and each and every one of their preceding ancestors, extending far back into the past, years before the signing of the Declaration of Independence, all first beheld the light of day in that sunny land to the south of Mason and Dixon's line.

With good feelings for all—even concave-chested "Crackers"—and animosity to none, I close.

WM. H. AVIS.



NEW HAVEN, Conn., July 4.

Natural History.

GÄTKE'S BIRDS OF HELIGOLAND.

A YEAR and a half ago in FOREST AND STREAM attention was called to Mr. Gätke's important work, entitled "Heligoland, an Ornithological Observatory." This was the German edition, which had made its appearance nearly a year before. An English translation of this very interesting work has just been issued from the press of Mr. David Douglas, of Edinburgh, Scotland. It is introduced by a preface by Mr. John A. Harvie-Brown, which bears date May 8, 1895.

As is well known, Heligoland is a tiny island in the German Ocean, about forty miles north of the mouth of the river Elbe. It consists of a rock rising 200ft. above the sea, a waste of sand hills and rugged stone, which offers little attraction or hospitality to the migrating hordes which pass it. Only the auks and the guillemots find a congenial home among its desolate storm-swept crags, yet this tiny island is a stopping place for millions of birds on their passage to and from their summer breeding grounds. In early February the first of the advancing hosts make their appearance from the South. In March their numbers increase, and by the end of the month many summer birds, like the song thrush, two species of doves, the snipe and the water rail, are abundant. In April and May the migration is at its height, and it is then that the collector reaps a rich harvest of facts

HELIGOLAND.

for his note book and secures his rarest specimens. Mr. Gätke says, "If * * * the weather be especially favorable the species pour in in incalculable numbers; during the hours of night this great host of wanderers weeps across and passes the island without taking rest h ereon—some of the birds traveling singly, others in maller or larger groups, according to the nature of the pecies—all striving to gain their far-off homes. About unrise, however, and during the early hours of the forenoon thousands and tens of thousands of these birds break their journey; some, too, at sunset, in order to make a few hours' stay on our island. It is, however, absolutely impossible to ascertain the manner and method of arrival of most of these visitors even by the most careful observation. This is especially the case with the small song-bird and similar species, whose number increases with each minute, without one being able to see a single

THE AUTHOR IN SHOOTING DRESS.

bird descending from on high or shaping its course in any one particular direction. Many alight on the fields while it is still dark, and are present in their thousands by the time it has become daylight; some on the other hand arrive shortly before sunrise, others arrive only after the day has fully begun. From this time onward their number increases steadily."

Toward the end of June the returning migratory wave sets in, and this increases through the following month. With August the southward migration is in full force, and continues through September and October, while in November the northern species, sea birds and birds of prey, are abundant, and the migration cannot be called at an end until well into December, when the winter residents, such as the wildfowl, take up their home about the island. Thus briefly, but most practically, does Mr. Gätke, in his opening chapter, entitled "The Course of Migration in Heligoland," set forth the seasonal progress of bird life there.

Mr. Gätke's observations, which have continued over fifty years in this island, have established two main facts in regard to the direction of the migration flight: that in autumn the migration proceeds from east to west, and in the spring in the opposite direction; that in the cases of all the species and individuals noted on the island these courses are rigidly maintained during the passage, or if any deviations occur they do not extend beyond one or two points of the compass. Similar observations conducted since 1879 at the lighthouses and lightships on the English and Scottish coasts have yielded results like those of Mr. Gätke, and the conclusion seems inevitable that the vast numbers of birds which breed in northern Europe take, on their fall migration, a westward course until they reach the shores of the Atlantic Ocean, when they turn sharply to the south, and crossing the English Channel distribute themselves over southern Europe or pass on to Africa. In spring, however, the line of flight is for many species a different one. The birds no longer have time to pass along in a leisurely manner at their ease; it is essential that they should be at their breeding quarters, perhaps in northern Asia, at a fixed time, and instead of returning northward by the route followed during their autumnal journey, they make a direct northeasterly flight, which carries them to their summer home in the shortest possible time. Thus it is that many species which are most abundant in Heligoland in autumn are extremely rare there during the spring.

Mr. Gätke's chapters on the altitude of the migration flight, its velocity, and the meteorological conditions which affect it, are full of interest. They could hardly be otherwise, since they contain the results of observations carried on for so long a time over so limited an area.

The altitude at which birds fly during their migration is one of the subjects to which Mr. Gätke has devoted much attention, and to this he has devoted a chapter containing a great number of interesting facts and generalizations. He concludes among other things that the common buzzard (*Buteo*) can soar upward without wing movements and yet steadily and rapidly in unbroken lines to heights where the human eye can no longer reach the birds—in the present case at least 12,000ft. Allied to this same question of rising through the air is the habit common to many, if not all, the diving birds of immersing a part or the whole of their bodies under the water. This, of course, is wholly different from the act of diving either in search of food or to escape active pursuit. He says: "All these birds when alive and undisturbed float so lightly on the water that they scarcely make any noticeable depression in it. Nor is this surprising, for all of them have their under sides clothed with a covering of down and feathers. It is perfectly easy to understand how birds can without difficulty float on the water on an almost weightless support of this nature, which is moreover filled with warm air; but it is difficult to explain how, in spite of such a float, they are able to immerse themselves under the water and to remain for any desirable length of time beneath the surface. Thus a little grebe managed to escape observation on a piece of water about sixty paces in diameter and from two to three feet in depth by immersing itself up to its beak and eyes in the middle of the pond and remaining quietly beneath the surface. What is still more surprising, the bird selected for its hiding place a part of the pond where some dried grass blades and wood shavings about an inch long were floating about, which entirely diverted one's attention from the insignificant portion of its head and which were still visible above the water. On another occasion a bird of the same species remained quietly immersed at the margin of the same pool, where the water was only about six inches deep, so that only its beak and eyes remained above the surface. It should moreover be noted that in the first instance the depth of the water as well as the presence of any kind of vegetable growth completely precludes the supposition that the bird might have obtained some kind of hold or attachment under the water, while in the last case the bottom was so hard and level that it is quite out of the question that the bird could have held on to it with its feet. In both cases the birds remained perfectly motionless, since the least motion would, at so short a distance—at most some thirty paces—have at once betrayed their hiding places. Naumann, in Vol. IX. of his great work, relates similar experiences in regard to this small diver.

"Another extremely valuable opportunity of observing this quiet immersion of the body was presented to me many years ago in the case of a cormorant in a pond in the Zoölogical Garden at Hamburg. For the purpose of catching some of the swallows which were roving in fairly large numbers over the surface of the water, the bird had immersed itself to such a depth that only its head remained visible above the surface. In this position it remained perfectly motionless, for the least movement of its feet would have been at once betrayed on the perfectly smooth surface of the water. The swallows, foreboding no ill, frequently came up very close to it, and when the bird thought it could reach one of them it would quick as lightning protrude its neck and make a snap at it. After four or five unsuccessful attempts it actually did manage to catch one of them, which it swallowed after giving it a few shakes in the water. It then quickly immersed its body as before, and with neck drawn in continued to lie in ambush for further prey."

While, of course, it is difficult to determine the limits of elevation for small birds, which disappear from view before they have attained any very great height, the case is otherwise with large birds, such as the stork or the dark plumaged crane, which may be supposed to disappear from view at a height hardly less than 15,000 to 20,000ft. Humboldt is quoted to show that the condor soars and maintains itself for a long time at a height of not less than 30,000ft. and which may be very much more. Observations made in the open air in Heligoland have yielded similar results, and at a measured distance of 22,000ft. a flag of the same breadth of the expanse of wings of the condor would not only be at once seen from the island, but its color might be recognized. From these and like observations, Mr. Gätke concludes that 40,000ft. above the sea level is only a low estimate for the height of the condor's flight. Birds such as rooks and curlews are thought to pass across Heligoland at heights as considerable as 10,000 and 15,000ft.; sparrow hawks at not less than 10,000ft. Attention too is called to the enormous velocity with which some of these birds descend from the great heights at which they traverse the upper air and the abruptness with which they check themselves on approaching the surface of the ground. All duck shooters have observed this feature in the flight of wildfowl. It is believed, and with apparent reason, that the number of birds whose migration flight is commonly carried on within a few hundred feet of the surface of the sea is extremely small. On the other hand, in dull or foggy weather the flight is much lower than when the weather is fine. Examples of the capture of great numbers of migrants which have flown against lighthouses or

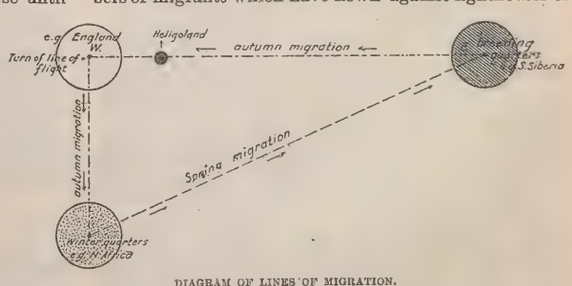


DIAGRAM OF LINES OF MIGRATION.

lighted steamboats will occur to every student of bird life. Mr. Gätke instances the night of November 6, 1868, when no less than 15,000 larks were captured on the plain of the Highland in the space of about three hours. No less than 3,400 of these were caught against the panes of the lighthouse lantern alone.

Mr. Gätke is disposed to assign to birds during their migration flight a velocity much greater than has been commonly acknowledged. Among the birds of swiftest flight he instances that of the Virginian plover (*Charadrius*

drius virginicus), for which he claims a flight of 212 geographical miles per hour.

Reference has already been made to the fact that dull or foggy weather affects the height at which birds migrate, and it is generally acknowledged that birds are especially sensitive to the first indications of atmospheric changes. Rain storms, especially if violent, lightning and fog are all likely to interrupt migration, and during the hours preceding such change in the weather birds are likely to hurry along at unusual speed and in unusual numbers.

The chapters on the order of migration according to the ages and sex, on exceptional migration phenomena, and on what guides birds during their migration are of exceeding interest, whether one agrees or disagrees with the conclusions reached by the author. It is interesting to see that, notwithstanding the long years of observation and thought which Mr. Gätke has given to the cause of the migratory movement and to what guides birds during their migration, he does not advance new theories to account for any of these phenomena. The second part of the volume consists of a chapter entitled "Changes in the Color of the Plumage of Birds without Moulting." This is followed by the main body of the work, more than 400 pages, in which are enumerated 398 species of birds observed by the author in Heligoland, together with his notes on each one. An index of the species mentioned gives an added value to the work, which is also illustrated by two portraits of the author, one of which we reproduce, and by a number of striking tail pieces.

Quite apart from its value to the ornithologist, this volume has a strong personal interest, for it represents fifty years of absorbing labor by a single man. It can well be understood how year after year his work took a stronger hold on the author, until at last it became so much a part of his life that he thought of little else, and we can imagine something of the satisfaction that he must have experienced when the last words were written, and the greater gladness with which, later, he received a copy of the imposing volume. Such a culminated satisfaction comes to but few men.

A CAPTIVE HEN-HAWK.

LOCKPORT, N. Y., June 29.—*Editor Forest and Stream:* Saturday evening as I was finishing a late supper after a thirty-mile ride about the country on the "silent steed," a neighbor came to the door and said that he had a bird at his house that he wanted me to see. I told him that I would be with him in two minutes and turned him loose in the flower garden.

Arriving at his house I found that he had a live red-tailed hawk (*Buteo borealis*). I told him that it was commonly known as the hen hawk. He said that if that was what it was I could take it away if I wanted it. I found that he had a string around one leg and tied to a crowbar. He said the hawk was captured by getting caught in a coil of wire.

When I attempted to take the hawk, he faced about and made objections to my doing so; but getting hold of the string I soon had him turned upside down, and getting the free leg in my hand I soon had him under control and in my yard, where I placed him on the handle-bar of the lawn mower and tied the string to the handle.

Later in the evening I went out to see how the hawk was getting along, when I found the house cat creeping up to him. Now, this cat has a propensity for birds that she finds on the lawn or garden. A few days since she caught a female house wren, but did not have the satisfaction of eating it, as I took it away from her after she had killed it. This wren had just finished a nest in a box on the grape trellis. After taking the bird from the cat I soundly boxed her ears and dropped her to the ground. I hardly think she would have fared as well if she had tackled the hawk. But to make it more safe for the cat I ran the handle of the mower through the entrance of an unused dog kennel and closed the entrance.

The next morning I withdrew the mower from the kennel without disturbing the hawk; but *Buteo* was not to remain undisturbed, as he was soon discovered by the ever-present English sparrow, who sounded the alarm, and soon the apple and cherry trees were full of birds that came from all directions. There were more robins than I had seen at one time this season, for I had thought them not as plenty as usual this year. They were brave, and looked quite ferocious with their crests erect as they flew back and forth within two feet of their enemy. The orioles also came in numbers, and their bright yellow and black plumage seemed brighter than usual as they flitted through the green foliage of the trees.

A pair of yellow warblers (*Dendroica æstiva*), that have a nest full of young in a pear tree within fifty feet, also joined in the excitement. This is the first instance I have known of warblers nesting within the city limits, and such a nest as these have I have never seen before. The outside is composed entirely of cotton, and it looks like a large snowball that might have been left from the six or eight inches of snow that fell on May 14, when the apple and pear trees were white and pink with blossoms.

Also a pair of meek little chipping sparrows (*Spizella socialis*) got excited and chased each other from tree to tree. Even the lonely house wren (*Troglodytes ædon*)—which daily, since the death of his mate, has sung his love song from the top of the apple tree overlooking the little box on the grape trellis containing the nest, which his lost love worked so faithfully to build—even he forgot his sorrow during the excitement, and joined in the protest against the advent of an unwelcome visitor.

But a few ineffectual attempts by *Buteo* to increase the distance between himself and the birds, which only the length of the cord prevented, seemed to assure the excited crowd that there was no danger and most of them soon dispersed.

But a pair of robins that have their second brood in a near-by apple tree did not seem inclined to give *Buteo* much peace. The male especially seemed to take pleasure in flying from an apple tree across to a cherry tree, under which the hawk sits most of the time on the dog kennel. He usually flies within two feet of the hawk, but sometimes he will go near enough to strike him, when the hawk will turn his head; at other times he does not notice him.

Buteo seemed to be more docile after his would-be lynchers had taken their departure, and I tried to induce him to partake of food, as he had eaten nothing since he was captured. But although the food offered should have been to his taste—head and neck of a freshly killed chicken—he refused to eat it. While trying to feed him I noticed that the string around his leg did not look safe and procured a stronger one and a piece of soft leather and made two holes in it. I expected to have some trouble in putting it on him, but to my surprise he let me do it without moving a toe from the handle-bar of the lawn mower; but he kept his sharp eyes on my hands during the whole time.

Your readers will probably think that this is a young bird. Such is not the case, it is at least more than full grown, as no young *Buteo borealis* could have the plumage of this one; its tail feathers are 9½in. long, crossed with eight bars of brown, except the two middle feathers, which are red with one black bar and tipped with white, but only about 7in. long. It is now moulting and at present has only five of the old tail feathers besides the two red ones. I am undecided as to its sex. A few years ago I had a young bird of this species from the nest that I kept until June of the following year, and its first tail feathers were red and I supposed it was a male. After keeping it until it was more than a year old I sent it to the American Museum of Natural History, Central Park, New York.

The bird I now have is apparently uninjured as far as can be seen, but from the first I noticed a peculiarity about it, and that is that it never turns its head to the left, but always to the right. If it wants to see anything to the left it will turn its head to the right until it is squarely half way around. His eyes are, so far as can be seen, perfect, yet he is entirely blind in the left eye. I generally feed him from my hand, and if I hold the food to the left so that he cannot see it with his right eye, I can move it within half an inch of his left eye as long as I wish and he will not notice it, but as soon as I move it to the right he will take it instantly. The pupil of the left eye expands and contracts with the other. I might advance the idea that hawks have one shortsight and one longsight eye, as a professor of one of your colleges a few years ago advanced the idea that hawks soared by imbricating the wing feathers, because he happened to find them in that position after he had killed one, and it had fallen some distance to the ground. The probability is that the concussion from striking the earth was enough to imbricate every feather on it. I have found the wings in the same condition when I have shot hawks on the wing when not soaring.

I did not start out to write the "life history" of the red-tailed hawk, as that had better be left to Captain Charles E. Bendire, and as these notes have extended much beyond what the caption alludes to they had better close.

J. L. DAVISON.

A Mother Cat Adopts Rabbits.

BLOOMINGDALE, N. J., July 5.—*Editor Forest and Stream:* Am in receipt of your letter of July 2, asking about a cat bringing home some young rabbits. The following are the facts:

About six weeks ago our pet cat, Tootsie, gave birth to four kittens, all of which were drowned two days later. Two weeks ago, in looking over a berry patch 200yds. back of the house, the Misses Donald saw our cat watching something very closely. On going to look what it was they were surprised to find a nest of seven young rabbits apparently about four days old. The cat was purring and seemed well pleased with her find. They took the cat away and brought her to the house. Next morning, on opening the door, they were again surprised to find four of the young rabbits on the porch and the cat in the act of depositing a fifth in the same place. She went back to the nest again and brought another, put that down with the five and made another trip for the seventh. She then made one more trip and examined the nest carefully to make sure that she had got them all. The seven little rabbits were taken into the house and placed in a box, the cat going in with them. They sucked her, but the cat not having enough milk for them, the family gave them milk out of a teaspoon. Five of them are now alive and bid fair to become full-grown rabbits, eating now without help. Of the two that are dead one jumped out of the box and got caught between the leg of the table and casing; it was dead when found. The other was very delicate when the cat first brought it home, still it lived a week. The cat is very proud of her family. She kills and brings to them birds, ground squirrels, etc., evidently expecting them to eat them. Needless to say, they disappoint her.

The cat and rabbits can be seen any time by calling at my residence. They have been visited by a great number of people already.

JOHN DONALD.

Catskill Mountain Deer.

THE deer in the State Game Park in the Catskills have eaten all there was to eat in the preserve and the Commissioners have for that reason determined to liberate them. The seventy-four deer were turned out this week. The law protects deer in Ulster, Greene, Delaware and Sullivan counties for five years. The Commissioners have posted notices of the law and proclaiming: "This herd has been obtained and cared for at great expense by the State, with the intention of restocking the Catskill forests with this kind of game. The co-operation of all good citizens is respectfully solicited in the furtherance of this work, and they are particularly requested to discourage all attempts of lawless or thoughtless people to molest these animals, and to report promptly any violation of the law in this respect."

Deer were formerly found in this region and the species would be there to-day had a wise use been made of the original stock. If only these animals now set free can be protected, they will prove progenitors of a new race of Catskill deer.

Some Sense in This.

PHILADELPHIA, July 5.—In the interest of science I think Mr. Hough ought to be suppressed. The way he is going on about horned snakes and snakes with feet, the story of the man who had a tame oyster that would follow him up and down stairs will soon cease to be a joke.

FRANK ROBINSON.

A man may guy,
And a man may lie,
And a man may puff and blow!
But he can't get trade
By sitting in the shade,
Waiting for business to grow.
If he's wise
He'll advertise.
—*Source unknown, but worthy of credit.*

Game Bag and Gun.

SMALL-BORE BULLETS.

NEW CASTLE, Col., June 25.—*Editor Forest and Stream:* Parker Gillmore once wrote that the best part of every gun is behind the stock, and I believe that it is the same with bullets. There is no doubt that a small bullet properly placed is very effective; but when a snap shot is necessary, or when the game stands in an unfavorable position, the larger bores are undoubtedly preferable.

There are some excellent rifle shots in this part of the Rocky Mountains who use .25-20 rifles for deer hunting, and speak very highly of their effectiveness. Others do excellent work with .32-40s, but the majority prefer .38-55, .40-82, .40 90, .45-70 and .45-90.

Some men are so nervous that they almost invariably flinch at the report and recoil of a large caliber rifle, and I believe that such men could do better work with the smaller calibers; but for any one who has sufficiently steady nerves to shoot a medium or large-bore rifle without flinching at the instant the trigger is pulled, I believe that a .38 to a .45cal. are the sizes best adapted to such game as deer and elk.

I once owned a .38-55 which killed eight consecutive deer where they stood when the shots were fired. They were shot through the neck, heart or close proximity to the heart at less than 100yds. distance, and in each case dropped with the report of the rifle.

On another occasion I fired the same gun, loaded with 45grs. powder and 270grs. bullet, at a deer standing with his rump toward me at about 450yds. The bullet struck in front of the hip and came out at the base of the neck, dropping the deer inside of 20yds.

All the sportsmen in this locality who use .38-55 rifles speak very highly of them, and it is their boast that they "never find a bullet in a deer."

Although the .38-55 possesses remarkable accuracy and penetration, its trajectory is high, and unless one is a good judge of distance he is likely to miss through error in sighting at distances over 150yds.

Some time ago I discarded the .38-55 for a .40-90 single shot and have obtained more satisfactory results at long range from it than from any rifle I ever owned, including a .32-40 and a .45-90. I procured a grooved bullet mould, 355grs., and a set of reloading tools from the Ideal Manufacturing Co., and the ammunition prepared with them appears to be perfect in every particular. The grooved bullet is preferable to the patched for hunting, and as the wads and lubricating discs used with patched bullets are not necessary with grooved ones, ample space is left in the shell for the full charge of powder. This cartridge possesses great accuracy and penetration with low trajectory at all ranges, a combination difficult to obtain, and I can heartily recommend it for large game shooting, especially at distances of 300yds. and over.

EDW. F. BALL, President New Castle Rifle Club.

REMINISCENCES.

As the sportsman becomes somewhat advanced in years he takes great pleasure in reviewing the incidents of the past, and his mind dwells lovingly on the many agreeable experiences of days gone by. What sportsman does not remember his first gun and the thrill of rapture that attended his first successful wing shot? He had killed a bird on the wing, he knew just how he held and fondly believed he had mastered the art. Alas! But subsequent frequent failures only tend to sweeten an occasional success, and as he is a true sportsman discouragement is unknown to him.

The sportsman is a lover of the rod and reel as well as of the gun. He recalls his early angling achievements with rod (pole), minus the reel and worms for bait, and smiles as he thinks of the simplicity of the equipment. But who will say that the joy he felt in those days, when he "yanked" a small trout out of a "likely hole," was less intense than that felt by him in later years when skillfully "playing" a larger trout with a 5oz. split bamboo rod, click reel, enameled line, fine gut leader and flies on No. 10 hooks?

In looking back upon the past, I recall to mind my first gun and the beginning of my education in the art of shooting. I was about 14 years of age when my father purchased for me a single-barrel muzzle loader, light and a good shooter.

My brother, four years my senior, was a tireless hunter, a good wing shot, owned a double-barreled gun and a pointer dog. Small game was quite plentiful in those days in Connecticut, where we lived. Almost every pasture contained a bevy of quail and "partridge" could be found in fair numbers on the wooded hillsides and frequently in the open fields at quite a distance from the wood, giving a good chance for a shot before they reached cover. Woodcock were numerous in the alder and willow thickets on low ground, and jacksnipe abounded in the swamps and marshy places.

During many excursions with my brother he did all he could to teach me, giving me the best positions and often waiting until I missed a bird before he fired. I missed many times before I killed a bird on the wing. I well remember the first one. It was a woodcock and looked to me as big as a spring chicken. My brother had stationed me in a good position and gone around on the opposite side of an alder thicket, where he sent the dog in. "Look out," he called, and over the tops of the alders the bird appeared coming straight toward me. I raised my gun and fired, and by good luck held so true that without a flutter he dropped almost at my feet. I gave a triumphant yell, and my brother asked in some surprise, "Did you get him?" "Of course I did," said I proudly. After discussing the shot, of which I gave the most minute details, we resumed the hunt and soon had another bird on the wing which I neatly downed, or at least I thought so. We both fired at the same instant and the bird fell. I was sure that I had hit it and explained that it was a much easier bird than the one I had killed before, and if I could kill a hard one of course an easy one like this could not get away from me. He admitted, with perhaps a shade of sarcasm, that undoubtedly the bird was mine.

We now began to feel the need of refreshments, and ascending a rising piece of ground seated ourselves in the shade of an apple tree near a fence which separated us from a pasture, where we purposed looking for quail after lunch had been discussed. We were quietly engaged in

appeasing hunger when our attention was attracted by a slight noise to the right, and looking in that direction we saw a pretty sight. Under the fence from the pasture a bevy of quail were filing along, daintily threading their way between weed stalks and scattered hazel bushes. Eight or ten were in sight at intervals, and still they came. Cautiously picking up my gun and taking quick aim, I fired into the midst of them. The same instant there was a whirring of wings as they rose, and my brother, who would not shoot them on the ground, was ready, and brought down one with each barrel in as neat a manner as could be desired. The dog, which had for some time been uneasily sniffing the air, probably having scented the quail before we saw them, was now told to retrieve, and brought in, one after another, five fine, plump quail, three having fallen to my shot on the ground. I know it was unsportsmanlike, but I was only a boy.

We finished our interrupted lunch and going into the pasture proceeded to hunt up some members of the scattered flock. We found more quail, of which my brother bagged several, and I missed as many—he let me shoot alone—and our hunt was drawing to a close, as it was getting late in the day.

While we were walking along, reviewing the incidents of the day, a partridge rose from a clump of berry bushes, almost at our feet. So sudden and unexpected was his appearance that I did not attempt to shoot. Not so with my brother. His gun came instantly to shoulder, and as he fired the bird shot up into the air, higher and higher, when after a few convulsive flutters it fell to the ground, dead. I learned then that a bird frequently towers in that manner when shot in the head, as this one upon examination proved to be.

We reached home at night with a respectable bag of game, three quail and two woodcock credited to me, and well pleased with the result of our day's hunt.

These are some of the incidents of an experience of long ago, and as they come to my mind I write them down so that other sportsmen may read and compare them with their own experiences. W.

TINAMOUS.

Editor Forest and Stream:

Replying to the inquiry of "W. O. B." in your issue of July 6, the re about fifty species of tinamous, ranging from Mexi 'o the Argentine Republic. Probably his description refers to some members of the genus *Crypturus*, and while I cannot tell him where these birds may be purchased—though I doubt if they can be procured in numbers outside the countries which they inhabit—I would not advise him to attempt their introduction. First, because it is doubtful if they would long survive the change of climate. Second, because so far as my experience goes the birds of this genus inhabit the undergrowth and take wing only as a last resort. Indeed, although I have been for months in a country where tinamous were common, I have rarely flushed them. Third, because their flesh is dry and comparatively tasteless.

FRANK M. CHAPMAN.

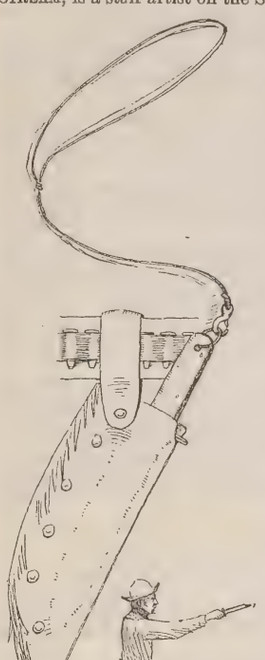
AMERICAN MUSEUM OF NATURAL HISTORY, July 6.

Editor Forest and Stream:

There are various kinds of tinamous, one (*Calodromas elegans*) as large as the ordinary mixed blood hen in the United States, and another smaller—"a little larger than the quail and not as large as the pheasant." The latter kind is found clear down to the islands of the Cape Horn archipelago. While on a journey in the Cape Horn region last summer, I saw three of them, a cock and two hens, brought on board the steamer alive in a big wooden cage. They looked very much like the mountain quail of California. They had been trapped on Navarin Island, the captain told me. They were exceedingly shy, hiding behind a wisp of straw provided for the purpose whenever anyone approached the cage; but they ate wheat, oats, grass seed, bread crumbs, scraps of meat and table refuse, and were brought eventually to Buenos Ayres in excellent health and spirits. On the other hand, three dozen that were taken on board a steamer at Buenos Ayres bound for New York began to droop soon after we entered the tropics. They ate a variety of grain with relish at the start, but soon refused to eat more than a little of anything. Fresh sand was kept on the bottom of their cage—a huge wooden box—and ample shelter for hiding was provided. The cage was under a good awning and it had, moreover, a double top, light and ventilation being provided for on the sides; but this was all to little purpose. Only a half dozen or so survived the passage. These were taken ashore on Staten Island by their owner and I have not heard their subsequent fate.

As a game bird for the pot both kinds of tinamous are unsurpassed. As a bird under the dog's nose they would probably please people accustomed to the preserved game of English country places more than one accustomed to the swift, well-sustained flight of North American birds. They get up with a tremendous roar of the wings, but they move slowly and are soon tired out. The usual way of killing them on the pampas is to ride them down with a pampa cayuse and kill them with a blow of the riding whip. They are exceedingly sensitive. Natives told me that the cowboys there very often surround a covey and then charge on it with all the noise they can make, and thus actually scare a half of the covey to death. They say, too, that when a bird has become tired out it can easily be captured alive. The moment it is taken in the hand, however, it feigns death—gasps as one that has received a fatal wound and then tumbles over with its muscles all relaxed. But if then the captor should release his hold on the bird it will recover its life and energy in marvelous time and jump away with a flutter that will entirely upset the unaccustomed spectator.

Both of the tinamous are skulkers and are hard to put up. One may walk right through a flock of them even on the barren plains of Patagonia without seeing them and without starting them awing. But should he chance to catch the eye of one of the skulkers, away she goes and the rest are likely to jump into the air also. That they should be so hard to put up is undoubtedly due to the fact that their worst enemies are hawks. Foxes and even the great desert panthers feed on them (the panthers run them down), but the peregrine falcon is feared more than anything else.



I never saw their eggs. W. H. Hudson, in his "Idle Days in Patagonia" (a most interesting book for the naturalist), says that the larger bird "lays a dozen eggs as large as those of a fowl, with deep green polished shells," The smaller bird lays eggs of "a reddish purple or liver color." Hudson also tells a most remarkable fact about the tinamous. He says that the desert birds do not drink—that they live without water. I do not doubt the statement. I know they are found on the desert where there is no fresh water at least within fifty miles. I wish some of the bird lovers who know and who read FOREST AND STREAM would tell us if there are birds built in that fashion in the United States (in the Colorado or the Mojave desert, for instance), and add other facts about them if any are found so.

Should "W. O. B." wish to import some of the tinamous he will find it expensive, but just what it will cost I do not know. Norton & Son, of Wall street, New York, run a line of steamers direct to Buenos Ayres. They are Americans and will do all they can to accommodate customers. Very likely they can get the birds through their agent at Buenos Ayres. If not, W. O. B. might write to Mr. Edward L. Baker, American consul at Buenos Ayres, for the address of a trustworthy dealer in live game. Mr. Baker is one of the few consuls who will always answer a courteous letter. JOHN R. SPEARS.

NORTHWOOD, N. Y.

A Handy Knife Scabbard.

"El Comancho," valued as a contributor to FOREST AND STREAM, is a staff artist on the Seattle, Wash., daily press, and is as handy with the pencil as the rifle. He favors FOREST AND STREAM with a drawing of a knife scabbard which he says he has found very desirable in a rough riding country. The sheath is of heavy leather, riveted, with the top split to let in the knife guard. [Some hunters do not like a guard on the knife.] The scabbard is suspended in the belt by a loop which is let on well back on the top of the scabbard, by means of a loose rivet which acts as a hinge, the scabbard easily swinging back and forward on this hinge. It is claimed that this form of scabbard is safer in case of a fall from a horse, or an entanglement with brush or limbs of trees. Any object striking the scabbard merely swings it back so that it clears itself. "El Comancho" further makes his knife secure by means of a lanyard snapped to the handle, the lanyard having a loop which is passed about the neck of the hunter, so that if the knife be jarred out of its scabbard, the cord prevents it being lost. A good knife scabbard is something hard to buy in the sporting goods trade, and most of those offered are wrong in principle. "El Comancho's" idea is good if one carries but one knife. Most big game hunters would perhaps prefer the scabbard carrying in addition a skinning knife and a steel, and in that form the hinge idea would not be so desirable. Yet the terrors of a scabbard with its handles sticking stiffly up are such as any hard-riding horseman hunter knows perfectly well. E. HOUGH.

Where Ducks Cloud the Sky.

ST. LOUIS, Mo., July 1.—*Editor Forest and Stream:* I have read with much interest your article pertaining to the gathering of wild duck eggs for commercial purposes. The theory whenever mentioned never failed to produce audible smiles. Did any of the theorists ever try to find a wild duck's nest? Sad, but only too true, the secret of decimated ranks lies more with those fortunate enough to get where ducks use, and with the market shooter in particular, who is on the ground all the time. No, wild ducks are not all dead yet, not if we may judge from the vast multitudes to be seen in the swamps of the sunk lands of Missouri and Arkansas.

In October of '94 a party of four from this city and four from Cincinnati shot over 1,000 ducks in one week, and from the hordes still seen it didn't look as if any were missing. To the average amateur the piles of ducks would have looked like three times the quantity, as nine-tenths of them were choice mallards.

Nor were these all the ducks shot in this quiet and celebrated spot that week. Five market hunters are in there all the time, and in this particular week averaged from 80 to 140 ducks per day each.

A netter was also at work, who made shipment of 20 barrels of mallards at one time. Again to the average amateur and even the semi-professional this may sound "fishy." If the steamboat receipts, which brought the ducks to this market, will be proof they can be produced. The netter made no more shipments, for the natives forced him out of the country with Winchesters.

In these days of plenty of sportsmen and as some say "scarcity of game," it is truly a question, where will we go?

At any time after the middle of August to Sept. 20 or 30 it is an easy matter to get from 100 to 200 killing shots on wood ducks at the evening flight. After that they have moved on and the big ducks begin to arrive.

There is plenty of game of all kinds in this State: deer, ducks, geese, snipe, quail, turkeys, some chickens, squirrels and rabbits by the wagon load. Any of the counties in the sunk lands of Missouri and Arkansas will afford plenty of deer, duck, geese, turkey and squirrel shooting.

But the sportsman must get into the locality where the game uses. Plenty of game does not mean that it comes to you. ONE OF THE CAMPERS.

[And outsiders will please remember that Missouri has a Chinese-wall non-resident sportsmen law.]

Lumbermen as Sprinters.

HARTFORD, Conn.—*Editor Forest and Stream:* In FOREST AND STREAM of last week I read a most interesting communication entitled "Those Adirondack Deer." In it Mr. Raymond S. Spears, its author, gives a most graphic description of the heartless and wanton slaughter of Adirondack deer, which in itself cannot fail to arouse the sympathy of any humane man, but the indignation evoked by Mr. Spears's realistic picture of the killing is dissipated by the feeling of profound wonderment at the supernatural fleetness and endurance of the lumbermen, of whom he says, "The lumbermen are as children at times. They chase the deer and a cruel death winds up the sport. Then on they go again. And so deer after deer is slain." Before reading Mr. Spears's truthful tale, I had supposed that to catch a deer was a task for the best of dogs or fleetest of horses, but when I read of those lumbermen-children chasing a deer to its death in a calm-like and easy-like manner, I wondered greatly at their marvelous fleetness; but when I read that they then went blithely on slaying deer after deer, my wonder was beyond bounds at both their fleetness and demoniacal endurance. Such fleet runners could break all records on the race track, whether of men or horses, or bicycles, or even the famous World's Fair Flyer No. 999. Pray do not think that I doubt Mr. Spears's statements. Much credit is due him for the discovery that the lumbermen can run down a deer and then go on running down another one, and another *ad infinitum*.

He also says: "The bosses at (lumber) camp forbid venison." Those dear good bosses. Of course they do. Would anyone suppose for a moment that an æsthetic lumber camp boss would permit his men to eat venison when he could buy provisions for them to eat? Of course not. Any boss would prefer to pay for his meat in preference to getting it for nothing. Those kind, good bosses! DICK.

Adirondack Deer Destruction.

GLOVERSVILLE, N. Y., June 28.—*Editor Forest and Stream:* On my recent annual fishing trip to the Adirondacks I took occasion to make considerable inquiry in regard to the reported slaughter of deer in or near the locality I am in the habit of visiting, and although I was satisfied from previous observation that most of the residents of that community had but slight regard for game laws, I was horrified to learn to what extent depredations had been committed against the game supply, which they all naturally ought to be interested in protecting. Judging from the reports of people who annually visit both the West Canada and Cedar lakes, as well as the guides who hunt and fish in that vicinity during the open season and trap fur-bearing animals in the close season, there seems to be no doubt that the number of deer in that vicinity is rapidly diminishing.

It is well known by everyone within fifty miles of those lakes that certain parties have been lumbering the entire length of West Canada Creek, as well as some of the streams and lakes which form its source; that some sections have as many as seventy-five lumbermen at work. There seems to be no question that the principal meat supply of those lumber camps consists of trout and venison. Men are hired ostensibly as choppers when it is positively known that they are (on account of their proficiency as still-hunters) paid to kill deer for the consumption of those camps. And when those log jobbers and camp keepers have not the nerve to keep a game butcher in their own camp, they hire the deer killed by such men as John Leaf, a half-breed Indian, who was tried and convicted last winter at Lake Pleasant, and who, through the machinations of some of his friends or accessories, escaped with the insignificant fine of $40 or forty days in jail, and after he had served twenty-six days in jail was liberated by paying $14. This is the way the laws are enforced in the face of the reported evidence of a dozen deer carcasses which were found around his camp. It is also said that a man by the name of French Louie, who lives near one of the West Canadas, is in the habit of furnishing deer to some of these lumber camps.

Another cause for the depopulation of deer in the Adirondacks is the misuse of the hounding law. Hounding in the neighborhood of Arietta, it is said, is commenced as early as July by certain parties, who also night hunt as early as June. But of all the deer which are killed illegally nine-tenths go to wood choppers.

A man, who worked last winter in a logging camp not more than six miles from Piseco post office, told me that he had eaten what he was satisfied was fresh venison from December till the last of March; and in that camp as road cutter and hunter was employed one of the worst old game butchering reprobates that tramps the woods.

John Richardson, of Gloversville, who in company with Dr. Beach, of the same place, has annually visited the Cedar Lakes for the last twenty years, reports that although they were in camp a week or so earlier than usual this year, nevertheless where in former years they had counted fifteen or twenty deer during the two hours preceding darkness, this year they comparatively speaking had seen none. They express the opinion that there is not one-quarter the number of deer of three years ago.

What can you expect toward the conviction of violators when the nearest game protector is fifty to sixty miles away; and when everybody knows within two hours of his arrival in the neighborhood. I was told by a number of guides and people who seemed to be interested in stopping this wholesale slaughter of game that, whereas a few years ago they had ample protection through the efforts of James Higgins, of Ruddeston, who was a game protector at that time, now nearly everybody in that community seemed to take a hand in violating the game law. I also discovered considerable evidence of illegal catching of trout. It seemed to be common talk that the son of a certain hotel-keeper at Piseco had set lines in the lake, and as evidence which would seem to verify this common rumor he is known to visit the lake after dark or at a time when no one else is on the lake. It is also known that this same man and his friends are in the habit every spring of taking advantage of the April 15 trout law and catching them through the ice at T Lake.

With the appointment of a man with the sterling qualities of this man James Higgins all such violations could be eventually stopped. I speak of him not that I am any friend of Mr. Higgins, as I have never had the honor of his acquaintance, but think that being so near at hand to these violators, and being held in such great respect by them, as well as the law-abiding citizens of that locality, he would be an excellent person for the position. I also wish to speak in condemnation of the party of alleged sportsmen who about a dozen strong, with their guides, dogs and plenty of whisky, go to the Cedars each year, and not content with a decent amount of sport and venison, must kill, eat and feed venison to the dogs for two weeks, and then each bring out a whole deer, generally nearly all does, simply because the law allows this wanton slaughter. Such game destroyers are nearly, if not quite, as bad as the men who kill for the lumber camps. All it needs in order to stop this terrible slaughter is a determined and efficient game protector appointed who resides in the same community with the unscrupulous violators of the game laws. CAYADUTTA.

Sea and River Fishing.

A DAY WITH M. SALMOIDES.

ABOARD! And we are pulling out from St. Paul, Minn., over the Great Northern Railway, for a day with *M. salmoides* at Lake Minnetonka, the "we" being my brother Harry and myself, both also claiming the relationship of "brothers of the angle," as quaint Uncle Ike puts it.

A pleasant run of an hour or so lands us at Spring Park station. Mine host Hopkins, of the Hotel del Otero, soon has us fixed out with boat and frogs, and we pull out from the dock in the teeth of a sou'wester that makes the white foam curl on the crest of each blue wave we ride. Ere reaching the point where our fishing is to be done, we notice dark thunder clouds advancing toward us dead against the wind. For once our storm coats are left behind, and we debate the question whether to make for shore or risk a wetting where we are. A rattling peal of thunder and a few heavy rain drops decide us, and we make for the land, drag our ship up the beach, and, propping it on edge with an oar, are soon seated dry and comfortable beneath it, smoking our pipes and arguing the question of hooks, reels, leaders, etc. For half an hour the rain beats in torrents against our improvised tent, but we are masters of the situation and heed it not.

Ere long the worst has passed, and we rig our craft anew and put our tackle in order. Here is my idea for a bass-casting rig for Minnesota or Wisconsin lakes: Rod, two-joint, 7½ft. long, or slightly shorter, weight about 8oz., rather stiffish action. Reel, quadruple multiplying, the finest your purse will allow. Line, moderate-sized raw silk, tested to a breaking strain of 10lbs. or better. It will surely lose some strength though dried and wiped ever so carefully, and a strong line is needed for a 4lb. bass when he finds the weeds. Now, just here is where I use my own little device. Others may have employed the same, but I have never seen it used except on my own tackle. It is very simple—just a couple of lengths of silkworm gut (so-called), stained mist color, and tied as a short leader, say 12in. long. In one end I fasten my line, in the other a Sproat or Carlisle-Kirby 4-0 snelled hook.

I confess to being somewhat "on the fence" as to the respective merits of straight or side-bent hooks. For years I religiously followed and continually preached Dr. Henshall's practice of using Sproat hooks, No. 1 or 1-0 for minnows and a trifle larger for frogs, but have recently been putting the "Kirby" bend to a series of actual tests in the water, and am inclined so far to think it hooks as many or possibly more fish than my old straight hooks.

For sinkers, when necessary, as they always are with a large frog in deep water, I use the handy patent spiral ends placed on the line just above the "leader." These 18in. or so of gut make almost invisible the connection between your frog or minnow and the fishes' arch enemy, man. I have in an actual test with this method of rigging the cast hooked two fish to my comrade's one, all other conditions being precisely similar.

But to return to our mutton, or rather fish. The storm has passed, and leaves a dead calm with blazing sun overhead. Casting is well nigh useless, but we coast up and down the rushes in various depths of water, and keep our lines wet for hours; but in vain. Then we give up and take to smoking for solace, and whistle for a breeze.

At last the water ripples under a rising west wind.

Now for the edge of the bar. We anchor in 4ft. of water, while a few rods in front it deepens suddenly to about 20ft.

Harry drops a frog lightly on the water 80ft. away, allows it to sink almost to the bottom, and reels slowly in. "Here we are!" He exclaims, and drops the handle of his reel. Out goes about 20ft. of line, then a stop, the point of the rod is raised a trifle, *Salmoides* feels the restraint and away buzzes the reel again. A good 30ft. runs out when the angler takes a hand. A short strike sets the hook firmly and the concert begins. The reel sings as the click button is shoved over, and the rod transferred to the left hand. "Keep your rod up!" I cry, for Harry is a Colorado mountain trout angler, used to brush streams, and this is his first bass season.

The bamboo doubles up like a whip, and cree-e-ee the reel sings again. "He's a whale!" says Harry, and egad! I almost believe him. Now a long tack to the right and the line hisses as he "gives the butt," for that way lie weeds and danger. For half a minute it is touch and go, then very slowly the tip of the rod rises, and the line is as slowly recovered.

Suddenly it slackens and a peculiar "lifting" motion seems to possess it. Experience tells me what to expect and I caution Harry to keep the line taut and the rod bent, when with a rush and a splash there springs above the surface a flashing mass of green and gold, the water dripping from it in a shower of diamonds, and the crimson jaws and gills blazing in the sunlight. Harry is wild. "Gosh!" he exclaims, "ain't that out o' sight?" It is almost his first sight of the leap of a 3½lbs. bass, and those who know the beauty of that thrilling leap for liberty (or, as Dr. Ellzey has it, from "fright") will appreciate his exclamation.

So the fun goes on. Up and down the brave fish dashes, ever and anon vaulting above the water, with armored sides and red jaws flashing like jewels. Tiring at last he comes slowly along near the surface. When he catches sight of the boat he makes a bold dash in an attempt to get under it. Harry cleverly swings his rod around the stern and foils his little strategy. One more wild hum of the reel and he turns his "snowy breastplate" (Henshall) to the sky, the landing net slips under him and rescues him from oblivion. As he touches the bottom of the boat the hook drops from a long tear in his lip and Harry gasps at the narrow escape.

Three pounds and a half by the pocket scales and perfect in scale and fin, a magnificent fish, and one to make any angler proud of his trophy.

Though an old bass fisherman I am distinctly "not in it" to-day, and Harry "wipes my eye" in most approved style, hooking two more bass and several pickerel, while I vainly drop my frog on every inch of water within a circle of 90ft.

The two bass scale 3¾ and 3½lbs. respectively and the pickerel average about 3lbs. apiece. The latter we kill and give to some boys who shout in boyish glee over the "big suckers."

At last my turn comes and I get a genuine bass "strike." I let him have it and he takes 10 or 15ft., then check him slightly, but a succession of short jerks tells me he is not yet satisfied and 15ft. more go under water. Then I put on the click and check him again, now it's a steady pull, so, "Give it to him!" Harry cries, and I strike him hard. Ye gods! what a run!

The reel fairly screams, and the line just melts off from the spool. And see! Away out in the water, 40 good yards away, flashes the well-known crimson and gold in a setting of diamonds, but the line is taut and he gains nothing by the leap. I fancy I hear critics say, "Shows how much that fellow knows about 'playing' a bass," "He should 'drop the point of the rod.'" etc.

I take off my hat to dozens of well-known names in the angling fraternity, Dr. Henshall included, who has forgotten more about bass than I ever expect to know, but nevertheless I say, keep your line taut, first and last and all the time, when there is a large-mouth bass at the end of it. I have lost plenty of bass in various ways, as every angler has, but I recall but one that I lost through "falling on a taut line."

Meantime *M. Salmoides* has been cavorting around there in fine style, while Harry sits idly on the boat seat holding the landing net on his knees. Maybe "basso" is "sulking," but he is down there somewhere doing anything but what a well-conducted bass should, so I take the disgorger and rap on the butt of my rod, salmon fashion, a telegram to "Get up and dust," and he does.

What a series of rushes and leaps and wild breaks for liberty that make the reel-plates hot from friction (?), but finally the steady strain of even a 7½ft. 8oz. rod tells on him, and with a last ineffectual spurt when close to the boat—which, however, finds me expecting it, and ready to foil his final effort—he joins his comrades, the top of the string and the topper in weight—4 square solid pounds of glistening paradise.

The shades of evening are now closing in and our wrists and our elbows ache from the steady eight hours of casting, so we unjoint our rods, pack up our smaller tackle and pull for the boat landing.

Just four bass, but they run 4, 3¾, 3½, 3½lbs., and that's glory enough for me for one afternoon, even if Harry is "high hook" in point of numbers, and I can only plead guilty to the 4-pounder.

Minnetonka, especially the north end, abounds with such bass, and many are the days that our modest string has been excelled, possibly not in individual and average weight of fish, but at any rate in numbers.

But we are content. It isn't the fishing for count that gives the pleasure. It's to match your skill against your brave antagonist and by pure generalship bring him to bag.

And so we return home with the memory of the song of the birds and the music of the reel in our ears, the clear blue of the sky and water, the vivid green of the beautiful verdured shores, the "cloudy pinnacles" of the snowy *cumulus* and the flashing crimson and gold of the armored bass before our eyes, and say together in unison, as we strike our "ranch" at 1:30 A. M., "We had a bully time!"

Don't you think so? W. L. AGNEW.

ST. PAUL, MINN., June 25.

SMALL BOY AND BIG TROUT.

Editor Forest and Stream:

Having recently returned from a brief fishing trip to Plymouth, N. H., I make, as in duty bound, my report to FOREST AND STREAM.

After the first few fishing trips I found brook trout to be very abundant, but much smaller than I had expected to find them Of the fifty trout which I caught, the result of one day's fishing, I was compelled to quickly return to the water twenty on account of their diminutive size. For the past thirty years I have fished in these regions almost every year, and find to my delight that trout are as abundant as ever, which, of course, is due to the restocking of the brooks and lakes from time to time.

About two years ago I fished in a brook about five miles from Plymouth, and found quite a number of salmon trout, but this year I felt keenly disappointed on finding that they had all disappeared. These trout were, on an average, from 6 to 8in. long, and this year I had expected to find some of considerable size, and my disappointment was very great when I discovered that all had vanished.

My luck has always been pretty good on the East Branch of the Pemegewassett River, a branch of the main river, which leaves it at Woodstock, N. H., about five miles south of the Franconia Mountains. My visit to New Hampshire being necessarily short this year, I did not have time to take in this stream. Those desiring to visit these wild, beautiful regions and fish in the many lakes and brooks which are so abundantly supplied with fish, will find now the best time of the year in which to go.

From Boston take the train for North Woodstock. At this place there is a hotel—the Deer Park. Follow the stream up from here, passing through one of the wildest woods you ever entered. After a five-mile tramp up the stream trout may be found, but the deeper into the woods you go the better luck you will have. A party of four, including myself, spent two very delightful weeks on this stream several years ago and had all the trout we desired.

Great sport is being had on Newfound Lake, N. H., catching trout and salmon. The great abundance of these fish is surprising, as is also their size. Many have been captured weighing from 6 to 12lbs., but Frank I. Cross, of Bristol, N. H., a lad of but fifteen years, broke all previous records by his wonderful adventure with a trout while fishing in this lake.

On May 20 he had been out rowing the boat for several hours, for a city man to troll, but without success, and finally the fisherman left the boat and returned home.

The boy then concluded to try it alone. He trolled slowly for an hour, when suddenly his line refused to move with the boat. His first thought was that he had struck a snag, and he began to back water. Just then a mighty fish leaped from the water, and with a big splash headed toward the boat. The situation was no ordinary one. To handle the line and boat too was more than enough for an experienced fisherman, but the boy, although somewhat "rattled," did not lose nerve, but reeled in as fast as possible, getting the trout quite near the boat, when away he went for another one hundred feet. Thus he continued to play him for fully twenty minutes.

Finally the boy succeeded in getting the ponderous fish near the boat in a very much exhausted condition. The excited boy now began to think about landing him. In holding the line and reaching for the gaff hook, he slipped and pitched headlong into the boat. Recovering his equilibrium, and when the fish was within reach, he struck him with the gaff, but too far back in the body to be sure of landing him. He drew it out and struck him once more. This time he fetched the fish into the boat, but even then there was danger that he might flop out and get away, and so the plucky lad laid on him to keep him quiet.

The fish was weighed three hours after being taken from the water, pulling the scales down to 20lbs and 6oz. It was 35in. long, measured 21½in. around the body, was 10in. deep, 6in. across the tail and 4in. across the head. It was indeed a beauty.

To catch a 12lbs. trout with a man to handle the boat for you is no easy trick, but for an inexperienced youth to capture this monster alone was much more difficult, and the persevering boy deserves much credit in my estimation. DR. M.

PHILADELPHIA, Pa., July 1.

MORE ABOUT LEAPING BASS.

Editor Forest and Stream:

It would seem cruel and pitiless to cast another stone through the glass house erected by Dr. Ellzey, and so perforated by "Kingfisher" in his letter published in your issue of June 29.

Dear Kingfisher!—that article was a "sockdolager;" it reminded me of how you flayed alive that Black Lake chap and left so little of his original physiognomy that even his mother refused to recognize him.

But a thought or two occurs on this subject of the "leaping bass" that is suggested by Dr. Ellzey's proffered excuses in behalf of those whom he seems to consider the victims of weird hallucinations and as grossly ignorant or willfully perverse; and that is, I seriously doubt whether Dr. Ellzey ever caught a black bass in his life. I don't question his sincerity. I don't doubt his honesty. I don't challenge his good intentions. But as "the eyesight is the most deceptive of our senses," it is fairly to be inferred from his description of the fish he saw, of his control over them by "lowering the tip of his rod" and "slackening of his line," and by their failure to do what scores of fishermen have seen them do, that he has mistaken some other fish for the black bass. He has, in part, been exerting the muscles of his wrist and forearm on mud cats—a fish that naturally infest the bottom —and in part been playing mongrels of som rt that are given to describing Hogarthian curves in th r and falling with mathematical exactness inside a boat and not beyond it.

Nor can we, on reflection, be sure the Doctor ever saw these mongrels leap from the water, for he himself says, "A bass is above water so short a time you can't see him open his mouth or shake his head." Therefore it is to be presumed Dr. Ellzey mistook a flash of sunlight or a glimmer on the pool or a curl of smoke from his pipe as he sat in his easy chair on the bank and dreamed dreams of the bass he read of in the books—he deemed these optical illusions as actual bass—in the body and not of the spirit.

"The eyesight is the most deceptive of our senses" is not the tentative but the absolute dogma that settles the discussion with Dr. Ellzey in the matter of leaping bass; not his eyesight, but the eyesight of other bass fishermen. This is pedantry.

Doesn't Dr. Ellzey know that the line that divides theory from fact or logical demonstration is the number of particulars that constitute the premises of his argument? Doesn't he further know that many a man has been justly hung on the proof of what witnesses saw with their eyes—"the most deceptive of the senses"—and not upon what others didn't see?

His testimony is simply negative and therefore inconclusive. He never saw a bass open his mouth above the water; therefore he says they don't do it. He never saw a bass shake his head when leaping, nor jump over a boat, nor describe other than a beautiful curve above the surface; therefore he says they don't do it.

The writer never saw a live whale, nor a dead elephant, but he would not affirm that such things don't exist. He is willing to take the testimony of others.

As to the quickness of the eyesight. A bolt of lightning draws a line along the sky in less time than a fish takes in his leap above the water. Yet we can discern whether the electric line is straight or crooked.

Two race horses, at lightning speed, cross the string at the winning post a nose apart, and yet the judges easily pick out the winner. It is done in the twentieth of a second.

The hunter catches lightning aim on the flying bird across his path and kills it, and he knows the sights of his gun caught the bird fair and full.

The eye is quick and alert—quicker than the fish that even at times delays its stay above the surface to shake out the hook with open jaws and vigorous muscles.

Less than ten years ago, on the salt shoals of Cumberland River, I saw a bass that had taken from me nearly 30ft. of broken line leap nearly perpendicularly upward to escape its trailing trouble. This action was repeated, and following him into shallow water I finally caught the line and captured the fish.

In Doak's Mill Dam on Dix River, in Boyle County, Ky., I saw a party seining for suckers, cats and bass. The seine was seven feet high and 100yds. long. They were passing a submerged tree top, full of green leaves, near the bank, when some one got on it and gave a vigorous shake. A dozen bass leaped from the cover like sheep, several passing over the top of the seine and one over the head of the man holding the right brail. The latter cleared the water at least four feet.

The capabilities of fish in their leaping powers are scarcely collated. Gen. Geo. B. Crittenden stated to me that while stationed on regular duty near the Rio Grande, in Texas, he saw a number of fish ascend a perpendicular fall nearly or quite twenty feet high. They seemed to take a running jump, and striking the face of the fall worked their way up—many failing in the attempt, but a few succeeding. His opinion was that they worked their fins more rapidly than the water's descent, and gained a fulcrum that assisted them upward, taking the surface and avoiding the heavier downpour. I don't think Gen. Crittenden said these fish were bass, and therefore Dr. Ellzey is released from repeating his favorite expression that "the eyesight is the most deceptive of the senses."

I am afraid Dr. Ellzey fishes from a stool; that he fishes with preconceived notions and an eternal opinion; that he fishes for mud-cat, eels and the market; that he has no

due reverence for the fitness of things, the rights of the black bass and of their defenders. But I forgive him.

OLD SAM.

SYRACUSE, June 21.—Having seen considerable controversy in the last few issues of the FOREST AND STREAM about leaping or jumping bass, I became very much interested, and began to think that perhaps my eyes had deceived me after reading the communication of M. G. Ellzey, when he said that the bass leaped on account of fright; that he very seldom lost a fish by having it leap from the water, and that a tenth of a second was not time to see whether the bass had its mouth open or not. But being at Montezuma last Tuesday I took particular pains to test the argument. I caught a good number of small-mouthed bass, two of them weighing 3lbs. 4oz. and 4lbs. 2oz., and was very unfortunate in losing a number by having them break water and leaping from 6in. to 1ft., and in every instance did the bass have its mouth open and it shook itself. I could not say it was exactly like a terrier shaking a rat, but it would be a very good comparison, and in one instance the hook flew to a considerable distance, and each time did I have a taut line. I can save most of the fish that do not break water, but am very unfortunate in losing a great many that do. But as the Doctor says good-by, I don't think that we can have an argument.

A. R. K.

IN NEW ENGLAND WATERS.

BOSTON, Mass., July 6.—Judge Horace Gray, of the U. S. Supreme Court, has left Boston for the St. John's River, where he will spend a few weeks fishing for salmon. For many successive seasons he fished the Nepissiguit at the Grand Falls, but I understand has not done any fishing at all for the last six years. I trust his return to the sport will be made agreeable by the best of luck on his present trip.

Mr. Jas. Bird, of Boston, has returned from his bass fishing trip to Belgrade Mills, highly pleased with results. He reports the fishing to be exciting enough to satisfy the most exacting. At one cast, on a 5oz. rod he hooked three bass whose total weight was 7¼lbs. It required great care to land them without breaking his tackle, and this was only accomplished after quite a struggle. Mr. Bird will go to the Plymouth Ponds for a short time, and will return to Belgrade for a few weeks, later in the season.

J. C. Gibbs and E. R. Eustis, of Boston, have left for Belgrade, expecting to make a two weeks' stay. Mr. Gibbs has been there before this season, and goes back this time determined if possible to capture some of the big land-locked salmon known to be so plentiful in these ponds. He will try deep water trolling, and ought to be successful. From Belgrade the two gentlemen will go to fish the waters in the vicinity of the Katahdin Iron Works, spending a week in that locality.

H. N. Whitman and wife, Samuel Boothby and wife, Charles Gilman and wife and Mr. Fred. Eastman, all of Portland, Maine, have gone to spend a two weeks' vacation at their comfortable camp at Millnocket Lake, near the west branch of the Penobscot. The fishing is generally very fair in that region and it is said to be quite a sight during the months of June and July to watch the game coming down to the water. Mr. Whitman is an old Sebago fisherman, and captured several lusty salmon at that lake shortly after the ice went out this year.

Professors G. S. Lamson and J. C. Rolfe, of the University of Michigan at Ann Arbor, stopped a few days in Boston this week en route to the White Mountains, where they will stay during the month of July, spending most of their time fishing the streams for trout. Prof. Lamson is very fond of brook fishing, and no alder thicket is too dense for him to penetrate if he thinks there is a fair chance of reward. A part of August will be spent in salt-water fishing, and after that a trip to the Maine woods has been planned to last until college reopens in the fall.

The fishing at Big King and Bartlett Lake in Maine is reported to be better this season than for many years. There has always been a degree of uncertainty about what to expect in this pond. Plenty of trout are known to inhabit its waters, but they have been somewhat eccentric and not always ready to take the fly. This year has proved a notable exception to the past, and everybody who has visited the King and Bartlett camps seemed very well satisfied with their luck. A peculiar feature of these trout is their almost exact average of 1lb. in weight. It is singular how uniform they are in this respect. As evidence of this fifty trout were taken on the fly in one day a short time ago and were found to weigh almost exactly 50lbs. The success of sportsmen who have visited this preserve during the present season is worthy of special notice. There is only one Spencer Stream in Maine, and that is a paradise for those who like brook fishing. T. H. Rollinson and wife and E. L. Barry and wife, of Waltham, Mass., while at King and Bartlett spent a couple of days fishing this stream with the very best of results. The Kibby Stream, a branch of the Spencer, is also good; 235 good-sized trout were landed there in one day by two gentlemen who fished for a record, but returned most of their catch to the water. Big Spencer Lake, about four miles from the main camps, is noted for large lake trout, mostly taken by trolling. The record for big game seen on the preserve this season is also quite remarkable. Mr. F. H. Talcott, just returned to Boston, saw thirteen deer and a moose at Long Pond. While Dr. Johnson's party were fishing at Big Spencer Lake a large black bear came down to the lake to satisfy his thirst. He watched the boat for five minutes and then made off into the woods. The Messrs. Epting, of Philadelphia, with Fred. Davis as guide, were fishing on Spencer stream. A noise on the bank attracted their attention, and the next instant a large moose thrust his head through the bushes. He looked at the party a moment and then boldly descended into the water and commenced to feed on the lily-pads. The guide paddled up to within 20ft. of the moose, and they watched him for fully ten minutes. Finally his wild sense was aroused and he sauntered off into the woods. An hour or two later the same moose presumably was seen at Fish Pond, and the party got within 20yds. of him. Finally one of the gentlemen commenced to bellow at him. This aroused him with a vengeance, and as he showed indications of a charge the party beat a hasty retreat, considering that discretion was the better part of valor.

Mr. S. C. Dizer and wife, of Boston, have just returned from what proved to be a very enjoyable trip into the Moosehead region. They went to the Northwest Carry, from there into the Upper Penobscot, and then to Spencer Pond. Fair fishing was had, the largest taken weighing 2¼lbs. At Northwest Carry Mr. Dizer saw six deer within gunshot distance of the house. When fishing at Spencer Pond he saw a doe and two fawns, which came out on the shore and stayed in plain sight for some time. The trip just over was undertaken principally to arrange for a much longer one to begin in August. At that time it is Mr. Dizer's intention to make a canoe trip of 200 miles, starting at Moosehead, over the Northeast Carry to the Penobscot, thence to Chesuncook, Chamberlain and Eagle lakes, and the Allegash and St. John's rivers, coming out at Edmanston, N. B.

Mr. Frank C. Black, of William Read & Sons, leaves Boston in a few days for an extended trip over the best fishing territory of Nova Scotia. Before returning he expects to stop some days with his father, who owns a large farm in the midst of a good sporting country, where excellent fishing is to be had almost at the doors of his home.

Messrs. H. Williams and Robert Williams, of Boston, have gone to Norcross, Me., where they will take guides and go into the woods for a three weeks' trolling and fly-fishing trip. Last year these gentlemen spent some weeks salmon and grilse fishing in the Miramichi River. This year they are trying Maine for a change, and as they are going into the Aroostook country will no doubt have good sport.

HACKLE.

BOSTON AND MAINE.

BOSTON, July 3.—Mr. Rodney P. Woodman with his friend Chubbuck starts to-day for a fishing trip that is likely to prove to be a good one. They will visit the almost unknown ponds that lie in the mountains beyond Parlin Pond. Parlin Pond itself is well up to the Canada line on the borders of Maine, on the celebrated Canada Road, which is about the route Benedict Arnold took way back in the days of the Revolution. Parlin Pond has been somewhat opened up to sportsmen by the building of a hotel there. It is said to be in the midst of a great fish and game section. But up among the mountains, over one of the roughest of buckboard roads, are Grace Pond and Horse Pond, the latter named from the fact that the lumbermen once got a horse into it and drowned him. A little further in is another pond or two called Enchanted Ponds, or "Enchantment," for short. This name seems to have been rightly given, for the few that have visited the locality are loud in their praises of the scenery. The mountains, over 2,000ft. high, hang over the little ponds, shutting them in, with only a narrow gorge for a gateway. Murphy, the hotel-keeper at Parlin Pond, has built some camps at the Enchanted Ponds, and with his men will transport the luggage of sportsmen on his buckboards to his camps. Murphy is a character that the sportsmen will speak in high terms of. He makes them comfortable somehow, and his charges are said to be reasonable.

Mr. Harry Powers, of the Boston Chamber of Commerce, with a party of friends visited the Enchanted Ponds a couple of years ago for a spring fishing trip. But alas, they were too early! There was actually ice in the ponds very late in May, the sun barely rising above the mountains in the middle of the day. They caught very few fish, but were well satisfied with the surroundings, and that the fishing must have been great a few weeks later.

Mr. Woodman has reports from these ponds that satisfy him that the fly fishing must be all that could be asked in midsummer. He says that guides are not necessary, except a man for all work, including cooking. All there is to do is to take a boat and row out to some of the fishing grounds, drop the anchor and cast the fly. "If one spot does not prove satisfactory, why, pull up and move to another." The shores are so bold and rocky that very deep water is found only a rod or two from the land in hundreds of places. He says, "in fact, there is very little shoal water in these ponds."

Deer he speaks of as being remarkably abundant there, with occasionally a moose. Mr. Woodman thinks strongly of making another trip to Enchantment this fall for gunning, provided he finds the signs of game, big or little, as abundant as represented, and if he likes the country as well as he expects to.

There are some complaints of poor fishing from the salmon anglers, who are now generally on their rivers. Mr. John Fottler, Jr., one of the best known of salmon anglers, and owner of the salmon rights of the St. John at Gaspé, P. Q., with Mr. I. W. Adams, writes from Mossy Cliff Camp, under date of June 27: "Salmon fishing is fairly good on our river. Up to date we have taken 24 salmon. Other rivers, famous for salmon, we learn, are affording light catches as compared with former years. The weather here is cool now, and we have had rain for a week. It was very hot ten days ago." It will be remembered that Mr. Fottler has had great success at the same river on former seasons.

July 6.—There has been a hearing, under the new law, and before Commissioners Stanley, Wentworth and Oak, relative to restricting the fishing in Quimby Pond, at Rangeley, Me. The hearing resulted in a decision that no person shall kill or carry away from the pond more than 15 landlocked salmon or trout in any one day. The ruling is to stand for four years from date.

Dr. Fred Mores, of Boston, is passing his summer vacation, with his family, in Monmouth, Me. He is counted as an expert angler. Up the Carthage Stream, and back of Saddleback Mountain, is a favorite fishing resort of his. He has recently returned from a trip to that stream, where he is reported to have taken 134 trout in four hours' fishing. Some of the brook trout weighed over a pound. If he put back three-quarters of his numbers, he made a good catch; but if he brought them all away, he simply deprived the next fellow of sport that he had a right to expect, and showed himself to be unreasonable. There is not a trout stream in the world from which 134 trout can be taken in four hours without taking the very stock that should be left to breed and grow, and such fishing is simply depletion, that is not sport.

Many of the vacationists are taking New Brunswick and Nova Scotia as their objective points, and they are seeking points where there is promise of sport with rod and line. From the salmon fishermen there have come home many complaints of poor fishing. This is, in a measure, accounted for by the fact of dry weather and very low water through nearly all of June, with so little water that the salmon would not come to the fly, or were not on hand. All this has been changed, however, with an abundance of rain along the Atlantic coast, and it is likely to bring better sport to the salmon fishermen.

Mr. "Nick" Boylston, of Worcester, is down for another big catch of trout. Mr. Whorff, landlord of the Mooselucmaguntic House, Haine's Landing, Me., writes a friend here an account of this catch. It was made on Friday, June 28, and included 10 trout weighing respectively 8½, 5¾, 5½, 5½, 4½, 4½, 4½, 4½, 2½ and 2lbs., the united weight of the string being 47lbs. The length of the largest trout was 27in. Mr. Boylston has spent a number of seasons at this resort, and is as well acquainted with the fishing and hunting there as almost any man can be, besides being a great lover of the rod and gun.

SPECIAL.

CANADIAN ANGLING NOTES.

Editor Forest and Stream:

The fishing for ouananiche in the Grande Décharge has been, so far this season, even better than it has ever been known for some years back. Mr. J. U. Gregory, the agent of the Department of Marine and Fisheries at Quebec, who first visited the Décharge twenty years ago, long before there was any railway to Lake St. John, assured me that the fishing this year is fully equal to what it was when he first visited the locality, both as regards the size of the fish and also their abundance. He attributes this fact to the care shown in preserving the waters by their lessees, and also to the sportsmanlike qualities of the American anglers who principally visit the haunts of the ouananiche, and who invariably return all their catch of small fish to the water. This statement of one so well qualified to judge will be very gratifying to all admirers of the fish, disproving as it does the necessity for the note of alarm sounded by a writer on this fish some few years ago, who expressed the fear that with the completion of the railway to Lake St. John and the consequent rush of anglers to the ouananiche waters this splendid fish would soon become a thing of the past.

No doubt the ouananiche fishing, as usual, will continue fair throughout July and August in the Décharge, but after about the 20th or 25th of July the fish often run much smaller than during the early part of the season. The larger ones are then running up toward the spawning grounds in the large feeders of Lake St. John, and the best of the sport is then to be had in the Mistassini, Peribonca and Ashuapmouchouan rivers.

Trout fishing is still exceedingly good in the various club waters between Quebec and Lake St. John. Kit Clarke, upon the Amabalish club waters; Mr. A. W. Hooper, of New Haven, at Lac Commissaire, and Dr. R. M. Lawrence, of Lexington, Mass., have all enjoyed splendid sport. Dr. Lawrence fished some of the lakes of the Triton Club, of which he is a member, and has a 5¾lbs. *fontinalis* to his credit at Lac Trois Cariboux. Dean Robbins, of All Souls Cathedral, Albany, is at present on the Triton Tract, and splendid sport has also been had there this season by Messrs. G. F. Gregory, M. C. Pierce, J. G. Seymour, Dr. Hugh H. Brown and F. P. Denisson, of Syracuse, N. Y. The gentlemen just mentioned and several of their friends and fellow citizens are about joining this club and will have a cottage of their own upon American Point, overlooking one of the prettiest of the hundreds of pretty lakes now known to exist upon this tract. Plans are in course of preparation by this club for the construction of a handsome club house to be 105ft. in length, and to be constructed on Vermillion River, where it can be reached in twenty minutes by a canoe trip from a flag station upon the edge of the water, on the line of the Quebec & Lake St. John Railway.

Judge Harlan, of the Supreme Court, is expected here shortly to fish on the Triton Tract, his son, Rev. Mr. Harlan, being a member of the club. Among other prominent members of this club are General Fullerton, of the War Department, Washington, Rev. Mackay Smith, of Washington; Messrs. Eugene McCarthy, Dean, Curtis and others.

Mr. McCarthy took home with him last week to Syracuse four splendid salmon between 20 and 30lbs. each which he killed in the Ste. Anne des Monts River.

The Moisie River, on the North Shore, has also furnished good salmon fishing to a party of American anglers, and Messrs. J. D. Gilmour, Edson Fitch and Veasey Boswell have had fine sport on the Trinty.

E. T. D. CHAMBERS.

QUEBEC, July 6.

Mussels Take the Hook.

U. S. COMMISSION OF FISH AND FISHERIES, WASHINGTON, D. C., July 5.—*Editor Forest and Stream:* Persons familiar with the operations of haul seines used in capturing shad and the river herring have observed that the shell-fish known as the fresh-water mussel is brought ashore during a great part of the season. The mussel comes in not as an involuntary but apparently as a voluntary prisoner. They cling to the twine with both edges of the shell as if they had grabbed it in their mouths. Fishermen believe that the twine drops into the open mouths of the mussels while they are innocently feeding, and that their seizure of the twine is done under excitement, which seems probable.

Two or three years ago I knew of a number of these animals being captured on hook and line by W. T. Lindsey, custodian of the Bryan Point Station, U. S. Fish Commission, situated on the Potomac opposite Mount Vernon. When the catch was reported I inquired somewhat minutely to determine whether or not the mussels were after the bait, but could not reach a conclusion. Last week Mr. Lindsey put out a trot line for the obtainment of a mess of channel catfish, and when he raised it he found the hooks covered with mussels. They evidently took the hooks in order to secure the bait. There were 175 hooks on the line and nearly every one had one mussel and quite a number had captured two mussels. This statement is furnished as a fact in natural history and not to create a sensation as a fish story. The line was laid crosswise of the channel on the bottom and in water 30ft. or more deep.

New York City.

NOTES FROM THE RESTIGOUCHE.

CAMPBELLTON, N. B., July 1.—It is now the close of June and so far the month has been most unfavorable for the angler. The spring opened early in May and the hot days we had took the little snow away quickly, and the total absence of rain until last week reduced the water in June to summer level, the intense heat raised the temperature over 60°. The salmon took hold—when they would rise at all—so gingerly that the hook would soon come home.

I went up to Kedgwick, some seventy miles above tide water, and my first fish was taken on the 8th, proving the fish did not run up as quickly as supposed, as a few good fish were caught in tidal nets the last week of May. I only killed six fish there, as Mr. Ayer, of Bangor, arrived on the 12th. My largest was 28lbs. Mr. Rodgers, whose property joins this pool, has four fine pools, two of them high water and two of them for low, consequently he has made his usual score, some eighty salmon, and has now left for New York. Some fair scores have been made by others. About eight fish in one day is the highest I have heard of. I think the Montreal party had some twenty-five, however. We are going to have better fishing in July, and as the dry spell has broken up we stand a better chance for a rise of water.

Some fine fish have been taken on the Metapedia, giving grand sport. The river being in better trim did not feel the drought owing to its lake supply of water. The river is very rapid, banks are steeper, the angler works under difficulties, which much enhances the sport when he lands his fish. So far as the numbers of fish in the river go I believe they are fully equal to last year. Many of the netters in the estuary have taken their nets out of the water, it being impossible to keep them clean between the green growth in the water and the refuse from the timber booms and saw mills this season. So the netting has not been profitable. The catch has also been poor all along the south side of Baie de Chaleur, but better on the north. I hear the Labrador rivers are turning out well, and probably will turn out a good July score, and as many of our July run will have no nets to contend with, I hope to be able to maintain the credit of the old Restigouche as the king of rivers in the Dominion when the season closes. JNO. MOWAT.

NOTES FROM FISHING WATERS.

NEWPORT, Vt., June 29.—I saw your sign up in the hotel here to report one's luck either with rod or gun. I have had some very fine trout fishing last week in the Soco River. Four of us went from Bartlet, N. H., last Monday from the Mountain Cave House, and drove eight miles up the Soco River. The four of us took 170 trout, the largest of them weighing 4½lbs.; they ran from ¾lb. to 1½lbs. I think the Soco River the best fishing in the White Mountains. GRISWOLD A. THOMPSON.

POINT CLEAR, Ala., July 2.—Chas. Zundel at 8 P. M. yesterday caught a 30lbs. redfish off the wharf of the Grand Hotel. As a winter resort we claim advantages surpassing Florida. ELLIOTT TOXEY.

LAKE MEMPHREMAGOG, Newport, Vt., July 3.—Bass and 'lunge fishing is good at Lake Memphremagog, Vt. Mr. Young, of New Hampshire, who will pilot fishing parties from Owl's Head Hotel during the season, caught on July 3 five 'lunge weighing from 10 to 17lbs. each. Dr. Roe, of Dartmouth College, who is a guest at the hotel, and who is also a very ardent fisherman, has made some very fine catches of bass and 'lunge. JOHN LADJING.

CAPE VINCENT, N. Y., July 4 and 5.—Guests of the Union House here had great fishing these two days. R. J. Sloan, W. J. Gillett, W. C. Bradley and George S. Sanford, of Syracuse, N. Y., captured 240 black bass; the majority would average 1½lbs. each. Messrs. Sloan and Gillett caught seventy-nine of the 240 in four hours; all weighed 1½lbs. each. J. A. FRISBIE.

COVINGTON, Va.—July 1 was opening day for the black bass season in this part of the Jackson River, which is protected by law. The river was fairly alive with rod fishermen, much after the fashion on Long Island on April 1, when the trout law goes off, and several hundred fish were caught, for the most part small. In the Greenbriar, over the ridge, they are larger. C. HALLOCK.

The Platte Lakes.

CINCINNATI, O., July 3.—I was thinking of writing up this winter our camping and fishing trip on Platte Lakes, Benzie county, Michigan (Lower Peninsula), but upon second thought, concluded some "Rodster" might like to know now of a good place to go to catch big bass, also enough trout. If so, wend your way to Benzonia, Mich., on the T. A. A. & N. M. R. R. You can stop there over night at the Van Winkle Hotel, on the shores of beautiful Crystal Lake, and the next morning drive a distance of five miles to Wm. Thompson's (a farmer who keeps boarders and has good boats for hire), who lives on the shore of Platte Lake; or if you prefer to camp, you can pitch your tents there, and he will board you, or supply you with milk, butter, etc., and at this writing has some ice left. There are lots of 3½ to 5lbs. bass there (large and small mouths about equally divided and gamy fellows) and in Platte River we have caught a good many trout, from fingerlings to a pound and over. Reduced rates on the G. R. & I. R. R., also the C. H. & D., in connection with the T. A. A. & N. M. R. R. You can catch some bass in Crystal Lake, but the Platte Lakes are much the best. This has been our second season there. I will cheerfully answer any brother angler, and remain,
H. W. VOSS.

Vermont League's Midsummer.

ST. JOHNSBURY, Vt.—The Midsummer Meeting of the Vermont Fish and Game League will be held at Isle La Motte, Vermont, Thursday, August 1. Members of the League are urged to extend a cordial invitation to their sportsman friends, to accompany them on this excursion through a portion of the most beautiful scenery on Lake Champlain. All members of branch clubs are cordially invited to join in making this the most successful of a series of meetings which have brought pleasure to those who have participated and have helped further the interests of the League. The steamer Reindeer has been chartered to take members of the League, branch clubs and their guests to the island and return. The boat will stop at Fisk's dock, and the meeting and dinner will be served on Mr. Fisk's lawn. An opportunity will be given to ramble about the island, boat or fish, during the afternoon. A Lake Champlain fish chowder will be part of the dinner. After dinner speeches will be dispensed with except of distinguished guests or at the request of those present. JOHN W. TITCOMB, Sec'y.

Fisheulture.

Influence of Railroads on Fishculture.

[A paper read before the American Fisheries Society.]

BY FRED MATHER.

THE continual extension of railroads has been an important factor in stimulating fishculture, and has had a most important bearing on it that is worth considering. When I am asked why shad are not cheaper, now that so many millions of eggs are taken from fish caught for market and are hatched and added to the natural product of the river, I answer, "Railroads." If the question refers to the price of oysters, lobsters or the fresh-water fishes of the Great Lakes, the same answer is returned.

Forty years ago the Hudson River furnished all the shad for New York city and for a district included in two strips thirty miles back from each bank of the river as far north as Troy. Farmers drove in to the fishing grounds and bought shad to salt for winter use, and in the height of the season they could be bought at the nets for from $3 to $5 per hundred. In Albany they retailed at two for a quarter of a dollar, and sometimes for less. Lobsters were retailed at about 5 cents per pound, and were seldom seen under 4lbs. weight, oftener 6 to 8lbs. Before the building of the Boston & Albany Railroad, teams came through to Albany from Boston, when sleighing was good, loaded with boxes of fresh codfish, haddock, pollock, and kegs of opened oysters. The latter were in quart, two-quart and gallon sizes. The Hudson River Railroad was not built and the only source of supply of sea food in winter was from Boston. In summer the steamboats brought some shell oysters to Albany, but the demand was light and the shipments were not as prompt as now, and I often heard it said that we never got good oysters in Albany! To-day they can be had in Omaha, owing to fast trains, prompt express service and the use of ice, for it must be remembered that there were no express companies in those days, and the great New York Central Railroad did not exist as a continuous line. From Albany to Rochester there were three railways—the Albany & Schenectady, the Schenectady & Syracuse, and the Syracuse & Rochester via Auburn and Canandaigua. These railroads did not sell tickets nor check baggage beyond their own lines, and if passengers were delayed by stops to transfer and recheck baggage, freight was sure of long delays. No wonder, then, that the inland towns of the State of New York in those days never saw an oyster in the shell nor a shad. Ice was then a luxury, and we only got a few lobsters because they spoiled so quickly that it did not pay to risk large shipments. Under these circumstances it is plain that shad, lobsters and sea fish did not get far beyond Albany and Troy, the head of navigation on the Hudson.

In boyhood days, forty-five to fifty years ago, I did not see either hard or soft crabs in Albany, but my father was part owner in and agent for the Eckford line of barges engaged in freighting between Albany and New York, before canal-boats were towed down the river, and my main desire for a trip to the great city was to buy hard crabs along the dock for a cent apiece and go down the pier and eat them, regardless of smeared face and fingers. Now soft crabs are common in Chicago; packed in seaweed and kept cool, they are whirled through in good shape.

In the early days of which I have spoken and up to twenty years ago no shad came to New York from Florida, nor even from North Carolina, where some of the finest come from to-day, and the citizens of the great metropolis waited for the first shad to be taken in New York Bay. This was an event in the year that was heralded far and wide, and hotels bid high for the first fish, as much as $25 having frequently been paid for the honor of serving the first shad of the season by the Astor House and other hotels. Now that Florida begins to send shad in midwinter, the strife for the first "North River" shad is ended.

Having glanced at the different conditions of railroading some decades ago and noted the effect upon the fish markets of inland towns, let us see how the changed conditions affect fishculture, which only began operations on a large scale well within twenty years. The pioneers in fishculture fondly expected to make fish cheaper for the masses. We expected to multiply certain species to such an extent that the market prices would be perceptibly lowered, and it is on record that the shad fishermen of Holyoke and South Hadley Falls, Mass., rebelled at the first efforts at shad hatching there by the late Seth Green because he said that he could "make shad cheap." He meant that they would be made plenty, and merely used the wrong word to the fishermen. We have increased the yield of shad in the Hudson, the Delaware and in other rivers farther south, but this increase of supply has been met by an increased demand that has kept prices up to, and even beyond, the old standards, and the extension of railways and the improved express facilities have made increased demands upon the shad fisheries that have kept, and will keep, the prices up, and perhaps increase them notwithstanding the increased production.

In this paper I have chosen to take shad as an illustration of the effect that the railroads have had on fishculture in America, but the same line of argument is applicable to the whitefish of the Great Lakes, which now reaches a hundred tables where it only fed one a quarter of a century ago. The oyster is more subject to an increased consumption by the extension of railroads than either the shad or the whitefish, for it not only has a longer "season," but is not as perishable as the fish, and by the use of ice is now found on the "half shell" in most small towns, while in tins, both raw and cooked, it is a visitor to many mining camps.

But to return to the shad. The increase of population and of fishermen with improved appliances along the Hudson River would have exhausted the supply of shad without the help of railroads twenty years ago but for the aid of the fishculturist. The annual catch had been falling off for some years before the work of shad hatching was begun, and continued to fall off for several years after, for the first work was done on a small scale. We know this in a general way by reports of the fishermen, for there had been no attempt to gather the fishing statistics until 1880; but both fishermen and marketmen from Troy to New York city agreed that the supply had gradually fallen off, until many fishermen declared that it did not pay to wet their nets.

The work of shad hatching on the Hudson River was begun in a small way by the State Fish Commissioner in 1868, near Coeymans.

The next year work was not begun until the first day of June [second report, page 4], about a month late, and continued until July 13. The report says: "Only 15,000,000 of shad were hatched in place of 300,000,000, as could doubtless have been done had proper legislation been had." In 1870 there were 2,604,000 shad fry planted [see report for that year, page 4].

This, judging by the plants afterward made, was an average year, and it is possible that there was a typographical error in the figures for 1869. But whatever may have been the number planted each year since the good work began, it is certain that each young shad artificially hatched would never have seen daylight but for the aid of the fishculturist, for the eggs obtained were from fish caught for market, and would have been wasted entirely, as they were too ripe to be eaten as "roe," for when within a week of maturity the ovarian sac is almost purple with the distended veins and not at all tempting as food, besides being very tender to handle, for the eggs are ready to drop apart.

This extra supply of young shad, preserved from danger during the egg and embryo stage, and let loose at the time when ready to take food, supplements and reinforces the natural hatch in the river, which has gradually grown less each year, because of the increase of fishermen with improved appliances of capture to supply the increased demand occasioned by the extension of railroads.

Looked at in this light it will be seen that the natural hatch in the river must decrease in proportion to the number of fish caught, and only artificial propagation has kept the shad fisheries of the Northern States up to their former standard, and now that the southern rivers are beginning to feel the drain, they will soon have to look to shad culture to keep up their stock or see it dwindle into next to nothing, as the shad catch has done in the Connecticut River. This river furnishes a case in point. Its shad fisheries, once so famous, have fallen off until they are hardly sufficient for home consumption since hatching was discontinued at South Hadley Falls. In 1880 the catch of shad in the Connecticut was 268,608, or about equal to 1,074,432lbs., with a value of $53,721. In 1889 the catch of the whole State of Connecticut, including the Housatonic, Connecticut and Thames Rivers, was less than one-third of the catch of 1880, the official figures for the three rivers being 48,963 shad, weighing 195,852lbs., and worth $16,580.

These figures for two different years would mean little did we not know that the falling off had been gradual and that the catch has fluctuated with a downward tendency for the past six seasons.

The shad in the Hudson have been enabled to stand the drain caused by an increased local population and the shipments by rail by two factors: artificial fishculture and the newly worked southern rivers. I say "newly worked" because it is only a few years since the northern markets have taken great quantities of shad from the South. Ten years ago New York city was forced to look beyond the Carolinas for early shad, and Florida began to get her fish to the great market even as early as January, and how long these rivers will stand the increased fishing without crying for aid from the fishculturist remains to be seen. At present the hatching of shad is mainly done on the Hudson, the Delaware, Chesapeake Bay and the Potomac. Some work has been done on Virginia rivers and in North Carolina, but the work of the U. S. F. C. near Havre de Grace, where the Susquehanna loses itself in Chesapeake Bay, has been one of the most important stations. Last year the State of New York received over 7,000,000 of shad fry from that place for planting in the Hudson, in addition to what hatching was done on that river.

According to the census of 1880 the catch of shad in the Hudson was 683,400 fish, which at an average of four pounds each would be 2,733,600lbs., valued at $136,680 at wholesale. While I have not the figures at hand for any of the succeeding years I am informed by the fishermen that the river has more than held its own in the past fifteen years.

From the above statements it seems plain that while the fishculturist has been striving to increase the food supply, and possibly cheapen it, he has merely been successful in keeping the supply up to the increased demand, and the railroads have prevented any decrease in prices by taking all surplus above the local demand far inland and thereby bringing to people distant from the fisheries delicious and wholesome food which has been produced by the fishculturist.

Last year Mr. Charles Hallock read a very interesting paper before this society, entitled "When shad were a penny apiece," in which he stated that "Connecticut shad in barrels were first advertised in Boston in 1736, though they were current in river towns for at least three years previous at one penny apiece. By 1773 prices had advanced to two or three pence." This was caused by lack of transportation to inland towns, and no matter how many shad we may produce, those prices will not be heard again, nor will the markets be glutted to the extent of lowering present prices unless for an occasional day or two when the catch has been much larger than usual.

The extension of railroads will always drain the fisheries, which are limited in production, especially in the fresh waters. The shad only feed in fresh water during their first year of life and afterward get their growth at sea, but the pasturage for young shad, to borrow a word from the herdsman, is limited by the amount of food such as cyclops, copepoda, daphnia, etc., which are in turn limited by other causes. Therefore there is a natural limit to the capacity of every stream to produce fish, but that limit in our shad rivers and in our lakes has not even been approached by our labors in fishculture.

FIXTURES.

BENCH SHOWS.

Sept. 3 to 6.—Kingston Kennel Club, Kingston, Ont. H. C. Bates Sec'y.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 24 to 27.—New England Kennel Club's second annual terrier show, Boston, Mass. D. E. Loveland, Sec'y.

Oct. 8-11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 29.—New England Field Trial Club, at Assonet, Mass. S. R. Sharp, Sec'y.

Railroad Rates and Field Trials.

LOCK BOX 4, Indianapolis, Ind., June 30.—*Editor Forest and Stream:* I am sorry to be compelled to say that special railroad rates could not be secured to the Continental Field Trials Club's chicken trials, at Morris, Man. However, tourists' tickets can be purchased at nearly all points in the South and West for St. Paul or Winnipeg. These tickets are on sale now, and will be good returning up to and including Oct. 31. Parties going who intend taking dogs with them had better apply to me for a permit or pass for their dogs, otherwise they will have to pay for having their dogs carried.

P. T. MADISON, Sec'y-Treas.

DARWIN ON THE DOG.

IN many of his writings Darwin refers to the dog in an interesting and instructive manner, both in respect to the qualities absolutely possessed by the dog and in respect to others as they relate to those of different species.

The full force of Darwin's remarks on the dog cannot be gathered from the quotations detached from their context. There is a mass of testimony of which the reference to the dog is but a trifling detail. Many of his remarks have a direct bearing on the possession of reason by the dog and on his power to communicate with his fellows through the medium of language, matters which have been treated in FOREST AND STREAM recently. The following excerpts are taken from the chapter on mental powers in his famous work, "The Descent of Man:"

"Desor has remarked that no animal voluntarily imitates an action performed by man, until in the ascending scale we come to monkeys, which are well known to be ridiculous mockers. Animals, however, sometimes imitate each other's actions; thus, two species of wolves, which had been reared by dogs, learned to bark, as does sometimes the jackal; but whether this can be called voluntary imitation is another question. Birds imitate the songs of their parents and sometimes of other birds, and parrots are notorious imitators of any sound which they often hear. Dureau de la Malle gives an account of a dog reared by a cat who learned to imitate the well-known action of a cat licking her paws and thus washing her ears and face; this was witnessed by the celebrated naturalist Audubon. I have received several confirmatory accounts; in one of these a dog had not been suckled by a cat, but had been brought up with one, together with kittens, and had thus acquired the above habit, which he ever afterward practiced during his life of thirteen years. Dureau de la Malle's dog likew se learned from the kitten to play with a ball by rolling it about with his forepaws and springing on it. A correspondent assures me that a cat in his house used to put her paws into jugs of milk having too narrow a mouth for her head. A kitten of this cat soon learned the same trick, and practiced it ever afterward whenever there was an opportunity.

"The parents of many animals, trusting to the principle of imitation in their young, and more especially to their instinctive or inherited tendencies, may be said to educate them. We see this when a cat brings a live mouse to her kittens; and Dureau de la Malle has given a curious account of his observations on hawks which taught their young dexterity as well as judgment of distances by first dropping through the air dead mice and sparrows, which the young generally failed to catch, and then bringing them live birds and letting them loose.

"Hardly any faculty is more important for the intellectual progress of man than *attention*. Animals clearly manifest this power, as when a cat watches by a hole and prepares to spring on its prey. Wild animals sometimes become so absorbed when thus engaged that they may be easily approached. Mr. Bartlett has given me a curious proof how variable this faculty is in monkeys. A man who trains monkeys to act in plays used to purchase common kinds from the Zoölogical Society at £5 for each; but he offered to give double the price if he might keep three or four of them for a few days in order to select one. When asked how he could possibly learn so soon whether a particular monkey would turn out a good actor, he answered that it all depended on their power of attention. If when he was talking and explaining anything to a monkey its attention was easily distracted, as by a fly on the wall or other trifling subject, the case was hopeless. If he tried by punishment to make an inattentive monkey act, it turned sulky. On the other hand, a monkey that carefully attended to him could always be trained.

"It is almost superfluous to state that animals have excellent memories for persons and places. A baboon at the Cape of Good Hope, as I have been informed by Sir Andrew Smith, recognized him with joy after an absence of nine months. I had a dog who was savage and averse to all strangers, and I purposely tried his memory after an absence of five years and two days. I went near the stable where he lived and shouted to him in my old manner; he showed no joy, but instantly followed me out walking and obeyed me exactly as if I had parted with him only half an hour before. A train of old associations, dormant during five years, had thus been instantaneously awakened in his mind. Even ants, as P. Huber has clearly shown, recognized their fellow ants belonging to the same community after an absence of four months. Animals can certainly by some means judge of the intervals of time between recurrent events.

"The imagination is one of the highest prerogatives of man. By this faculty he writes former images and ideas independently of the will and thus creates brilliant and novel results. A poet, as Jean Paul Richter remarks, 'who must reflect whether he shall make a character say yes or no—to the devil with him, he is only a stupid corpse.' Dreaming gives us the best notion of this power; as Jean Paul again says, 'The dream is an involuntary art of poetry.' The value of the products of our imagination depends of course on the number, accuracy and clearness of our impressions, on our judgment and taste in selecting or rejecting the involuntary combinations, and to a certain extent on our power of voluntarily combining them. As dogs, cats, horses and probably all the higher animals, even birds, have vivid dreams, and this is shown by their movements and the sounds uttered, we must admit that they have some power of imagination. There must be something special which causes dogs to howl in the night, and especially during moonlight, in that remarkable and melancholy manner called baying. All dogs do not do so; according to Houzeau, they do not then look at the moon, but at some fixed point near the horizon. Houzeau thinks that their imaginations are disturbed by the vague outlines of the surrounding objects, and conjure up before them fantastic images; if this be so, their feelings may almost be called superstitious.

"Of all the faculties of the human mind it will, I presume, be admitted that reason stands at the summit. Only a few persons now dispute that animals possess some power of reasoning. Animals may constantly be seen to pause, deliberate and resolve. It is a significant fact that the more the habits of any particular animal are studied by a naturalist, the more he attributes to reason and the less to unlearned instincts. In future chapters we shall see that some animals extremely low in the scale apparently display a certain amount of reason. No doubt it is often difficult to distinguish between the power of reason and that of instinct. For instance, Dr. Hayes, in his work on the 'Open Polar Sea,' repeatedly remarks that his dogs, instead of continuing to draw the sledges in a compact body, diverged and separated when they came to thin ice, so that their weight might be more evenly distributed. This was often the first warning which the travelers received that the ice was becoming thin and dangerous. Now, did the dogs act thus from the experience of each individual or from the example of the older and wiser dogs, or from an inherited habit—that is, from instinct? This instinct may possibly have arisen since the time, long ago, when dogs were first employed by the natives in drawing sledges; or the Arctic wolves, the parent stock of the Esquimau dog, may have acquired an instinct impelling them not to attack their prey in a close pack when on thin ice.

* * * * * * *

"The following cases relate to dogs: Mr. Colquhoun winged two wild ducks which fell on the further side of a stream; his retriever tried to bring over both at once, but could not succeed; she then, though never before known to ruffle a feather, deliberately killed one, brought over the other and returned for the dead bird. Colonel Hutchinson relates that two partridges were shot at once, one being killed, the other wounded; the latter ran away and was caught by the retriever, who, on her return, came across the dead bird; 'she stopped, evidently greatly puzzled, and after one or two trials, finding she could not take it up without permitting the escape of the winged bird, she considered a moment, then deliberately murdered it by giving it a severe crunch, and afterward brought away both together. This was the only known instance of her having wilfully injured any game.' Here we have reason, though not quite perfect, for the retriever might have brought the wounded bird first and then returned for the dead one, as in the case of the two wild ducks. I give the two above cases as resting on the evidence of two independent witnesses, and because in both instances the retrievers after deliberation broke through a habit which is inherited by them (that of killing the game retrieved), and because they show how strong their reasoning faculty must have been to overcome a fixed habit.

* * * * * * *

"Our domestic dogs are descended from wolves and jackals, and though they may not have gained in cunning, and may have lost in wariness and suspicion, yet they have progressed in certain moral qualities, such as affection, trustworthiness, temper and probably in general intelligence.

* * * * * * *

"*Language.*—This faculty has justly been considered as one of the chief distinctions between man and the lower animals. But man, as a highly competent judge, Archbishop Whately remarks, 'is not the only animal that can make use of language to express what is passing in his mind, and can understand, more or less, what is so expressed by another.' In Paraguay the *Cebus azaræ* when excited utters at least six distinct sounds, which excite in other monkeys similar emotions. The movements of the features and gestures of monkeys are understood by us, and they partly understand ours, as Rugger and others declare. It is a more remarkable fact that the dog, since being domesticated, has learned to bark in at least four or five distinct tones. Although barking is a new art, no doubt the wild parent-species of the dog expressed their feelings by cries of various kinds. With the domesticated dog we have the bark of eagerness, as in the chase; that of anger as well as growling; the yelp or howl of despair, as when shut up; the baying at night; the bark of joy, as when starting on a walk with his master; and the very distinct one of demand or supplication, as when wishing for a door or window to be opened. According to Houzeau, who paid particular attention to the subject, the domestic fowl utters at least a dozen significant sounds.

* * * * * * *

"The feeling of religious devotion is a highly complex one, consisting of love, complete submission to an exalted and mysterous superior, a strong sense of dependence, fear, reverence, gratitude, hope for the future and perhaps other elements. No being could feel so complex an emotion until advanced in his intellectual and moral faculties to at least a moderately high level. Nevertheless, we see some distinct approach to this state of mind in the deep love of a dog for his master, associated with complete submission, some fear and perhaps other feelings. The behavior of a dog who returned to his master after an absence, and, as I may add, of a monkey to his beloved keeper, is widely different from that toward their fellows. In the latter case the transports of joy appear to be somewhat less, and the sense of equality is shown in every action. Prof. Braubach goes so far as to maintain that a dog looks on his master as a god.

* * * * * * *

"*Sociability.*—Animals of many kinds are social; we find some distinct species living together; for example, some American monkeys and united flocks of rooks, jackdaws and starlings. Man shows the same feeling in the strong love for the dog, which the dog returns with interest. Everyone must have noticed how miserable horses, dogs, sheep, etc., are when separated from their companions, and what strong mutual affection the two former kinds at least show on their reunion. It is curious to speculate on the feelings of a dog who will rest peacefully for hours in a room with his master or any of the family, without the least notice being taken of him; but if left for a short time by himself, barks or howls dismally. * * * The most common mutual service of the higher animals is to warn one another of danger by means of the united senses of all. Every sportsman knows, as Dr. Jaeger remarks, how difficult it is to approach animals in a herd or troop. Wild horses and cattle do not, I believe, make any danger signal; but the attitude of any one of them who first discovers an enemy warns the others. Rabbits stamp loudly on the ground with their hindfeet as a signal; sheep and chamois do the same with their forefeet, uttering likewise a whistle. Many birds and some mammals post sentinels, which in the case of seals are said generally to be females. The leader of a troop of monkeys acts as the sentinel, and utters cries expressive both of danger and of safety. * * * Wolves and some other beasts of prey hunt in packs, and aid one another in attacking their victims. Pelicans fish in concert. The Hamadryas baboons turn over stones to find insects, etc., and when they come to a large one, as many as can stand around turn it over together and share the booty. Social animals mutually defend each other. Bull bisons in North America, when there is danger, drive the cows and calves into the middle of the herd, while they defend the outside. In Abyssinia, Brehm encountered a great troop of baboons who were crossing a valley; some had already ascended the opposite mountain and some were still in the valley; the latter were attacked by the dogs, but the old males immediately hurried down from the rocks, and with mouths widely opened roared so fearfully that the dogs quickly drew back. They were again encouraged to the attack; but by this time all the baboons had reascended the heights, excepting a young one about six months old, who, loudly calling for aid, climbed on a block of rock and was surrounded. Now one of the largest males, a true hero, came down again from the mountain, slowly went to the young one, coaxed him, and triumphantly led him away—the dogs being too much astonished to make an attack. * * * Many animals, however, certainly sympathize with each other's distress or danger. This is the case even with birds. Captain Stansbury found on a salt lake in Utah an old and completely blind pelican, which was very fat and must have been well fed for a long time by his companions. Mr. Blyth, as he informs me, saw Indian crows feed two or three of their companions which were blind; and I have heard of an analagous case with the domestic cock. We may, if we choose, call these actions instinctive; but such cases are much too rare for the development of any special instinct. I have myself seen a dog who never passed a cat who lay sick in a basket and was a great friend of his without giving her a few licks with his tongue, the surest sign of kind feeling in a dog. It must be called sympathy that leads a courageous dog to fly at any one who strikes his master, as he certainly will. I saw a person pretend to beat a lady who had a very timid little dog on her lap, and the trial had never been made before; the little creature instantly jumped away, but after the pretended beating was over it was really pathetic to see how perseveringly he tried to lick his mistress's face and comfort her. Brehm states that when a baboon in confinement was pursued to be punished, the others tried to protect him. * * * Besides love and sympathy, animals exhibit other qualities connected with the social instincts which in us would be called moral; and I agree with Agassiz that dogs possess something very like a conscience Dogs possess some power of self-command, and this does not appear to be wholly the result of fear. As Braubach remarks, they will refrain from stealing food in the absence of the master. They have long been accepted as the very type of fidelity and obedience."

ALOPECIA AREATA.

Editor Forest and Stream:

"Alopecia areata is a disease of the pillary follicles, characterized by the sudden occurrence of general and asymmetrical or partial and asymmetrical baldness, the latter exhibited in distinctly circumscribed smooth patches, which are in typical cases entirely destitute of hair."

The symptoms of this disease, according to Dr. Jas. Nevins Hyde, A. M., M. D., in his work on diseases of the skin, may be at its outset accompanied by symptoms of ill health, such as malaria, loss of appetite, mal-nutrition, etc.

In the three cases I have met with in canine practice none of the above symptoms have been present, and in fact to all appearance the animals have been in excellent health when presented to me for treatment, and in cases 1 and 2 the disease manifested itself by the sudden and complete loss of hair in round or nearly circular patches, and presented the appearance of having been scalded, so completely bare were the parts affected.

Hyde describes it in human practice as presenting roundish, or oval, or irregularly shaped patches, varying in size from a small coin upward, and states that they may be so numerous as to disfigure the entire scalp, and while they may touch at the borders when thus numerous they can scarcely be said to coalesce, as the line of demarcation is recognizable; and he states that in point of abnormal sensations, temperature or signs of disease of the surface from which the hairs have fallen as a rule show complete absence of symptoms, and that the skin when the disease is in complete evolution is usually normal to the touch, but occasionally anæmic, thinned and more movable in the affected parts than in the parts not touched by the disease. The latter or anæmic condition I have found in cases presented to me, but whether from the disease or from the effect of previous unsuccessful medication I could not say.

The cause of the disease seems to be obscure. According to all authorities it is not transmitted by heredity or contagion, and yet it is claimed it is not due to a parasite, and the neurotic explanation is now generally accepted as *fait accumulate* bearing on its etiology. This I can hardly reconcile myself to believe is the cause of the disease in the dog, and while I cannot give a probable, satisfactory explanation of its cause, I do from observation believe it is parasitic; and further, that while authorities claim it is not infectious, I am inclined to believe it is, from the fact that such history as I could obtain regarding the cases showed that, while it appeared in two or three patches simultaneously, it invariably affected adjoining parts in the course of a few weeks, which were caused I believe by subcutaneous infection.

Pathology.—The anatomical lesions which produce alopecia have not been recognized. The hairs fallen from the surface, according to Hyde, when examined by a microscope, appear to be atrophied in the bulb and shaft, and he states that no parasite can be discovered in uncomplicated cases; but that he had in one instance detected spores and myclia of the trichopyton in the hairs. His diagnosis alopecia areata is distinguishable from ringworm, and favors by the suddenness of its onset the absence of all stumps of hairs, scales, crusts or evidences of irritation in the parts involved, and the complete baldness and smoothness.

Treatment.—According to the author above referred to he states that one must necessarily view with distrust all treatment for a disease which, while continuing for months or years, usually terminates in spontaneous recovery, and in the meantime bids defiance to each and

every therapeutic measure. Nevertheless persistent and hopeful management in even apparently desperate cases is occasionally rewarded by such brilliant consequences that, however slight may be the belief in the treatment employed, it deserves recognition. He prescribes such remedies as the following, either alone or in combination: Camphor, cantharides, carbolic acid, croton oil, tinct. capsicum, etc., in the form of stimulating lotions applied with friction to the parts affected, all of which should recommend themselves to the practitioner or party having the disease under treatment. My own treatment, while it has proved eminently satisfactory so far, I should like to hear of it being used by others, and their success reported. It is as follows:

Case No. 1.—A small black and tan terrier was affected with patches the size of hen's eggs on the shoulder, back, rump, one side and under neck; had been so for six months, and everything in the way of mange cure tried; dog ordered washed thoroughly and one patch painted thoroughly with cantharidal collodion, two or three applications until blistering was produced; after puncturing the blister and applying vaseline as an emollient, a second place was treated the same, and so on, a patch being blistered every three or four days until all had been treated, when a wash composed of alcohol, 1 pint, balsam Peru, 2oz., was applied alternately with a dressing of crude petroleum. This was used every three or four days and a cure was effected in between three and four months. The only internal treatment employed was occasional small doses of quinine as a tonic.

No. 2 was a large dog of the Newfoundland species. The disease made its appearance simultaneously on his back and head. So sudden did it come that the owner himself declared that some servant had poured boiling water on the dog, and only for the lack of any soreness previous to the loss of hair or at the time I was called, I confess I would have been most inclined to concide with him. This case was treated same as No. 1; while it did not make its appearance in any new places, it was quite stubborn in its amenability to treatment, being fully six months before the patch on the skull was restored to its normal condition. I would say that in this case I also used rum sulp. 1gr., ferri sulp. 1gr., arsenic acid $\frac{1}{10}$gr., given in pill three times a day.

Case No. 3 is now under treatment. He is a black, corded poodle about five months old, in apparently good health otherwise. He is affected in five places: each side, on back, on neck and on the throat well up toward the jaws. This dog was purchased in New York, and the seller stated that it had been scalded with hot water, but that as it was a long-haired dog no one would see it. I was called, as they wished to see if possibly something could not be done to permit the growth of the hair in the spots so called. In examining him, I found more spots affected than they had seen, and after calling their attention to the fact that it was next to impossible for the dog to get accidentally scalded so high up under the neck, I suggested that it was from disease, and took it for treatment. One of the most eminent physicians in the State and a man of almost national reputation has interested himself in the case on account of its rarity. He pronounces it a typical case of the disease, and is watching the effects of treatment preparatory to reporting it in the medical press. ALBERT.

POINTS AND FLUSHES.

Puppies and Training.

THE manner in which many people care for puppies, as compared with the high expectations which they have concerning their puppies' mental and physical development, are so antagonistic that they are sources of wonderment to those who give the matter rational thought. Many puppies and dogs are kept in confinement, or, what is worse, on a chain. If under restraint on a chain, the puppy or dog acquires a habit of standing at the extreme length of it, pulling it taut. This strained position, elbows out and neck set hard in the collar, the whole body leaning forward and resting against the collar, soon becomes habitual, and then he stands out of shape when not on chain. The puppy grows up with light and badly formed bone, elbow out, and, from constant fretting and irritation, with a most ill-favored countenance. The scowl which comes from tugging at the end of a chain, from anxiety to be released, and from the irritation of such confinement, in time becomes permanently set and mars the dog's expression. For his best development and health, the dog requires freedom.

Any man, if confined to his room with nothing to read and no one to give him any information, would consider himself unjustly treated if he were expected to learn worldly ways and worldly knowledge under such circumstances. The puppy cannot learn when confined. He learns only by direct experience. Unlike man he can gain no knowledge from the speech of others or from writings. Cut off his powers of observation and the source of all knowledge is cut off from him. Confine him, his physical development is impaired. The dog thrives only when he has sufficient liberty. The knowledge which man teaches him is but little compared to the vast knowledge which he acquires from his own observation and perception. Information does not come to him by instinct. If it were so the dog, if kept in confinement all his life, would have an equal knowledge with the one which has its liberty. Everyone who has owned dogs knows how essential experience is to them. The city dog in the country for the first time is in a new world. He chases sheep at first sight and all kinds of fowl are alike his prey. A frog is a source of quizzical wonder and careful investigation, while a butterfly affords delight. Yet the country dog in town for the first time has far more complexities to encounter and many dangers to learn and guard against. The strange noises of the city are terrifying to him; the crowds of people cut off his view of his master, and if a corner is turned he is lost.

Only by experience can the dog learn the problem of living. Give him his liberty and he will gain his own knowledge of every-day life, he will grow up healthy and vigorous and his temper will be sweet and even. Inaction and seclusion have the same effects on both men and dogs —undeveloped minds and bodies.

Dog Laws.

There is no doubt but what in any community which has sufficient age and interests to establish itself permanently the ownership of dogs must be so regulated as to conform to the requirements of the public good, and the increase and liberty of homeless and ownerless cur dogs must be restricted to such numbers as are harmless to the community. Nearly all cities have provided legal and humane means for the capture and disposition or destruction of such dogs as are harmful or offensive to them. Their capture is effected with as little tumult and demonstration as possible. The laws are directed toward freeing the community of a nuisance in a dignified and orderly manner, by efforts which are made with a commonplace, every-day regularity the year round. The dogs which are valueless or ownerless are privately destroyed. There is no publicity, no sensation. The public mind is thus not brutalized and degraded by the sights of pursuit and bloodshed on the streets; innocent onlookers are not in danger of losing life or limb from the reckless shooting of the official killers; the peace of the community is not disturbed nor is its business suspended to witness a gory sensation, and sensible discrimination is observed in saving the valuable well-bred dog from the death inflicted on the homeless or vicious cur. When a policeman with pistol in hand, followed by an excited crowd, is in pursuit of a dog, he is very apt to have in mind the dramatic effect and his own egotistical personality quite as much as the simple matter of ridding the community of homeless dogs. The mob, when once excited by the pursuit, desires to see blood regardless of the merits of the case.

It is strange that at this year of civilization a city can be found where such open brutality and senseless, erratic methods prevail as those adopted by the citizens of Elizabeth, N. J., if the press accounts of them be true. It is pleasing, on the other hand, to note that a part at least of the daily press can discuss the matter in a sensibl manner, free from the exaggerations and sensationae features which it deems so necessary in treating of any event connected with the violent death of a dog or dogs.

Touching on the recent killing of dogs at Elizabeth, N. J., which in its details reads more like a description of an annual battue for the edification of the police, the *Sunday Call*, Easton, Pa., has the following very sensible editorial under the caption, "Which are the Brutes?"

"Which are the brutes, the officials or the dogs? Elizabeth, N. J., is making its annual raid against dogs, and its authorities have within a few days butchered over 1001 dogs that have appeared to be not within the letter of their dog law. A dog found on the street without a collar and license tag, or a muzzle, is shot without ado by any policeman. It does not signify whether the dog is registered or not. If by any accident he appears without his paraphernalia he is shot. This butchering is carried on by the instruction of the Mayor. Many valuable dogs have been butchered whose owners have endeavored not to transgress the dog laws, and much hot blood is the result. New Jersey within the last decade has proclaimed more bad dogs and more epidemics of rabies than the rest of the earth has exhibited since the creation. Her dog laws are brutal, and the sundry crusades in her towns have been as brutal as they are senseless. The muzzling law in hot weather, when a dog needs water and his open-mouthed respiration, which stands him in lieu of the perspiration of other animals, is brutal, and the law which allows officers to kill dogs indiscriminately is brutal. Summer dog laws are mainly directed against the fancied danger of hydrophobia, one of the rarest of diseases, the authenticated cases of it usually occurring in winter, which being the fact muzzling in summer is as unnecessary as it is brutal. There seemingly should be mental resource in New Jersey, if not in Elizabeth, sufficient to make sensible dog laws. The registration and taxation of dogs are not objectionable. Muzzles are needless at any season as a safeguard against rabies. Vicious dogs are barely worth considering, as any neighborhood will protect itself against such dogs. But whatever dog laws Elizabeth or any other town may see fit to enact, the principle should prevail that punishment should first be visited on the owner of the dog, and not death upon the innocent dog. The covert dog poisoner ranks among men as a skulking coward, as well as a brute. And the official wholesale butchery of dogs in Elizabeth ranks those who are responsible for it as brutes in the estimation of all humane persons."

The hot weather seems to have less effect on the poor dogs than it does on the more intelligent biped. The ignorance and imaginary fears of the people, with a love of the sensational superadded, are the causes of much cruelty to the dog.

Nevertheless the killing of dogs, as practiced with such offensive publicity and brutality by the police of Elizabeth, cannot justly be blamed on them. The Mayor, with the hot weather ideas which he unfairly attributes to the dogs, should be muzzled politically when the next election takes place, regardless of his political faith.

The Marvelous.

There is constantly manifested by the daily press, and the papers specially devoted to the dog and gun are not free from the evil, a disposition to color any dog story with tinges of the marvelous, or fantastical, or even the supernatural. The common test of reasonable action or possible or accidental happening is not seasoned properly for the news writer or his readers. It must be made extraordinary or sensational.

A dog meets a death in a manner out of the ordinary and forthwith it is heralded to the world as an act of suicide. It does not matter that the writers of such trash cannot possibly know of the dog's intentions; such absence of knowledge does not affect in the least the fulness and firmness of their assertions. A dog has a fit in the street; a cry of mad dog is raised; the frantic efforts of the dog while afflicted or his dazed efforts to escape while recovering are all perverted into furious and ferocious onslaughts, in the relation of the circumstance after it is all past. A dog performs some acts which he was taught, and forthwith it is discovered that he inherited a knowledge of how to perform them. There never was a better time than the present for the kennel and daily press and dog owners of the country to be governed by the rules of common sense in treating of dogs and their doings. The fantastic, the wonderful and the supernatural have no more place in the phenomena of dog life than they have in the life of any other organic beings. B. WATERS.

Mr. E. M. Oldham will have the general management of the kennels of Spratts Patent, on the retirement of Mr. John Brett, which takes place in a short time. Mr. Oldham will have the management of the kennel matters in addition to the other important interests which he cares for so efficiently and popularly.

C. F. T. Club's Quail Derby.

ALL the dogs entered were whelped in 1894. There are 22 pointers, 32 setters.

SISTER SUE—N. T. De Pauw's liver and white bitch (Jingo— ——).

DOWLAH—Charlottesville F. T. Kennels' liver and white dog (Rip Rap—Dolly D.).

NABOB—Charlottesville F. T. Kennels' black and white dog (Rip Rap—Dolly D.).

INDIA—Charlottesville F. T. Kennels' orange and white bitch (Rip Rap—Dolly D.).

AMEN—Charlottesville F. T. Kennels' liver and white dog (Wrecker—Selah).

WRESTLER—Charlottesville F. T. Kennels' lemon and white dog (Wrecker—Selah).

TOXIC—Charlottesville F. T. Kennels' liver and white bitch (Dog Wood—Maid of Kent).

STRIDEMORE—Richard Merrill's liver and white dog (Strideaway—Hops II.).

COINAGE—C. G. Stoddard's liver and white dog (Trinket's Coin—Ightfield Blythe).

STRIDEAWAY'S LAD—S. W. Alsdorf's liver and white dog (Strideaway—Ightfield Teighn).

ELDRED GAME—Eldred Kennels' liver and white dog (King of Kent—Graceful II.).

ABDALLAH ROMP—J. B. Turner's liver and white bitch (Castleman's Rex—Tiney Kent).

TOP SAWYER—E. O. Damon's liver and white dog (Strideaway—Ightfield Teighn).

SAL STRIDEAWAY—E. O. Damon's liver and white bitch (Strideaway—Ightfield Teighn).

KENT B.—Dr. J. S. Brown's dog (Rip Rap—Croxie Kent).

VIRGINIA—H. K. Devereux's liver and white bitch (Little Ned—Pearl's Dot).

SIDMONT—P. T. Madison's liver and white dog (Strideaway—Hops II.).

CRACKER JACK—Adams & Thompson's liver and white dog (Lad of Rush—Cyclops).

BLITHLEY—J. L. Adams's liver and white bitch (Trinket's Coin—Ightfield Blythe).

SAPPHO—Dr. O. Totten's liver and white bitch (Strideaway—Warwick Nellie).

BLAZEAWAY—Damon & Holmes's liver and white dog (Strideaway—Ightfield Spree).

SHADYWAY—Prof. E. H. Osthaus's liver and white dog (Strideaway—Jean of Beaufort).

ENGLISH SETTERS.

PAULINE BO—Richard Merrill's black, white and tan bitch (Paul Bo—Tube Rose).

RUDGE BO—Richard Merrill's black, white and tan dog (Paul Bo—Tube Rose).

KING'S DAN II.—Geo. W. Ewing's black, white and tan dog (King's Dan—M'liss II.).

M'LISS III.—Geo. W. Ewing's black, white and tan bitch (King's Dan—M'liss II.).

KATE—Geo. W. Ewing's black, white and tan bitch (King's Dan—M'liss II.).

—— —Geo. W. Ewing's cream, white and tan bitch (King's Dan—M'liss II.).

MARIE'S SPORT—H. B. Ledbetter's black, white and tan dog (Gleam's Sport—Marie Avent).

ROD'S BOY—King Graphic Kennels' black, white and tan dog (Roderigo—Lany Gladstone).

TROUDADOUR—Eldred Kennels' blue belton dog (Gladstone's Boy—Rill Ray).

GLEAM'S RUTH—Manchester Kennel Co.'s black, white and tan bitch (Count Gladstone—Gleam's Maid).

GLEAM'S DART—Manchester Kennel Co.'s black, white and tan bitch (Count Gladstone—Gleam's Maid).

ROD'S TOPSY—Wm. A. Hinesley's black, white and tan bitch (Topsy's Rod—Lulu Hill).

MAZEPPA—T. H. Gibbs's lemon and white dog (Rod's Dan—Bondhu's Nellie)

PATRICIAN—Avent & Thayer's black, white and tan dog (Chevalier—Patsy).

FEU FOLLET—Avent & Thayer's black, white and tan bitch (Count Gladstone—Fullie).

FLEET'S PET—Avent & Thayer's lemon and white bitch (Count Gladstone—Fleety Avent).

TOUCHSTONE—Avent & Thayer's black, white and tan dog (Orlando—Dolly Wilson).

—— —Avent & Thayer's black and white bitch (Topsy's Rod—Lady Lib).

HARWICK—H. R. Edwards's black, white and tan dog (Topsy's Rod—Opel).

CLAUDE—P. Lorillard, Jr.'s, black, white and tan dog (Eugene T.—Maiden Mine).

FANNIE L.—P. Lorillard, Jr.'s, black, white and tan bitch (Eugene T.—Maiden Mine).

ARAPAHOE—P. Lorillard, Jr.'s, black, white and tan dog (Eugene T.—Maiden Mine).

FRED—P. Lorillard, Jr.'s, black and white dog (Eugene T.—Ightfield Rosalie).

BRIGHTON DICK—T. G. Davey's black and white dog (Brighton Tobe—Brighton Lady).

BRIGHTON TOM—T. G. Davey's black and white dog (Brighton Tobe—Brighton Lady).

BRIGHTON MAUD—T. G. Davey's black and white bitch (Brighton Tobe—Brighton Lady).

ADELAIDE—R. V. Fox's black, white and tan bitch (Gath's Mark—Countess Rush).

TORY FASHION—F. R. Hitchcock's lemon and white dog (Count Gladstone IV.—Fleety Avent).

TORY CELIU—F. R. Hitchcock's black, white and tan bitch (Roderigo—Norah II.).

MARK OF IGHTFIELD—Joseph Becker's black, white and tan dog (Ightfield Rhiwlas—Queen Regent).

DOMINO—P. H. O'Bannon's black, white and tan dog (Antonio—Ruby's Girl).

BOB S.—D. E. Rose's (agent) black, white and tan dog (Antonio—Oriole). P. T. MADISON, Sec'y-Treas.

English Setter Type.

CHATHAM, Ont.—*Editor Forest and Stream:* I cannot let Albert's article, in your issue of the 29th ult., on the type of the English setter, pass without a word of protest.

In the first place, let me say that, although I have read the Stonehenge and the English Setter Club standards, I attach very little importance to either of them. My idea of judging the English setter and all other animals is by comparison. We do not hear of a standard by which horses or cattle are judged. Fancy fowl were judged by a strict scale of points a few years ago, but now I believe the best judges judge them by comparison.

Albert says "he is a firm advocate of the Stonehenge or

Laverack type, and until we can produce a dog of that type, why try to breed otherwise? That the otherwise breeding has been the ruination of English setter breeding, and has been the cause of many an old admirer and breeder as well as new one leaving the fancy."

I have always contended that the English setter, the king of field dogs, was not a member of the fancy. He should be judged by the man who takes him into the field. The members of the fancy should keep their hands off him and off the other breeds used for practical field work. Let them stick to the non-sporting classes, and I will promise for the sportsmen that we will not interfere with them.

A few years ago I saw a letter in an English sporting paper, from a prominent setter breeder, complaining that the members of the fancy had so interfered with the sportsmen's dog that the latter were driven out of shows entirely. I think this must be so, to judge from the weak classes of setters and pointers shown at the principal shows, and also the absence of prominent breeders.

Albert says: "Until we can breed a dog of that type (the Laverack), why breed otherwise? My reply is, the English setter has other work to do than to sit up like a pug at a bench show and look pretty. The Laverack setter has shown himself, in spite of ample opportunity for the last twenty odd years, fit for little else.

Albert's advice to breeders of the Laverack type, to keep their dogs at home unless judges favorable to their type are appointed, is perhaps good; and the opposite will no doubt be good advice to breeders of the field type.

I would say to breeders of the field type of English setter, keep your dogs at home unless Major Taylor or one of his lieutenants is on the cards. We shall then find out who is who. CINNA.

DOG CHAT.

A writer in the Philadelphia *Times* thus describes Magistrate Fulmer's dog:

"The tall, lank form of the Magistrate is a familiar figure and as he passed everybody gave him a familiar greeting. But nobody paid any attention to the dog. It has no friends, never has had, never will have, and does not deserve any. It is a bad-tempered, measly-looking, dirt colored bull-terrier that the dog catchers of the ward would have gleefully asphyxiated long ago if it were not for the influence of its owner. It has the look of a criminal, and even the Magistrate's efforts to improve its appearance by putting a real silver collar around its neck does not conceal the plain fact that its ancestry was bad. If it ever escapes from its master's affectionate eye for ten minutes it will be murdered."

Poor thing!

Mr. Francis W. Kitchel, Perth Amboy, N. J., writes us that an official dog catcher has been appointed in Perth Amboy whose duty is to catch and impound all unlicensed dogs running at large within the city limits. If not redeemed within five days, the dogs are to be killed. Mr. Kitchel adds: "Under the circumstances you can understand how jubilant a number of us feel that modern and merciful methods will prevail in the future."

The circular of the Muckross Kennels, Springfield, Vt., is very complete and neatly gotten up. They are sent to those who apply for them.

Under date of July 5, Mr. Alex. Mackenzie-Hughes writes us that the site for the dog shelter in Brooklyn has not yet been determined. He adds: "I have just recovered from a rather bad bite on both hands from a cat which I was putting into the 'death box,' and when the beggar realized what was going to happen to him, he went 'red hot' for me."

Concerning foxhounds a writer in the *Field* (London) says: "It may interest some of your readers to know that black and gray hounds were imported here (Virginia, U. S. A.) from England about 100 years ago, and have been the favorite breed in the district ever since. They stand from 20in. to 22in., straight legged and upstanding, though not so stout a build as the present English foxhound; but it strikes me they have better noses, good at puzzling a line on a cold scent and fast on a warm one; they are probably purer bred here than in England, being the established breed of the country."

The bickering epistles, which were spiced with something akin to ill-temper and which followed close after the ending of the Ladies' Show at Ranelagh, afforded a proof, if any were needed, that dog shows are much alike in their effects on human nature the world over—they develop what tempers are good and what are otherwise.

Mr. H. W. Lacy, who was kennel editor of FOREST AND STREAM many years, has accepted the editorship and general management of the *Kennel News*. As is well known, Mr. Lacy is one of the brightest and best informed newspaper men, whose training in the special field of canine matters has been long and broad. Under his skillful management the *Kennel News* should prosper. We heartily wish him success. He intends to leave to-day for his new field of effort.

From correspondents we learn that the northward flight of the handlers has begun. Mr. Nat. Nesbitt left on the 3d inst. for the chicken country, and Mr. C. E. Buckle, we are informed, starts for it on the 15th inst. The secretaries of the clubs interested could help matters out greatly by publishing full information as to the correct mode of procedure or what measures they will take to aid the handlers in arranging with the customs. Mr. Thomas Johnson was kind enough in this connection to give valuable information in FOREST AND STREAM of May 18.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Rochester-Pittsburgh Bull-Terrier Kennels'
Lady Dinah, bull-terrier bitch, May 17, to champion Streatham Monarch.
Nellie Harper, bull-terrier bitch, April 16, to Little Flyer.
Mr. Henry Spencer's Spencer's Julia, English setter bitch, June 15, to Mark of Gladstone.
Muckross Kennels' Olive, Irish setter bitch, May 27, to Henmore Shamrock.
Prof. Wormwood's Nellie, corded poodle bitch, June 5, to Ponce de Leon.
Mr. Jos. Smith's My Joe, cocker bitch, May 9 and 11, to champion Red Roland.

WHELPS.

Mr. Jos. Smith's Vexation, foxhound bitch, whelped, May 21, nine (two dogs), by imported Jimcrack; one dog and five bitches dead.
Warwick Kennels' Albert's Moll, English setter bitch, whelped June 15, seven (five dogs), by imported Albert's Ranger.
Dr. H. W. Lincoln's Broomfield Madge, Manchester terrier bitch, whelped, June 4, four (one dog), by Broomfield Sultan.
Mr. G. G. Williamson's Belle of Blue Ridge, English setter bitch, whelped, May 30, eight (four dogs), by champion Gath's Mark.
Mr. Richard Merrill's
Canadian Lily, English setter bitch, whelped, April 5, three (one dog), by champion Paul Gladstone.
Tube Rose, English setter bitch, whelped, June 15, four (two dogs), by champion Paul Gladstone.
Lady Lucy, English setter bitch, whelped, June 10, seven (four dogs), by champion Paul Gladstone.

SALES.

Mr. A. D. Fiske has sold a beagle dog pup to Mr. A. C. Darrell.
Dr. H. W. Lincoln has sold Ridd's Chink, fox-terrier bitch, to Mr. Chas. H. Wendell.
Eberhart Pug Kennels have sold
The Colonel, toy terrier dog, to Mr. John M. Ritner.
Nellie, corded poodle bitch, to Prof. Wormwood.
Earl of Rossmore, pug dog, to Mr. J. H. Wilder.
Mr. J. M. Avent has sold
Chevalier, English setter dog, to Mr. Geo. N. Clemson.
Kingston, English setter dog, to same party.
Mr. H. E. Cook has sold his kennel of foxhounds to Messrs. G. S. White & Co., West Fork, Ark.
Muckross Kennels have sold
One Irish setter dog pup to Mr. Fred G. Wiese.
One Irish setter dog pup to Mr. Wm. Hyres.

Yachting.

FIXTURES.

*Dates marked thus are unofficial.

12. Larchmont, 1st class, special schooners, and 34 and 21ft. classes, Sound.
12. Larchmont-Atlantic combined annual cruise, rendezvous at Larchmont.
13. Larchmont to Black Rock.
14. Black Rock to Morris Cove.
15. Morris Cove to New London.
16. Special race, New London.
17. New London to Shelter Island.
13. Royal St. Lawrence cruising race to Beauharnois, Montreal.
13. Cor., Marblehead, first cham., Marblehead (Mass.) Bay.
13. Hempstead Harbor annual, Sound.
13. Squantum second cham., Squantum, Mass.
14. San Francisco open race, San Francisco Bay.
15. Savin Hill open, Savin Hill, Boston Harbor.
15. Riverside annual cruise, Sound.
15. Rhode Island annual.

WE have confidently anticipated a series of stirring races next fall, such as have never yet been seen, in the meeting of Defender and Valkyrie III. If the latest news from Bristol and Glasgow is to be believed, however, we and many other yachtsmen are doomed to disappointment; the Cup is already saved, and all is over but the shouting.

All reports from Bristol agree that the new defender in her first trial has, in a light breeze, made 12 knots without effort, or the same speed as Vigilant showed in the second leg of the triangular race and the run home in the final race with Valkyrie II. The average rate of sailing in the Cup races of 1893 was about 8 knots. With this speed the defender carries her lofty rig admirably, and makes no perceptible wave disturbance

The challenger, on the other hand, as described by the Glasgow correspondents of the American papers, cannot carry her sail, lying down and dragging her boom in the water; she turns up a bad bow wave and a worse one on the quarter, and her shrouds have pulled up her sides until her sheer is broken in but a few days' sailing. Under these circumstances Lord Dunraven's task is indeed a hopeless one, and he might better give it up now and stay at home.

SUNDAY was a gala day in Bristol, the streets being full of people and the water covered with yachts and boats, the occasion being the first trial of the new defender. The work of rigging had been hindered by the rain throughout the week, and Saturday morning was so rainy that no attempt was made to bend sails. Capt. Haff and his crew, however, were scrupulous about taking the first sail on Sunday, so when the sun came out in the afternoon the big mainsail was sent aboard and bent, and the yacht taken in tow by the Hattie Palmer. When the tug started she parted her towline, Defender being aground, but after a second line parted the mainsail was partly hoisted, heeling the yacht so that she cleared the ground. She sailed about for some time in a light breeze, handling very well.

The real trial was made next day, in fair weather and smooth water with a moderate breeze. On board of Defender were Mr. Herreshoff, Mr. and Mrs. Iselin, Messrs. Vanderbilt, Morgan and Duncan, Capt. Haff being in command; while Colonia, manned in part by the crew of Wasp, was in charge of young Capt. Harry Haff. The two yachts sailed in company, but without formal starting and timing, Defender easily beating Colonia on the wind and free in all the varying strengths of the wind. With the two were a number of steam yachts, all doing the regulation "twelve knots," and Defender ran away from them easily. The various reports agree that she carried her sail admirably, having all lower sail and jibtopsail, and it is reported that Messrs. Iselin and Herreshoff have already decided to increase her sail plan. The reports also agree that she made no material wave disturbance, even when running at twelve knots, a showing that her designer may well be proud of.

The sails are all of the new Herreshoff cut, the working topsail being too large, but the others sitting well. The yacht will not be under sail again before the last of this week, much work on deck and below being uncompleted. The special race off Sandy Hook, set for July 10, has of course been postponed, the new date being not yet decided on, but it will not be earlier than July 16, and possibly about July 21.

THAT the Cup defender was finally floated without serious damage by the heroic process of yanking the cradle from under her was a matter of sheer good luck, and in no way is it due to care or skill on the part of her builders. One may admire the boldness and audacity with which this magnificent and costly piece of property was pulled and hauled about for three days, at the risk of tumbling the whole structure into the mud, but it can hardly be commended as a precedent in engineering. Many reasons are given for the sticking of the yacht; the ways were not parallel, but converged slightly, thus jamming the sliding ways; the ways could not be properly greased, being so far under water; the ways settled under the weight and the bolts projected, catching the sole of the sliding ways. All of these reasons may be correct, but the one obvious cause of the trouble was the very small base of the sliding ways. The launching weight, probably 130 tons, was supported on a base said to be but 20ft. long, and certainly not very much longer. The ground ways, on which the yacht and sliding ways slid, were new and of unusual length, extending far under water. The work of building them was necessarily done by a diver; piles were driven and sawed off below water at the height necessary to give the required grade to the ways, ¾in. to the foot; transverse caps were laid on these piles and on top of them the ground ways, of heavy yellow pine. It is quite possible that this work may not have been done perfectly, but, whatever the trouble may have been, it would probably have been avoided had the yacht been cradled in the usual manner, distributing the weight over a sufficiently long base, thus lessening the friction and the danger arising from improper lubrication, and also lessening the danger of a part of the ways settling under the great weight. The form of the yacht made her a difficult craft to cradle properly, but for this very reason she should have been specially secured against the danger of capsizing on the ways. It is probable that the next large cutter built at Bristol will be launched in a different manner.

AFTER seeing Defender on Saturday we made a point, but four days later, and while the form of the new boat was freshly in mind, to look up Vigilant, by chance on the dock at the time, in order to compare her with her younger sister. In thus comparing the two, it is difficult to believe that one man designed them both and for precisely the same purpose, only two years apart, and it is equally difficult to consider Defender as other than the plainest possible admission on the part of her designer that Vigilant was radically wrong. The differences between the two models are in no way those arising from a regular course of evolution, or from the higher development, even to an extreme point, of the same ideas or principles; but they are so radical as to amount to a complete condemnation of all the distinctive characteristics of a yacht that has been generally considered one of the masterpieces of modern naval architecture.

That Vigilant was very far from a perfect craft, and that her designer would never build another large yacht like her, has been our opinion since the last Cup races in 1893, frequently expressed in print; but still we were completely taken by surprise by the developments of this year, as finally disclosed in the launching of Defender; nor are we yet able to follow the reasoning which has produced such a different type of craft.

The faults of Vigilant, as we saw them in 1893, were mainly the carrying out of the distinctive Herreshoff features to too great an extreme, the long straight keel, the very moderate rake of post, and in particular the great beam and flaring side, and the excessive fullness of the waterlines and framelines, especially forward. There was, it is true, a certain justification for the extreme beam at the deck in the use of the "ballast crew," and this no longer exists; but beyond this the model was forced in every way to gain power at the expense of form. To our eye, Colonia, in dimensions and the form of her hull, represented a much happier medium—a fine, wholesome, powerful craft, and yet with a pleasing form. The weighted centerboard of Vigilant was of doubtful benefit, any small gain derived from it as ballast at times being offset by the liability to derangement of gear or total loss of the board at a critical moment, as finally happened. The fault of the sail plan is generally known, the abnormally advanced position of the center of effort, giving a dangerous weather helm, detrimental at all times to the speed of the yacht.

Ever since the last Vigilant-Valkyrie race in 1893, it has been a matter of speculation with us as to what the next large Herreshoff boat would be like; and with the prospects of a new challenge last winter the subject became still more interesting. Looking at the leading Herreshoff boats—Navahoe, Colonia, Vigilant, Wasp and Gloriana—we had quite confidently selected Colonia as the one on which he would rely, above all others, for the basis of the new model. In her he had a boat of excellent proportions, possessing the power which long experience has shown to be essential to success in the Cup contests, of excellent form and fast through the water; possessing one defect that was perfectly well known and quite easy to remedy. The addition of a deeper and shorter keel and the raking of her sternpost would add to her power, increase her speed in maneuvering, and make her quite as weatherly as the smaller Herreshoff keel boats—that is, the equal of any centerboard boat.

The remark has been frequently made of late that Defender is an improved Colonia, but we fail to see that this is at all the case; on the contrary, the new boat is of another type, lacking all the characteristics of the earlier Herreshoff boats, and denoting an entire change in his methods. An improved Colonia of 90ft. waterline would show a beam of nearly 25ft., with a strong bilge and powerful section carried down into a very deep keel, the full waterline and general model being retained, though perhaps faired up. The new boat is in beam and draft more of an enlarged Valkyrie II. than Colonia, with even an easier section and lighter bilge than Valkyrie II., about the same proportionate beam, and a long and fine bow for a modern boat. Her sail plan too is more like Valkyrie II. than like Vigilant and Colonia—a large mainsail and comparatively small headsails, with mast well forward.

How she will carry her sail will soon be known by actual trial, but it is certain that the model is lacking in that beam and bilge which gave the power heretofore deemed necessary to defend the America's Cup. In general racing there are times when extreme power costs more than it is worth and when form pays; but the long experience in Cup racing has shown the necessity for a yacht of high power, and each year has seen an increase of sail spread, from some 7,000 square feet in 1885 to 12,000 in 1895. This year, for the first time, the increase of power in the defender has apparently stopped, and at the very time when the challenger has built a yacht of abnormally high power.

We are yet in the dark as to the exact sail area of Defender, and more particularly as to how she will carry it; but it does not seem possible from her model that she can stand up under a larger rig than Vigilant. The nature of the sail carrying power derived from low weight instead of beam and bilge is better understood now than it was a few years since; and the fact is generally appreciated that in American waters a yacht must stand on her feet to sail fast. If the new boat does this under a big rig by mere virtue of low lead, with a cleanly swept section of narrow beam, it will be a new revelation to yachtsmen. If she does not stand up, it is hardly likely that she will win from other yachts, like Vigilant and Valkyrie III., which do; save in such exceptional weather as has never yet been met with in a Cup race in twenty years except in the last Puritan-Genesta race.

The coming races are important in that the keel boat is on trial in a peculiar way, and if defeated it will be universally attributed to the fact that she has not a centerboard. Under the circumstances such a conclusion can only be unfair and misleading when it is considered that the distinctively American features of beam and a marked bilge are entirely lacking. It would certainly seem that, in summing up the faults of Vigilant and Colonia preparatory to designing a new boat Mr. Herreshoff had quite overlooked the strong points of each, those which give power, and which might have easily been retained in a model of easier and better form and improved lateral plane. What he has done, apparently, is to sacrifice all other considerations to easy form, low weight and reduced wetted surface.

So far as we can learn, Mr. Herreshoff sailed in none of Vigilant's races abroad in hard weather, but only in the light weather races on the Clyde, which brings his experience of Vigilant in rough water down to the one final race for the Cup. In this race, as we have fre-

quently stated, the performance of Vigilant in a moderate sea was very much better than might have been expected from her very full model. Badly canvased and very badly handled, she still made the 15 miles to windward in rough water in only 2½ minutes less than Valkyrie, and with a proper disposition of canvas and good management she would have beaten the other boat in spite of the sea. It may be that her behavior, as experienced by those on board, was much worse than it appeared to be, but to the careful observer she was doing much better than would be expected from her extreme form There was certainly nothing in this race to call for the entire abandonment of this form for one so radically different as that of De fender.

Speaking without authentic and adequate data, and from only the hulls of the yachts alone, as they appear to the eye, it may be presumptuous to criticise a decision arrived at after long and careful study and deliberation, but there are many others besides ourselves who are at a loss as to the reasons for such extreme changes, and in doubt as to the results.

THE performance of Valkyrie III. in hard weather is exciting a great deal of comment on both sides of the ocean, much of it being absurd in the extreme. Some of the British papers, which a few days ago spoke as though she had already won the Cup, are now ready to pronounce her a failure and are starting little booms for Ailsa and Britannia. Assuming that the yacht was well sailed and sailed to win, there is nothing extraordinary in the fact that she was tender under the conditions described. The last Vigilant-Valkyrie II. race, sailed in a "gale," was made at an average speed of 8.7 knots; while this race, of fifty nautical miles, was sailed at an average speed of 11.26 knots. The yacht was sailing with gear and canvas all new and stretching, lessening her speed and increasing her liability to heel.

Every yachtsman knows that, with a wooden hull, a month afloat makes a vast difference in the stability of a new yacht; the bottom is heavier by immersion and the spars lighter by drying, both helping the stability. The gear and canvas being in good shape, the yacht may be better sailed, consequently keeping on her feet far better than when constantly eased to favor a stretching shroud or depressed by baggy sails.

We have still a keen recollection of that stirring race off Marblehead in 1886, when Priscilla first went round the Cape and Mayflower made her debut; a race, by the way, in which the regatta committee of the club builded better than they knew in laying out a triangle of five mile sides, to be sailed twice. The course was a fine one for trying the yachts and seeing the race, but it was objected to very strongly by the yachtsmen on the ground that it made too much work, spinakers and other kites having to be set twice. In this race Mayflower made a spectacle of herself, staggering around the course with decks almost vertical; but the whole trouble was easily remedied, and she finally beat Puritan in the trial races.

It is probable that Valkyrie III. will be materially stiffer in a short time, especially after she has been coppered, as she probably will be in this country. Even if such should not be the case, it is an easy matter to cut her down a little. The only way to get enough sail on these over-rigged boats is to give them the last inch that they can be expected to carry, reducing it if found necessary on trial; and this is probably what Mr. Watson has done. It is a question whether a boat for racing off Sandy Hook should not be sparred to the last limit in a moderate breeze, trusting to just such weather as all the races are sailed in and taking chances in the unlikely event of a real hard blow. There is a possibility that some day the whole series of races may fall in a week of hard easterly weather and a bad sea, in which event the lower powered and easier formed boat may win; but the likelihood of such a chance is not to be considered in designing a challenger or defender. Unless Valkyrie III. develops some more serious defects than are thus far reported, she is likely to prove far and away better than any of her predecessors.

The 20-Rating Class.

DURING the past week Niagara has met a new antagonist, the fin-keel 20-rater Eucharis, designed and built by Will Fife, Jr., for the Earl of Lonsdale, the order being placed just after the time Niagara left New York, less than two months ago. In the Mudhook Y. C. regatta of July 3 four yachts started—Niagara, Eucharis and Zinita, 20-raters, and Dacotah, 12-rater. Eucharis won this, her first race, easily, the times being:

Eucharis	2 14 14	Zinita	2 18 47
Niagara	2 17 01	Dacotah	2 34 03

On July 4 the same course was sailed in a light and variable wind, an unsatisfactory race, resulting in a win for Niagara.

Niagara	5 44 48	Zinita	5 54 52
Eucharis	5 52 21	Dakotah	5 59 28

In the strong breeze of July 5 Dacotah was overpowered and Eucharis made a bad showing, the honors going to the Fife cruiser Zinita, the times being:

Zinita	2 50 03	Eucharis	3 10 20
Niagara	3 05 55	Dacotah	3 19 55

Zinita was disqualified for crossing too soon and failing to return when recalled.

On July 6 in a moderate breeze the four met again. Niagara had the lead at the end of the first round, but was disqualified for fouling Zinita's main sheet with her bowsprit at the Kilcreggan mark, the race finally going to Eucharis:

Eucharis	3 40 50	Dacotah	3 54 05
Zinita	3 41 55		

Dacotah second by 2m. 30s. on time allowance.

Gravesend Bay Y. C.

BENSONHURST—GRAVESEND BAY.

Thursday, July 4.

THE bad weather of the Fourth spoiled the regatta of the Gravesend Bay Y. C., nearly all of the starters giving up. The times were:

CLASS A—SLOOPS AND CUTTERS 18FT. AND OVER.

	Length.	Finish.	Elapsed.
Gael, Simonson & Benedict	28.00	4 25 03	2 02 38
Iris, J. E. Ball	28.00	Withdrew.	
Arrow, H. W. Brett	22.06	Withdrew.	

CLASS B—SLOOPS, CUTTERS AND YAWLS UNDER 18FT.

Pup, G. C. Hallenbeck	12.06	Withdrew.	
Iere, G. J. Howatson	14.04	Withdrew.	

CLASS C—CATBOATS OVER 18FT.

Lester, H. M. Furgueson	22.11	Withdrew.	
Rob Roy, W. P. Coffin	21.06	Withdrew.	
Isabel, R. H. Sherwood	20.06	Withdrew.	
Clytie, O. F. Spate	19.03	Withdrew.	
Lizzie, S. O'Brien	19.02	Withdrew.	
Edda D., R. W. Rummell	19.01	Capsized.	

CLASS D—SMALL JIB AND MAINSAIL CLASS.

Naiad, F. M. Lathrop	14.05	3 59 10	2 01 45
Bessie, W. E. Johnson	15.02	3 56 56	2 00 26
Columbia, P. & G. Pfalzgraf	15.07	3 57 45	2 01 05

The Regatta Committee included S. H. McElroy, Chairman; T. W. Harris, T. Cleary, J. W. Lane and W. H. West.

Newport Y. C.

NEWPORT, R. I.—NARRAGANSETT BAY.

Thursday, July 4.

THE annual regatta of the Newport Y. C. was sailed on July 4 in a heavy rain and variable wind, the times being:

	Elapsed.	Corrected.
Seamaid, Jas. Arnold, Jr.	2 33 06	2 33 06
Betsy, Richard Wadsworth	2 33 37	2 32 13
Prunell, Ralph Woods	2 37 33	2 34 51
Reindeer, W. Tripp	2 31 07	2 31 07
Niobrara, Jno. Scanwinn	2 33 38	2 32 47
Zuta, W. Arnold		Withdrew.
Eyries, C. Callahan	2 35 38	2 33 02
Vesper, C. S. Plummer	2 38 45	2 38 45
Shadow, Edward Hassard	3 04 00	3 03 32
Omega, George Slocum		Withdrew.

Valkyrie, Britannia and Ailsa.

THE past week has been an interesting one on the Clyde, awakening a lively discussion on both sides of the Atlantic. On Monday, as told last week, Valkyrie III. did not start, there being a strong breeze with rain, and Britannia beat Ailsa by 2m. 41s. corrected time. On July 3 the three sailed a 50-mile course in a strong breeze with smooth water, and Britannia beat Ailsa by 1m. and Valkyrie III. by 3m. This defeat, and the reports of Valkyrie's tenderness and of the big quartering wave carried by her, have given rise to many unfavorable comments on both sides, the yacht even being pronounced a failure by some hasty critics. On July 5 Britannia was temporarily disabled and Valkyrie sailed against Ailsa only, beating her by 15m. after a good race in a fresh breeze and smooth water, Ailsa doing very well in the early part of the race. On July 6 the three again met in a moderate breeze and smooth water, Valkyrie beating Britannia by about 18m. and Ailsa by nearly 20m. in a 50-mile race.

July 3 was the first day of the Mudhook Y. C. regatta, the course being from off Hunter's Quay, around the Skelmorlie mark, Ascog mark, Kilcreggan mark and home, two rounds making 50 miles. The restriction calling for amateur helmsmen was removed in the large class. There was a strong N.W. wind at the start, Ailsa leading over the line with boom to port for a quartering run of 7 miles to Skelmorlie, Britannia being on Ailsa's weather quarter and Valkyrie in Ailsa's wake.

All started under jack yard topsails, Valkyrie carrying a No. 2, and jibtopsails were soon drawing after the line was crossed. Britannia soon took the lead and held it to Skelmorlie, where they were timed:

Britannia	11 06 01	Valkyrie	11 06 30
Ailsa	11 06 15		

They luffed around the mark and stood across for Ascog, four miles, with the wind forward of the beam, Britannia carrying sail well, while both of the others rolled down, Valkyrie, from all accounts, showing a great deal too much side. No times were taken at Ascog, where they luffed around and hardened sheets for the 11 miles to Kilcreggan, a close reach, Valkyrie losing a little, the times at Kilcreggan being:

Britannia	12 26 39	Valkyrie	12 28 18
Ailsa	12 27 32		

Another luff brought a three-mile leg to the line, with the wind well on the starboard bow, Valkyrie now shifting her second jack-yarder for a jibheader. The end of the round was timed:

Britannia	12 45 30	Valkyrie	12 48 44
Ailsa	12 46 37		

Reaching off for Skelmorlie, even Britannia was glad to shift to a jibheader. No times were taken until they turned Ascog:

Britannia	1 42 28	Valkyrie	1 45 25
Ailsa	1 43 45		

The finish was timed:

Britannia	2 56 37	Valkyrie	2 59 45
Ailsa	2 57 47		

Britannia beat Valkyrie 7m. 10s. corrected time, and Ailsa 2m. 13s.

Valkyrie sailed with three ladies aboard; accounts differ as to the details of her performance, but all agree that she showed a lack of stability, heeling badly and throwing a heavy wave. It is also said that she was poorly sailed, and some express the opinion that she was intentionally held in, her owners and designer being only anxious to form their own judgment as to her abilities.

On July 5 Valkyrie was to sail a private match with Britannia, but the latter boat had something wrong with her topmast and declined to start. A race was then made up with Mr. Walker, owner of Ailsa, and at 2:30 P. M. the two started down the Clyde, the wind being moderate from the south, to sail the seven miles to windward to Skelmorlie mark and return. Ailsa started 15secs. ahead and an obstinate fight of half an hour ensued, each tacking frequently. In the end Valkyrie got clear when off the Cloch Light, the wind being stronger than at the start. She continued to gain to the turn, where they were timed:

Valkyrie	3 36 50	Ailsa	3 40 19

As they ran up the Clyde the wind dropped for a time, then freshened. Both set spinakers and balloon jibtopsails. The finish was timed: Valkyrie 4:45.55, Ailsa 5:00:50. The race was a fair test in moderate weather, Valkyrie's win being apparently on her merits.

On July 6, the first day of the Royal Clyde Y. C. regatta, the three met again, the wind being light to moderate from the south, making a beat of 7 miles to Skelmorlie, a reach to Ascog, 4 miles, a run to Kilcreggan, 11 miles, and a reach across the 3 miles to the line. Ailsa and Britannia crossed before the gun and were recalled, Valkyrie, after a good start at 10:30:50, heaving to and waiting to start evenly with the others, they crossing; Ailsa 10:32:45, Britannia 10:33:25. They beat out with club topsails set in a moderate breeze and smooth water, Valkyrie steadily gaining, the times at Skelmorlie being:

Valkyrie	11 39 55	Britannia	11 46 30
Ailsa	11 45 01		

There was not much difference on the reach to Ascog, Ailsa gaining a little, the times being:

Valkyrie	12 00 56	Britannia	12 07 41
Ailsa	12 05 50		

They ran up the Clyde under spinakers in a light wind, Britannia overhauling Ailsa, the times half way to Kilcreggan being:

Valkyrie	12 37 45	Britannia	12 45 43
Ailsa	12 45 23		

British second place just before the mark was reached, the turn being timed:

Valkyrie	1 18 47	Ailsa	1 25 35
Britannia	1 25 30		

Valkyrie picked up a slant on the last three miles of the first round and ran away from the others, the times of the line being:

Valkyrie	1 32 50	Ailsa	1 46 48
Britannia	1 44 59		

Valkyrie had gained 12min. on Britannia in 25 miles.

With sheets well in and beeling to a good breeze, Valkyrie made the 7 miles to windward in good time, being timed at Skelmorlie:

Valkyrie	2 38 55	Ailsa	2 55 19
Britannia	2 55 23		

The short reach to Ascog showed about the same positions:

Valkyrie	2 59 45	Ailsa	3 16 50
Britannia	3 14 50		

Down wind Valkyrie still gained a little, the times at Kilcreggan being:

Valkyrie	4 11 45	Ailsa	4 29 50
Britannia	4 27 30		

The last short leg was soon covered and the finish timed:

Valkyrie	4 31 10	Ailsa	4 50 57
Britannia	4 49 36		

Valkyrie beat Britannic 14m. 24s., corrected time, and Ailsa 16m 48s.

The race was sailed in a true breeze of moderate strength, sometimes blowing quite fresh. The average speed over the 50 mile course was 8 33 knots, a good rate of sailing, while in the race of July 3, in which Valkyrie was defeated, it was as high as 11.26 knots, a very high rate for a course with seven turns, and on which the distances with and against tide are about equal.

Early on July 8 Valkyrie III. was towed up the Clyde to Henderson's yard, where she will be fitted for sea, sailing on July 18. She will be rigged as a yawl, with a smaller mainmast, contrary to the usual custom, the racing mast having been carried on the ocean trip by Genesta, Thistle, Galatea and all the other large yachts which have crossed from the other side.

Beverly Y. C.

MONUMENT BEACH—BUZZARD'S BAY.

Thursday, July 4.

The 22ist race, first championship, was sailed off the club house on July 4 in a howling north-easterly gale, a blinding rain and fog, with a very heavy sea running. It was one of the roughest races ever sailed in the bay, and the absence of serious accidents speaks well for the seamanship of the crews.

The morning opened rainy and calm, with light airs from all round the compass, but at noon the north-easter struck in, butt end first, and in fifteen minutes the bay was feather white.

For the first time in the club's history the cannon could not be heard against the wind, and most of the boats missing first gun were badly handicapped, Anonyma, Grilse, Fin and Weona alone got a good start, going off when their watches said the gun ought to be fired.

The special class found it very rough and thick down the bay. They had in all their reefs, and Ashumet had the jaws of her gaff settled down on the boom, but finally ran off for Quisett. Salmon was misled into following her when she bore off to leeward and sailed about 25 miles in place of 20; she finally came home at 5:15, and as the wind had moderated somewhat was carrying storm jib and close-reefed mainsail.

The first class boats are both new at racing and did not read their sailing orders. They went nearly twice as far as the course called for, sailing catboat fashion under balance reefed mainsail and no jib. Finally Mistral, having got down to bare spars and being beaten, gave it up and ran off for Falmouth.

In second class Surprise and her owner missed each other and she could not start, as she had no club member to sail her. Anonyma got by far the best start, Bernice was drowned out, Linotte did the best work and came home barely leading Anonyma; all the boats carried balance reefs.

It looked as if Linotte had both pennant and second prize, and Anonyma first prize, but next day Mr. Wilson reported that he had become tired and given up the wheel to a professional, which rules the boat out.

In the fourth class the judges gave the short course, as they did in the fifth, being unwilling to send the small boats round Abiel's Ledge in such weather. Grilse with a crew new to her sailed a wonderful race, carrying only three reefs, while others had four or five; she also carried storm jib; she finished with a tremendous burst of speed. The short courses were dead to windward and back.

Ghuzz got badly left at the start. She sailed fast, with only two reefs, but did not point with Grilse, and finally withdrew.

Fin made a good race for first round and then had her jib blown away.

The new Silence was on hand, but could not get her crew aboard, and did not start. During the race Mr. Crane tried to sail home alone under storm jib, but capsized. However, the boat floated and he was picked up unhurt.

Dawdle sailed a good race in fourth class cats. Howard found one round enough.

In third class Gilt Edge would not start on account of the wind. Colymbus had her sail split right across by the wind. Melro and Puzzle were drowned out, leaving Doris alone to make the race.

In the fifth class cats Imp won by a little over Vif. In the sloops P. D. Q. was towed up, but in the heavy sea could not ship her mast in time. Mr. Burgess was on hand with Laurel, but parted her cable and had to beach her on a sandbar.

Experienced judges figured the force of the wind at about fifty miles an hour. Courses, 20 miles for special, 11¼ for first and second, 8½ for third, 5½ for fourth, 2¾ for fifth class. Judges, W. Lloyd Jeffries, N. H. Emmons, A. H. Hardy.

The race proves that the boats of the Onawa type, properly handled, can do most anything, but other races show that unless so handled they are useless.

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Salmon, W. E. C. Eustis, B. Y. C.	33.07	4 10 10	4 08 28
Ashumet, C. H. Jones, B. Y. C.	34.04	Withdrew.	

FIRST CLASS SLOOPS.

Bernice, J. G. Young, Jr., B. Y. C.	25.08	Withdrew.	

THIRD CLASS CATS.

Doris, J. Parkinson, B. Y. C.	21.10	2 00 05	1 44 41
Melro, D. L. Whittemore, B. Y. C.	20.08	Withdrew.	
Puzzle, G. S. Amory, B. Y. C.		Withdrew.	
Colymbus, Alfred Winsor, B. Y. C.	21.06	Withdrew.	

FOURTH CLASS SLOOPS.

Grilse, W. E. C. Eustis, B. Y. C.	19.02	1 12 23	1 14 00
Ghuzz, L. Brooks, B. Y. C.	17.11	Withdrew.	
Fin, H. Stockton, B. Y. C.	17.09	Disabled.	

FIFTH CLASS CATS.

Imp, G. B. Dabney, B. Y. C.	14.04	0 46 55	0 39 18
Vif, R. Winsor, B. Y. C.	14.04	0 48 18	0 40 41
Weona, H. Ware, B. Y. C.	14.08	0 54 56	0 47 56
Tern, W. Tileston, B. Y. C.	14.05	Withdrew.	

Winners of prizes: Class 1, sloops—Little Peter first. Class 2, cats—Anonyma first, Uiula second. Class 3, cats—Doris first. Class 4, sloops—Grilse first. Class 5, cats—Imp. Special class—Salmon first. Little Peter, Anonyma, Doris, Grilse, Dawdle and Imp won legs for pennants.

New Rochelle Y. C.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, June 29.

THE annual regatta of the New Rochelle Y. C. was sailed on June 29 over the regular club courses on the Sound off New Rochelle. The wind was light and variable all day, making an unsatisfactory race. Sasqua went up a class and then beat Banshee very badly. Polly and Onaway fouled at a mark. The official times were:

CABIN SLOOPS—CLASS 6—43 TO 49FT.

	Elapsed.	Corrected.
Sasqua, H. Andrus	4 50 00	4 50 00
Banshee, H. Doscher	5 11 40	5 11 40

Hullo, Hull Y. C.	1 16 38

Larchmont Y. C.

LARCHMONT—LONG ISLAND SOUND

Thursday, July 4.

THE weather of July 4 did all that it possibly could to spoil the racing of the finest fleet that has been seen about New York in many a day; sixty yachts, from the big schooners Constellation and Ramona down to the tiny 15-footers Question and Trust Me, starting in the annual regatta of the Larchmont Y. C. After a threatening morning, rain began to fall at 10 o'clock and continued all day, in fact, for the rest of the week, with short intervals of clear weather. The wind was light and variable, north at the start, going all around the compass and ending in the north again. The rain bid much of the race from view, but at the same time the spectators on the club steamer Albertina and the judges' boat Raymond saw the start, the end of the first round and the finish—very much more than was ever seen over the old courses in the clearest weather.

Though the fleet was divided into 21 classes, in only one class was there a sail-over, and in some there were five or six good boats. All things considered, the racing was good, with less fluking than might have been expected from the shifting breeze.

The schooners Marguerite, Constellation and Mayflower came on from Boston, being matched respectively with Emerald, Ramona and Iroquois, the last pair in cruising trim. The new steam yacht, designed by A. Cary Smith for W. G. Brokaw, was matched against the older Smith boat Elsemarie in this her first race. She was just from the builder's yard, with a green crew and hastily rigged and fitted out, sailing under considerable disadvantage. Loyal and Florida made up the smallest schooner class. The promised race of the 90-footers, announced for some time as the great event of the day, was off through the delay over Defender, and Vigilant was not present, her alterations being uncompleted.

The largest single-stickers were Katrina and Huron, sailing together in the regular class, while Queen Mab was put with them in a special class for a separate prize. The old 40-footers were divided into flush decked and trunk cabin classes, which brought the three keels, Uvira, Gossoon and Minerva, together in the former and the two centerboards Penguin and Choctaw in the latter. Both Uvira and Penguin are over 40ft. l.w.l., but they are placed with the old forties under the present classification. The 43ft. class had six starters, including the new cutters Norota and Eidolon, the old 30-footer Kathleen, and the centerboard sloop Sasqua. In the regular class 8, 30ft. racing length, were the modern Fife cutter Infanta, the old sloop Henry Ward Beecher, a famous racer of her type, and the cutter Gavilan. The 34ft. special class, also of 30ft. l.w.l., included but Dragoon and Vorant II., the new Adele being under way, but not starting. The 1-rater Shrimp was matched against Badger, the fin-keel Folly and Bingo. The larger cabin cats had but three starters—Mary, the well-known Ellsworth boat, Weasel, a brand new boat designed by T. E. Ferris and built at Tom's River, and Molly Bawn. Weasel showed a very rough bottom, the seams having yelled; she carried a handsome mainsail made after Wilson & Griffin's new style, the cloths running in all directions.

Amorita had a complete suit of the same cut, Iroquois has a mainsail and Norota has two headsails. All of these sails seemed to stand well, taking a beautiful sweep throughout; so far as they have been tried, all of them new and just bent, they have been most successful.

The oddest boat in the fleet was the 15-footer Question, a square flat box, with a big centerboard, a flat deck but a few inches above the water, with a small square hole in it to carry a spinaker and a sandwich or two, a mainsail and a diminutive jib. The crew of two laid flat on the deck like the crew of an iceyacht in the car, and in the tide rips they were washed fore and aft. In marked contrast with them was the crew of the little fin-keel Trust Me, in the same class, the bold owner sailing alone, locking his tiller and running forward to set and take in spinaker. When they finished the race Question's crew drew up alongside the judges' boat in a state of complete exhaustion, being hardly able to stand or speak after four hours of continual drenching with rain and sea.

Penguin was in hard luck on Wednesday, being in collision with a steamer on her way up the East River and losing her bowsprit. She managed to ship a new one and to show up in time on Thursday morning. Ethel started from New York with a new boom, a miserable stick, which broke about a third of the way from the fore end before she reached Larchmont. One of her crew cleverly reduced the fracture and put it in splits in time for the start, afterward lashing on an oar when the splints threatened to go during the race. She finally won in her class. Folly had hard luck, towing over from Oyster Bay with barely time to get her number and make a late start, some eight minutes astern of her class, the 25-footers. As she crossed the line she was mistaken by the regatta committee for a 21-footer and ordered back, the signal for this class not having been given. After three or four peremptory hails from the committee boat she returned and laid about for some time before the committee discovered and rectified its mistake, when she started far astern of her class. With all of this handicap she finally won.

The courses selected, the wind being north, were the Red Springs and Parsonage Point course for all above Class 9; the four larger schooner classes sailing three rounds, 32¼ nautical miles, and all of the others sailing two rounds, 21½ miles. The other classes sailed the smaller and similar triangle, the first mark being half-way to the Red Spring Buoy and the second mark being the Scotch Caps Buoy, two rounds making 10¾ miles. The starting and finish line was off the mouth of Larchmont Harbor, two scows with flags being anchored, one plainly lettered "Southwest Spit Boat." The courses and classes with the series numbers, were displayed from the committee boat.

The fleet was started in four divisions, at 11:35, 11:43, 11:51 and 12:01, the latter being a one gun start for the 21 footers. All went over with spinaker booms to port, some setting spinakers and then taking them in only to set them again a few minutes later. Balloon jib topsails and balloon main topmast staysails were also set, though a few of the schooners were content with small main topmast staysails. The fleet was timed:

Queen Mab	11 36 24	Vorant II	11 46 00
Emerald	11 36 27	Badger	11 53 51
Elsemarie	11 37 20	Fairy	11 55 11
Katrina	11 37 44	Ione	11 55 16
Ramona	11 38 03	Feydeh	11 55 43
Amorita	11 38 32	Bingo	11 55 53
Iroquois	11 39 35	Trust Me	11 55 58
Mayflower	11 39 55	Punch	11 56 00
Constellation	11 39 55	Ramona	11 56 00
Loyal	11 39 55	Mary	11 56 00
Marguerita	11 39 55	Edna	11 56 00
Florida	11 39 55	Water Lily	11 56 00
Choctaw	11 44 30	Terrapin	11 56 00
Huron	11 46 00	Colleen	11 56 00

Uvira	11 46 00	Flounder	11 56 00
Minerva	11 46 00	Weasel	11 56 00
Dragoon	11 46 00	Annie F	11 56 00
Gossoon	11 46 00	Adele Rae	11 56 00
Penguin	11 46 00	Shrimp	11 56 00
Sasqua	11 46 00	Question	11 56 00
H. W. Beecher	11 46 00	Zelica	11 56 00
Gavilan	11 46 00	Ethel	11 56 00
Dorothy	11 46 00	Molly Bawn	11 56 00
Norota	11 46 00	Houri	12 01 00
Kathleen	11 46 00	Vaquero	12 01 00
Swirl	11 46 00	Celia	12 01 00
Eidolon	11 46 00	Folly	12 01 00

The wind from the north held but a short time, then coming from southwest and making a reach on starboard tack over the last of the first leg and a free reach over the second. Then it shifted to northwest again and made a close reach over the third leg. A number of the smaller boats managed to make a wrong turn and were sent back over the right course by messages from the regatta committee, wafted through an aluminum megaphone. The ending of the first round made a fine sight, in spite of the rain and haze, the long procession of yachts, large and small together, jibing at the southwest markboat. The times were:

Houri	1 26 25	Adele Rae	1 53 02
Vaquero	1 37 03	Trust Me	1 53 51
Fairy	1 37 28	Zelica	1 54 30
Folly	1 37 50	Weasel	1 55 08
Feydeh	1 39 55	Question	1 55 11
Mary	1 40 10	Caper	1 55 45
Ramona	1 42 51	Constellation	1 57 15
Badger	1 43 16	Iroquois	1 57 20
Celia	1 44 00	Uvira	1 58 34
Kittie	1 44 08	Mayflower	2 00 03
Molly Bawn	1 44 59	Ramona	2 00 20
Colleen	1 45 25	Katrina	2 00 25
Zelica	1 48 46	Huron	2 03 28
Punch	1 45 55	Gossoon	2 07 01
Edna	1 46 28	Minerva	2 10 09
Ethel	1 46 29	Loyal	2 13 41
Queen Mab	1 47 27	Eidolon	2 19 31
Emerald	1 47 35	Penguin	2 19 56
Bingo	1 48 06	Norota	2 20 50
Ione	1 48 24	Dragoon	2 25 10
Amorita	1 48 31	Choctaw	2 31 22
Shrimp	1 49 20	Vorant	2 34 02
Elsemarie	1 50 41	Infanta	2 39 39
Flounder	1 51 33	H. W. Beecher	2 59 45
Marguerite	1 52 10		

The second round was sailed with a free reach to the first mark, a beat to the second and a close reach in, the last boats being headed and having to make a short leg. The committee very wisely signaled the larger yachts to finish on this round. The times over the line were:

Fairy	2 47 20	Emerald	3 41 27
Houri	2 48 49	Amorita	3 46 53
Folly	1 52 07	Queen Mab	3 47 10
Vaquero	2 54 15	Marguerite	3 53 02
Mary	2 54 55	Elsemarie	3 55 41
Ramona	2 58 06	Uvira	4 05 53
Celia	3 06 54	Constellation	4 13 42
Adele Rae	3 08 43	Katrina	4 15 51
Ethel	3 12 35	Iroquois	4 19 46
Punch	3 12 38	Huron	4 21 56
Feydeh	3 14 14	Mayflower	4 23 58
Kittie	3 15 41	Ramona	4 26 24
Colleen	3 16 29	Gossoon	4 27 29
Edna	3 17 08	Minerva	4 33 12
Ione	3 20 41	Loyal	4 39 36
Terrapin	3 21 13	Norota	4 41 30
Shrimp	3 22 16	Penguin	4 44 36
Weasel	3 25 43	Dragoon	4 47 19
Badger	3 28 49	Eidolon	4 48 18
Flounder	3 30 31	Vorant	4 50 26
Bingo	3 30 42	Choctaw	4 51 13
Trust Me	3 38 06	Infanta	4 53 14
Question	3 38 50	Henry Ward Beecher	5 05 48

The official times were:

SCHOONERS—CLASS A—ALL OVER 90FT. RACING LENGTH.

	Length.	Elapsed.	Corrected.

Elsemarie, J. B. King	78.18	4 18 21	4 17 12

CLASS D—ALL OVER 60 AND NOT OVER 71FT.

Loyal, B. F. Sutton	64.51	5 01 36	5 01 36
Florida, F. A. Reid	63.36	Withdrew.	

SLOOPS, CUTTERS AND YAWLS—CLASS 2—ALL OVER 69 AND NOT OVER 77FT.

Katrina, George Work	76.08	4 38 07	4 38 07
Huron, E. S. Hatch	69.01	4 45 56	4 39 32

CLASS 3—SPECIAL.

Katrina, George Work	76.08	4 38 07	4 38 07
Queen Mab, Percy Chubb	53.28	4 10 46	4 06 22
Huron, E. S. Hatch	69.01	4 43 56	4 39 32

CLASS 6 (FLUSH DECK)—ALL OVER 43 AND NOT OVER 49FT.

Gossoon, L. V. Clark	47.83	4 41 29	4 41 29
Uvira, F. P. Sands	47.13	4 19 53	4 19 03
Minerva H. W. Bucknall	45.63	4 47 12	4 44 32

CLASS 6 (TRUNK CABINS), ALL OVER 43 AND NOT OVER 49FT.

Penguin, G. E. Brightson	48.90	4 58 36	4 58 36
Choctaw, T. L. Arnold	.. 46.30	5 06 43	5 03 39

Sloops and Cutters, Class 2.—Katrina beat Huron 1:25.

Sloops and Cutters, Special.—Queen Mab beat Katrina 31:45 and Huron 33:10.

Sloops and Cutters, Class 6 (Flush Deck).—Uvira beat Gossoon 22:28 and Minerva 25:29.

Sloops and Cutters, Class 6 (Trunk Cabin).—Penguin beat Choctaw 5:03.

Sloops and Cutters, Class 7.—Norota beat Eidolon 6:56.

Sloops and Cutters.—Infanta beat H. W. Beecher 10:30.

Sloops and Cutters, Class 9.—Feydeh won.

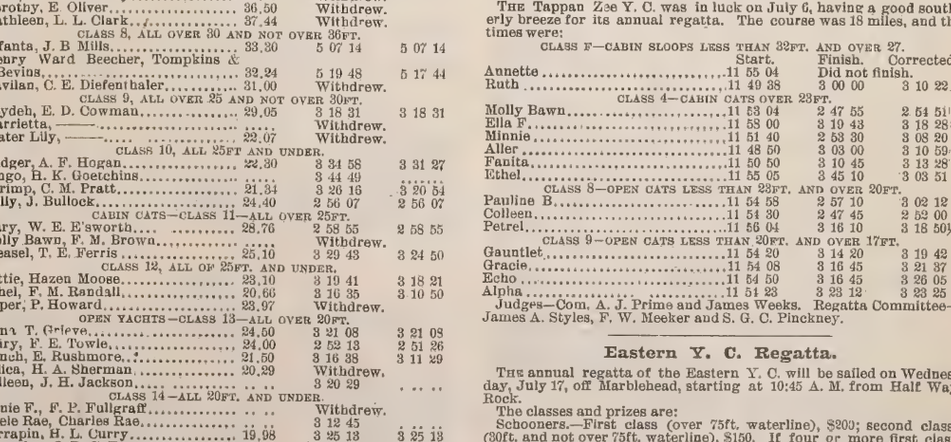
Sloops and Cutters, Class 10.—Folly beat Shrimp 24:47, Badger and Bingo.

Cabin Cats, Class 11.—Mary beat Weasel 25:55.

Cabin Cats, Class 12.—Ethel beat Kittie 7:31.

Open Yachts, Class 13.—Fancy beat Punch 20:03 and Edna 29:40.

Open Yachts, Class 14, Adele Rae wins on elapsed time, Terrapin second.



Open Yachts, Class 15.—Ramona, walk-over.

Thirty-four-Raters.—Dragoon beat Vorant 3:07.

Twenty-one-Footers.—Houri beat Vaquero 5:26 and Celia 18:05.

Half-Raters.—Trust Me beat Question 0:42.

Emerald wins the Colt cup. The large fleet was well handled by the regatta committee, Messrs. J. F. Lovejoy, Otto Sarony and Wilson Marshall. Among the large number of attendant yachts the new Seabury launch Levanter attracted the most attention from the model and workmanship on her hull and her clean running when speeded. Amorita made a fine race, judged by all the other large schooners, easily beating her older sister, Elsemarie. She came to grief, however, just after finishing, there being an incompatability between her draft—12ft.—and the rocks off Pagoda Point. The tide was out at the time and she soon came off without injury. Her elapsed time was 3m. 53s. slower than Emerald. Queen Mab not only beat the 70ft. Katrina by half an hour, but made the course in 5m 45s. more than Emerald and 1m. 54s. more than Amorita. The Fife cutter Uvira made remarkable time, beating Gossoon and Minerva very badly, while the three keel cutters were far ahead of the two centerboards in their class. Uvira is going wonderfully well this year, but her owner knows her to a nicety, and sailing her himself is getting all out of her that is in her, just as he did a few years ago with the old centerboard sloop Peri. It is a pleasure to see a yacht kept and sailed as Uvira is, and that by a Corinthian. Norota sailed a good race in her class; in fact, she outsailed Penguin and Choctaw in the class. The little Fife cutter Infanta, a boat that has been little heard of in the two years that she has been afloat, is doing very good work this year, this time easily beating one of the fast centerboard sloops of the old type. The little fin-keel Feydeh, a failure on her first trial last year, has been greatly improved, and is doing very well this season. Folly scored a very creditable win in her class, and Shrimp beat the two centerboard boats. Mary won easily from Weasel and Molly Bawn, the latter an old-time McGlehan sandbagger lately fitted with a cabin house. Ethel beat Kittie in spite of a broken boom—a very creditable performance. The old Fairy won again in her class, and Adele Rae in hers. Vorant II sailed a good race, but was beaten by Dragoon; the latter had her crew in uniform, making a pretty sight. Vaquero swung a new suit of Herreshoff crosscut sails, but was beaten by Houri. The two 15-footers had quite as much racing as they wanted, and Question's crew were in hard luck, too. Mr. Clark sailed a very good race, handling his boat entirely alone.

DEFENDER—TAKEN TWO HOURS AFTER LEAVING THE SHOP,—FROM A PHOTO BY R. B. BURCHARD, AMATEUR.

CLASS 7, ALL OVER 36 AND NOT OVER 43FT.

Eidolon, H. F. Crosby	41.70	5 02 18	5 01 35

Judges—Com. A. J. Prime and James Weeks. Regatta Committee—James A. Styles, F. W. Meeker and S. G. C. Pinckney.

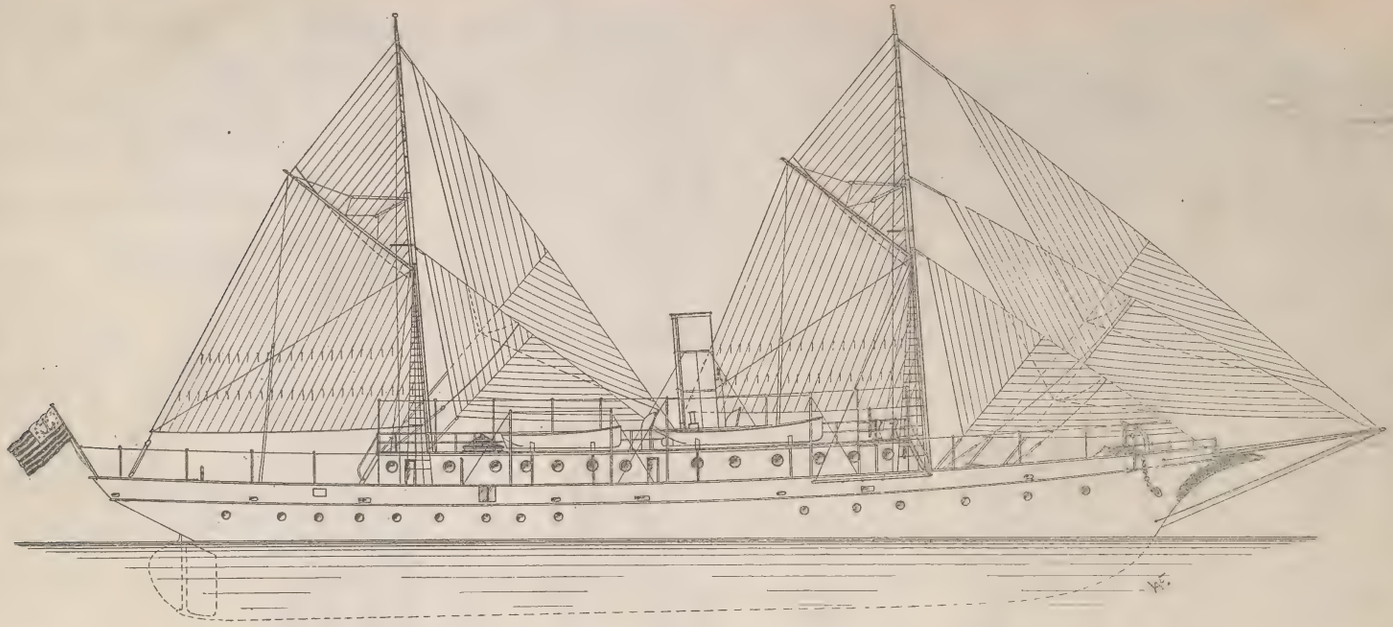
Eastern Y. C. Regatta.

THE annual regatta of the Eastern Y. C. will be sailed on Wednesday, July 17, off Marblehead, starting at 10:45 A. M. from Half Way Rock.

The classes and prizes are:

Schooners.—First class (over 75ft. waterline), $200; second class, (30ft. and not over 75ft. waterline), $150. If four or more first class schooners complete the course, a second prize of $75 will be awarded.

Sloops and Cutters.—First class (over 70ft. waterline), $200; second class, not over 70ft., $100; third class, not over 61ft., $100; fourth class, not over 53ft., $75; fifth class, not over 46ft., $75; sixth class, not over 40ft., $75; seventh class, not over 35ft., $75.



If four or more yachts start in any class, a second prize of $25 will be awarded in that class; if three or more cutters or sloops of first class start, both prizes will be increased.

The Puritan Cup will be awarded for the year to the yacht of the club making the best corrected time over the course sailed by the larger yachts.

Entries must be received in writing at the office of Mr. William S. Eaton, Jr., secretary of the club, 281 Franklin street, Boston, before 2 o'clock P. M. on July 16, or before 9 P. M. of July 16 at the club house.

"No yacht shall be entered for a race without her ownership, rig, and official measurement are on record with the secretary."—Racing Rule 2.

The measurer of the club is Mr. Henry Taggard, 264 Purchase street, Boston.

STEAM YACHT PEREGRINE.—DESIGNED BY C. B. HANSCOM FOR R. H. WHITE, 1895.

The Steam Yacht Peregrine.

THE steam yacht Peregrine is now building, by the Bath Iron Works, of Bath, Me., for Mr. R. H. White, of Boston, Mass., from designs by Mr. Charles Ridgely Hanscom, of Bath, Me. She is a steel, single screw, schooner rigged steam yacht of the following dimensions :—

Length over all	158ft. 3in.
L. W. L.	131ft. 0in.
Beam, extreme	23ft. 0in.
Depth of hold	13ft. 0in.
Mean draft	10ft. 0in.
Extreme Draft	10ft. 9in.

The accommodation comprises every requisite to insure comfort and convenience, and all the decorations and fittings are designed to be elegant, efficient and tasteful.

The principal feature of the main deck is a large mahogany deck house 72ft. long, with an average width of about 13ft. At the forward end of this house is the captain's stateroom, about 8ft. long, finished in handsome paneled white mahogany, with white enamel ceiling, and furnished with large berth, desk, washstand, wardrobe, sofa and convenient lockers. Abaft this room on the port side is a stairway leading below to the officers' quarters. Then comes the pantry, 5ft. long and the width of the house, and this room is finished in ivory white, with mahogany trimmings and fitted with all necessary dish racks, dressers, sinks, etc. A dumb waiter will be arranged between this room and the officers' mess-room. The galley is directly aft of the pantry, and is a commodious and well arranged room 10ft. long, with red tile floor and white tiled sides, the ceiling being finished in ash. A passage 30in. wide, on the starboard side, leads from the galley to the dining room aft, thus maintaining communication with the forward and after parts of the vessel without exposure to the weather. Between the boiler and engine hatches is a room 4ft. by 6ft. for the stowage of deck chairs, rugs, etc., on the starboard side, and a large deck toilet-room on the port side.

Abaft the engine hatch is the dining room, 12ft. long and the width of the house. This room will be finished in selected paneled oak, and a handsome large sideboard and dish closet occupies the forward end. The height in the clear is 6ft. 6in., and a large circular skylight is placed directly over the dining table. There will be seating accommodation at the table for ten people. Connected with the dining room by large sliding doors is the social hall. This room is 11ft. long, and a mahogany stairway of elaborate design leads below to the main saloon. The owner's desk is at the forward end, and transom seats are fitted on each side. The finish is in harmony with the dining room. Large circular sliding lights or air ports, 16in. in diameter, give light and air to the living compartments of this deck house, and these lights have proved a great improvement over the ordinary swinging ones.

Hand rails will be worked on the outside of the house for convenience in rough weather. The galley and machinery hatches are completely cased in with steel as a safeguard against fire. The top of the deck house forms a clear promenade for the owner and his guests, the smokestack and skylights to the dining room, engine room and galley being the only obstructions.

There is a bridge at the forward end, also the steering stand, binnacle, chart table, search light, etc. Brass rail stanchions are worked around the top of the house, and awnings will be placed forward and aft.

Abaft the deck house is a large mahogany skylight which gives light and ventilation to the main saloon below. There is a large transom seat directly aft and a Bath Iron Works patent hand screw steerer. A raised forecastle deck is placed forward, of the height of the rail.

The compartment forward of the collision bulkhead on the lower deck is to be used as a lamp and oil room. Then comes the crew's quarters, which are quite roomy and have excellent accommodations for nine men. Abaft the crew space are the officers' quarters. Three staterooms are located on the starboard side, the forward one for the chief engineer, then one for the cook and steward, while the third will be fitted up for the mate and assistant engineer.

The mess room is on the port side, also the w. c. and dish lockers, and a transom seat is fitted so as to make beds for two boys. An ice room occupies the aft end of the mess room.

Abaft the machinery spaces are the owner's and guests quarters. At the forward end are the toilet and bath rooms, handsomely and conveniently appointed. These rooms are to be wainscoted with white tile 4ft. high and paneled in white mahogany to ceiling. Directly aft are two large staterooms for the owner. These rooms are to be finished in paneled white enameled pine with a little gold leaf decoration. The beds are extra large and the rooms are well furnished with sofas, bureaus, wardrobes, etc.

Aft of these staterooms and communicating with them is the main saloon, a beautiful roomy compartment 17ft. long and the full width of the ship. The height in the clear is nearly 7ft., and this room is to be furnished in handsome selected mahogany with ivory white ceiling, and fitted up in the most modern and artistic style. A staircase of carved mahogany leads from this saloon to the social hall above. A piano, table, bookcase, shelves and lockers are located in this room to the best advantage. At the aft end of the saloon are two guests' staterooms finished in white mahogany with bird's-eye maple panels. These rooms are furnished similiar to the owner's staterooms, and they will undoubtedly prove very desirable compartments. Leading from these rooms is the guests' toilet room, finished same as the guests' stateroom, and complete in all its appointments

In the forward hold is located the cold storage room and large compartments for stores, and in the after hold are the engineer's stores, wine room and three fresh-water tanks with a capacity of about 2,500 gallons of water. A large tank is also located amidships with a capacity of 3,500 gallons of water, and small tanks are fitted in the engine room for hot and cold, salt and fresh water.

The ventilation and plumbing systems are designed to be most complete and efficient. A donkey boiler will be placed in the boiler room for steam heating and auxiliary purposes. A Williamson steam steerer and a Hyde patent steam windlass are also fitted. The vessel will be lighted throughout by electricity, the dynamo being placed in the engine room, and a 12in. search light and display lights for the rigging will be fitted. There will also be efficient telephone and electric bell communication between various parts of the ship.

The Peregrine will carry the following small boats: One 23ft. lifeboat, one 23ft. gig, one 23ft. naphtha launch and one 16ft. dinghy. She has two pole masts, each being about 64ft. long above deck, and is rigged as a two-masted schooner, the total sail area being about 3,500sq. ft.

The motive power consists of a vertical triple expansion engine, with cylinders 14, 21 and 34½in. diameter respectively, and a stroke of 22in. Piston valves are used throughout, and the high pressure cylinder is placed in the center, the intermediate forward and the low aft. The condenser forms part of the framing at the back of the engine, and the cylinders are well supported and braced by steel columns. The propeller is of manganese bronze, four-bladed, with a diameter of 8ft. 3in. and a pitch of about 10ft. There are two Almy water-tube boilers, built for a working pressure of 185lbs. each, occupying a space 83in. long, 83in. wide and 104in. high. The grate surface is 65sq. ft., and the heating surface about 2,500sq. ft. The designed indicated horse power is 800, and this will give the vessel a speed of over 14 knots.

The Peregrine is a very commodious yacht for her size, as will be seen from the above minute description, and with her large deck house so efficiently subdivided, her accommodations are quite equal to that of most steam yachts fully 40ft. longer. She is being built under the rules of the American Shipmasters' Association for the highest class, and when completed she will be commanded by Capt. Theodore M. Bunker.

Mr. Charles Ridgely Hanscom, the designer of the Peregrine, has given considerable study to this class of vessels, and he is well known as a man of new ideas.

It will be remembered that Mr. Hanscom is the designer of the steam yacht Eleanor, constructed last year by the same shipbuilding firm for Mr. William Slater, of Norwich, Conn., and which is now on the Pacific Ocean on a two years' cruise around the world.

The Eleanor is a handsomely appointed vessel, and has proved herself a very staunch and seaworthy craft. Wherever she has been she has received considerable attention, and the foreign press all agree in acknowledging her to be a triumph of American yacht building.

American Y. C.

MILTON POINT—LONG ISLAND SOUND.

Friday, July 5.

THE American Y. C. sailed its annual sailing regatta on July 5, the steam regatta being a thing of the past in spite of the club's $10,000 challenge cup. The day was stormy with heavy rain and S.E. wind, and but few yachts started, though there was some good racing. The course was from off Milton Point, around white spar buoy off Parsonage Point; distance 1⅝ nautical miles. Course E.N.E., leaving same on starboard hand, thence around white spar buoy off Red Springs Point, Hempstead Harbor; distance 3⅞ nautical miles. Course south, leaving same on starboard hand, thence around southwesterly stakeboat off Larchmont, flying American Y. C. flag; distance 3⅞ miles. Course N.W., leaving same on starboard hand, thence across finish line off Milton Point; distance 1⅜ nautical miles. Course E.N.E. Total distance of course, 10¾ nautical miles.

The schooners sailed three times around this course; the 36ft., 34ft. and cats twice around and all other classes once around this course.

The start was timed: Marguerite 12:12:31, Elsemarie 12:13:24, Dragoon 12:21:58, Fannie 12:22:18, Infanta 12:22:19, Vorant II. 12:23:09, Kittie 12:23:15, Mary 12:33:40; Shrimp and Vaquero handicapped 2m. 30s.

One and even two reefs were in order. Dragoon sprung her bowsprit and gave up early in the race, after sailing for a time on her side. The times were:

Riverside Y. C.

RIVERSIDE—LONG ISLAND SOUND.

Saturday, July 6.

THE Riverside Y. C. sailed its annual regatta on July 6 with a very good fleet of starters, but a poor breeze, there being a flat calm for a time. The courses were:

Course A—Sailed by all yachts over the 30ft. class. From a line marked by black gas buoy off eastern end of Little Captain's Island, and stake boat east of it, around white spar buoy, course about south by west, thence around stake boat, course east by north one-half north, and thence around home stake boat, northwest one-quarter west, keeping same on port hand, eighteen nautical miles, two rounds.

Course B—Sailed by 30ft., 25ft. and 21ft. special class. From starting point around White Spar Buoy, course S. by W., thence around stake boat, course E. by N., ½ N., thence around home stake boat, N. W., ¼ W., keeping same on port hand, thence around southeasterly stake boat and return, the finish being across starting line from S. E. to N. W., fifteen nautical miles.

Course C—For all other classes. From starting point around White Spar Buoy, course S. by W.; thence around stake boat, course E. by N., ½ north, and thence to home stake boat, nine nautical miles.

The official times were:

	Elapsed.	Corrected
SLOOPS—60FT. CLASS.		Finish.
Whitby, H. Tyson		5 47 57
Eleanor, A. S. Williams		5 38 14

Vorant II., G. G. Tyson	4 56 49	4 56 48
21-FOOTERS.		
Vaquero, W. G. Brokaw	3 50 18	3 50 18

The winners were Eleanor, Uvira, Penguin, Norota, Infanta, Americus, Almira, Ethel, Sirene, Punch (probably on corrected time), Chippie, Dragoon and Vaquero.

Regatta committee—W. J. Selleck, S. Dewey Pierce, Edwin Bluney and George Clark.

After the race Eleanor ran ashore, but was hauled off. The steamer Aurora carried the members and guests, and in making a landing the crowd proved too heavy for the gangplank and it broke, throwing a lady and gentleman into the water. They were soon rescued without injury.

Plymouth Y. C.

PLYMOUTH, MASS.—PLYMOUTH HARBOR.

Thursday, July 4.

THE Plymouth Y. C. had bad weather for its second regatta on July 4, the start being postponed until late on account of a calm, the wind rising during the race to almost a gale. Nancy Hanks went up a class and then won. The full times were:

	Length.	Elapsed.	Corrected.

Shrewsbury Y. C.

RED BANK—SHREWSBURY RIVER.

Thursday, July 4.

THE third annual regatta of the Shrewsbury Y. C. was sailed at Red Bank on July 4. Although the day was a dreary one, showers of rain occurring at intervals of five minutes, the usual number of ladies and their escorts filled the balconies and club house. The start and finish lines were in plain view of the club house. The regular club courses were sailed.

Strange to say the cabin sloop and open jib and mainsail classes did not fill. A class was made for cabin cats that came near not filling also. Mr. Randall's Allegro, that had been entered, met with an accident in crossing the bay, having run into a log, and she was with much difficulty kept afloat until she reached Red Bank. It was out of the question for her to race, however. The committee spied a newcomer in the shape of the cat Mollie Mae, and she was pressed into service, and so they succeeded in making a race for the class.

The usual number of 22ft. flyers came to the line, although it was regretted that Mr. Sawyer's Arrow and ex-Chief Byrnes's Nancy did not start, the former being engaged at Larchmont, while the latter had his usual excuse of not being able to get a crew. Undine, sailed by her owner, Clinton R. James, won handily, beating her nearest competitor over 8m.

The preparatory signal was given at 10:45 in a downpour of rain, and the starting signal at 10:50. Several of the boats were handicapped, handing F. R. Smith's Irma T. over 4 minutes, and Mr. Haughwout's Tempest over 10 minutes. The following are the full times:

CLASS A—CABIN CATBOATS.

	Length.	Elapsed.	Corrected.
Mollie Mae, R. C. Greier	22.06	. . ..	. . ..
Drift, T. E. DeSotolongo	22.02	2 29 19	1 53 53

CLASS D—CAT-RIGGED, 23FT. AND OVER.

Tempest, Wm. M. Haughwout	22.10	. . ..	. . ..
Irma T., F. R. Smith	22.00	2 45 27	2 09 48
Jessie, A. B. Murray	21.11	Withdrew.	
Undine, C. R. James	21.10	2 27 08	2 01 36
Shrewsbury, C. F. Wagner	21.09	2 48 16	2 12 17
Ulunda, H. L. Powers	21.05	2 47 09	2 10 44
Volsung	21.11	Withdrew.	

CLASS E—CAT-RIGGED, 18 TO 21FT.

Crescent, G. J. Gillig	20.07	2 00 40	1 23 06
Baby, W. L. Bass	19.11	Withdrew.	
Martha, C. M. Washington	19.11	2 25 21	1 46 49
Annie B., C. E. Burd	19.11	1 52 19	1 13 47
Dione, Frank Taylor	19.10½	2 23 34	1 44 59
Nereid (1), Knapp & Houston	19.06	2 02 59	1 23 29
Anna, W. B. Parsons	18.03	Withdrew.	

CLASS F—CAT-RIGGED, UNDER 18FT.

Pauline, J. F. James, Jr.	17.11½	2 09 55	1 28 16
Alice, F. W. Cornish	17.11	2 14 38	1 32 55
Lusson, A. E. Philbrick	17.09⅓	2 03 04	1 21 10
Nereid (2), G. S. Brown	16.07	Withdrew.	
Clytie, M. P. Fisher	15.11	Withdrew.	
Wasp, J. M. Hance	15.01½	Withdrew.	

The winners are: Class A, Drift; Class D, Undine first, Irma T. second; Class E, Annie B. first, Crescent second; Class F, Lusson first, Pauline second.

The judges were Geo. E. Gartland, New Jersey Y. C.; Henry Clay Miner, Jr., and George Williams, Shrewsbury Y. C. The regatta committee included Clinton R. James, Henry C. Miner, Jr., and Carl Wagner.

After the race the prizes—handsome silver plate—were presented to the winners by Mr. John F. James. In the evening the club house was illuminated and there was dancing.

Indian Harbor Y. C.

GREENWICH—LONG ISLAND SOUND.

Monday, July 1.

THE special race of the Indian Harbor Y. C. on July 1 furnished good sport for the few yachts which started, many of the entries failing to show up at the line. The light northerly wind was by no means what was wanted, but it served for a very good race between the two 34-footers, Dragoon and Vorant II. The new Sibbick 1-rater, Shrimp, has been canvassed and ballasted to get her into the 21ft. class, though smaller than the Hereshoff 21-footers, and she started against Celia. The course for the 34-footers was from off Little Captain's Island around Center Island Buoy, back over the starting line and out around the Matinnicock Buoy and back, 20¼ nautical miles. The others sailed from Little Captain's Island around Matinnicock Buoy and back, 10⅝ miles.

The fleet was started from the gun, in three classes, at 12:25, 12:30 and 12:35, but the yachts were slow in getting away, being timed:

Dragoon	12 28 10	Teddy	12 36 27
Vorant II.	12 31 10	Celia	12 36 56
Minnehaha	12 32 30	Shrimp	12 37 51
Mischief	12 34 00	Flounder	12 38 55
Kittie	12 35 28		

Teddy and Flounder are old boats, no new boats starting in the 20ft. class.

Reaching off for Center Island Buoy, Dragoon had a start of 3m., which she increased to 5m. 20s., the times being:

Dragoon	1 38 30	Vorant II.	1 34 00

On the beat back, a long and short leg, Vorant II. picked up, the times at the line being:

Dragoon	2 35 30	Vorant II.	2 39 53

The third leg, to Matinnicock, was run with spinakers to starboard, there being little loss or gain, the times being:

Dragoon	3 22 55	Vorant II	3 27 33

The last leg was dead to windward in a light breeze. Vorant II. made a wonderful gain on Dragoon, 13m., and won easily. The other classes were not timed at Matinnicock, but the order was: Mary, Celia, Kittie, Shrimp, Minnehaha, Mischief, Flounder, Teddy. The full times were:

SPECIAL—34FT. RACING CLASS.

	Length.	Finish.	Elapsed.	Corrected.
Dragoon, F. M. Freeman	34.00	5 02 40	4 37 40	4 37 40
Vorant II., G. G. Tyson	34.00	4 54 09	4 29 09	4 29 09

CABIN CATS—30FT. CLASS.

Mary, W. E. Elsworth	28.76	3 42 15	3 12 15	3 12 15

CABIN CATS—25FT. CLASS.

Kittie, Hazen Morse	23.10	3 50 41	3 20 41	3 06 55
Minnehaha, F. N. Monjo	....	5 53 30	5 28 30	Not timed.
Mischief, D. M. Winne	....	5 57 30	5 30 30	Not timed.

SPECIAL—21FT. CLASS.

Celia, C. A. Gould	21.00	3 46 40	3 11 40	3 11 40
Shrimp, C. M. Pratt	19.00	4 11 12	3 36 12	3 36 12

20FT. RACING LENGTH CLASS.

Flounder, J. B. C. Tappan	....	....	Withdrew.	
Teddy, G. W. Pfeiffer	....	....	Withdrew.	

The Tyson cup for 20-footers was not awarded. Shrimp was very badly beaten by Celia. The regatta committee included Messrs. F. Bowne Jones, D. W. Merritt and Charles E. McManus.

Fox Lake Y. C.

FOX LAKE, ILL.

Saturday, June 29.

THE second regatta of the Fox Lake Y. C. was sailed on June 29 in a variable S.E. wind, the times being:

Duxbury Y. C.

DUXBURY, MASS—DUXBURY BAY.

Saturday, July 6.

THE second race of the new Duxbury Y. C. was sailed on July 6 in a gale from the south, most of the boats being reefed. The race in the second class was for the cup presented by Miss Fanny Davenport, for catboats not over 21ft. sailing length, owned between Cape Cod and Cape Ann; to be the property of a yacht winning it three times in four races. The race in this class was specially exciting, Cleopatra leading for a time, but being headed by Fanny D. and losing her mast. The times were:

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Harbinger, C. F. Bache	28.00	1 51 44	1 16 59

Cygnet fouled a mark and was disqualified.

Excelsior Y. C.

LAKE MINNETONKA.

Thursday, July 4.

THE Excelsior Y. C., of Excelsior, Lake Minnetonka, has lately been reorganized with the following officers: Com., Prof. William Cross; Vice-Com., L. S. Gillette; Treas., L. Perkins; Sec., Albert Lyman.

A race was sailed on July 4 in a very strong south wind, the times being:

	Start.	Finish.	Corrected.
Slipener	4 19 12	5 16 45	0 57 33
Arrow	4 20 19	5 22 10	1 01 51
Victoria	4 15 00	5 22 45	1 07 45
Lorelei	4 23 01	5 22 15	0 59 14

Boston City Regatta.

BOSTON—BOSTON HARBOR.

Thursday, July 4.

THE annual regatta for prizes, given by the City of Boston, was sailed on July 4, proving a great success. The wind was moderate at the start, from east, but freshened to a reefing breeze, making a fine race. The times were as follows, subject to a number of protests to be decided on July 10:

CLASS A—CENTERBOARDS.

Cupid	10 22 30	12 43 43	2 21 13	2 10 05

Alpha parted her throat halliards during the race.

Jersey City Y. C.

COMMUNIPAW—NEW YORK BAY.

Thursday, July 4.

THE New Jersey Y. C. sailed its thirty-seventh annual regatta on July 4 with poor results, the wind and rain preventing most of the entries from starting. The times were:

CLASS B—CABIN SLOOPS.

	Start.	Finish.
Eleanor, P. W. Figueira	11 20 30	3 55 25

CLASS C—CABIN SLOOPS.

Forsythe, Alex. Roe	11 27 17	4 33 00

CLASS D—CABIN SLOOPS.

Mariposa, Dr. O. F. Coe	11 24 56	2 53 54

CLASS F—OPEN CATBOATS.

Eureka, William Durham	11 37 24	1 04 25

CLASS G—YAWLS.

Bessie, Garret Van Horne	11 20 23	3 15 09

The regatta committee comprised P. W. Figueira, Dr. O. F. Coe and J. V. Woolcott. The judges were R. J. Hill, James H. Love and Gustav Blau, Jr.

Sewaren Y. C.

SEWAREN—STATEN ISLAND SOUND.

Thursday, July 4.

THE race of the Sewaren Land and Water Club for the Sewaren trophy was postponed on July 4, there being no wind, but late in the afternoon a special race was started for prizes offered by the commodore and the chairman of the house committee the course being 5 miles. The times were:

	Length.	Elapsed.	Corrected.
Fury	21.01	0 59 00	0 59 00
Gracie	16.00	1 02 40	1 00 07¼
Lotona	19.10	1 01 30	1 00 52½
Ripple	19.00	1 03 20	1 02 17½

Penobscot Y. C.

PENOBSCOT—PENOBSCOT BAY.

Saturday, July 6.

THE second race of the Penobscot Y. C. in a fresh S.W. breeze, the times being:

FISHERMEN'S CLASS.

	Elapsed.	Corrected.
Viola, M. A. Rice	3 22 35	3 22 35
Acme	3 39 35	3 30 33
Aurora, John Lewis	3 42 05	3 37 17
Comet, John Fuller	Did not finish.	

THIRD CLASS

Surf, C. E. McIntyre	2 57 25	2 57 25
Elonia, C. E. Tuttle	Did not finish.	

FOURTH CLASS.

Snarleyow, C. G. Weld	1 42 40	1 40 13
Marguerite, David Little	1 43 38	1 42 38
Tita, F. H. Gardiner	1 48 03	1 44 54
Emona, Jackson Richardson	1 43 13	1 42 36

Emona was disqualified for fouling a mark. Acme broke her gaff, but still won the Bay Point cup.

Cape Cod Y. C.

EAST DENNIS—CAPE COD BAY.

Saturday, July 6.

THE second race of the Cape Cod Y. C., postponed from June 29, was sailed in a strong S.W. breeze, the times being:

	Length.	Elapsed.	Corrected.
Addie, R. C. Nickerson	25.03	2 05 35	1 33 47
City of Chicago, F. F. Crosby	25.06	2 08 38	1 35 06
Eclipse, H. H. Sears	25.09	2 08 38	1 37 22

Spruce IV.

MR. J. ARTHUR BRAND'S new Spruce IV. sailed her first race on June 22, in the Hamble branch of the Minima Y. C. She won second place in a fleet of five, in spite of twice taking the ground; being beaten 1m. 31s. by the Viva. She is described as fast running and reaching, but not so good to windward. The wind was fresh and true through the race.

Canoeing.

New York C. C. Challenge Cup.

THE sixth series of races for the international challenge cup established by the New York C. C. in 1886 was sailed last week on Gravesend Bay, the challenger being Charles E. Archbald, of the Corinthian Sailing Club, of Montreal, with his canoe Mab, and the defender, selected after the races of the Marine and Field Club on June 29, Paul Butler, of the Vesper B. C. of Lowell, an associate member of the New York C. C., in his canoe Wasp. Both of the canoes are well known to canoeists as old racers, having been frequently seen at the meets. The Marine and Field Club very hospitably offered their club house, boat house and grounds to the New York C. C. for the races, the location offering a better course. This was a 3-mile triangle on Gravesend Bay, sailed three times, 9 miles.

The first race took place on July 4 in very bad weather, a cold rain and fluky and variable wind. Mab started just before the gun and was compelled to recross, Wasp crossing at 10:55:05, just 5s. after the gun, and Mab at 10:55:50. The start was made with sheets trimmed for a reach, but soon a shift of wind made the first leg to windward, Mab losing a little through the greater distance she had to beat. The first round was timed:

		Elapsed.
Wasp	11 22 12	0 27 12
Mab	11 24 12	0 29 12

Mab gained on the first two legs of the second round, but capsized at the second mark; the round being timed:

		Elapsed.
Wasp	11 49 41	0 54 41
Mab	11 51 18	0 56 18

On the last round there was more wind, and Mab gained; but once more capsized at the second mark, losing much time. Her mizen sheets fouled, and she went over a second time after one righting. The race finished:

		Elapsed.
Wasp	12 12 16	1 17 16
Mab	12 15 38	1 20 28

A remarkable incident of the race was the courtesy of the captain of the tugboat W. E. Ferguson, with a tow of three barges, who went to a great deal of trouble to avoid crossing the course when informed that a race was being sailed.

The second race was sailed on July 5 in a strong and puffy southeast wind, over the same course. Wasp carried a small rig, 115ft. reefed down to 85ft.; Mab carried about 90ft. The first leg was a free reach, the two crossing the line together at the gun. They sailed very fast, Wasp gaining a little, having a lead of 10s. at the first mark. The second leg was to windward and Mab made up her loss, but capsized and again lost time, Wasp also nearly being over. On the reach in Wasp gained, the round being timed: Wasp 4:48:17, Mab 4:48:50. Wasp lost all of her lead by a capsize at the turn in jibing, Mab making a clean jibe and running ahead. She failed to hold her advantage, however, and had but 5s. lead when they came on the wind. Wasp passed her at the first mark and had a lead of 41s. at the end of the windward leg. On the home leg Wasp's rudder jammed and she became unmanageble, capsizing twice. After righting her the second time Mr. Butler withdrew, being tired out. Mab finished the second round at 5:16:05 and the last round at 5:43:33, the elapsed time being: First round 25.17, second round 53.15, third round 1.22.43.

The third race was sailed on July 6, the wind being light from the south and the water smooth. Wasp carried 157 square feet of sail and Mab 165. The start was made at 3:30:30, Wasp crossing very promptly and Mab about 30secs. late. The first leg was to windward and Wasp gained, having a lead of 2min. 50sec. at the first mark. She continued to gain on the free reach of the second leg, the round being finished:

		Elapsed.
Wasp	4 12 53	42 03
Mab	4 24 16	53 46

Mab was in very hard luck, her crew slipping off his piazza just at the turn in trying to right her, and losing much time in regaining his seat and making the turn.

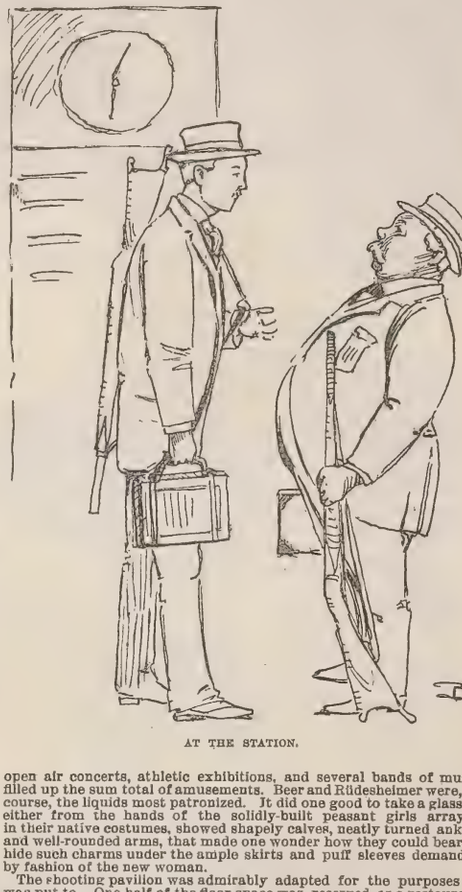
The second round was sailed slowly in a falling wind, the turn being timed: Wasp 4:54:50. Mab 5:04:14.

The last round was finished:

		Elapsed.
Wasp	5 38 16	2 07 46
Mab	6 01 17	2 40 47

Mr. Butler was warmly greeted by his friends ashore.

This series of races was marked by the number of capsizes and the delay which they caused, both contestants suffering in this respect. If our recollection is correct, in none of the previous five races has a canoe capsized, though all of them were sailed either just inside of the Narrows or on Gravesend Bay. The weather made the first two races of the present series unusually hard on the contestants.



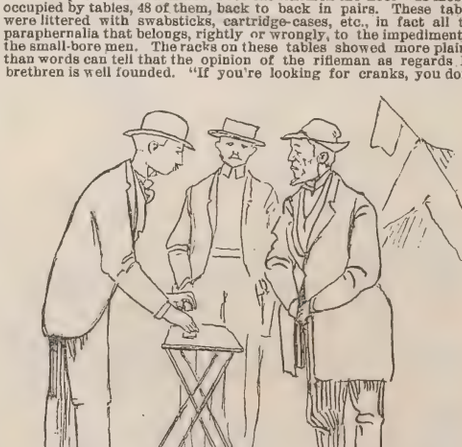
Rifle Range and Gallery.

The National Schuetzenfest.

THE National Schuetzenfest, which has just been brought to a close, has proved the greatest gathering of skilled marksmen ever coming together in this country. There has been no question as to its management, and the fact that somewhere about 500 riflemen have taken part in the proceedings goes to show that the management has had no sinecure.

On June 30, the opening day, great crowds visited the scene, Glendale Park, L. I. On Monday, Tuesday and Wednesday, also, the presence of a large number of visitors gave promise of a banner day on the Glorious Fourth of July. Weather prophet Dunn promised fine weather for the Fourth, but he didn't guess correctly. There was something off the Atlantic coast that he did not wot of, and that something came ashore on Thursday morning and caused heaps of trouble. If the sun showed itself at all on that day it was during those hours when the small boy was getting rid of his first fire-crackers and while we were asleep. Dull, gray skies greeted those who breakfasted at 8:30. By 11 A. M. rain had set in in real earnest and Glendale Park was anything but a pleasure resort. Rain! It just poured! At times it obscured the targets, but still the marksmen were not disheartened. Late in the afternoon the wind played havoc with scores and shooting was practically discontinued. A good-sized crowd of visitors was present, but it was only just large enough to make those who had rented saloon, restaurant and amusement privileges (at exorbitant rates, it must be said) all the more wretched when they thought of "what might have been."

The arrangements at Glendale Park were capital. Trains deposited shooters and visitors right at the entrance, and two minutes' walk brought one to the main shooting pavilion, situated on the right hand side of "Weber Avenue," as the road was called which passed up the eastern side of the park. Weber Avenue, beyond the shooting pavilion, was a miniature Midway Plaisance. It was there that the average visitors passed their time, finding lots of opportunities to part with nimble nickels and dimes in return for the fleeting joys of fishing in a fish-pond that produced more collar buttons apparently than anything else; or in pegging baseballs at an astute, dodging nigger's cranium; or in bucking the tiger in the shape of a wheel of fortune—"the only square game on the Island." Early in the week fakirs with more deadly intent on the dollars were to be found, but these were cleared out as soon as discovered and complaint was made. Punch and Judy,



AT THE STATION.

open air concerts, athletic exhibitions, and several bands of music filled up the sum total of amusements. Beer and Rüdesheimer were, of course, the liquids most patronized. It did one good to take a glass of either from the hands of the solidly-built peasant girls arrayed in their native costumes, showed shapely calves, neatly turned ankles and well-rounded arms, that made one wonder how they could bear to hide such charms under the ample skirts and puff sleeves demanded by fashion of the new woman.

The shooting pavilion was admirably adapted for the purposes it was put to. One-half of the floor space was reserved as a restaurant and as a promenade from which visitors could see all there was to be seen of the shooting. This portion of the floor space was raised some 18 inches or so above the other half, which was sacred to the use of marksmen, the management, their aides and newspaper men. It would be just as well now to pay a tribute to the management for the manner in which they handled the pressmen. So far as we could see everything was done that could be done to aid the newspaper men in gathering up what news there was floating around. This was no small thing when the newsgatherer was a novice in the art of shooting with the small bores.

In the space reserved as above for the riflemen the floor was mostly occupied by tables, 48 of them, back to back in pairs. These tables were littered with swabsticks, cartridge-cases, etc., in fact all the paraphernalia that belongs, rightly or wrongly, to the impediment of the small-bore men. The racks on these tables showed more plainly than words can tell that the opinion of the rifleman as regards his brethren is well founded. "If you're looking for cranks, you don't

ONE OF THE GAMES.

want to go outside a meeting like this," said a popular member of a local Schuetzen Verein to us one day last week, "look at the variety of hand rests used!" He pointed out such a multiplicity of devices for supporting the rifle with the left hand that it began to appear as if the man who devised a new one that was of any account deserved properly to be crowned King of the Fest. To a novice, and to one accustomed to the long forearm of the scattergun crank, these rests were very upsetting. He began to realize that the men who talked smokeless powders, shells, "field" or "trap" wads, hammer or hammerless guns, Tatham's or other shot, sights and recoil pads, did not have a monopoly in the field of gun cranks. There are others and—we've found some of them.

The firing stands were necessarily unsatisfactory from the looker-on's point of view. The rifleman leveled his rifle through an open window, as it were. A few yards in front of him was a lofty and solid wall of blocks of lumber, loopholed; each loophole being edged with sheet iron. Beyond this wall was another, somewhat similar in get up, but with wider apertures. Beyond this again was the target shed, 200yds. from the firing point. The intervening loopholed walls were for the purpose of catching wild bullets. That they were needed was shown by the marks here and there on the sheet iron casing. Each stand, each of the two loopholes and each target was numbered; there could be no mistake on the part of any shooter as to his own target. As soon as he had fired, the scorer, who stood alongside of him, pressed an electric button; this signified to the marker of that target that a shot had been fired and notified him to point out its location and value. As a general thing, one required a neck like a cormorant to get a glimpse of the flag when both shooter and scorer were looking to see the value of the shot. As a rule, it was far easier, and more satisfactory too, to stand back and judge from the expression of the shooter's face as he left the score the effect of his last shot: Red flag—a peace-upon-earth-good-will-toward-men look on his face; blue flag—not-so-dusty-after-all; white flag—a that-won't-do sort of expression; nothing at all—a where-abouts-was-that-anyway kind of a twist to the mouth. It was dead easy to score when once you'd caught on.

Although the majority of rifles were of standard makes, there were not a few that were the product of the skill and ingenuity of their owners. Among this number was the weapon handled by W. Milton Farrow, of Morgantown, W. Va. Mr. Farrow, who holds the world's championship at long ranges, has won honors on the other side of the Atlantic with the American team. His rifle is peculiar in that all the mechanism, lock, triggers and hammer, are contained in the lever and drop down out of the way, permitting easy and effective cleaning. There is nothing complicated about it; everything is remarkably simple. Judge E. J. Cram, of Biddeford, Me., on the other hand, has a truly remarkable weapon. Its very ponderousness attracts attention, while its homely appearance (His Honor will please excuse us!) produces a smile that is almost more than a movement of the muscles around the corners of one's mouth. Being a man of powerful build, the judge requires a heavy weapon. He's got one. It weighs about 27lbs., more or less; probably more, from its general appearance. The following description taken from the New York *Times* of July 5 can't be improved upon:

"The gun has a rifle barrel inclosed in a 2¼in. gas pipe. The gas pipe is filled with lead, so as to give it the required weight. There is no rest. The weapon has an aperture sight, which is tied upon the barrel with a piece of twine. A fragment of a three-cornered file is also tied on the rifle, this doing the service of a spirit level. The Judge loads his own cartridges on the shooting stand and uses a bullet with two tails to it, which, being something of a wag, he calls the feathers. When he gets a swelled shell in the chamber, and if the leverage of the lock is not strong enough to force it into the breech block, he drives the breech block down with the butt of his re-and decapper. The gun was tried yesterday for the first time and the Judge expressed himself as perfectly satisfied with it. He broke the firing pin after firing twenty-one shots. While he was demonstrating the working of the weapon to several riflemen the gun made an average of two misses out of three attempts to shoot. Judge Cram works industriously while he is at the gun rack, and each shot is only made after he has performed all the labors entailed in cleaning the strange firearm and making the cartridges."

In addition to the above it may be stated that the judge extends his left arm when in position, assuming very much the position of a trap-shooter at the score.

Where so many great shots, the best this country can produce, are gathered together, it would be impossible to particularize. Among the visitors, however, who have left their marks were: A. Strecker, F. O. Young, M. Blodau, George Helm, F. P. Schuster, A. H. Pape, of the Columbia Rifle Club, San Francisco, Mr. Pape being quite a young man and only a beginner, being a pupil of Mr. Young; W. Milton Farrow, Morganton, W. Va.; H. M. Pope, Hartford, Conn.; M. Gindele, Cincinnati, O.; John F. Humphrey, Herbert E. Tuch, J. P. Westfield, Boston, Mass.; J. E. Kelly, Springfield, Mass.; Col. H. F. Clark, a down-Easter, who was a member of the American team which visited Wimbledon in '88; Robert Bartow, of the Bridgeport, Conn., Schuetzen Verein; G. Homrighausen, Baltimore, Md.; W. Hasenzahl, Cincinnati, O., etc. etc. New York and New Jersey marksmen, however, held their own quite comfortably in the matter of good scores, as a reference to the totals given below will show. Among those from the nearby clubs were W. C. Collins, of the Greenville Rifle Club; G. Plaisted, of the Zettler Rifle Club; Fred. C. Ross, Gus Zimmerman, Gebhard Krauss, William Hayes, M. Dorrler, etc. etc. The work of Zimmerman and Ross was watched with the closest attention.

Prominent among those who mingled among the riflemen was Major Geo. E. Albee, who sported the P. Lorillard magnificent gold medal which he won in 1882 owing to his remarkably rapid and accurate work with the Hotchkiss Rifle at Creedmoor, firing 20 shots in sixty seconds, scoring 62 points. Major (then Lieut.) Albee beat some very speedy competitors in that contest; some of his antagonists were among those taking part in shooting at this Schuetzenfest. Major Albee is now an important factor in the Winchester Repeating Arms Company, of New Haven, Conn.

The personnel of the management of the Schuetzenfest was given in our last issue. Suffice it to add that shooting masters Gebhard Krauss, Bernard Walther and William Hayes had their hands full, but made no fuss over it. Everything was done quietly, orderly and in a soldier-like manner; hence very few people really appreciated the good work of the management.

A word as to the prizes. These were on exhibition in a glass pavilion opposite the headquarters tent. Policemen patrolled the platform surrounding the pavilion and kept spectators moving. Seldom, if ever, has there been gotten together by any association such a magnificent lot of cups, trophies and medals. When seen, it is readily understood that their value mounted up into the thousands of dollars.

A special feature in the park was a little tent on the left hand side as one started up Weber avenue after entering the gate on the railroad side. This tent was the Emergency tent of the Brooklyn Eastern District Hospital, which was in charge of a regular corps of surgeons. Alongside the tent, and in the shade of the trees, was hitched a gray horse harnessed to the ambulance. Everything was ready for a sudden call. That this institution was needed was shown by the records, thirty-six cases treated in the first three days of the Schuetzenfest. Of these cases only one was serious; John Baumann, a man 50 years of age, a resident of New York city, was talking to some friends who were shooting at the swinging targets in the little airgun range operated by John Bayer. In some way one of the guns was discharged, the bullet striking Baumann in the right side. At first the case was thought to be serious, but investigation proved that the wound was only slight, the bullet having glanced off a rib and being found just under the skin. The other cases treated were of various sudden ailments and mishaps.

If the rain on the Fourth of July destroyed all chances of a big crowd on that day, the heat on Saturday, together with the thousands who visited Glendale Park that afternoon, gave promise of a big day on Sunday. The spirits of the management rose correspondingly high, and everybody in and around the park was all smiles. The maidens in national costumes toyed coquettishly with the glasses of lager and the smaller glasses of Rüdesheimer. It was going to be a harvest to-morrow and it was.

Sunday broke with a sky that told of hot weather ahead. At noon it was suffocating in the streets of the Greater New York; while at 4 P. M. the best laundried collar was threatened with a disgraceful collapse, so warm did the slightest exertion make its wearer. But at Glendale Park is was delightfully cool, refreshingly so. What a relief it was to sit down on a bench under the shade of the oaks, a glass of cool lager before you; the strains of Tyrolean Yodlers, mingling with the blatant crack of the rifle, effectually shutting out the high-pitched song of the Long Island mosquito. How cool it was! Even a hot Frankfurter was not out of place! And "pickelt eels," too!

And there were thousands that thought just so; about 30,000 of them. Trolley cars from all parts of Brooklyn and trains from Long Island City, the route for all New Yorkers, poured their thousands into Glendale Park. Standing room only was the order of things on the Rockaway Beach trains. Inside the shooting pavilion, on the dancing floor of the big hall, in the bowling alleys, on the benches in the groves, everywhere there were thousands of people, young and old, and all good-natured. It was a great gathering, and one from which much might be learned. It was a sermon in itself, and a good one at that. The extreme good nature with which shooting-master Krauss went about his duty of keeping the firing lines clear, so that the riflemen might be able to get to their stations, was something to marvel at.

Along Weber avenue, the Midway Plaisance of the park, every amusement booth and refreshment stand was taxed to its utmost to satisfy the wishes of its patrons, while the nigger dodged the baseballs and kept the crowd amused by allowing a zestly thrown ball to tap him on the head now and again. Fred Sauter's Museum of Natural History, tucked away in a far-off corner of the park, well repaid the dimes paid for the privilege of a visit.

The firing lines were comparatively deserted toward 4 P. M., but there were plenty of riflemen present, most of whom were discussing the chances of Dorrler and Ross for the kingship of the tournament, and relating how they managed to make this or that score.

The question of the ultimate ownership of the King's Medal was practically settled on Sunday afternoon when Michael Dorrler, of the Zettler Rifle Club, finished his string with 370 points, or one point less than that of Fred C. Ross, the Brooklyn crack who scored 371. Mr. Dorrler up to his very last shot appeared to have the advantage, although it was a slight one. On his last shot, however, he pulled his trigger before he intended to, the shot going clear of the black. It was a great disappointment to both himself and his friends. Ross's average of 18½ is a big one, and one that it would be hard to beat. A story was afloat that Ross had told Dorrler that his (Ross's) score was 373; this led Dorrler to believe that he must get a red flag with his last shot to win, or a blue to tie, whereas a white flag would have tied the scores as they actually were, and a blue flag would have won the King's Medal for the Zettler champion. Mr. Ross denied that he intentionally misled Dorrler, and stated that a mistake was made when he counted up his score. He added that he spoke in all good

faith when he told Mr. Dorrler and his friends that he had made 373. The contretemps was a little unfortunate, as it marred to a small degree the absolute goodfellowship that has rendered this National Schuetzenfest a truly remarkable gathering.

TARGETS AND SCORES.

The targets in use were the Honor targets—Columbia and Germania—Standard, Man, Ring and Point targets. The Honor Target Columbia is divided into twenty-five rings, ¾in. apart. The black is 12-in. in diameter and contains the rings 18–25; the remainder of the target is white and contains the rings 1–17. Honor Target Germania: This target has a black 12in. in diameter; in the center is a bullseye 6in. in diameter, and nothing but bullseyes count. The Man target is the shape of a man's head and upper half of his body. This target is divided by perpendicular lines ½in. apart; the central division is numbered 20, the divisions on each side being numbered 19–1, the ones being on the outside of course. The Standard target is well known, having an 11in. black. This black is divided into four rings as follows: Inner circle, 3.36in. in diameter; next, 5.5in.; next, 8in., and the last the remainder of the bullseye—11in. The remainder of the target is white and is divided into five circles. An inner circle hit counts 10, the other circles run from 9–2, while the balance of the target outside the outer ring counts 1. The Ring target is the same as the Honor target Columbia. The Point target has a black of 12in. in diameter. The inner circle, the bullseye, is 8in. in diameter and counts 3 points—red flag. The next circle is 6in. in diameter and counts 2 points—blue flag; the remainder of the black counts 1—a white flag. Shots that hit outside the black do not count.

There were 45 targets in use as follows: 36 Point targets, 2 Man targets, 2 Standard, 3 Ring, 1 Columbia and 1 Germania. Up to the time of going to press the scores made during the Schuetzenfest were as follows:

HONOR TARGET.

Monday, July 1.

Columbia: W. C. Collins, Greenville R. C., 56; H. Cordt, Hoboken J. S. C., 47; Fred Heilman, Elite S. C., Brooklyn, 47; B. Prossie, Friday R. C., Jersey City, 42; Charles Geschke, Friday R. C., Jersey City, 31; P. Schider, G. A. S. C., 20.

Germania: W. C. Collins, Greenville R. C., 2.

Wednesday, July 3.

Columbia: Robert Bartow 67, George Schlich 65, W. Hayes 64, F. C. Ross, C. C. Boyce, C. E. Gentsch, 63 each; J. Rebhan 62, Henry Walter, R. Zimmer, G. W. Lotz, 61 each; L. Enders, J. W. Graif, 60 each; E. F. Travis, P. Schmitt, G. Perkins, Martin Ficken, W. F. Channing, G. Purkess, 59 each; Fred Meyer, E. Bloedorn, C. E. Gentsch, J. Porris, 58 each; M. B. Engel 57, F. N. Lange, M. B. Engel, 57 each; Richard Nolze, G. Jantzer, C. Horny, Sr., H. Lutz, 56 each; Henry Kraus, John Speicher, 55 each; Charles Molter, E. Meurer, Samuel Karlsen, 54 each; F. Greiner, H. Kroeger, 53 each; J. Blumenberg 52, G. Gross 48, Phil Muth 48, Robert Fliende 46, C. W. Horny, Jr., 45, William Stein, Jr., 44, Thomas Hughes 40, A. Malz 39, C. F. Gernerich 38, H. W. Tamm 37, F. A. Holzmann 34, Charles Bischoff 33, G. F. Kolb, Emil Gully, 29 each; C. H. Schroeder, G. Breda, 23 each; J. Schissler 21, H. Siericks 17, William Waltmann 15, Henry Schroeder 9.

Germania: E. Blodau, John Speicher, Frederick Meyer, E. T. Traves, F. A. Holzmann, H. Kroeger, E. Meurer, 2 each; Charles Bischoff, H. Lutz, W. C. Ross, A. Malz, J. Rebhan, R. Nolze, H. Kraus, William Stein, Jr., H. W. Tamm, Emil Gully, P. F. Schmidt, C. C. Boyce, C. E. Gentsch, Charles Molter, Max B. Engel, J. Schissler, 1 point each.

Thursday, July 4.

Columbia: The following scores were made up to 2 P. M.: F. P. Schuster 71, Louis Flack 70, H. D. Muller 66, A. Braun, Jr., 66, Herman Block 65, A. H. Pope 65, A. Strecker 64, F. C. Watts 63, G. Helm 63, R. Buss 62, Charles Hutch 61, H. Nahlenbrock 60, E. Fisher 60, V. Rapp

TAKING IT EASY.

60, Otto Heinz, D. A. S. G., 59; J. Schmidt, Zettler R. C., 58; John G. Toekse, D. A. S. G., 56; G. Bermus, D. A. S. G., 56; H. Lohmann, Hoboken S. C., 55; J. Jarden 54, Max Weikersreuther, Williamsburg S. G., 49; A. Stroll, Freitag R. C., 49; J. Bodenstab, Zettler R. C., 49; John Mason, Greenpoint R. C., 49; H. Weber 48; William Muller 45; B. Hecht, Freitag R. C., 42; J. Meyer, Hoboken S. S. C., 41; Otto Heim, Hoboken S. S. C., 37; Ferd. Stutz, D. A. S. G., 36; A. Kahle, S. T. S. C., 36; John A. Scheuermann, Steppenfeldt Co., 33.

The following scores were made from 2 P. M. until firing ceased for the day: D. B Factor, San Francisco S. V., 68; Robert Schulenberg, Williamsburg, 65; August W. Steuben, Hudson A. C., 64; William A. Hicks 64; A. A. Stillman, Baldwinsville R. C., 62; W. Heunery, Excelsior, 61; G. D. Wiegman, Zellar, 61; C. A. Range, City S. C., 60; J. G Dill, Ion, Philadelphia, 60; D. Merrn, Central, 60; G. Worn, Williamsburg, 59; C. Neugobank, Trerdy, 59; Alis Stein, T. S. N. Y., 58; D. A. Steng, Newark, 57; Max Tropp, D. A. S. G., 56; J. H. Hughes, Excelsior, 54; John Meryll, D. A. S. G., 53; C. Neumege, Hoboken, 52; Henry Benkelsbach, Brooklyn, 52; J. Facklamm, City, 51; N. C. Kiegel, Newark, 50, C. Hepk, Miller R. C., 50; H. C. Tonng, Bridgeport, 49; N. Becker, Zettler Rifle Club, 48; F. W. Brandt, Hoboken, 48; Guy Lindklosser, D. A. S. G., 45; T. C. Blumersberg, Zettler, 43; H. Zettler, Emp, 42; J. Wilkersen, Bridgeport, 41; William Roeber, Brooklyn, 38; C. Gochman, City, 33; F. Jarkenbein, Freitag, 33; William Ricke, O. O., 31; C. Schultz, 27; A. Stehle, 18.

Germania: The following scores were made up to 2 P. M.: A. H. Pape, San Francisco S. V., 3; Charles Hutsch, Hudson R. C., 3; J. Schmidt, Zettler R. C., 2; A. Stoll, Freitag R. C., 2; Louis Flach, Zettler R. C., 1; A. Braun, Jr., Hudson R. C., 1; H. Block, T. S., St. Louis, 1; F. C. Watts, Newark S. G., 1; G. Helm, San Francisco S. V., 1; E. Fischer, Hoboken S. C., 1; Ferd. Stutz, D. A. S. G., 1; A. Kohle, S. T. S. C., 1.

The following were made from 2 P. M. until firing ceased: D. B. Factor, 3; S. Francke, 2; J. H. Hughes, Excelsior, 2; Robert Schulenberg, Williamsburg; J. G. Dillon, Philadelphia; G. Worm, Williamsburg; John Menzel, D. A. S. G.; H. C. Koegel, Newark; F. W. Brandt, Hoboken; F. Lindklosser, D. A. S. G., and E. Schultz, Freitag Rifle Club, 1 each.

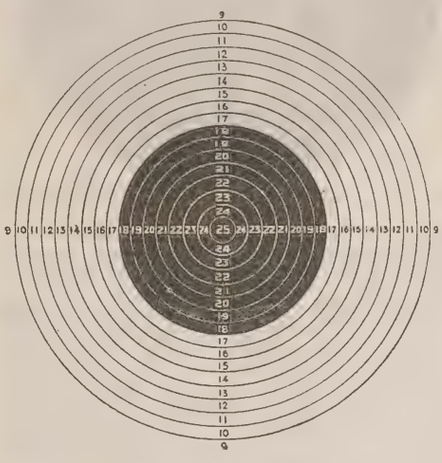
Friday, July 5.

The following scores were made at the targets of honor from 8 to 2 o'clock:

Columbia: A. H. Merriman, Bridgeport R. C., 66; L. Schmidt, Hoboken R. C., 61; John Bander, Newark, N. J., 57; Henry Dreise, Staten Island, 57; D. L. Seymour, Hartford S. V., 55; Louis Zoellner, Elite S. C., 54; Ed Riedel, Officers' Casino, N. Y. S. B., 54; Charles Engert, Elite S. C., 52; E. Soff, Williamsburg S. C., 41; W. W. Tucker, Hartford S. V., 40; Joseph Lehner, S. T. S. C., 35; Charles Schaefer, Brooklyn T. S. C., 32; Fred Erxmeyer, Hoboken T. S. C., 31; H. Kuhn, T. N. Y. S., 28; Bruno Euner, C. S., 26.

Germania: D. J. Peters, Miller R. C., 2; E. Soff, 1; Charles Engert, 1; D. L. Seymour, 1; A. H. Merriman, Bridgeport S. V., 1; Henry Markus, 1; F. Dietz, 1; N. Zickel, 1; C. Jock, 1; A. Mattes 1.

The scores from 2 to 7 were:



Columbia: Gustav Gregor, Lützow R. C., 68; C. H. Lovant, Greenville R. C., 67; R. Zack, Miller R. C., 66; William Koch, New York Central, 66; J. P. Grannis, Bridgeport R. C., 64; Charles Pletz, New York R. C., 64; William Kronsberg, Zettler R. C., 64; C. Weinbacher, Harlem T. S. C., 63; Richard Gregor, Lützow R. C., 63; Richard Gutt, Greenpoint R. C., 63; J. A. Wagner, S. G., 62; H. Hofer, Zettler R. C., 61; H. Neumann, Miller R. C., 60; W. H. Roubidous, Greenville R. C., 60; Fred. Schmidt, N. Y. S. B., 59; R. Morris, Baldwinsville R. C., 59; William Forker, Hoboken S. B., 58; J. Kolbe, Brooklyn S. B., 58; Geo, Eberhardt, Greenpoint R. C., 57; C. Meyer, Brooklyn S. B., 57; D. C. Grosch, New York, 56; F. W. Hoefele, New York T. S., 55; F. Brech, Emp. R. C., 55; Edward Rich, N. Y. Central S. C., 54; F. C. Knothe, Newark R. C., 54; Henry Koch, N. Y. C. S. C., 53; Henry Koster, N. Y. S. C., 53; C. Born, N. Y. S. C., 51; R. Bendler 51, C. H. Hoerning 51, Frank Kolb 48, A. S. Volk 47, P. Bartel 46, H. Luettich 46, Henry Evers 45, Erwin Karl 45, J. Dickerscheicht 44, D Liebmann 44, W. G. Dunbar 44, H. Heish 44, F. Marquart 44, A. D. Rehm 43, Charles Schnabel 43, T. Holl 42, J. Bunz 42, Henry Markus 41, F. Dietz 41, N. Zickel 41, D. Lang 38, J. H. Bahnenburg 38, C. Weber 37, C. Brunning 37, B. Meyberg 36, C. Jock 36, J. Warnken 36, C. M. Magnus 34, S. Loose 34, R. Busch 33, C. G. Hoeslon 32, A. Lieschke 31, A. Mattes 31, J. H. Fischer 28, I. Seibert 27, A. D. Richter 18

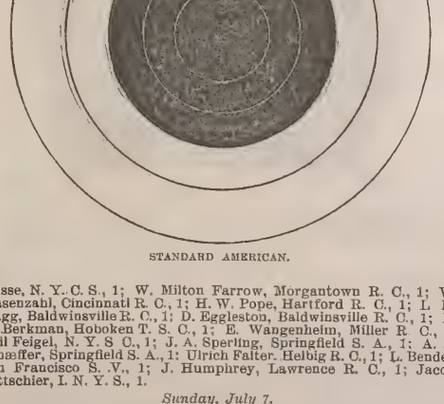
Germania: John Eberhardt 2, C. Weber 2, Henry Koster 2, Charles D. Rehm 2, M. Forker 1, August Meyer 1, Dr. Charles Grosch 1, J. W. Hoeple 1, Edward Rich 1, H. Luettich 1, Frank Kolb 1.

Saturday, July 6.

Scores up to 2 P. M.:

Columbia: Michael Dorrler, Zettler R. C. (22, 24, 21), 67; M. Gindele, Cincinnati, 66; John Coppersmith, Newark S. G., 66; G. W. Joiner, Zettler R. C., 65; Herbert E. Tuck, Lawrence R. C., 63; Aug. Begerow, Newark S. G., 63; Stephen J. Lyons, Zettler R. C., 61; F. H. Scofield, Bridgeport S. V., 61; Aug. Meyns, Hoboken F. S. C., 59; M. Rosenthal, Wauwatose R. C., 57; F. S. Harrison, 56; Jacob Loewes, I. N. Y. S. C., 54; D. Miller, Miller R. C., 53; F. K. Rand, Hartford S. V., 53; George Loewer, I. N. Y. S. C., 52; John J. Jobels, Lutzow R. C., 51; J. E. Kelly, Springfield R. C., 50; Frederick Eisele, D. A. S. G., 50; William Soell, I. N. Y. S. C., 50; F. Goodmann, Heidenreich R. C., 49; F. Hecking, Zettler R. C., 49; Dr. Charles Hettesheimer, Elite S. C., 49; G.

HONOR TARGET COLUMBIA.



Hodgdon, Pittsburgh R. C., 48; A. Peters, Hoboken I. S. C., 48; Dr. G. Schmidt, Williamsburg S. G., 47; Philip Klein, South Brooklyn S. S., 43; John Volz, N. Y. S. C., 41; Wm. F. Baab, N. Y. T. S., 41; John Eusner, N. Y. T. S., 37; G. Monses, B. S. C., 32; Jacob Weisner, Dufour S. C., 16.

Germania: J. E. Kelly, Springfield R. C., 3; M. Gindele, Cincinnati R. C., 3; Herbert E. Tuck, Lawrence R. C., 2; John J. Jobels, Lutzow R. C., 2; F. K. Rand, Hartford S. V., 2; Fr. Goodmann, Heidenreich R. C., 2; G. W. Joiner, Zettler R. C., 1; Stephen J. Lyons, Zettler R. C., 1; Aug. Meyns, Hoboken I. S. C., 1; M. Rosenthal, Wauwatose R. C., 1; D. Miller, Miller R. C., 1; George Loewer, N. Y. I. S., 1; F. Hecking, Zettler R. C., 1; Philip Klein, So. B. S. S., 1.

Scores from 2 P. M. till close of shooting:

Columbia: W. Fohrbach, Williamsburg S. G., 72; A. C. Wheeler, Bridgeport S. V., 66; Joseph Henners, Passaic S. V., 66; R. Busse, New York C. S. C., 65; W. Milton Farrow, Morgantown, 65; W. Hasenzahl, Cincinnati, 64; H. M. Pope, Hartford R. C., 64; Julius Link, D. A. S. G., 63; Fritz Simon, T. N. T. S., 63; Ignatz Martin, Elite S. C., 63; L. M. Magg, Baldwinsville R. C. 62; A. A. Stillman, Baldwinsville R. C., 62; L. Dreyer, N. Y. T. S. C., 62; C. Brag, Greenville R. C, 62; G. Eggleston, Baldwinsville R. C., 61; Louis Eggleston, Baldwinsville R. C., 61; David Crocker, N. Y. POINT TARGET.

Sunday, June 30.

Gold medals for 150 points made by one shooter were awarded to Gebhard Krauss, Louis Bendel, H. D. Miller, C. Coppersmith, J. Facklamm, Henry Holges, A. Jungblut, G. Homrighausen and C. Newman.

Silver medals for 25 points were won by John Blumenberg, E. Bloden, C. Borg, Louis Bendel, John Coppersmith, Louis Flach, John W. Hornig, A. Marhausen, G. Homrighausen, A. W. Hoffman, Henry Noeges, V. Horn, D. Krauss, C. E. Gent, O. Mertens, Robert Schulenburg, A. Stein, J. Warm, Louis Bloch, D. Factor, George Price, A. Jungblut, William Koch, R. Kick, Jacob Loewer, Ignatz Lucas, George Löber, H. T. Muller, Charles Neumayer, H. Neuman, William Searle, T. P. Schuster, G. T. Weelman, Louis Grunt, John Bodenstack, C. Grunack, C. Börneus, N. Junghardt, A. Juse, C. Dietz, Jr., William Dalton, John Eisner, Joseph Fachler, D. Mischer, F. Goodman, L. G. Crowe, C. F. Gonersch, William Eldrich, Robert Hencke, John Polley, Anton Klein, H. Kronsberg, A. Loman, O. Meyer, D. Mercy, J. Wenzel, L. Nowocki, D. Peters, H. Radlow, J. Breitweisner, Chris. Rehm, O. Schlappe, D. G. Smith, C. Seidel, Theodore Walters, T. C. Warts, H. Walther, R. Wiehle and John Young.

Monday, July 1.

Festival cups for 300 points were awarded to Plaisted and Newman.

Gold medals: J. Blumenberg, George Plaisted, W. Gindele, D. B. Factor, F. W. Höfele, A. W. Hoffman, H. Lohmann, J. Reithwiesner.

Silver medals: Albert Bocki, F. W. Brandt, George Plaisted, W. C. Collins, G. Diekerscheidt, F. J. Dolan, D. B. Factor, M. Ficken, J. Feigl, M. J. Furniss, G. Grigor, M. Gindele, A. W. Hoffman, F. W. Hoefler, X. D. Henken, Robert Herold, J. B. Jones, E. Karl, G. Kirchbuber, F. Kolb, H. Krouger, H. Lomann, H. Loden, J. Liemann, A. Ludgwig, O. Langsdorf, M. Muller, F. R. Mueller, W. Waltz, J. H. Muth, F. Mendorf, J. M. Maurer, W. R. Pryor, C. Reibevlesnacht, W. Rosenbaum, G. W. Rothwell, W. Loeber, H. Reiling, E. Rapp, Jr., J. Schippers, F. Schroeder, W. Stein, Jr., J. H. Schmitt, L. Schmitt, F. Simon, A. W. Steuben, George Schlicht, H. Stoll, L. Schuman, J. Schmidt, L. Von Der Leith, S. M. Van Allen, J. Wanken, C. Weber, H. Zimmer, Louis Zollner and L. Flach.

Tuesday, July 2.

Silver festival cups: F. P. Schuster, A. Stein, A. Facklamm, G. Homrighausen, and Gebhard Krauss. The winners of the goblet receive a silver-and gold medal.

Gold medals: Thomas Lloyd, William Koch, F. Stein, F. S. Harrison, William Stein, Jr., A. Streckler, O. Mertens, L. Schmidt, P. Meyer, J. Rothwell and P. Schlicht.

Silver medals: L. Maurer, F. Meyer, S. Bozzoni, W. F. Baab, C. H. Horning, P. E. Kent, F. S. Stulz, A. H. Merriman, P. F. Schmidt, H. W. Weber, W. Vosbach, E. Gully, Joseph Blocklinger, L. Enders, M. Kaier, H. Kraus, H. Mahlenbrock, R. Nolizt, H. M. Pape, J. A. Rebhan, C. H. Engert, A. Eppich, T Hughes, M. Haumann, G. Schmidt, G. Lolz, J. G. Martin, Carl Schneider, G. Mowak, Capt. F. Ersmeyer, W. Egleston, W. Hughes, Jr., C. J. Watson, G. W. Joiner, J. Spiecher,

POINT TARGET.

Y. E. Jantzer, Henry W. Tamm, C. H. Schroeder, O. C. Bozel, C. W. Fanning, C. F. Stephens, E. F. Traver, E. Sachs, and A. Kahle.

Wednesday, July 3.

Silver festival cups: M. Gindele, H. Holjes, H. M. Pope, Stephen J. Lyon, F. Eisele, L. Enders, J. W. Rothwell, F. W. Hofels and L. Schmidt.

Gold medals: L. Enders, G. W. Joiner, E. Buckman, C. W. Horney, H. M. Pope, Stephen J. Lyon, F. Eisele, J. M. Maura, F. Schroeder, C. K. Hoerning, R. Brisse, W. Schuller, A. Bloedau, D. J. A. Bocken, A. Fischer, S. Hodgdon, A. Epping, T. Mirth, A. B. Jones, J. Rebhan, M. Bicken and George Smith.

Silver medals: H. Hildebrandt, H. Koster, J. Muzzio, W. E Seppenfeld, F. Lindklorter, Sam Gall, P. Leibinger, A. C. Wheler, J. D. Dillon, G. Hodgedon, Emil F. Kolb, A. Pfiffner, W. Schieller, M Braun, W. M. Farrow, Sam Karlen, Ch. Meyer, P. G Frauenfelder, Dr. Wieseckel, L. W. Joseph, W. Ehrenpfort, Memroth Keck, E. Berckman, L. Vogel, E. Greiner, J R. Jones, F. A. Gruneberg, E. Meurer, L. Wissel, F. Luhr, August Schumacher, K Reiber, P. Eppig, R. Fliedl, G Buchstein, G. Kaege, E. Richard, August Schmitt, F. W. Luecke, John Bunz, G. W. Graf, F. Schill, N. Knowsky, W. Wollmann, G. Purkers, J. Jordan, W. Schneller, M. Braun.

Thursday, July 4.

Silver festival cups: Otto Mertens, H. M. Pope, H. D. Muller, G. W. Joiner, and W. Roeber.

Gold medals: W. Dalton, W. R. Pryor, J Schmidt, E. M. Steuber, J. Munzel, E. F. Kolb, J E Kelley, W. Helbig, L. Vogel, J. A. Boyken, W. Roeber, W. M. Farrow, Phil F. Schmidt, J. F. Travis, S. G. Schmidt, H. Weber, J. S. Dillon, C. Molter, A H. Merriman, L. Maurer, William Soll, Val Horn, D. J. Peters, C. B Schneider, C. Plitz, J. Kolle, F. Meyer, G. A. Strong, V. Rapp, Jr., J. G. Thoelke, C. Engert, Capt. D. Meersse.

Silver medals: G. L. Fetry, H. Block, Joseph Bittschier, H. Koch, A. F. Christen, Julius Lask, J. Gunther, A. Hildebrandt, Albert Geher, A. Rodler, A. Liscke, H. Lutz, G. Renker, W. Fajen, C. A. Niemeyer, C. Pletz, F. C. Rose, August Schmidt, M Dorrier, J. E. Kelly, Henry Meyer, G. Keiser, August Schumacher, H. E. Tuck, Philip Wissig, R. J. Young, F. O. Young, B. Lehn, A. A. Stillman, Charles Schaeffer, Charles Reid, C. J. Dalley, G. Bauer, Jacob Buchfeldt, Peter Bernhardt, M. Prapp, W. Lieber, J. Meyer, A. W. Lembke, H. Wensing, H. Nolte, A. Peters, G. Tossler, John Knieste, William Mueller, Fred Mayser, W. Morris, Lorenz Zeller, E. Piepenbring, H. C. Koegel, A. H. Pape, J. N. Hermann, John G. Thoelke, G. Rückel, Franz Mayer, J. C. Hughes, G.

MAN TARGET.

A. Strong, Charles Fuchs, W. Kintzer, C Neugebauer, A. Siedenburg, A. Nehling, John Volz, W. Hennessey, H. Heckmann, Otto Hinz, and Jacob Dux.

Friday, July 5.

Silver festival cups: R. Busse, A. Jungblut, E. T. Travis, F. Simon, G. Schlicht, C. W. Horney, D. G. Peters, John Blumenburg, Ernst Fischer, Henry G. Thoelke, A. Eppig, G. Loewer, F. Meyer and G. D. Wiegemann.

Gold medals: H. Block, M. Kaiser, C. Hutch, Henry Weiler, P. Eppig, A. Braun, H. Mahlenbrock, D. Dreyer, A. C. Wheeler, William Wheeler, C. Weber, J. Eberhardt, E. Karl, H. Kraus, E. C. Ross, J. Jordan, W. Vorloch, H. E. Tuck, F. O. Young, D. L. Seymour, F. Schweickert, M. Bendel, W. F. Baab, R. Spitz, John Garrich and Gus. Nowak.

Silver medals: Charles Wissel, W. Wurfflein, J. J. Mountjoy, L. M. Mogg, F. A. Wills, Charles Schaefer, William Wheeler, Frank Knochenhauer, A. S. Hills, W. J. Dunbar, J. H. Feldscher, H. Kuhn, J. F. Baude, C. F. Knott, Edwin Hotz, R. Gute, Milton Bedell, J. Brauer, J. Budensieck, F. W. Brandt, H. Fox, Bruno Eusner, C. Bayer, H. Sulzer, J. C. Bonn, W. W. Tucker, D. L. Seymour, Max B. Engel, M. Weikersreuther, E. Pipenbrink, E. Soff, H. Lohmann, Fred. Mayser, George Wehrenberg, M. E. Riedel, William Krumsick, Gus. Gregor, H. C. Young, R. Spitz, H. Martin, W. Tornford, C. Hutch, W. A. Hicks, Henry Bentelsbach, C. G. Ditrich, George A. Friedrich, John Heft, R. Gelzer, F. Erxmeyer, H. Bremer, W. R. Sternkopf, Henry Weiler, H. Schultheiss, J. Loebel, George Niemviller, L. Dreyer, J. Weisner, A. Heil, A. C. Wheeler and C. Robner.

Saturday, July 6.

Silver festival cups: Thomas Lloyd, William Koch, E. Karl, Stephen J. Lyons, H. D. Miller, V. Rapp, Jr., F. Schroeder, William Soell, F. Reitwiesner and W. E. Pryor.

Gold medals: H. A. Fox, Albert Gehrer, Henry Kosser, Richard Gregor, L. Brech, Aug. Meyer, Milton Bedell, S. Buzzini, F. Y. Rand, James Bushfield, T. G. Dolon, Philip Leibinger, L. N. Magg, J. Humphry, D. Eggleston, A. A. Stillman, H. Radloff, P. Bernhard, George Algers, F. Schmidt, B. Zahn, C. Seidel, John Jobels, Ed Maurer, F. Kolb and A. J. Christen.

Silver medals: Joseph Bennel, G. Hodgdon, John Eisenhardt, Bernard Meyburg, Richard Ahrens, John H. Fischer, John H. Furboter, D. Lange, Dr. Charles Hettesheimer, Charles Keppler, Fred Dietz, Dr. C. Grosch, L. Kutscher, C. Jack, N. C. L. Beverstein, H. R. Duff, H. Haase, M. Brendel, J. L. Wood, J. A. Wagner, L. Sohl, Aug. Meyns, C. H. Chavant, May Clinton, J. T. Humphry, Debos Eggleston, H. B. Michelson, William Muller, H. Martin, A. Stolzenberger, L. Arfmann, Charles Meyer, Fred Mahler, Louis A. Hoffman, E. Modesohn, F. K. Rand, Ed Meurer, John J. Jobels, H. H. Fleischer, W. Roos, N. Zirkel, J. Sarbacher, H. Loose, Lev. Hutter, H. Weber, H. Michelson, John D. Wilckens, Richard Bendler, F. Kolb, James Hennes, W. Dutcher, A. Uhling, J. C. Welcher, F. Plump and E. Wangersheim.

Sunday, July 7.

Silver festival cups: Gus Zimmermann, V. Horn, John Young, Martin Ficken, L. Bendel, Emil Berckmann, Charles Engest, F. S. Harrison, W. Helbig, J. Schmidt.

Gold medals: Ernst Stieber, August Meyns, Henry Zimmer, Gus Zimmermann, George Alphers, Julius Bittschier, E. T. Stephans, Max Rosenthal, William Sorkel, Fred Mahler, Ludwig Kick, P. Fiegel, W. J. Furness, Jacob Dux, L. P. Hanson and John Bloechlinger.

Silver medals: H. Mesloh, F. H. Scofield, A. J. Volk, Max Rosenthal, E. Richter, A. Schneck Ernst Stieler, A. Weissenholder, Hiram W. Hawes, P. C. Schmitt, George Klingelhoefer, J. H. W. Meyer, A. Q. Z schang, Gus Zimmermann, P. Bartel, G. Bauer, F. A. Bastlow, E. J. Cram, U. Delisle, John Von Dobren, J. Dodds, D. Meyer, Fred Mayser, F. Marquardt, George Niemoeller, F. Prickovits, Robert Kelly, John Mason, C. G. Zettler, F. B. Granniss, Philip Klein, J. Hamhorst, Max Rosenthal, H. Blumenberg, L. Buss, A. Begenow, George Fessler, William Torkel, E. L. Gardener, A. F. Bardwell, E. C. Goddard, H. H. Fleischer, David Crocker, C. Keller, F. Landorf, H. C. Boddy, B. F. Amend, H. Heinicke and H. Bonitz.

BULLSEYES ON THE POINT TARGETS.

Measurements by the Committee.

The measurement of the bullseyes on the point targets is done by the Shooting Committee, the measuring being accomplished by means of a special gauge. The best bullseyes made on the opening day were made by the following persons, the figures denoting how far, in one-

WALTER WINANS, JUNE 15.

thousandths of an inch, the bullet struck from the inner circle of the black: John Rolle 10, E. Blodau 18, F. P. Schuster 21½, Alexander Stein 31½, D. G. Schmidt 35¼, John Bodenstadt 38¼, G. D. Wagner 39¾, G. Worn 43, H. Neumann 71.

On the second day the measurements, as above, were as follows: Phil. Flegel 28, G. W. Plaisted 55, F. Herbert 62, H. Neuman 71¼, P. Schmitt 74½.

On the third day the following figures were given out by the Shooting Committee: F. George Hodgdon 27½, M. Ficken 38, F. S. Harrison 45½, F. Erxmeyer 56.

On Wednesday, the fourth day of the Schuetzenfest, the best bullseyes were recorded as follows: F. Schroeder 13, A. H. Pape and Wm. Hayes 34, Wm. R. Pryor 37½, Emil Berckman 45½, Joseph Rebhan 72½, F. G. Hodgdon 58, Emil F. Kolb 77, George A. Strong 95½.

On Thursday the best bullseyes were as follows: H. D. Muller 10, J. Buchfield 12, J. Worn 20¼, W. Beutelspach 57, R. Schulenberg 60, Fred. Meyer 62, G. G. Dielin 63¾.

Revolver Shooting in England.

LONDON, England, June 21.—Below are the latest revolver scores made at the North London Rifle Club. Both the clubs are suffering in number of entries just at present, owing to absence of members to other rifle meetings.

June 5.—Fifty yards: Franzmann 36, Knapp 34, W. Bashford 34.

June 15.—Twenty yards, stationary target:

Lieut C Chitty	677767—40	Maj Palmer	655577—35
C Knapp	767577—39	Lieut Richardson	547667—35
A J Comber	775776—39	A Franzmann	573766—34
Luff	664767—36	Carter	457647—33
Capt Earle	667467—36	Gould	674473—31
E Howe	477576—36	Diggins	643755—30

June 20.—Disappearing target: Only Mr. Chitty shot, scoring 37.

At the South London Rifle Club the wind was too high on June 6 for good shooting, and only Mr. Knapp shot as below:

Twenty yards, stationary target:

C Knapp.....476776—37

June 15.—The revolver records for 12 shots stood in England till June 15 as follows:

Twelve shots at 20yds., 2in. bullseye: Walter Winans, 82 out of a possible 84; at 50yds., 82 out of a possible 83 on a 4in. bull, also by Walter Winans.

On June 15, at the North London Rifle Club, in two consecutive entries of six shots each in the 20yds. revolver competition Mr. Winans made the following:

First score.....777776—41 Second score.....777777—42

Total 83 out of a possible 84, or one point over his previous best on record.

Below are details of the revolver competitions at the club.

June 15.—Twenty yards stationary:

Walter Winans	777777—42	Capt Earle	576754—34
Lieut Chitty	777767—41	Col Atherton	377604—27
Knapp	777667—40		

June 19.—Alternate hands:

Lieut W W Chitty	767777—41	R B Luff	657437—32
Knapp	775577—38	Howe	773762—32
Comber	767567—38	Carter	466573—31
Maj Munday	776774—38	T H N Aldridge	734305—28
F H Frost	576754—34	Capt Earle	664640—26
Richardson	666546—33		

Below are details of the South London revolver scores. Mr. Winans at 50yds. made the best score at that distance yet made this season at either club.

June 15.—Twenty yards:

Walter Winans	677777—41	E Howe	677377—37
C Knapp	757777—40	Capt T W Heath	476757—36
Lieut J Howard	757666—37		

Fifty yards:

Walter Winans	667777—40	Capt T W Heath	466775—35
Knapp	775757—38		

Scores for Revolver Championship of club to date:

Walter Winans	41 41 40 40 39 40 39 39—319
Capt T W Heath	39 39 38 36 35 36 36 36—297
Knapp	40 40 38 37 30 38 35 31—289
E Howe	38 37 36 37 36 32 31 30—277

(N. B.—The last two scores for the championship in each case are at 50yds., the other at 20yds.)

Milwaukee's Schuetzenfest.

THE following are the scores made at the Milwaukee riflemen's Schuetzenfest as given in the Milwaukee *Herald* of June 24:

Honor target: Stephan Meunier 70, C. F. Gottsch, J. Guschl 68, A. Mohr, W. M. Fairow, W. Heyser, J. Schmidt, H. M. Pope 67, L. Bendel, J. Kundert, H. Richter, J. Alpers 66, L. J. Sehring, M. Gindele, A. J. Van Dusen, J. Demling, J. S. Regennitter, J. Karlen, Jr., C. Peterson, D. Wigert, C. W. Ranzow, C. Findeisen, E. Berg 64, W. Ott, J. Marf, W. Kappe, G. Kuhl, A. Strecker, A. Kunz, C. Theiler, George Helm, A. Kavel 63, A. D. Riedner, J. Braun, Jr., F. Mathe, H. M. Campbell, D. Lauer, C. Restler, C. B. Traub, C. F. Richter 62, W. C. Story, F. Roth, H. P. Yale 61, S. Schindler, G. D. Payne, A. Fienhold 60, J. Ringle, F. Lee, T. F. Bredow, E. Berger, D. Stamm, R. Unzicker, A. Reusch, C. T. Schutter 59, G. F. Schmidt, F. D. Young, G. Spengler, W. Hafenzahl, D. Altpeter, D. B. Faktor, F. T. Buplinger 58, F. Pfeifer, A. Engel, J. Pfister, F. A. Fuller, C. Burdick, T. W. Budd, A. Munster, H. Wesle, A. Weinheimer, D. Schneidewind, J. Ott, G. Kurtz 57, F. Gebrlich, G. Ziegenfuz, F. B. Schuster 56, H. L. Babler, M. Koch, Mel. Schmidt, F. Maus, G. Blodau, F. Schulz, J. Traudt, V. Link, G. Weltzau, A. P. Steffen 55, M. Rosenthal, B. Ahnert, R. Bothman, F. Bredow, C. A. Johnson 54, W. Glatz, W. P. Bragg, F. Bohri, M. Grau, S. T. Dorman, E. Rieger, E. Thielepape, C. T. Maulick, T. F. Bethauer, R. Plopper, T. H. Theller 53, J. Ehlers, A. Gotterdam, F. R. Rest, B. S. Schmidt 52, R. W. Stalley, W. Sonneberg, F. Schroder, 51, G. Schober, T. Zander, W. Randall, C. H. Wellinger, 50, P. Zapf, B. Rapp, A. Wesle, H. Kroseberg, 49, D. Zapf, W. Finger, R. Plotke, 48, J. Meumar, M. H. Regennitter, 47, M. Kagel, C. Schotte, F. Wittwer, H. C. Gustavus, M. Maidroth, J. Spelter, C. H. Gehlin, 46, L. Schweighofer, H. Rollmann, F. W. Buck, P. Ducker, 45, R. Ruhder, A. W. Reen, W. Ehrenfort, F. Kellnohfer, P. G. Van Dusen, 44, J. Arps, A. Jungblut, T. Martz, Dr. Matthey, 43, H. Riepenbrink, W. Frodeman, F. Mengedoff, D. B. Schmidt, H. Schroder, 42, P. Walger, F. Linder, H. M. Sifton, H. Hohn, 41, A. Cowe, Wm. Ott, F. M. Martin, 40, F. Toggenberger, P. Schobacher, 39, H. Wild, F. Arps, F. Mertz, L. Dawser, 38, F. Gehr, 37, A. King, H. Peterson, 36, A. Betzold, G. Muller, 35, E. K. Ansorge, F. Kellnhofer, 32, E. Schmidt, 29, F. King, 26, A. Kohl, 22, A. Bose, 13, F. Bethke.

King target: E. F. Richter 228, W. Ott 226, F. F. Schmidt 225, L. T. Sehring 220, A. T. Van Dusen 218, D. Schneidewind 215, J. Arps 212, M. Gindele, D. Wick, S. Meunier 211, H. M. Pope 210, F. W. Ranzow, H. Wesle 209, F. Arps, S. B. Traub, C. Fendeisen 208, F. Roth 207, H. L. Babler 205, G. Helm, F. A. Fuller 205, L. Bendel, D. Faktor 204, J. Pfister, A. Engel, J. Morf, T. Bendow 203, A. Strecker, W. Koppe, D. B. Schmidt 202, V. Rapp, Jr., O. Lauer 201, J. Gusche, W. Ott, A. Wesle, F. Berlinger, G. A. Gotterdam 200, F. Young, F. Toggenburger, E. Berg, C. Johnson 199, J. Beethauer, J. Zander, C. Pederson 198, W. Koch, A. Kuntz, F. Pfeiffer 197, P. Pieder, S. Schindler, G. Schober, L. Schweighofer 196, P. Van Dusen, W. M. Farron, J. Braun, Jr., H. Hohn 195, W. Sonneberg, W. Hasenzahl, G. Manlick, C. Smehlin, H. Gustavus, F. Schuster 194.

Man Target: A. Strecker 97, F. Schuster, W. Ott 94, A. Steffen, H. Pope, M. Rosenthal 93, C. J. Schutter, L. Schweighofer 92, L. Sehring, W. M. Farrow, A. Van Dusen, C. Ranzow 91, V. Rapp, Jr., J. Ehlers, E. Gotterdam, E. Richter, A. Engel, H. Bernhofer, D. Manthey 90, E. Payne, S. T. Dorman, C. Bentley, F. Toggenburger, T. Young, C. Maulick, E. Berger, E. Berg 89, G. Alpers, F. Arps, G. Ziegenfuhs, G. Helm, D. Schneidewind, W. Reggennitter, C. Restler, F. D Young 88, F. Berthauer, W. Hasenzahl 87, J. Pfister, J. C. Manthey, A. Jungblut, E. Richter, L. Bendel 86, J. Buck, M. Kacer, W. Koppe, T. Bredow, F. Theiler, J. Braun, Jr. 85, R. Staley, H. Piepenbrink, G. Muller, C. Schonberg, J. Morf, F. Maus, F. Blodau 84, J. Ringle, F. Mertz, S. Burdick, D. Faktor 83, F. Roth 82.

Open target: H. Pope 96, E. Gotterdam, A. Strecker, E. Berg, E. Blodau, F. Young, G. Helm 93, L. Schweighofer, A. Van Dusen, W. Hasenzahl, W. Ott, E. Berger 92, G. Ziegenfuz, S. T. Dorman 91, E. Richter, M. Gindele, W. M. Farrow, L. Bendel 90, T. Brethauer, B. Kapp, Jr., T. Bredow, L. Sehring, M. Rosenthal, F. Schuster, E. Resler, T. Theiler 89, P. Lagenmak, T. Carlan, Jr., J. Ringle, D. Faktor 88, D. Schneidewind, T. Braun, Jr., C. Johnson, H. Wesle, P. Van Dusen, V. Link, W. Koppe 87, J. Ehlers, T. Martin, J. Arps, C. Findeisen, S. Meunier, W. Regennitter 86, J. D. Regennitter, J. Schmidt, H. Piepenbrink, E. Rugger, F. Maus, A. Mohr, G. Alpers, A. Jungbiunt, W. Heyser, C. Ranzow 85, C. Maulick, J. Ott, F. Marz, A. Engel, C. Richter, F. Arps 84, J. Guschl, H. Peterson 83.

Standard target: M. Gindeie 85, E. Payne, W. Randall 82, W. Koppe, H. Hohn, A. Engel, F. Manthie 81, W. Hasenzahl 79, A. Restler 78, F. Lee 77, A. Kuntz 75, C. Johnson 74, W. M. Farrow 73, G. L. Detler 72, E. Wittwer, C. J. Johnson 71, E. Muller, C. Maulick 70, J. Ott, C. Burdick, J. Arps, W. Story 69, C. Wellengar, M. Rosenthal 68, H. P. Yale 67.

Team shooting: St. Louis 972, Joliet 971, Winona 963, Cincinnati 953, Monroe 952, San Francisco 951.

Cincinnati Riflemen.

CINCINNATI, O., June 30.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., strictly off-hand, 3lb. trigger pull, rifles under 10lbs. weight, at the standard target, 7-ring black. A strong 9 o'clock wind blowing required from 1 to 2 points windage. The small attendance was due to some of our members leaving for the National Schuetzenfest at New York, and also a few more were attracted to the Dayton (Ky.) range, where a military match was to be shot between two members of this Association. The scores:

Payne	9	10	9	9	6	8	6	9	7	9—83
	9	7	9	8	10	7	9	6	7	5—77
	5	9	8	5	9	9	9	7	6	9—76
	8	10	8	9	10	9	9	8	7	9—85
Topf	6	9	7	9	8	8	9	8	4	8—71
	10	9	10	5	8	5	4	5	5	6—67
	6	6	4	9	7	10	5	5	7	5—64
	6	7	7	5	9	9	5	5	4	8—65
Randall	7	8	9	6	9	9	10	7	10	9—84
	8	10	9	9	10	6	5	6	6	5—74
	5	8	6	5	7	10	6	8	9	8—72
	4	9	7	8	6	10	6	6	9	9—74
Weinheimer	9	6	10	6	9	10	7	4	8	8—77
	8	7	7	9	9	8	8	5	6	5—72
	4	8	5	7	5	9	5	6	7	10—66
	5	10	8	8	6	9	8	10	10	6—80
Daube	9	6	8	8	7	10	7	8	8	7—78
	5	10	8	7	5	7	8	9	7	7—73
	6	10	10	10	9	10	6	9	6	10—86
	9	4	9	4	10	6	8	7	10	9—74

Pacific Slope Riflemen.

SAN FRANCISCO, June 30.—There was a slim attendance at the regular shoot of the Columbia P. & R. Club last Sunday. The wind was raging all the afternoon and only one rifleman finished his score in the Kuhule Medal Contest, viz., Dr. Rogers, who made 83.

The pistol shooting conditions were better. Scores: J. E. Gorman 94, S. Carr 94, C. M. Daiss 93, A. B. Dorrell 92, Dr. Rogers 89.

To-day was held the quarterly contest for the Columbia Diamond 50 shot pistol medal. Scores:

J. E. Gorman...93 89 91 92 86—451 Smith Carr.....79 82 86 93 91—431
C. M. Daiss.....87 84 90 92 95—448

Two of our irrepressibles, Young and Pape, are in New York attending the great shooting festival. Two of the representatives of the Columbia Club did themselves proud yesterday in the great shoot, Messrs. Strecker and Blodau. We expect good work from all of these four. ROEEL.

Game Laws in Brief.

THE *Game Laws in Brief*, new edition, now ready, June 27, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

July 16-19.—KANSAS CITY, Mo.—Tournament of the Schmelzer Arms Company in Fairmount Park.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

July 16-17.—BELFAST, Me.—Second annual tournament of the Belfast Gun Club; $125 in cash guaranteed.

July 24.—WORCESTER, Mass.—All day shoot of the Worcester Sportsmen's Club, under the management of Chas. E. Forehand, Sec'y.

July 25.—GUTTENBURG, N. J.—Sixth monthly tournament of the New Jersey Trap Shooters' League, under the auspices of the Union Hill Gun Club, of Hoboken, N. J.; league contest at 2 P. M.

Aug. 9-10.—NEW ORLEANS, La.—Tournament of the Inter-state Association, under the auspices of the Louisiana Gun Club; $300 added money.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

Aug. 27-29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Sept. 2-3.—UTICA, N. Y.—Two days tournament; live birds and targets.

Sept. 2-3.—NEWARK, N. J.—Tournament of the South Side Gun Club; targets New Jersey Trap Shooters' League contest at 2 P. M. on the second day. W. R. Hobart, Sec'y.

Sept. 4-5.—SHEPHERDSTOWN, W. Va.—Morgan's Grove Fair Association's tournament, under the management of the Interstate Association

Sept (second week).—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Sept —.—ROCHESTER, N. Y.—Fourth annual tournament of the Rochester Rod and Gun Club; three days of tne week following the Clover tournament.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Oct. 23-24.—ELIZABETH, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

1896.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the management of Texas Field; $2,500 added.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week).—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Ivins's shooting in the Hollywood Futurity Handicap stamps him as a rattling good live bird shot. In the Grand American Handicap at Paterson, N. J., last April, he killed 24 out of 25, missing his 19th bird. E. F. Thomas was another 24 man in the Grand American, going straight until the 22d round. Messner, the winner last April, shot well on Saturday last up to the time he made his first miss, but then went to pieces, being unlucky, however, in losing his 17th bird dead out of bounds. The 21yds. boundary figures largely in the score; note the number of "dead out of bounds."

Capt. Money shot well during the International week in London, but was only fortunate enough to come out on top in one of the main events at the gun club grounds. This event was a $25 sweep, 20yd. rise, miss and out (as all the events were), with a $150 cup added. There were 49 entries, but F. Marsden Cobb, Gordon Smith and Capt. Money were the only ones to kill 9 straight. On the shoot-off, Capt. Money missed his first bird and took third prize ($100); Cobb killed three straight and took first money ($750 and cup); Smith missing his third tie bird took second money ($250).

The team averages in the Maplewood-Peekskill match were remarkably high. The return match is set for Labor Day, Sept. 2, and may possibly be brought off at the grounds of the Southside Gun Club, Newark, N. J., as that club advertises a two days' tournament for Sept. 2 and 3. Shot off in a regular 25-target event, the teams of course shooting in squads as they did at Peekskill, this event would attract a good deal of attention and help the tournament. We hope that Secretary Hobart may see his way to acting on this suggestion.

Mr. H. M. Stewart, of Rochester, N. Y., writes under date of July 6: "Will you kindly mention in Drivers and Twisters that the fourth annual tournament of the Rochester (N. Y.) Rod and Gun Club will be held September, the week following that of the Clover Trap and Target Company. Ours will be a three days' shoot, and we expect to send out an elaborate programme."

At the meeting held in Mr. W. P. Ashton's barber shop on Tuesday evening, June 18th, called for the purpose of organizing a rod and gun club, the following officers were elected: President—W. A. Judd; Vice-President—E. G. Williamson; Secretary and Treasurer—G. W. Lisk; Captain—W. P. Ashton. The organization is to be known as the Clifton Springs Rod and Gun Club. The club starts with 12 members.

In a match at 25 live birds, modified Long Island rules, shot at Dexter Park, L. I., on June 28, Henry Knebel, Jr., defeated P. Sweeney by a score of 22-19. After the match Sweeney challenged Knebel to a 50-bird race under the same conditions; the challenge was accepted and it is understood that the match will be shot off in the near future.

The annual meeting of the Dedham, Mass., Sportsman's Club was held at the Quincy House, Boston, on Friday evening, June 28. The following officers were elected for the ensuing 12 months: Wm. F. McQuillen—President; Danforth P. Wright—Secretary; Amasa Alden—Treasurer.

The "Farmers" of Dayton, N. J., got away with the Freehold, N. J., team on the Fourth of July. That kind of a team race does more to stimulate interest in trap-shooting than any amount of three-day tournaments. Team races between clubs get men together and arouse an *esprit de corps* that no other style of shooting can bring about.

The programme issued by the Belfast, Me., Gun Club, for the second annual tournament to be held next week, on July 16 and 17, is a varied and interesting one. Event No. 7 on the first day is a team shoot, 5 men to a team, 25 targets per man, is open only to State of Maine clubs. Valuable prizes are offered in this event. Mr. Chas. R. Coombs is secretary of the club.

A new club has been organized at Aitkin, Minn., under the title of the Bass Lake Gun Club. The score of its maiden effort at the traps is given elsewhere. The totals are by no means poor ones under the conditions given.

The Schmelzer Arms Company's tournament at Kansas City, Mo., next week will be a big attraction in the South. The championship cup offered by the company will be a special feature of the tournament.

Major J. K. Thibault, who won the State Championship at the recent tournament of the Arkansas State Sportsmen's Association at Little Rock, shoots a Parker gun, a fact that makes Capt. DuBray smile every time he thinks about it.

In our issue of June 29 we stated that the Emerald Gun Club of this city would not hold its regular shoot in August. What we intended to say was that the next shoot would be in August, no shoot being held in July.

Paul North has claimed dates in '96 for the third annual tournament of the Chamberlin Cartridge and Target Company. The third week of next June will witness the annual reunion at Cleveland.

The Elizabeth, N. J., Gun Club claims Oct. 23-24 as the dates for its fourth bi-monthly tournament. The first day will be devoted to smashing empires; the second day live birds will be used.

Send in your scores, and send them in early. They look well in type, even if you don't all make straights. Let other shooters know that your club is alive.

The Multnomah eleventh annual scores have come to us just as we go to press. Next week.

EDWARD BANKS.

Bass Lake Gun Club.

AITKIN, Minn., July 5.—I send you herewith the score of the maiden shoot of the Bass Lake Gun Club, just organized by Aitkin sportsmen. The score, of course, is not flattering, but it must be understood that but one of the members can shoot a trap; the wind also was blowing heavily. One of the shooters, Mr. Rice, has but one arm, and at live birds and game he is reckoned a good shot. The trap was new and the shooters had not got it adjusted. The regulation 18ft. range and rules prevailed. I trust later on that I can give FOREST AND STREAM a score from the Bass Lake Club which will compare favorably with older clubs. Scores:

Lott	0001010110010111001101010—12
Marr	0010010101100101010110—11
Danwick	0101000010110111001010100—10
Rice	0010110001000100101010100— 9
Bond	1101010111010111010101010—15

F. J. S.

Hollywood Futurity Handicap.

LONG BRANCH, July 6.—The Hollywood Futurity Handicap was shot to-day on the grounds of the Hollywood Gun Club at West End, N. J. This event has grown in popularity from year to year, until this year it had the largest entry—twenty—that has been recorded. The conditions are 25 live birds, handicap rise, 21yds. boundary, $50 entrance. The birds were good ones considering the time of year, the consequence being that no straight was made. Ivins shot well throughout and won the cup with 35 straight. The details of the score, given below, showing trap, flight of bird and result of shot, tell the tale.

Hollywood Futurity Handicap, 25 live birds, $50 entrance, handicap rise, 21yds. boundary, four high guns:

Ivins, Davis and Work divided first, second and third moneys, but shot off for the cup. The tie was decided at 10 birds, Ivins killing his 10 straight, Davis 9 (missed his 7th bird), Work 8, the latter losing his 6th and 9th birds. Finletter, Dando and Chapin, with 23 each, shot off for fourth money, Finletter winning.

New Utrecht Gun Club.

BROOKLYN, N. Y., July 4.—The following scores at live birds were made to-day by members of the New Utrecht Gun Club at their grounds, Woodlawn, L. I.:

Holiday cup, Class B allowed one miss as no bird:

N E Money (A)	2222●●1222 — 8
G W Coulston (A)	2221212211 — 9
Dr Littlefield (B)	2222112101 2—10
C W Floyd (B)	2021211221 2—10
L Schortemeier (B)	0212221122 2—10
G E Loeble*	201*012211 — 7
W H Thompson*	111111w — 6

*Guests.

No. 2, 25 live birds for price of birds, Dr. Littlefield allowed 2 misses as no birds:

N E Money	2211222212221222222222 —25
G W Coulston	2021212221211212122222 —24
Dr Littlefield	2222121112*221*12101122222—24

No. 3, 25 live birds for price of birds and $5, Dr. Littlefield allowed 2 misses as no birds:

G W Coulston	1121112212021*2222221221 —23
Dr Littlefield	2221212212022212221220*23—23

No. 4, 10 live birds for price of birds, 41yds. rise; tie shot off at 5 birds, 29yds. rise:

N E Money	22*22020*2 - 6 11122—5
L H Schortemeier	22*2022*20—6 0221w

July 6.—The following scores were made this afternoon at targets: Club shoot, class A at 20 targets, class B at 22, and class C at 24:

D Deacon (A)	00101110110011101110 —12
C Furgueson, Jr (A)	01000010100011100110 — 8
D C Bennett (B)	10101001111111111101 —16
Jere Lott (C)	11111010101001111110101—17
P A Hegeman (C)	10000011111101101001111—15
C F Cowperthwait (C)	01000000010100000000000— 3
G E Pool (C)	11011101111101111101011—20

No. 2, 15 targets, $1 entrance: D. C. Bennett 18, G. E. Pool 13, J. Lott 11, D. Deacon 10, P. Hegeman 9, C. F. Cowperthwait 4.

G. E. POOL, Sec'y.

A New Gun Club for Michigan.

HOLLAND, Mich., July 5.—A number of we amateurs have lately organized the Holland Blue Rock Gun Club here for the purpose of trap-shooting. O. E. Yates was elected President; S. Arleth, Vice-President; Dr. Yates, Treasurer, and Arthur G. Baumgartel, Secretary.

A shoot, open to all, was held at Macatawa Park, July 4. Messrs. Wharton and Walton, of Grand Rapids, made some of the highest scores. Shooting was at known traps, unknown angles. The following scores were made:

No. 1, 10 bluerocks: Geo. Bender 2, S. Arleth 5, A. G. Baumgartel 5, C. J. DeRoo 3, P. Dulyea 6.

No. 2, same: Bender 4, Arleth 7, Baumgartel 7, DeRoo 0, Dulyea 4, Wharton 10

No. 3, 25 targets: W. Thomas 17, D. Blom 15, Dulyea 17, C. Harmon 14, Wharton 23, Bender 8, Baumgartel 16, Arleth 11.

No. 4, 5 pairs: Thomas 4, Blom 3, Dulyea 7, Harmon 5, Wharton 8, Arleth 6, Baumgartel 5, Bender 6, Walton 7.

No. 5, 10 targets: Blom 2, Walton 8, Wharton 7, B. Van Raalte, Jr. 3, Arleth 8, Bender 7, Dulyea 7, Baumgartel 3, J. Skinner 10.

No. 6, 10 targets: D. Blom 4, B. Van Raalte, Jr. 9.

ARTHUR G. BAUMGARTEL.

The Fourth of July is a big day for the Lynchburg (Va.) Gun Club. It is an annual reunion and a family picnic for the members and their friends, the picnic being held in and around the pretty club house and its groves of oaks. Regular committees—on shooting, invitation, reception and lunch—are appointed, and the day is made a field day. The formal invitation received at this office (alas! that it could not be accepted) was brought to a close with this note: "Notice: We will eat fried chicken, drink circus lemonade and shoot bluerock targets." Lynchburg's "fried chicken" and "circus lemonade" mean a good deal to those who know how expansive those terms are.

Paducah Gun Club.

PADUCAH, Ky., June 29.—The following scores were made by members of the Paducah Gun Club on June 21, 24 and 28:

June 21.—No. 1, 25 targets, National Shooting Association rules:

T. J. MOORE, Sec'y.

Eureka Gun Club.

CHICAGO, Ill., July 5.—The Fourth of July outing of about a dozen members of this club was spent before the traps, on the grounds Seventy-ninth street and Vincennes avenue, where they have a cosy club house, located on some forty acres of land, and good traps and electric pulls, kept in the best of running order. In fact, it was a matter of comment among the 150 visitors how smooth and fast things went. This perhaps was best illustrated by the number of targets thrown—something over 2,000. Goodrich astonished his friends by breaking 49 out of his first 50. Perhaps the presence of so many of the fair sex lent an additional incentive, not only to him, but to all. Certain it is that we are glad they graced the occasion by being there. The day was an ideal one in every respect, wind and weather being perfect. Scores:

No. 1, 25 targets, unknown angles:

W. F. D., Sec'y.

The Union Hill Gun Club, of Hoboken, N. J., announces through W. R. Hobart, secretary of the New Jersey Trap-Shooters' League, that the sixth monthly contest of the League will take place on July 25 on the Union Hill Club's grounds near Guttenburg race track. Trolley cars run direct to the grounds from the D., L. & W. station at Hoboken, or from the Court House in Jersey City. The League contest commences at 2 P. M. Sweepstake shooting will be indulged in all the morning.

North Judson Gun Club.

CHICAGO, Ill., June 27.—This shoot was the maiden effort of the North Judson Gun Club. It was a success from beginning to finish. This was owing largely to the active work of J. T. Helfield, of the Helfield Kennels; Dick Devor and Mr. Lightcap. To say that they made it a success is putting it mildly. Among the visitors were: W. H. Skinner, of Chicago, representing the W. A. Powder Co.; C. W. Grubbs, of Chicago, representing Montgomery Ward & Co.; J. H. Robins, of the *Sportsman's Review*, of Chicago; J. B. Corley, of Chicago; O. N. Britain, of Indianapolis; J. C. Gwinn, of Wilders; C. W. Thomas, of Sogan, Ind.; C. M. Townsend, of Knorr, Ind.; G. H. Cornelius and George Elliott, of Rochester, Ind.; J. W. King, Reussler, Ind., known as "Rain Maker;" Judge Burson and F. M. Dukes, of Winamac, Ind. The following are the scores of regular events:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21

Cumstock	..	..	..	..	..	..	..	..	10	13	9	10	17	8	10	14	8	18	14		
Welsh	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	6	..	..	..	
Eatenger	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..	6	15

Nos. 1 to 10 were shot on June 26; Nos. 11 to 21 on June 27. The entrance moneys averaged 10 cents per target, except in the 20-target races, each of which was $2 50 entrance. Nos. 15 and 20 were at unknown angles.

The guns and powders used were:

Name.	Gun.	Powder.
J. C. Gwinn	Winchester	E. C.
A. T. Hetfield	Winchester	S. S.
F. J. Cornelius	Parker	E. C.
J. M. Dukes	Parker	E. C.
Judge Burson	Parker	S. S.
O. F. Briton	Smith ejector	Am. Wood.
George Elliott	Burgess	E. C.
J. H. Robbins	Scott	E. C.
S. B. Cosby	Greener	E. C.
C. W. Grubbs	M. W. & Co., hammerless	S. S.
D. Devor	Ithaca, 16-gauge	S. S.
W. H. Skinner	Hollenbeck	W. A.
C. W. Thomas	Lefever	DuPont.
J. W. King	Ithaca	E. C.
J. C. McCalley	Remington	E. C.

Mr. Hetfield was unable to shoot on account of his arm being sore. The best average was made by C. W. Thomas, a young man only 19 years of age, who rolled up some capital scores.

Please permit the members of the North Judson Gun Club to extend a vote of thanks to their visitors for their presence at the tournament, and for their aid in making that tournament a success. SECRETARY.

Maplewood Defeats Peekskill.

PEEKSKILL, N. Y., July 4.—The Maplewood, N. J., Gun Club and the Peekskill, N. Y., Gun Club have entered into an agreement to shoot a series of three team races, six men a side, fifty targets per man, known angles, home-and-home matches, with the third on neutral grounds. Judging from the scores in to-day's race the teams are very evenly matched. For a team race the scores are remarkable, Maplewood winning with 272 out of 300, an average of 90⅔, with Peekskill but four behind, breaking 268, an average of 89⅓. Of course the race was at known traps and angles, but the Peekskill grounds are not famous for a good light. Yet it was on these grounds that the Peekskill team made a record that it will be hard to beat under any conditions

In to-day's match the interest was kept up to the very end. Drake, A. Sickley and Yeomans, of the Maplewoods, and Halsted, Southard and Dain, of the Peekskills, formed one squad, the balance of the two teams forming the other squad. When each team had fired at twenty-five targets per man the score stood:

Halsted 23, Southard 23, Dain 23, Pierce 23, Mason 21, Everinghim 23—total 136.

Drake 24, A. Sickley 24, Yeomans 21, W. Smith 24, E. Sickley 22, Geoffroy 20,—total 135.

These totals show the Peekskill team to have had a lead of one target at the halfway house. In the second half the Peekskill total dropped to 132, notwithstanding Halsted's straight score. Maplewood, on the other hand, picked up and beat her first score of 135 by two breaks, scoring 137 out of 150. Geoffroy going straight, and Yeomans and Warren Smith breaking 24 each. The scores for this half were:

Halsted 25. Southard 21, Dain 23, Pierce 19, Mason 23, Everinghim 21,—total 132.

Drake 19, A. Sickley 22, Yeomans 24, W. Smith 24, E. Sickley 23, Geoffroy 25,—total 137.

In grand totals Halsted and Warren Smith, the president of the Maplewoods, tied on 48 out of 50. Dain, captain of the Peekskills, and A. Sickley were second with 46. There were three with 45 (all Maplewood men), and three with 44 (all Peekskill men); a 43 by Drake and a 42 by Mason made up the list. In the 12 strings of 25 targets there were two straight scores, 5 of 24, 8 with 23, 2 with 22, 4 with 21, 1 with 20 and 2 with 19. Halsted made the largest score in the team race, missing his 4th and 7th and running 43 straight. Geoffroy did some great work during the day, making a big score, something like 80 straight, a big portion of them at unknown angles. Details of the team race are as follows:

Maplewood.

Michigan City Gun Club.

MICHIGAN CITY, Miss., June 27.—The regular weekly shoot of the Michigan City (Miss.) Gun Club took place at the club grounds to-day. The attendance was slim, but the ones who attended had a fine time. The club will hold a tournament Aug. 8, at which some excellent prizes will be given. The shooting to-day was from three traps, targets being thrown at unknown angles. Following are the scores in detail:

No. 1, 10 singles: Aldrich 6, McCarley 7, Tway 9, Prewitt 7, Maples 2, Hardaway 9.

Club shoot, 25 singles:

Aldrich...1110101001011101010100010—15
McCarley...0100101011100001101111111—16

CHOKE BORE.

Lake Erie Rod and Gun Club.

FREDONIA, N. Y., June 29.—The handsome badges for first and second prizes at our Saturday shoots have arrived, and to-day A. C. Clark, heretofore a novice, carried off the 1st badge with 23 out 25, a percentage of 92. Ware took the 2d badge with 22 out of 25. Last Saturday (June 22) our shoot had to be postponed owing to the races of the Fredonia Bicycle Club, when riders occupied the race track, making shooting dangerous. Considering the number of members in the Lake Erie Rod and Gun Club, and the difficulty they have to get to their shooting grounds, I can safely challenge comparison with any other club for the enthusiasm displayed in regular attendance and their hearty entrance into the sport. Since the club was organized, two months ago, not a weekly shoot has passed with less than 1,000 targets thrown. The improvement in marksmanship, too, is notable. When we first started we had several members who could not hit more than 1, 2 or 3 out of 10; the same shooters are now breaking 7, 8 and 9 out of 10, with an occasional 10 straight. The following are to-day's scores:

Prize contest: Clark 23, Ware 22, Shelly 21, Dr. Dodds 20, Porter 18, Dr. Johnson 16, Marsh 14, Sackett 13.

In a team race, 50 targets per man, the following scores were also made:

Ware 44, Porter 40, Shelly 39, Dr. Johnson 34. Sackett 31—188.
Bristol 41, Clark 39, Dr. Dodds 38, Dr. More 36, Marsh 31—185.

D. W. B.

Wet weather doesn't stop trap-shooters as a rule, but the steady downpour on the Fourth of July put a damper on the all-day shoots in the vicinity of New York.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

GAME NOW ON SALE.

WE print two interesting papers on the New York game law. One is from the pen of President F. J. Amsden, of the New York State Association for the Protection of Fish and Game, who is also a member of the Association's Law Committee; and the other comes from Mr. Geo. R. Peck, of Auburn, who has long been known as an active and intelligent worker in the cause of protection. A careful reading of these two papers will show that there is among organized sportsmen more of a diversity of opinion than Mr. Peck is willing to grant. We have no doubt that there is a large number of those who, as Mr. Peck, considering the new law inexpedient, would have opposed its adoption; and we believe that such a number would represent nine-tenths of the sportsmen of the State; whereas the Association's Law Committee urged the Governor to approve the measure. They contended that, though imperfect in some respects, as a whole it was an improvement on the old law. As this committee represented the Association, the present law may correctly be said to have had the Association's sanction. We do not mean to say that the committee or the Association defends that section which relates to game sale all the year around, but the Association is on record as having declared through its law committee that the new law is an improvement on the old.

We cannot accept this view of the advantages of the new law. In it we look in vain for any improvements over the old statute which would begin to compensate for its reactionary features. There were in the old system no evils which could not have been endured for another year at least much more advantageously than to have opened the markets to the sale of game. Nor do we share the rosy expectation of those who aver that it will be a simple matter to repeal this Sec. 249 immediately upon the asembling of the next Legislature. If the game protective forces of the State found it impossible to keep that section out of the amended law, they will find it no child's play to remove it, now that it is on the books.

The paper by President Amsden was read by him before the meeting of the American Fisheries Society. Upon the conclusion of Mr. Amsden's remarks, Mr. E. P. Doyle, at that time secretary of the New York Commission of Fish, Game and Forests, took occasion to defend the game selling feature of the law. This was to be expected, for both Secretary Dole and President Davis of the Commission were active in their championship of the Wilks bill, which was afterwards merged with the game law as this Sec. 249. Now that Mr. Doyle is no longer connected with the Commission, it is not worth while to discuss his stand toward the opening of the markets for the sale of game; but the activity of President Davis in behalf of the dealers is significant and may well excite apprehension. If the officials appointed to protect our game do what they can to secure its destruction, as President Davis did by his influence in this special instance, we have to cope not only with the forces of destruction which have hitherto been recognized as hostile, but with new agencies within the ranks.

Game is now on sale in this State. We learn of shooters who have been out for woodcock to supply the restaurants, although the season on that game will not open until the middle of next month.

Last week we printed an outline of the laws prevailing in nearly thirty States against the export of game to market. By opening its game stalls for twelve months in the year New York puts a premium on crime in every State tributary to her markets. To urge that New York game dealers do not know that they are receiving illicit goods is puerile. To give them license to carry on the traffic in this game smuggled from sister States is an outrage, against which a game commissioner should never cease to protest.

ABOUT BUFFALO.

WITHIN the past two or three years frequent notices have appeared in the FOREST AND STREAM of a small herd of plains buffalo, which still range along the Rio Grande and the Pecos River in Texas, and in the State of Chihuahua in Mexico. These are the last survivors of the old southern herd, from which Buffalo Jones captured a number of calves seven or eight years ago. This little bunch, when first discovered, numbered only about twenty, but it is believed that it has now increased to forty or thereabouts. The newspapers state that an attempt is soon to be made by Dr. J. B. Taylor, of Tom Green county, Texas, to drive these buffalo on to his range and to hold them there in a state of domestication. It is said that all arrangements have been made to find the herd and drive it to Dr. Taylor's ranch.

It is to be hoped that the efforts will be successful, and that the animals may prove as amenable as the projector of this enterprise appears to believe they will. Certainly none of them should be killed, and certainly no attempt should be made to capture any adults or even yearlings. Past experience clearly shows that while adult buffalo may be run down, captured and tied up, they will not live, even for a short time, in captivity. We have frequently talked with Mr. Jones on this subject. He captured a considerable number of young cows, but invariably found that after being caught and hobbled, they died almost within the hour. Others have had a like experience. While there is no question that buffalo can be run down, it is very doubtful whether they can be driven, as is proposed in this case, 150 miles in any particular direction. If a bunch of buffalo make up their minds to go anywhere, they will go there, unless some insuperable obstacle interposes itself. A horse and his rider do not present such an obstacle; but if in the way will be run over. In years past we have too often seen buffalo run over cut banks, into impassable morasses and against railroad trains, to feel any doubt as to their obstinacy and blindness when once started. They are like stampeded horses or cattle; they think altogether of the danger behind them and nothing of what may be in front. The results of Dr. Taylor's buffalo driving enterprise will be looked forward to with much interest.

Under the title, "Distribution of the American Bison in Pennsylvania, with Remarks on the New Fossil Species," Mr. Samuel N. Rhoads has published an interesting paper in the Proceedings of the Philadelphia Academy of Natural Sciences. Mr. Rhoads alludes to the fact that the most easterly range of the bison was in Pennsylvania, quoting Dr. Allen's statement that the last buffalo killed in Buffalo Valley, near Lewisburg, in Union county, Pa., was shot by Col. John Kelley about 1790 or 1800. Among some bones, found forty-five or fifty years ago in the celebrated Carlisle cave in Pennsylvania, were teeth—now lost—supposed to belong to buffalo, and the molar tooth of a bison was found at Pittston, Lucerne county, in association with the remains of the mastodon and the fossil horse, which was identified by Dr. Leidy as belonging to the extinct *Bison latifrons*. This tooth, Dr. Rhoads thinks, is probably an abnormal tooth of the American buffalo. Two other specimens in the Philadelphia Academy came from Lucerne county and were identified by Dr. Leidy as of buffalo, which identification is confirmed by a later examination of the specimen by Mr. Rhoads. Another specimen, consisting of a lower jaw of the last molar tooth of the bison, was found in Hartman cave, Monroe county, and is now in the collection of the Academy. It was pronounced by Dr. Leidy *Bison americanus*, and Mr. Rhoads believes that the animal formed part of the feast of some Delaware Indians in comparatively recent times. This record extends the wanderings of the buffalo as far as the Delaware Valley.

A horn core with a small portion of the frontal bone, taken from a closed limestone crevice in Durham cave, on the bank of the Delaware River, in Bucks county, forms a basis of a new species called by Mr. Rhoads *Bison appalachicolus*.

It is said that buffalo in England do badly; that they are not healthy and do not breed. We should be glad to receive some notes of the animals sent over there within the past few years, telling of their condition and whether they have increased or not.

CHALLENGER AND DEFENDER.

BY the end of this week the ninth competitor for the America's Cup should be on her way to New York, and the question of what she is becomes daily of greater moment.

Unlike Genesta, Galatea, Thistle and Valkyrie II., the third Valkyrie has done no continuous racing at home; but at the same time she has sailed often enough against Britannia and Ailsa to give a fair idea of her powers. Unfortunately the reports from the Clyde are largely unreliable and misleading; some are written by the Scotch correspondents of American papers, and are so obviously intended to please American readers that they are of no possible value. Others show the partisanship of the writers for Ailsa or Britannia and are thus equally worthless. The most that can be gleaned from a careful review of the many different reports is that Valkyrie III., in her preliminary trials, and with little chance for working up, is very fast in ordinary racing weather. That she is over rather than under canvased cannot be doubted, and it is possible that some small reduction of spars and sails may yet be made; but from what is known of her beam and draft there are good reasons to distrust the reports of undue tenderness. What she may do in a hard blow is quite uncertain, but there is little doubt that in the usual weather of the cup races, for which she was specially designed, she will be very fast. Her beam is about 26ft., or a medium between the two American yachts Vigilant and Colonia. Her draft is at least 18ft., and is probably quite adequate both for stability and windward work. In construction both hull and rig are fully up to the times, and are probably fully strong, and reasonably though not extremely light, and she has an excellent suit of canvas. Judging from the models of Vigilant and Colonia there is every opportunity in the dimensions of Valkyrie III. for a designer to turn out a high-powered boat of moderately easy form, and the photos indicate that Mr. Watson has done this.

Of the actual performances of the defender nothing is known up to the present time save that she is fairly fast and lively in light airs; her behavior under a clubtopsail in a breeze, or under a jibheader, is still a matter of conjecture. In dimensions she is very little wider than Valkyrie II., the unsuccessful challenger of 1893, but with proportionately more draft, an extreme of about 19ft. Of her construction, all new and experimental, nothing definite is known, and only time can tell whether the designer's expectations of ample strength combined with extreme lightness have been fully realized. From all that has thus far appeared, it seems probable that much of the unknown and unreliable aluminum has already been removed and replaced by plain, honest steel, thus reducing the intended gain in lightness; while it is still a question whether further strengthening may not prove necessary after a real trial under sail.

In view of her extreme dimensions, even allowing for the heavy and low hung keel, the question of her stability cannot be considered as settled without a thorough practical test, and it is still doubtful whether she can carry sail as previous successful Cup defenders have carried it. Like the hull, the sails are an experiment, as yet untried, and of doubtful merit, judging from the reports of similar sails on the 20-raters Niagara and Isolde.

After all the glowing reports of the Bristol correspondents, it must be admitted that the new boat is one big question mark, possibly a great success, but quite as possibly requiring time and labor before that success is attained.

MR. JOHN MANUEL of Ottawa, Canada, nephew of the late Allan Gilmour, has presented Mr. Chas. Hallock with a handsome souvenir of the old gentleman. Mr. Gilmour had some stock in FOREST AND STREAM during Mr. Hallock's incumbency, and this testimonial of Mr. Manuel is a very graceful recognition of the friendship then existing between the two anglers.

The Sportsman Tourist.

NORTHWARD TO THE FAR WEST.—III.

[*Continued from page 24.*]

WE are now up 3,388ft. and keep climbing fast in the next sixty miles. It is hardly daylight when we reach Kananaskis, 4,100ft. up; but as we are anxious to see the beauties of the approach to the Rockies, some of the party have arisen.

We cross the Kananaskis River on a high iron bridge and a little beyond the station enter what is called the Gap. The Bow River comes rushing forth from the mountains above and passes out into the plains through this Gateway. As we turn to the north the Fairholme range is to the right, while on our left stretch the Kananaskis range, two very prominent and beautiful mountains, Wind Mountain and the Three Sisters, the last being one of the most "numerously" photographed of any in the section. At Canmore during the summer an open observation car is added to the train and one has a fine and unobstructed view of the grand scenery. It is only fifteen miles from Canmore to Banff, but we climb 270ft. The ride is one to be remembered. Great and rugged masses of rock rise on each side of us until their summits seem to pierce the cloud-covered sky. The scientist claims these mountains are upheavals of the Devonian and Carboniferous ages. The average tourist don't know, or care, in what age the great upheaval took place, but he does know that the result is some of the most weird, rugged, and entrancing effects ever seen in mountain scenery.

The grade is steep and it takes nearly an hour to run from Canmore to Banff, with but short stops at Duthie and Anthracite, at which place are located the coal mines. We are circled on every side by high, rough, ragged and snow-capped peaks. The mountains in this part of the Rockies are of the most rugged and rocky description. There is nothing in their outlines but that which suggests the wild, the terrible and the grand work of old "nature."

As we near Banff we seem to enter a cul-de-sac, from which there is no escape. To our right, rising nearly precipitously from the narrow valley, with its sharp and snow-capped crest, encircled with the flying fleecy clouds, 9,796ft. high, we gaze upon Cascade Mountain backed by Stony Squaw, which, while only 6,130ft. high, does not seem to lose prestige even in comparison. Fronting us is Sulphur Mountain with its steep sides covered with the dark green pine, fir and other mountain growth; 7,455ft. we would be, if on its highest point, above the sea.

To our left is Tunnel Mountain with its rounded top only 5,510ft. in the clouds, and then comes Rundle, or, as ocally known, "Razor Back," which is one of the most mpressive and forbidding of all the group, with its jagged nd sharp outline marked so distinctly against the morn-ng sky and thrusting its highest peak 8,637ft. toward the blue dome of heaven.

We were very glad to get up to the Sanitarium, as the morning air was cold and one always feels the chill in the morning.

Banff is "the Mecca" of the patriotic Canadian, as it is the headquarters for their national park, and it is a natural sanitarium. As a natural park it of course is not o be compared with that we of the States boast of, as n that we easily lead the world; but as a pleasure resort, with some natural curiosities, some good sulphur (hot) springs, the finest kind of mountain scenery, some excellent trout fishing, and a place to have a general good time, it is hard to beat.

The size of the park is twenty-six miles by ten wide, and embraces parts of the valleys of the Bow, Spray and Cascade rivers, and "Devils" or Minnewanka Lake.

Banff is not much of a town, as it exists on the tourist and health-seeker's patronage. The altitude is 4,500ft. at the station and most of the valley would average about that—a very good altitude for a mountain resort, high enough, but not too high, for numbers of invalids who cannot go up where the air is too rarified. There are three hotels: first, the "C. P. R.," as it is called, built by the Canadian Pacific road to care for its tourist travel, and only open during the summer months.

We do not all think alike, but our humble opinion is that the architect of this fine hotel nearly spoiled a good thing by placing the front of the hotel where the rear should be, and it is only because the situation is so grand that this mistake is not more of a mistake. Wright's, or the Mountain View House, is way up on Sulphur Mountain, 5,000ft. high, and is near the springs that boil out of the mountain.

Most centrally located and most accessible is the Sanitarium. The location is fine, but not as fine as the C. P. R. in regard to scenery, as this part of the valley is not as pretty; still, one can feel pretty well satisfied when looking out of the windows or gazing from off the verandas at the beautiful vista before him. The Madame, to whom the mountains of the West were new and a revelation, went into ecstacies over the grand view from our window. And it was grand! A little fall of snow had capped the mountain with white, and great storm clouds were rolling over the tops and now and then obscuring them. Some cloud more heavily laden with moisture than its fellows would roll majestically down over Cascade's side, and then the sun would burst forth and gild the high peaks with a golden light, causing the pure white snow to shimmer and glisten like molten silver in a golden setting.

After breakfast we took a long walk and visited the pool and cave. The latter is quite a curiosity, and the natural warm bath in it is well patronized. The light in the cave is very dim, and lamps have to be used passing through the tunnel leading to it. The outside pool is for swimming baths, and parties of gentlemen have great sport in the warm water fresh from nature's fountain.

There is so much to see at Banff, if one's time is limited, that we had to be on the go; so in the afternoon our party hired a guide and team and started for Devil's Lake.

The drive was a lovely one, as we had an open wagonet, and could gaze on the hills and streams to our hearts' content.

The road was fine, as are all the drives in the park, and we bounded merrily along. Some of the party were students from the Chicago University and the usual Chicago spirit was not wanting, and the echoes of the old Rockies were awakened by college yells and songs.

Part way to the lake we crossed a little bridge over a deep cañon, at the bottom of which flowed a struggling torrent, the outlet of Minnewanka. It is called the Devils Cañon.

The road took us over high hills with the mountains to the right of us, mountains to the left of us, mountains behind and in front of us; now crossing some little valley and anon climbing along the steep hillside with the brawling stream far below us, in a chasm deep and dark, with its sides covered with green brush and straggling pines. As we near the lake we go over a small rise or hill, and then the lake in all its beauty, with its mighty mountain sentinels, bursts forth on our vision.

The sheet of water spread before our view was like a plate of polished glass, and not a ripple broke the surface of its silvery sheen. A little propeller, or more properly a steam launch, is kept on the lake, with a number of row boats, for the use of tourists and fishing parties. The fishing is all deep trolling for what is called locally lake trout, and at the proper season large catches are made. We soon made arrangements for a sail over the calm waters, and our little launch went puffing up the lake. The scene was one of the most beautiful and charming that the writer ever saw. The huge rocks of the mountains were reflected in the bosom of the placid lake as if in a huge mirror, and every tree, bush, rock or silvery stream descending from the melting snow was duplicated, so that we did not know which was the most beautiful to look at, the original or the reflection.

Castle Rock and Gibraltar Point look down upon us as we speed along, and far up the side of rugged Gibraltar a deep and rocky cañon is filled with a foaming, rushing silvery looking stream, that as it descends becomes almost spray before it reaches the lower level from the dizzy heights above. We had not the time to thoroughly enjoy the lake, as one should make arrangements to go and stay at the hotel there for a day or two. The hotel at the lake is not pretentious, but fair accommodations can be had.

The next day the Madame thought she would like to get up a little higher than she had been, and so the desire must be gratified, and off we went behind a fine old gray mare from the hotel stable, warranted to be both sound and able.

Winding about through the jack pines the road leads up toward the C. P. Hotel and then turns to the right and begins to climb Sulphur Mountain—up, up we went, winding back and forth to make the grade more easily. As we climbed upward we were treated with an occasional glimpse through the dark trees of charming views down in the valley below, but it was not until we had breasted the last steep pitch and drove up in front of the Grand View Hotel that we could gaze our fill upon the wonderful and beatiful vista stretched out before us like a picture, but more beautiful than any picture fashioned by human hands. Standing upon the platform built out over the steep mountain side—so steep that we looked over the tree tops only just below us—we gazed down literally into the Valley of the Bow. There before us was a combination of forest-clad slopes, rocky ranges with snow-capped peaks, swift-flowing rivers and streams, grassy valleys and rocky cañons; truly all that serves to make scenery in the mountains beyond compare.

The flowing Sulphur Springs were at our feet and the earth and rocks were dyed yellow with the overflow. The roadway was so sharply steep in its descent for a little way the Madame concluded she would walk down the stairs which led down to the road below and let the rest of the family risk his precious neck driving down; but the old mare was steady and we soon were bowling down the fine roadway much more rapidly than we came up.

Banff was charming and the Madame kept the outfit so busy sight-seeing that the sporting portion of it had not been able to go fishing, but one afternoon a compromise was effected, the rod was taken out and we wended our way down below the C. P. Hotel to some rocks that overhung deep pools, and while Madame sat under the trees and listened to the murmur of the running waters the fisherman cast the seductive hopper or attractive fly in the river below.

Quite good sport was had, but the best of the season was past, and to get really good fishing at Banff one must go about nine miles by boat from the hotels. It is not to be expected that good fishing can be found where it is so accessible that every man, woman or child that takes a notion to catch a trout can go to the spot in twenty minutes from the hotel. July and August are the months for the best sport.

Had we not known that new glories awaited us toward the setting sun, we would have been content to linger longer at Banff, for it is a beautiful spot, and he must be dead to nature's charms indeed who can visit it and not wish to remain, or wish to visit it in the near future again.

Before we took leave of this charming resort we had a fine canoe ride up the Echo River into Vermilion Lakes, and rode round the "Loops," a lovely drive down the valley of the Bow.

A carriage road or bridle trail takes one up Tunnel Mountain, or a good walker and fair climber can easily go up. The views from the different points where the road winds about the mountain are charming. As a mountain resort which combines so many attractions Banff has few equals.

The air was chill and the sun not up as we took the train from Banff on the morning of our departure west, but we put on our heavy wraps and braved the cold of the observation car, for we did not want to miss the climb up to Stephen, the summit of the Rockies. We follow up the Valley of the Bow and pass the Vermilion Lakes, which we had visited.

Rocky peaks are all about us and we gaze with wonder and awe upon the mighty monuments that nature has reared. Castle, Pilot, Copper mountains and Mount Temple are all admired in turn, and Mount Lefroy then claims our attention, and calls forth words of astonishment and admiration as we catch sight of its grand proportions.

At Laggan, thirty-four miles from Banff, those who wish to visit Lakes Louise and Agnes, called, with Mirror Lake, "the Lakes in the Clouds," can stop off and do so. The best plan is not to follow the instructions given in some guide books and go to Banff and return the same day, but go to Laggan and up to the mountain chalet and stay a day and a night, as the trip then will be more endurable for ladies. Arrangements can then be made to go on westward.

It is only seven miles from Laggan to Stephen, but we climb 366ft., which is a pretty good grade, but nothing to the drop we take on the opposite side. We are now at an altitude of 5,296ft. and at the highest point the line reaches in the Rockies and also the highest point on the Canadian Pacific. This is a very low pass when compared with many on the transcontinental lines which run south of us, but the grandeur of the scenery does not suffer in comparison as one goes north. For ten miles now the admirer of the grand and sublime in nature has a treat,—the descent is rapid, as we seem to drop right down 1,246ft. in the ten miles.

Steam is shut off on the engine and brakes applied, but still our train rushes down, the wheels groaning and shrieking at being held in the iron grasp of the brake-shoe. We pass Hector and the pretty little Wapeta Lake and cross the Kicking Horse River, so far below us in the terrible gorge. The curves in the road are so steep that we can look into the engine and cars ahead one moment, while at the next they are hidden from sight behind some massive rock which juts out to dispute our passage, and as we whirl round it we look down into the depths of the great cañon below, on the edge of which we seem to be hanging twixt heaven and earth. We catch glimpses of the shining river through the green tree tops a thousand feet below us, and gazing upward from the open observation car we see snow and ice-capped peaks of great mountains, which seem to have opened to let us poor weak mortals pass on our way, until we feel like poor King Lear ready to exclaim.

> "I'll look no more,
> Lest my brain turn and the deficient sight
> Topple down headlong."

And yet the fascination is so great that the ladies, though they shudder and utter little feminine shrieks of fear as the train gives some sudden lurch and they gaze down some extra precipitous rock into the cañon below, cannot be tempted to leave the side of the car, but cling more firmly to the iron bars and look again.

We plunge into a short tunnel, and for a moment, which we begrudge, lose sight of the mountains, then into the light again and round the mountain's base, and the great peak of Mt. Stephen is before us,

> "Fronting heaven's splendor,
> Strong and full and clear."

The time is all too short to enjoy thoroughly all there is to see, and yet when we arrive at Field we are glad to be there, for the early rising, the mountain air and excitement has given us sharp appetites. Even Madame, whose æsthetic soul was only a brief period before feasting on the sublime and beautiful, and who would have scorned the allegation that she was hungry or that her baser nature needed something more satisfying than grand and beautiful scenery, could not help purring out that "the tenderloin steak was delicious, the trout too sweet for anything, the coffee and cream awfully nice and the hot cakes just lovely."

Field is not a town nor even a village, it is chiefly mountains and incidently a very pretty, neat and well-kept hotel is there. Here is a spot where one can sit and gaze their fill upon Mt. Field, Mt. Stephen and various other mountains which make up the Otter Tail and Van Horn ranges. Lake Emerald lies near by, a charming little mountain lakelet filled it is said, with trout, that we won't vouch for.

A day or two at Field would not be lost in one's life's calendar, and a hardy climber could climb his climb without going very far. There was a time in the early history of the road when white goats were plenty hereabouts, but white goats, like most other wild animals, don't like tourists, so they have hunted themselves a new resort or maybe have been hunted to one. Therefore, if one wants a white goat they had better go a "leetle" further west—that is, unless they want one a great deal more than the writer.

We all enter the observation car with a kindly feeling toward Field, and off we go plunging down again into the valley of the Wapeta (literally, rushing water). The ride continues to be very exciting, and new beauties of this wonderful cañon are discovered every moment. Twenty-one miles below Field we reach Palliser, 800ft. down, and just beyond we pass through the most beautiful and grand portion of the cañon we have seen.

The walls of the cañon draw near together and become nearly vertical, the rocks are seemingly unpassable, and the curves and turns which we make to escape them seem shorter and more daring than those above. The roaring of the river, the grinding of the wheels, the snorting of the engine, the roar of the escaping steam of the train, prevents conversation, and all we can do is to hang on and look. The camera is "shot off" out of the windows, or side of the car where they ought to be, and we tried to catch the fleeting beauties of the scene for our friends at home.

But here we are, too soon, at Golden—only thirty-four miles from Field and 1,500ft. below. Before us is the mighty Columbia, which here is flowing northward.

It is our first sight of the great river, but we become well acquainted, of which more anon. At Golden one can stop off and take a side trip up the Columbia a hundred miles to the lake, and this seems incongruous, as the "up" is to the south. The steamer only made weekly trips, and we did not have time to go everywhere; but if one is not hurried, it would be interesting to go to the source of one of our mightiest rivers, which has its birthplace in such a magnificent country.

For a short time now we follow the Columbia and our steel pathway is almost level. The great Selkirk range is before us, however, and as we gaze on its dark, somber, forest-clad sides and up to the snow and ice-capped peaks we see we are not through climbing yet. Donald, where we change our iron horse for one freshly groomed, is soon reached, and then we cross the Columbia and get nearer the Selkirks. But we have not said farewell to the Rockies, and at Beaver Mouth there seems to be a conspiracy between the two mighty ranges to bar our way; but we follow the mighty, resistless mountain flood which breaks through a narrow gorge, and turn to the left, forsaking our friend the Columbia, but finding a new one in the Beaver River, and taking advantage of the gateway it has cut for itself through the Selkirk's giants on its way to add its volume to its mightier brother, we enter the Selkirk range.

The Beaver here is crowded so hard by the rocky barriers on either side that a tree felled across it serves for a foot bridge.

We now begin to climb in earnest and the puffing and straining of the two mighty giants that push and pull us up the great grades fill the air with a deafening roar, for 160ft. to the mile is at least a fair grade. We are soon looking down on a little silver-like stream 1,000ft. below, whose course we can just trace through the dense forest that fills the valley. We are struck with the almost tropical luxuriance of the vegetation and the denseness of the fir and cedar trees. The juxtaposition of the high peaks has a tendency to dwarf and belittle the immense trees of this section, but one must notice their great height in spite of that.

The scenery now is something that no pen can describe so that any idea of its real grandeur can be conveyed. Nature in many ways defies the efforts of weak and puny man to portray her beauties. The master hand of the greatest artist fails when he essays to place on canvas the many hued tints of the gorgeous sunset, or the flashing lights of the aurora borealis, and words fail to convey, though they be ever so flowery or well placed, in describing the real beauties of a ride through the Selkirks.

We can only try to show a little and feel that there is so much left unseen that even the trial is a failure.

From side to side of the observation car we go, first gazing up the valley of the Beaver to the line of high peaks ahead, then admiring some foaming cascade that comes plunging down the precipitous mountain side, nearly all foam as it dashes over the rocks, then almost holding our breaths as we cross some stupendous work of engineering in the shape of a bridge over a chasm so deep and dark that the rays of the sun light it only for a few moments each day. At Bear Creek station we are 1,000ft. above the Beaver, and through a break in the cliffs catch a view of Hermit Mountain, at whose base the pass we are seeking lies.

We now leave the Beaver and follow Bear Creek deeper into the heart of these glacier-covered peaks. Great gorges and tumbling cascades are on all sides, and the chief of all is that of Stony Creek. The bridge, a new steel one, is 295ft. above the little stream below. We now are in the great snow country and snow sheds come too often to suit us, as we begrudge every moment we lose in darkness, but the Canadian Pacific people have done the best they can by having outside or summer tracks at points where the scenery is too fine to miss.

MT. SIR DONALD AND GREAT GLACIER.

Now we approach Rogers Pass, 4,275ft. high, and go between Mount Macdonald on the left and Mount Hermit on the right, the first of which rears his hoary head a mile and a quarter above us.

The pass was named for Major A. B. Rodgers, who discovered it in 1883, before which it is claimed no human foot had ever trod these mountain fastnesses. It is only two miles to the summit and we soon reach it, 4,300ft. up and 1,700ft. above Donald, and only 33 miles in distance have we ridden, but such a ride! This is the summit of the Selkirks and here we are surrounded by

> "The snow-crowned monarchs of an upper world,
> Rugged and steep and bare the mountains rise;
> Their very feet are planted in the skies;
> Adown their sides are avalanches hurled."

Mt. Cheops is before us and down the dark valley of the Illicilliwaet we gaze upon the beautiful symmetry of Ross Peak. While overtopping all, like some huge giant, the sharp peak of Sir Donald, the father of them all, rises through the fleecy clouds that hide the lower levels from view.

The steel pathway of our iron horse is seen winding in and out among the green firs and cedars away below us, turning on itself, and twisting like the coils of some huge serpent as it seeks its way to the valley below. Huge snow-sheds are on our left, but we remain on the outer track, provided for summer use, and with a sharp turn we front the great Glacier, which looks as if its immense ice fields were ready to slide down and overwhelm us, but which is more than two miles away.

Our engine snorts and the wheels grind and we glide down the steep descent into Glacier Station. Here, nestling in the green trees of the forest, only enough of which has been removed to make room for the station and the three buildings that are used for hotel purposes, we find one of the most charming stopping-off places that heart can wish for. It is dinner time, so only delaying long enough to register, we pass into the pleasant dining room and with our fellow travelers enjoy a good dinner.

It does not seem like the average railway eating station, in fact, it is not. Ample time is given to serve a regular course dinner, and everything is done with a quietness and order that is refreshing as well as surprising. We do not hurry, but are ready to go and wave farewell to the friends who do not stop with us, but quite a party remain, and it may not be uninteresting to state what a cosmopolitan crowd we were. There was a gentleman from Sweden, who was circling the globe; a wholesale grocer from Ohio; a young student from Yale College, who had spent the entire summer among the glaciers near Lakes Louise and Agnes climbing and hunting white goats; two young gentlemen from England, who were enthusiastic mountain climbers, and were also traveling round the sphere; several ladies from Chicago and Madame and your obedient servant from Detroit. So the world is small after all.

The foot of the great glacier is a mile and one-half away and 540ft. above the hotel. A very good footpath leads up to it and we wend our way under the great trees and through brush toward it.

The ice-cold stream that flows down from the great ice body above is crossed by rough bridges. Great ferns and flowers abound in the dense shade, or where the sun can send his rays. The vegetation is almost tropical in its luxuriance and surprises us as we walk through it. Bear berries and blue berries grow in profusion. We cross the second bridge and follow the zigzag path up the hillside through the trees, and then into the open through lower brush, and finally over boulders and rocks to the great ice bed which covers the mountain before us. By skirting the ice field and keeping through the forest, one can easily get upon the ice, but this we did not attempt the first day.

The "great glacier," or as many call it the great "Illecellewaet glacier," is a field of pure white or blue ice, 2,500ft. high, and lies to the right of Mount Sir Donald, which is the highest peak of the Selkirks, 10,645ft. high. The ice is covered with snow most of the year, but when any portion happens to be bare and the bright rays of the sun shine upon it, the effect is dazzling.

In this section are many other glaciers. The glaciers of Mount Bonny, the Dawson, Van Horne and numerous others lie in among the great peaks about the Glacier House. One need not climb at all to get a fairly good view of the glacier, as it can be seen very plainly from the hotel veranda, but most everyone wants to get to the ice.

The view from the hotel satisfied Madame, as it was pretty wet in the forest, a snowstorm having come up, arriving the night we did. The next morning was wet, but the storm did not prove continuous and it was a blessing rather than otherwise, as it killed the forest fires to the westward, and the low driving clouds heightened the beauty of the scene about us. The sun would come forth now and then from out the dark clouds and send its darting rays toward some white-capped peaks, making the pure white snow glisten and shine like a silver crown upon the heads of the mountain kings.

Old Grizzly in the Hermit range, Mount Cheops, Ross Peak, Eagle Peak and Sir Donald would play hide and seek with us, now covered with fleecy or dark, storm-laden masses of vapor, now standing out bare and bold against the blue background of clear sky, then half obscured with only the dark forest below showing beneath the light covering of snow, which seemed to be marked by a line, as if some mighty hand had stretched an invisible barrier, saying, "Thus far shalt thou come." Sudden squalls would come flying up the valley, and hail and snow would mingle for a moment down below, while far above we would see the fleecy covering grow thicker on the green firs.

We would long have lingered at Glacier, as its beauties grow upon the lover of mountain scenery, but there is more before us. As a point for the mountain climber or the lover of nature who wishes to sit and admire, Glacier is a spot that will rank with the finest—but a "sportsman's paradise" it can hardly be called. White goats are in the immediate neighborhood, no doubt; bear are quite plenty, and at certain seasons can be seen near the hotel, but one must make up his mind if he hunts in this country to walk and pack. There are no trails nor horses to use, if there were. If, however, one is strong enough to pack and stand severe climbing, there is plenty of sport, but still to stop at Glacier just for hunting would not pay. A little further west, a miner informed us, if we would stop at his camp, we would find "plenty of goats." There is no doubt that one who wishes to thoroughly enjoy the trip over the Canadian Pacific should do as we were doing, stopping and taking it in sections. It is altogether too much of a feast to digest all at once. The old adage that "too much of a good thing is good for nothing" applies very forcibly here, for if one goes right through from Banff in one day he will see so much that he will not appreciate half. Therefore, stop off as often and as long as possible.

F. F. FRISBIE.

[TO BE CONTINUED.]

CAMPING OUT.

THE taste for camping out during the summer months seems to have grown greatly during the last few years, and the fashion is a healthy one. It is good to get away from the restraints and vexations of city life and, resting our nerves and renewing health in the pure air of the woods or seashore, realize our insignificance when alone with nature in the wilderness, and how much there is in our daily life that is useless and unnecessary. The style of camp may vary greatly, from the elaborate affair, floored, curtained, with cots, kitchen tent, refrigerator, etc., in the woods, down to the little tent pitched in a back lot of the suburbs; but in any case it is good, and I trust the fancy may still spread and more of us will see our way clear to include the women and children in the annual camping party.

For some years I lived in Australia and passed many months of that time under a cotton tent. Camp life may be made by necessity very simple and yet be both easy and pleasant. It is wonderful how little a man can get along with when driven by necessity, and how what at one time we look upon as a hardship at another is passed by without a thought. Now I look back with pleasant memories of my life under the cotton, of the nights in the silence of the forest, with the wind sighing in the tops of the giant gum trees and the camp-fire flashing faintly in our sleepy eyes and of the awakening before dawn in the cool violet-covered light of the morning, with the lofty ranges standing clear cut against the sky, while the magpies, "laughing jackasses," and cockatoos commenced their daily clamorous chattering.

I can laugh now as I think how we had to pass one Sunday sitting holding down our tent inside, with a blanket over our heads, and our clothes, etc., underneath us to keep them dry, while the wind roared and the rain sifted through our old 8×6 cotton tent, and we tried to pass time between lulls by reading an old paper, smoking and abusing things generally, but we weathered the storm.

Australia is the land of the camper, and on any bush road the wandering digger, shepherd or laborer, on foot or on horseback, may be met miles from a settlement, each with his little cotton tent, roll of blankets, tin pail or kettle and hatchet. One of the most primitive styles of camp consists of two long sheets of bark cut from a big, stringy bark gum tree. One sheet laid on the ground serves as a bed, and the other sheet, round side up, laid over the occupant, serves both as quilt and roof. As it is difficult to cut a sheet of bark over 5ft. long the camper's head or feet generally have to stay outside in the wet. Two such campers were located thus one wild, wet night on a bleak hillside, all to be seen of them being long boots projecting at one end and soft hat with glowing pipe at the other. Said one to the other, "Bill, I pity them poor chaps what's out to-night without a cover."

Ordinary travelers on foot usually carry a small cotton wall tent of 8×6ft., with fly, fitted with long, light ridge rope. Weight is an important consideration, as tent, blankets, spare clothes, boots, hatchet, tin pots, frying pan and provisions make load enough for two men on a twenty-mile-a-day tramp. By using a ridge rope the tent is easily slung up between two saplings and no poles are necessary. Diggers use the same style of tent, but when settled down raise it a foot or so on log foundation, fix permanent poles, etc., and add to it a mud fire-place and chimney. Such a home as this can be made very comfortable, and I have known a married couple with young children live in such a tent 10×12 for months. Of course the mild Australian climate makes tent life easy all the year round. Campers always avoid the neighborhood of big trees, as a dry branch falling any distance is no joke, and some of the blue gums in Victoria grow 400ft. high. In Gipplands, in the south, many such are to be found to-day. I have wandered considerably on the subject of camping, and will not take up more of your space, but I think all your readers who have not done so should try a turn of camp life, and I believe they will enjoy it. Why should not parties of neighbors unite in a little camp settlement for the vacation? United they would find time pass quickly and would go back to their homes invigorated by the rest and pure air. What say you?

W. HAMMERSLEY.

MASSACHUSETTS.

A Correction.

ST. LOUIS, MO., July 11.—The other day a veteran, to whom I am indebted for many "points" strolled into the office and asked for the last few numbers of FOREST AND STREAM. After reading a while, he looked up suddenly and exclaimed: "Say, who told you that rattlesnakes wuz good eatin'?"

"You did."

"Me!"

"Yes."

"I never told you no sech thing."

Here was a facer.

"Why, didn't you tell me once that you used to eat rattlesnakes when grub was scarce, and that you got to liking them?"

"Not much. Prob'ly a big fat diamond rattler might be good, but the little prairie rattler ain't no good at all—too sweetish fer my taste. We had to eat them sometimes, but they ain't no comparison to puff-adder."

He paused, with a far-away look in his eyes. Then he remarked: "Puff-adder is out of sight."

Natural History.

THE PORCUPINE AS FOOD.

A PARTY of us left Providence late one fall for a two week's camp in the woods of Maine. One pleasant forenoon, Mell Tucker, our guide, asked me if I didn't want to still-hunt deer. We struck a trail some distance from the camp, got a shot at deer, missed and started back, as it was getting late. On the way back, as we came down through a ravine out into an opening, away up on a side-hill I noticed a tree with a peculiar looking bunch of wart toward the top. I stopped and tried to make out what it was, and Mell, noticing me looking questioningly toward the sky, asked what was up. I pointed the object out to him.

"It's a bear cub, sure as you're alive. Sneak up on him, don't let him hear you."

I "sneaked." Mell didn't come, but, as I afterwards learned, sat on a log shaking his sides with laughter to see me still-hunting a porcupine. He said it took me half an hour to work up to the tree, and that the beast had probably been up there for a week and if I had not brought him down he would have remained there another week.

I got near enough to draw bead on the dumpy black animal, and let drive. He came dawn like a hod of bricks, and yelling like a loon I started for him. Mell now came running up and between his smiles told me not to touch the animal; it was a porcupine and would "quill" me. I told him I knew it all the time, but somehow he didn't swallow that and when we reached camp my bear cub was the plague of me for several days. The only consolation I had was that I had shot him clean in the head.

We dragged him to camp. He was an old one. He had been in a trap once, for one of his fore-feet was gone.

When Dan W. saw the peculiar looking animal, he declared we would have it for supper and as long after as it would last. At this the Maine men turned deathly pale and in feeble tones implored him not to do anything of the kind, but to take it away over the hills and bury it; but the Providence party were hungry. Sour meal, sour baked beans and fat pork were monotonous. We wanted fresh meat.

Dan peeled the porcupine, spitted him on a huge pole, and over the big camp-fire roasted him to a turn. I can see that picture now. While we were setting the table for supper, in came the Indian with the porcupine, which he tenderly laid in the center, and with John's big bowie proceeded to carve the pig. We sailed in, rather gingerly I will confess at first, but after getting a fair taste of the meat kept Dan busy serving up the "porky." The Maine men went hungry. But we found the porcupine a very good substitute for fresh pork. The meat, it is true, was a little strong, and had a gamy flavor. It was also a trifle tough, but that we attributed to the age of our prize. If I were ever cast away on a desert island and there were plenty of porcupines around, I would never go hungry.

Several days after, when we broke camp on account of the scarcity of provisions, and Mell and John stood guard over the broken camp wagon while the rest went to the front for a new set of wheels, Mell is declared to have said, "John, I actually believe I could go a small piece of that porcupine now!"

What is the matter with the animal anyway, that people should have such a prejudice against it? It feeds on the bark of good, clean, healthy trees, and, unlike many other animals which we delight in eating, is practically fastidious in its food. Certainly it is preferable to the genuine porker as far as cleanliness goes.

Our party is much separated now, but I will guarantee that when the porcupine subject is mentioned in the presence of any one, the animal is well defended.

TODE.

Wanted, Some Fan-tail Deer.

PHILADELPHIA, Pa.—*Editor Forest and Stream:* I was much interested in Capt. Kendall's letter two weeks ago on the small deer of the Chisos Mountains in the Big Bend of the Rio Grande, as I believe that I am one of the few civilized men who have been unfortunate enough to get into that desolate region, where I spent some weeks two and a half years ago.

The game conditions there now are very different from those Capt. Kendall speaks of ten years back. There is no sign of antelope, black-tail, nor the small deer. There are a very few common deer in the mountains, but so little game of any kind that a poor hunter would soon starve. Nor do I believe that the country has ever supported much game, as there is little food and less water.

ARTHUR ERWIN BROWN.

[In connection with the subject of the fan-tail deer, which has so frequently been mentioned in these columns, the FOREST AND STREAM announces that it is authorized to offer the sum of $100 in payment for a pair—buck and doe—of fan-tail deer from the North. These must come from some point north of the Union Pacific Railroad. Of course, it is understood that this price will be paid for these animals only in case they prove distinct from the Virginia deer (*Cariacus virginianus*) or the mule deer (*C. macrotis*). The opportunity is thus afforded any hunter who is confident of the existence of the fan-tail deer to settle the question at little or no expense to himself.]

Deer Whistle—Moose Horns.

LOWELL, Me.—Not long ago I noticed in FOREST AND STREAM the remarks of some one about the snort or whistle of the white-tailed deer, and different opinions as to how they produced the sound. If I remember rightly it was said to come from the throat. This is a mistake. They do it by forcing their breath through their nostrils, and it is similar to the snort of a horse. I have been near to them and have seen them do it.

Then again the same article spoke of their doing it after being wounded. A badly wounded deer seldom or never does it. I used to hunt by night and when I shot at a deer and he ran away a short distance and stopped and whistled, I never went to look for him, but took it for granted that he was not hit.

Then again I was surprised that your Bethel correspondent, an old woodsman and hunter should differ so much from my own experience on moose. He never saw where a moose took the bark entirely around a tree, but I have, and it makes a difference whether the snow is shallow or deep, or there is none at all. They cannot get the bark when the tree is frozen hard; but in the early fall or warm days in winter they usually take the bark off from the tree on the side that they come to, then pass on to another tree and so on.

Then his observations about their shedding their antlers are different from mine. He believes that a thaw in the winter takes them off. My experience is that the colder the weather the quicker the horns loosen and come off. Then he states that the new horns by the first of June have attained their full size. The horns don't get their full size until into August, and it is usually the case with all beasts and fowl to go where the best feed is, unless driven by their enemies.

He states that we have two kinds of moose in Maine and that they never were known to yard or mate together. This is all new to me, except that there is some difference in their color and shape of body, and so there is in all animals—deer, bears, etc. J. DARLING.

[Two correspondents have now written that a deer whistles; but the original question still remains, does a deer challenge?].

Game Bag and Gun.

SPORTSMEN AND TRANSPORTATION COMPANIES.

Editor Forest and Stream:

In an editorial of July 6 you speak of the laws relating to taking out game and fish by sportsmen, from the Maine and other hunting and fishing resorts.

I will give some of my experience on this subject both in Maine and the Province of Nova Scotia. I have made several hunting trips to Township No. 7, and to the region above Oxbow in Aroostook county, Maine. The Bangor and Aroostook road was not open when I made my last trip, and I went there as formerly from Bangor to Mattawamkeag, some sixty miles each way, by the Maine Central road. I found this road to be an expensive one to travel over, and the accommodations rather poor. My last trip will illustrate how a sportsman (who is fortunate enough to kill some game and unfortunate in trying to bring it home) is treated.

Returning from No. 7 early in December of '93, I brought out whole a bull caribou, a buck and the hind quarters of a cow caribou. At Mattawamkeag I was told that they must go by express (I knew this before), and that I must put them on the train myself, as the station men were not allowed to handle game. I have usually found the trains somewhat behind time at Mattawamkeag and the stop there was very short, and I knew perfectly well that I could never get those animals on the train alone, even if I had some time. I said so to the station agent. I do not know whether the intention was to make me leave my game there, but it looked that way to me. By the use of the almighty dollar I got one of the men at the station to help me put the game on a truck and wheel it to about where the express car would stop, and also the promise that he would be there and take hold of one leg of the big caribou. By hard and quick work on my part I got them into the car, but came very near getting left myself, having to jump on a rear platform as the train moved off. I had my rifle slung over my shoulder and a heavy ulster on; and as it was, I lost a new pair of expensive gloves, not having time to pick them up.

The next proceeding was to see the express messenger. He, after looking the game over, said that $9.50 was the charge. I objected, and he then told me they would weigh so much. Now, I think the big moose, caribou and deer we hear about must have been weighed by some express agent, that is, he estimates the weight. I know he did not weigh mine, and as I had weighed them while waiting at the station, I thought I knew the actual weight. The expressman, however, set the weight some 300lbs. more than the scales showed. After some kicking I got a slight reduction.

At Bangor the game warden was seen, and everything was satisfactory as far as he was concerned. While waiting for the warden I had a pleasant talk with Mr. Sumner L. Crosby, the expert taxidermist, and he introduced me to the warden. In fact, I never had the least trouble with the wardens at Bangor, and found them gentlemanly in every way.

Reaching Boston, I waited until the game was in the express room at the station, and asked to have it weighed. As the weight was the same as when it was put on the scales at Mattawamkeag, I demanded that the overcharge be refunded. At first they were not inclined to do so, but as I insisted, I was given a document and sent to the general office, a few blocks away. There I was informed by an elderly individual that I had broken the game laws by bringing any game out of Maine. I told him at once that he knew nothing whatever about the game laws. From there I was sent across the town to the offices of the grand mogul, general manager, or some one else of the express company, and was told that it should be looked up, and the over-charges, if any, would be sent to me, which was done a few days later. The amount I recovered was not worth the trouble I had in getting it, but I was bound to have it if it cost twice what it was worth.

The last few lines of the editorial I have referred to apply well to this particular road—get the last cent a sportsman has when he is returning from a trip. The road charges all they can for his ticket and turns him over to the express company, who will try hard to get anything, he has left. I know that, as far as I am concerned, I will never undertake again to bring out the carcass of any game if I have to travel over the Maine Central under the present rules. I would rather give the meat to the first lumber camp or settler I can find. Should I get a head and horns I will do as the gentleman spoken of by your correspondent "Special," and bring it out in my hands, and should the horns be too wide I will saw open the skull lengthwise so that I can handle them.

Now in comparison I will give my experience when on hunting trips in Nova Scotia; and it has been the same in the different parts of the Provinces which I have been to. Returning home one fall by way of Digby, we had two moose heads, two moose skins and four bear skins. With our packs containing our blankets, sleeping bags and hunting rig we had quite a number of bundles, and I did not know how we should get them to Boston. Asking the agent at the wharf in Digby he said, "I will check them all through to Boston." I expressed my thanks, and he said, "Oh, that is all right. You sportsmen come down here and spend your money and we want to make it as pleasant as we can for you. Hope you will come again and have good luck." Again returning once in January from moose hunting I went from Digby by rail to Yarmouth, and from there to Boston. I had considerable baggage, including a pair of large snowshoes and some moose meat. Everything was checked to Yarmouth, and from there to Boston. In fact, I have always found without a single exception that the officials of the steamboat lines, the custom house, the railroads and stages were very courteous and obliging, and this without feeing of any sort.

Verily, it would be a good thing for the managers of some of our railroads to take a trip through Nova Scotia during the hunting season, and to see, mark, learn and inwardly digest the way in which non-resident sportsmen are treated by the officials of the Provincial transportation companies. Certainly it would not do them any harm, C. M. STARK.

DUNBARTON, N. H., July 8.

A DAY IN MISSOURI.

WE had determined on a good day's hunt for quail and chickens as soon as the weather would permit. Reports from the surrounding counties toward the opening of quail shooting had it that "quail were thicker 'n rabbits," and that was saying considerable, although we had had a light winter before, and quail had not suffered here as they had in some States.

Finally everything was settled and the rendezvous named. I was the farthest away from it and the youngest of the party. I had not had a gun or rod in my hands for very near two years, except for a day's trout fishing in the streams of McKean county, Pennsylvania, and I very anxiously wanted and I might say needed the exercise and open air, being confined as I had in an office where exercise was an unheard-of thing.

The day that I was to start came, bright, sharp and breezy. I hitched my pony to a light road wagon, threw in my traps and was off for all the quail I could get. The road led me west from Brookfield through a waving country, where nothing but corn and blue grass met the eye, as the farmers of Missouri all raise corn as their principal crop. I arrived at the rendezvous at just 6 o'clock, sixteen miles from where I started. M. and A. were both there and they predicted a "rattling quail day" for the morrow.

The sun rose the next morning bright and clear, and on getting out we found there was a strong breeze from the west. Indeed, it was a quail day. Putting in our "traps" and dog, we started for Grand River bottoms, which are nothing but prairie land overflooded by Grand River in the spring. Arriving there—an hour's ride from A.'s place—M. and myself got out and started to work a "draw," A. saying, "I'll go around to the head and work back toward you."

Stepping over the fence, we had barely straightened up before wh-r-r, wh-r-r-r, went a half dozen birds from under M.'s feet, who got in one barrel with no effect. "They're here," he said, as he let drive right and left at a brace his dog flushed. "Yes, but why don't you stop some of them?" "Oh! I haven't got down to work yet," he answered. We took opposite sides of the draw, which was about five rods wide and had a cornfield on each side. We could not see each other and at intervals I heard his gun, but nary a bird did I see. Thinking my time would yet come, I kept on up the draw. Getting half way up, I saw him flush a bevy and raise his gun to shoot, and looking for the cause I saw A. just rising up about where the birds went down. "Close call," said he, "but never mind, we'll have those quail."

The dog stood the birds, which lay very close and got up in pairs and threes. The first two got away clear, but the next three A. and M. got one apiece. The balance got up and most of them got free, as it was in very thick brush, and you had no time to lose if you even saw one. Out of this bevy I got three, and A. two—M. still keeping in his bad shooting form.

Going a rod further we got up a bevy and here M. redeemed himself by killing right and left, which was a usual thing with him, as he was by far the best shot of the three. After this we separated and I continually heard the bang, bang of their guns, while I was busy between rabbits and quail. After a two hours' stay we came out on the road and counted up; twelve quail, two squirrels and four rabbits having been killed. "Well, that's not so bad," remarked A., "but I am out for chicken." I ventured we go after them and M. consenting we started. On our way over the bottoms we stopped in on a few bevies of quail and got some more rabbits.

The chickens here in Sullivan county are quite plentiful, but very wild. They lie in the cornfields and stubble all the morning, and in the blue grass through the mid-day heat, going back to the stubble to feed at about 3 or 4 o'clock in the afternoon.

We arrived at our "chicken roost," refreshed with lunch, with cider, and started after chicken. "I bet we don't get a chick," said I, well knowing how wild they were and how they fly. "I'll make feathers fly if I get near enough," said M. The first piece of corn was about a fifty acre piece and we started through that, about five rods apart. Getting about half way through I was startled with "Look out, Ed," and bang, bang, bang, bang. Looking over the corn I saw one lone chick going like a bullet for the grass. Asking A. and M. what the matter was they said they didn't know as they "ought to have knocked him down with a club."

We got up two more, letting them both get away. A. and M. then went across the road into another piece of corn and I took off for the lone chick that I had marked down. I worked a stubble going over with no success, and was looking sharp for my chick, but as they run when they light I didn't know how near I was to him. In my front was a hedge, which I had to climb—a difficult thing to do and save clothes. By the aid of a board I had got on top, and was just about to jump off on the other side when whr-r-r went my bird out of the grass, four rods away. Turning, I let him have one barrel, which broke his leg and knocked me off the board in the hedge and tearing my clothes in rents; but that was nothing, I wanted that chick. Following him I got him

up and missed him clear with both barrels. Thinking he had earned his liberty I let him go and struck off through another stubble, where I got up a flock of thirty or more.

At periods I could hear M. and A.'s guns in the distance. On my getting over to where I marked the flocks down, I found M. and A. waiting for me, but neither had a chicken. We spread out and started through the grass, A. got one bird up and missed. One got up behind me after I had walked by him, and I knocked him over before he had gone five rods. One got up before M. and started to the left at lightning speed; M. gave him one barrel, which, as could be plainly seen, knocked him a foot out of the line of his flight, and the second seemed not to touch him. To illustrate how much shot a chick will carry, that bird was picked up a quarter of a mile away from where he was shot at, stone dead, just riddled with shot. As it was getting dark by this time we started for the team.

Arriving at the wagon, I was surprised to find that M. had his coat full of quail and rabbits he had shot while over on the hills, he not missing a shot, and A. doing his share of killing too. That night at home we counted up and we had thirty-nine quail, two prairie chickens, seven rabbits and two squirrels, besides some other birds we had shot for specimens. This was not a large day, but it was sufficient to stretch our legs, give us a good appetite, and appease our thirst for "sport" for days to come.

BROOKFIELD, Mo. E. K. M.

HUNTING ON THE UPPER MISSOURI.

IT was a hot, sultry day, the 17th of last August, when Geo. Wells and his partner, Henri Moor, arrived at Fort Benton, the oldest trading post and fort on the head waters of the Missouri River. Their journey had been a long drive over the old stage and freighting line running between Lewistown, situated in the heart of the Judith Basin, and Fort Benton, a distance of fifty miles. Their route led them across a waterless plain, where in dry seasons no moisture can be found, save occasionally an alkali pool or an old-time buffalo wallow with its filthy, green water, shunned by every living creature, perhaps excepting the rattlesnake. A fifty-mile drive over a dry prairie in the hot days of August without water for man or beast is certainly a tester for human or brute constitution. Before the setting sun had hid among the foothills and the distant Rockies the party had reached their destination.

Surveying the surroundings, they spread their canvas in a cool, shady nook, overlooking the noble Missouri, and after supper they lit their pipes and strolled far up and down the river bank until the late hours of the night, mapping out and discussing their work for the next few days to come.

First, there was a boat to build, then a wagon with four head of bronchos to dispose of, and an outfit of provisions, suitable clothing and ammunition to purchase before embarking on our long hunting trip down river. Early next morning the boat was planned and under construction. It was to be 21ft. long by 5ft. in width, with a 20ft. mast, oarlocks for one set of oars, with lock for steering oar, and a canvas cabin in the stern. Under skillful workmen the boat was completed in less than a week, and in the water ready to undertake its long, tedious expedition.

All that was left to do was to sell the bronchos and purchase supplies. A person acquainted with Western ways knows that it takes but a short time to make a trade or sale, especially in a horse deal more than any other. By the night of Aug. 23 the stock was sold and ammunition and camp supplies were purchased and packed in the boat chests.

Early on the morning of the 24th Wells and his partner spread their canvas to a steady breeze, raised anchor and were off.

Their aim was to make as many miles by the river as circumstances and the season would permit. Their expedition was for hunting big game and to explore the famous Bad Lands. They expected to experience hardships and were prepared. As for Wells, it was not by any means his first trip in pursuit of noble game; he had hunted the Canadian and Minnesota woods for deer, bear and moose. He had followed herds of antelope over the trackless wilds of western Dakota and through the Bad Lands of eastern Montana, and had followed the big-horns in the Rockies.

Their gun case contained a .45-90 Winchester, a .44 Marlin, one breech-loading shotgun and two .45cal. Colt's six-shooters.

The day was beautiful, with a cool river breeze blowing down stream. The boat was riding the water like a duck and not leaking a drop, the hunters were in the best of humor. The scenery was magnificent, the steep cut banks of the river were a panorama ever changing. They told of mysterious events of the past. In places can be seen where the current is cutting away the soft banks and exposing to view buried trees, logs, bones of animals, etc. How long these have been hidden away no one knows; but it is reasonable to suppose that the course of the river is ever shifting.

Looking to the northward, the Bear Paw Mountains can be distinctly seen, while between them and the river is a rolling grassy prairie. The explorer turning his attention to the south can observe the rocky peaks of the Big Belt, Little Belt, Highwood and the Snowy Ranges, exhibiting themselves in the distance. Near by are the rolling foothills and occasionally a flat-topped butte standing like a solitary sentinel alone on the prairie.

This our friends knew at sight was no big game region, and not until the third day out from Benton did they strike favorable surroundings. The country along the river became more broken and wooded with a growth of scrub cottonwood and willow. The creeks and small rivers that empty their waters into the Missouri become more numerous, thus affording good runways and watering places. Fresh signs of black and white-tail deer, bears, wolves, elk and other wild game were numerous. Frequently through the field glasses small bands of antelope could be seen in the distance.

It was the third night out that the boys had for supper their first fresh venison. Wells brought down a fine fifteen-point black-tail buck with antlers in the beauty of velvet. Two days' more sailing found the hunters at the mouth of the Mussleshell and among the Missouri Brakes or the famous Bad Lands, with its everchanging scenery. Game was found in abundance, the weather being so hot the party shot only what they wanted for immediate use or for fine heads. Several days were spent exploring the wonders of the Bad Lands; it is a vast extent of hills, cañons, dry coulees, washouts, blowouts, gullies and burnt-outs. It is a hard country to picture.

One of our generals who had charge of a campaign in that region some years ago was asked by his friends to describe this country. The general answered by saying that he knew of nothing better to compare it to than to "hell with its fire out."

Our friends found many interesting things, such as petrified logs, fossil fish, fossil shells, enormous bones of some prehistoric animals.

Fresh bear tracks could be seen about their camp every morning and some of enormous size, made by nothing smaller than a silver-tip.

Coyotes would make the nights hideous by their howls and yells, causing a pilgrim to imagine there were ten thousand or more of the brutes. Frequently the blood-curdling yell of a mountain lion would be heard, and with the snarling, growling and fighting of the old buffalo wolves over the carcass of a deer there was a wild din in the air throughout the nights. The prairie and foothills, far back from the river, are the favorite haunt for the timid antelope; among the brakes will be found the places of refuge for the mule deer and black-tail, as well as the elk and big-horn or mountain sheep and the cinnamon and silver-tip bear; while in the immediate vicinity of the river dwell the white-tail.

The progress down river was fine, the ever changing scenery broke the monotony of a several days' sail.

The weather throughout the month of September was hot and no place in the world could be much worse for flies of all descriptions than along the Missouri. The boys tried to dry hams of venison; but in vain, the flies would set claim to the meat the minute the hide was taken from a carcass. Under this difficulty deer hunting was actually becoming monotonous, so the boys turned in the direction of bears and wolves.

Plenty of poison was put out, but Bruin appeared never to be meat hungry; but as for the big buffalo wolves, they were frequently tempted to accept the fatal morsel of venison.

The mouth of the Milk River was finally reached and here the Missouri runs along the Indian Reserve. This meant to the boys that there would be a scarcity of game until they passed the reservation at least. After leaving Benton but few signs of civilization were met with, occasionaly an abandoned fort and trading post or an old cow-camp; and frequently a lone placer miner would be passed.

The course of the Missouri is ever changing, the current of the river will be cutting away at one bank, while on the opposite side it is filling in; this in course of time causes a great crook in the river. Such is the case at Fort Buford, situated close to the Dakota-Montana boundary. The fort stands near one of these great loops of the river. Early one morning in October our hunters came within sound of the bugle at the garrison, but instead of getting nearer the river bore them away and it was six hours before they were again in hailing distance of the fort. White-tails became numerous again, especially on the Fort Buford reservation. Wells shot several fine specimens.

It being now late in the fall, and there being many miles before the explorers and hunters, and having a boat load of specimens, hides and heads, they made but few stops. The weather was becoming severe, the nights cold and stormy. The winter winds played a mournful tune through the rigging of the little craft. The icy waves dashed against the sides of the boat, leaving it a glistening mass of ice the next morning.

Contrary winds prevailed, so that the progress was slow and Bismarck was not reached until the end of October.

Geese were met with in vast numbers, but most large game was left behind. Eight out days from Bismarck, the distance was made to Pierre and on the night of November 8 the party tied up at Chamberlain, not to make another mile by water, for the next morning the river was frozen over, and after waiting for several days to allow the river to break up (which it did not do), the party decided to abandon the expedition, and in a few hours they were en route by rail to their eastern homes. Thus ended as glorious an expedition as two hunters could ask to take. They traversed a river that is but little known to many, through as wild a part of North America as can be found. Many nights their sleep was broken by the cries of wild animals and the tread of herds of deer. What more could man ask for?

The trip was a success in every particular. They killed in all twenty-one deer, twelve old buffalo wolves, twenty coyotes, one antelope, and a goodly sprinkling of small game.

They also got many fine specimens of fossils and petrifactions from the Bad Lands of the Upper Missouri.

REMAC.

CAPE BRETON CARIBOU.

Editor Forest and Stream:

Perhaps some of your readers may be interested if I tell you of my trip after caribou in Cape Breton. I went in the early part of January; the law allows no hunting after Jan. 15, and at this season the best hunting ground is upon the table land which forms the backbone of the island. This table land is about thirty miles wide and extends from the center of the island northward, till it ends precipitously in the Atlantic at Cape North, 1,100ft. high.

My friend Mr. Cann and I went in with a party of five hunters from the settlement of South Bay Ingonish. We started at noon in a heavy drizzle, and after a tough climb, each man on snowshoes pulling a toboggan and carrying a pack containing provisions (*i. e.*, biscuits, molasses and bacon), we reached the top of the mountain at 5 P. M. For that night we put up in an old lumber camp with a fireplace of the most primitive kind; the chimney consisted of a hole in the roof, and by the morning we were as thoroughly smoked as red herring and glad to resume our march before daybreak. Arrived at the hunter's camp at 3 P. M., having seen no signs of deer.

The camp was a log hut 10ft. square snugly placed in a heavy bit of timber about 200yds. in from the edge of the barren. There were marten tracks around the hut, and Jim Williams became much excited, and immediately set to work to build a deadfall to such fell purpose that next morning he appeared leading an unfortunate little marten by the back of its neck and exhibited it to us before killit with a stick.

It froze hard that night. The next morning we had an early breakfast and started for a day's hunt; found fresh tracks of ten deer, and as there was only 14ft. of snow the deer had taken to the woods. We once got a glimpse of them, but it was perfectly useless attempting to follow them on account of the infernal noise our snowshoes were making on the crust, so we headed back to camp about 3 P. M. Stopped at a little brook on the way to eat our biscuit; an old raven flapped past us, flying slowly against the wind, and I put a sudden stop to his mad career with a .38 Winchester bullet. We tramped on again and were descending a hill when seven deer came out of a wood about 600yds. in front of us and began feeding; but as they were almost dead to leeward of us their appetites suddenly deserted them and they remembered another barren where they had important business and made tracks for it. Everyone swore a little about the poor dead crow, and we went sadly back to camp, having tramped between fifteen and twenty miles.

That night three other hunters arrived in from the settlement, making ten men in a 10ft. square tent. Second morning dawned bright and cold, and when we arrived at the edge of the barren there were four deer about 500yds. in front of us. The head hunter, Mr. Hawley, placed seven of us across the southern end of the barren, sending two men up through the woods to windward to drive the deer. As luck would have it, the deer came galloping straight down on top of him. I was a little ahead and to the right of him, and had a magnificent broadside shot as they passed me, bringing down a splendid buck with a beautiful pair of horns. A yearling calf wheeled back and passed within 40yds. of me. I dropped her and turned round in time to see Jim surveying all that remained of a fourth victim—a pretty little cow. We hauled them into the woods, cleaned them, and started for the barrens again, but the remainder of our hunt was unsuccessful.

Next day it rained and we could do nothing. Some of the party went out, tracked one deer, but lost him. A heavy thaw set in that night and the following day the barrens were as bare of snow as in midsummer, and we feasted on large cranberries, which were growing all over the place, and any one who has ever had a severe attack of colic while in camp would, I am sure, have sympathized with me that night; but owing to the kind care of my hunter friends, pepper tea, hot socks and three big pills I pulled through.

The next day, a rainy Sunday, we lay in camp all day. Monday morning we lashed the meat on the toboggans and started for the settlement. A silver thaw during the night had made the road slippery, and our twelve-mile tramp to the edge of the mountains was about the most tiresome piece we ever put in. But the getting down the slippery side of that mountain wasn't, and what with running into trees and getting upset, I still can't understand how we reached the bottom with no broken bones.

Next day we said good-bye to our kind hunter friends with many regrets, and set out on our sixty-mile drive for home. We considered our trip a most successful one, as parties often go in, but don't see a deer. And if you happen to pass this way just drop in, and I will show you the head of my buck with his fine pair of horns. R. C. B.

SYDNEY MINES, Cape Breton.

Calibers for Big Game.

PORTLAND, Ind.—*Editor Forest and Stream:* I have just read Lieut. Kieffer's interesting article on "Caliber for Big Game Shooting." Recently I wrote you of my experience with a small caliber rifle. The gun was a .32-20 and not a .32-40, as stated in the letter. Two of the deer were shot once, one twice, and two of the five three times, but they all fell within sight. I have hunted with a .45-95, but for forest hunting prefer, as I said, a .38-40, or in place of that some close breeched medium caliber using a short cartridge. They are so handy for rapid firing in the timber.

That a large caliber gun has the greater stopping power I do not question, and yet Lieut. Kieffer cites an instance where Mr. Harvey Robe put two balls through the heart of a buck from a .40-82-260 rifle, and the buck ran 100yds.; while last fall I shot a 12-point buck through the heart with a .38-40 Winchester at a distance of 85yds. and he ran just thirty-five steps. In October, 1893, I killed seven deer with eight hits with this same .38. Two of them were running and fell within 50yds. One sneaked and lay down about 40yds. away. One was lying down and never got up, while the other three dropped. I believe this: if a deer's lungs are inflated when he is shot, he will run until his breath is exhausted.

G. W. CUNNINGHAM.

HALIFAX, N. S.—*Editor Forest and Stream:* In your issue of 6th inst. "Lieut. Kieffers" has an article on "Caliber for Big Game Shooting." He advocates something which when it hits will hit hard. The Winchester .50-110-300 hollow-pointed ball fills the bill exactly. True, a great many ridicule it, calling it a cannon, and say the recoil is so great it throws off the aim. But such is not the case; the recoil does not begin to be as great as with the Martini, at present used by the Canadian militia, and with which first-class shooting is being done all over Canada.

Its only fault in my opinion is want of penetration. For example, a moose shot by me last year at 200yds. was hit in the side, the ball making a clean hole at its entrance, penetrating the rib without breaking it, going through the lung, cutting off the large bloodvessel at the junction with the heart and breaking the rib on the opposite side, the bullet lodging under the skin. Now this bullet did not pass through any very hard substance, and in my opinion should have gone clean through the animal.

This moose ran nearly 500yds. before falling and then dropped perfectly dead. Again I have seen an animal hit over the high bone in the fore shoulder and with such force that the animal fell at once, although not dead; but here again there was but little penetration in comparison with smaller calibers, which I have seen make a hole clean through and through, but the animal did not stop so soon. I have picked out my bullet on several occasions and found it generally turned back and spread out to about the size of a 25-cent piece.

This principle of hitting with a shock and making a big hole is adhered to strongly by the Indians. In most cases an experienced Indian guide will prefer to use a common smooth-bore gun and trust to getting close, in place of taking a rifle, which according to them "make too leettle hole, no much blood come."

TIAM.

Adirondack Deer.

BIRCH HAVEN, Blue Mt. Lake, July 6.—*Editor Forest and Stream:* As a lover of the Adirondacks for many years, I have been much interested in the discussions as to the depletion of deer. My own observation has led me to believe that they are increasing rather than diminishing in numbers, at least in this section, and I have been repeatedly told by reliable men of the starvation of many deer during the severe winters. This week Mr. C. L. Stanton, a thoroughly reliable man and a skillful guide residing here, told me that he knows of the starvation of about 150 deer the past winter in the country stretching from Moose River to Bog River. In repeated instances deer were found in the road too weak to leave it, and were taken to stables and an effort was made to feed them and save them, but they were too far gone.

Mr. Stanton further says that he knows of large areas that were absolutely stripped bare of everything a deer could eat. Other experienced and reliable guides give me similar statements, and say with emphasis, "The deer are increasing."

I give you these facts as bearing on recent articles, and as indicating the wisdom of the Legislative Committee last winter in consulting the people who live in the Adirondacks all the year. J. C. ALLEN.

Rains and Nesting Quail.

WEST POINT, Miss., July 5.—It has been raining here for at least three weeks, and some of the rains have been very heavy. I do not know whether they have drowned any of the young quail or not, but I have commented on the fact of my seeing so many pairs of quail together at this time of the year, when one usually sees only the cock birds.

I walk about over the farm a good deal, and as you know there are any quantity of birds here; so plentiful, in fact, that I go only a few hundred yards to flush at half a dozen pairs of quail.

Their being together as when they are first paired off I do not understand, without attributing it to their nests being drowned out. A quail in making its nest invariably makes a hole in the ground like a guinea fowl's. In this country when it gets very wet the whole surface becomes saturated with water, and all depressions become miniature ponds; hence the quail's nest being in a hole fills with water unless on the side of a hill. W. W. TITUS.

Sea and River Fishing.

FROM A GIRL'S LETTER.

HERE are some extracts from a letter telling of the experiences of a party of three girls in the Adirondacks. They drove in from Westport by way of Elizabethtown:

We flew on and reached the cabin about half past ten in the morning. Everything there looked delightful; fresh flowers in the vases and brilliantly colored columbine blooming just outside the door, adding not a little to the charm. They have built a cunning little store-room just under the porch steps, and there we found eggs, butter, meat, etc. As the butcher only came once a week, and as veal was the only thing he had when he did come, we would have fared badly if we had not brought up some canned things with us. We made up our minds we would dine in the kitchen and have no table-cloth, no saucers to our cups as a matter of course and only one spoon apiece—you know our habits. We reduced the number of dishes which had to be washed very considerably, and, as there were only three of us, the washing did not take long.

In the afternoon we initiated our fishing-poles in Roaring Brook. We were fishing with flies, for which the fish will not rise so early in the season, we were afterward informed, and met with no success. The next day being Sunday, we went to church like good little girls, and Dr. DuBois being a "fisher of men," caught us instead of our catching anything. That evening Dr. DuBois brought over Verde Beede, a protégé of his and a guide, and we arranged then and there to take a thirty mile drive the next day to St. Armands, which is northwest of Lake Placid, in search of the mighty trout, which were declared to be particularly plentiful in the streams in that section. Alas! We awoke to hear the gentle patter of the rain and knew that we were doomed for that day at east. We resigned ourselves to the inevitable, provided ourselves with the vulgar worm, and in spite of rain and encased in rubber boots and sweaters went down to the Ausable below the house. This was the scene of our first victory, for Sib caught a beauty about 9in. long, Bessie caught several and I came out at the rear with two small ones. We had trout for supper that night.

The next morning it was pouring; however, we thought we would not wait any longer, and started off at 2 o'clock, although it was still drizzling. Beede's little boy, a kid of about eight years old, went along with us, and a useful little soul he was. He was wild with delight at the dea of going, and held out bravely through a very mosquitoey night. In order to reach this place, St. Armands, you have to cross a long ridge of Whiteface, over a very rough road. It cleared off during the afternoon, but was as cold as Greenland toward 5 o'clock, and as Beede did not seem very clear about the road being passable over the mountain, not having been over that year, we concluded it was better to stop at Wilmington for the night and push on fresh in the morning. The next day was gloriously clear and brisk, so that we walked most of the way over the mountain, the horses having hard work to pull the wagon up, the road being one series of ruts and rocks and quagmires. We passed the most beautiful clumps of painted trillium and lovely patches of violets, although many of the trees had been very badly bitten by a late frost, so that their foliage hung brown and lifeless. Sib was the victim of the first black fly, as indeed she was of most of those that came after, and while mosquitoes worked their will on Bessie and myself, Sib had the glory and anguish of all the black flies, so much so that at the end of our expedition she looked as though she had had a good case of chicken pox.

The view from the top of the ridge was superb, taking in Keene Valley, Marcy, Whiteface, the Poke o' Moonshine range and many others. We stopped by a stream on the way to fish, called Merry Brook, and it was indeed merry. No sooner had I whipped the water than up came a trout, and for a while we were quite busy. St. Armands is simply a tract of land, mostly farming and rolling, with one mountain, called Catamount, rising out of the ground like a sentinel, and seeming to be more of a geography book mountain than any I have seen. It is a very moth-eaten looking mound, owing to there being few trees on it.

We took up our abode in a cabin, close to Lincoln Brook, on some land belonging to Beede. He is a much better guide, companion and friend than our others have been. Nothing is too much trouble for him, and his funds of stories about the woods are endless. We fished up and down the stream, meeting with fair luck, having plenty and more than plenty for every meal. We turned in early, and were very comfortable the first part of the night, but toward morning were devoured by mosquitoes, so we arose with the sun.

We drove a couple of miles further up the brook that morning, and then separated each to try a different part of the stream, and then literally dove into it, for the trees came so close to the bank it was impossible to fish from the bank. It is most deliciously cool and refreshing to stand in rubber boots in the water, for you get all the sensations of wading without the wetness, unless you go in over them, as happens occasionally, and as Sib did when we were on the Boquet a couple of days later.

It was the funniest sight I ever saw—she was standing on a very sloping rock, and one moment I saw her and the next I didn't! Nothing but her pole, violently agitated, was visible over the top of the rock. I had given her up as lost when her head slowly appeared above the rock and she emerged again, having been in up to her waist!

To return to Lincoln Brook. We did not start to drive home that day until 2 o'clock. It was an awfully hot day, and we were forced to go very slowly, as Mary, one of the horses, showed signs of a rush of blood to the head, and we did not dare drive her fast. All the evening it threatened a thunderstorm, but it did not dampen our spirits. Beede told stories, and we all told stories, rattling along in the gloom. It was half-past ten before we reached the cabin.

Another day we went to the Boquet for all day. I was too lazy to fish and watched the others. We found that our taste for eating them was considerably diminished by the time we had cleaned them, and one mess of about four dozen we left for so long, not being anxious to undertake the task, that in the end we had to throw them away. Bessie and Sib found a place in the Ausable where two great big old grandfather trout dwelt, which must have been from their description somewhere between two and three feet long, and they angled for those grandfathers through rain and shine, but the old gentlemen were too wary for them. We got Beede to drive us out by way of Port Henry for a change, and found ourselves aboard the train bound for home much too soon for our taste. There were lots more places we wanted to go to, and we had just begun to know how to fish. E. L. L.

BASS AND BOATING ON THE UPPER DELAWARE.

A STREAM of crystal clear water, fresh distilled from the sand and rocks and moss of the unsullied mountains, is the Upper Delaware. It is a swift stream, full of foaming rapids; but at regular intervals the white water ends and the stream takes a rest, flowing lazily over shingly bottoms or through deep rock-strewn pools. Here in the amber waters lurk hordes of hungry bass—athletes by training and fighters from the word go.

Your lake bass are sluggish by comparison and not in the same class with these river warriors. The river fish are light, running from ¾ to 1½lbs.; but weight is not a standard of excellence with fish any more than it is with men.

Mr. George Dixon, with his hundred odd pounds, is more than a match for a ton of pot-bellied aldermen, and these Delaware small-mouths strike in a way to shake your teeth loose. They are up to all the tricks of the game, too, and if they can't shake the hook loose while out of the water, they will go the other way and rub it out on the rocks or foul the line on the bottom of your boat, or get free in some equally not-to-be-prevented way.

The two main branches of the Delaware rise in the western Catskills, fed by innumerable trout streams, and unite near the northeast corner of Pennsylvania, in Delaware county, N. Y. Just below their juncture is a deep foam-flecked pool, perhaps a quarter of a mile long, where we had our first good fishing. We—W. F. P. and myself—had come down the Mohawk Branch from Deposit in an Adirondack boat, but out of eleven bass taken in that stream we had only one good one—a fish weighing a pound and a half. In this first pool below the juncture of the branches, however, we took two good bass above a pound in weight and lost two more that would average as well, in less than fifteen minutes. From this point down at every reach of still water we took some bass. At Stockport, a little settlement of five or six houses and a sawmill, we caught eight good bass, averaging above a pound apiece.

At this point there is a cable ferry of the type so common along the river. A short distance below, near the center of the pool and in the deepest water, there rises a little island of rock, and around this and among the submerged rocks on the New York side the bass were lurking. We were trolling with phantom minnows, and several times had strikes and hooked fish before we had gotten out 20ft. of line.

After half a dozen turns on this pool we had lunch and then proceeded on our way down the river.

Running the rapids was exciting work. One man in the bow kept a sharp lookout for rocks and the other in the stern directed the boat's course with a stout ash paddle. Our boat was heavily loaded and the water was low, and as a consequence there was a good deal of wading to be done. At times, however, we ran considerable rapids without wetting our feet. This happened when most of the volume of the river was drawn into narrow compass between steep shores. Where the river spread out over broad rapids it was next to impossible to get through without wading or dragging.

A short distance below Stockport we shot into a deep, still pool, where the river ran lazily along the foot of a precipitous mountain. The scenery was wild and beautiful in the extreme; not a house nor a clearing was to be seen, and all the mountains within view were heavily wooded from base to summit. The fragrance of spruce and pine was sweet to the senses, and if added charm were needed it was there in the soothing certainty that our game was present. Hardly had the deadly phantom touched the water when the rod bent nearly double in response to a vicious strike, and from that instant a battle royal began which only ceased when seventeen bronzed warriors were *hors de combat*. A native fishing from a rock as large as a small house eyed us with ill-concealed envy. He was using small conger eels for bait, which next to small bull-heads is the Upper Delaware idea of a fetish for black bass, but he had caught only four. The phantom minnow had the field. It was an ideal day for trolling. A brisk wind raised miniature swells that galloped up stream against the current, and rain squalls occasionally added variety. Bass were on the feed, and though it is more than doubtful if they ever before had seen anything in the minnow line resembling our English importations, they bit at them greedily and did their level best to spoil their beauty. Frequently they broke loose from the cruel deception that gave them a mouthful of hooks instead of a meal, and no doubt such fish as escaped will have a lasting suspicion of high colored minnows with prominent eyes if they chance to see any such in future, and the sight will recall the ghosts of dead brethren, but enough reached our boat to satisfy our barbarian instincts of sport, and not one of these but gave a whole theatrical performance of the melo-dramatic class. Rearing, leaping, standing on their hind legs and tossing mains of foam; diving, darting, cutting the water and causing the obedient line to hiss and simmer and rip the liquid element, straining the rod to the utmost at one instant, and the next swimming faster than the reel could take up line preparatory to aerial flight—all this and more too was the performance for which the bass stood treat.

This "eddy," as such pool is known in Delaware parlance, was half or three-quarters of a mile in length, and after we had gone up and down it three times we concluded to give the bass a rest from their arduous entertainment. At succeeding eddies we added to our catch, and when we went into camp that night on a shingle beach just below Fordville, we had 37 nice bass. In addition we had caught half a dozen shiners and one pickerel. These shiners are toothsome eating and possess many of the qualities of game fish, chief among which may be mentioned courage. They measured from 10 to 13in. in length only, and being slender in build averaged less than a half-pound in weight, but they tackled phantom minnows half as long as themselves and fought with no little spirit.

We had each lost our biggest fish, as was natural. W. F. P. had one alongside the boat that looked 24in. long, that fouled the line with the keel and so escaped, and I lost a similar fish which got into shallow water and rubbed the hook loose on the bottom. We thought these fish would each weigh 3lbs. They were hooked in a deep pool opposite an old sawmill that stands in a narrow gorge, almost hidden from sight by the trees and overhanging cliffs. In the middle of this pool is a reef of rocks sheering off rapidly on both sides to deep water. It was here that we struck these, our largest fish, and here that we lost them.

The next day we went as far as Callicoon, but had no especial luck. It was a still, clear day, and bad for trolling, or, for that matter, any style of fishing. Our trip netted us fifty-five bass besides about twenty-five other fish. We had gone along leisurely and not fished for count or the score would have been larger.

As a rule the fishing near the railroad stations or towns is poor. This is a good thing to remember if you go to the Upper Delaware. It is in the inaccessible pools and virgin waters where the fish are plenty.

J. B. BURNHAM.

FOREST AND STREAM OFFICE.

TROUT LAKES NEAR MONTREAL.

NEWT and I went fishing the other day. We went to St. Agathe, on the Montreal and Labelle branch of the Canadian Pacific R. R., sixty-four miles from Montreal. A special fishing train leaves Dalhousie Station every Saturday during the season at 1:45 P. M., making the run in about three hours, returning on Monday morning, leaving St. Agathe at 7 A. M., reaching Montreal at 10 A. M. The return fare is $2.10, good for this time only.

We looked up some friends in Montreal to learn something of the country. Nearly every one named a different lake as being the best fishing. Finally we struck a party who had been fishing there on May 1, to whom, being a reader of FOREST AND STREAM, I might drop a hint that the season does not open till May 2, which he may paste in his hat for future reference. They fished four lakes in the two days, catching some 175 trout, bringing about 35lbs. home with them. Following his directions, we duly arrived at St. Agathe.

We crossed the street to Sauve's hotel, engaging him to drive us out to Mr. Jos. Belisle, at Lac à la Truit, three miles away, 75 cents for the trip. Arriving, we introduced ourselves, stating we were after fish, and asking if he could accommodate us with lodgings. He seemed to take us for city bloods, and was apologizing for his poor accommodations, when I cut him short by saying that we were just common farmers, that as soon as we could get our Sunday-go-to-meeting clothes off we would demonstrate by our old duds that we were not above farmers' fare, our principal object being trout. This seemed to relieve him greatly. We were on familiar terms at once, when he became quite communicative.

It being then 6 o'clock, we had a glass of milk with a slice of bread, slightly sour, for which the good woman apologized, but when we told her that it was just the kind we had at home she seemed relieved, so that we got on famously from that out.

A boy had in the meantime been digging some worms, and we proceeded to the lake. Our Montreal friend had told us that his best fishing there was almost in the guide's door yard, which proved to be the case. At the lake, only a short distance from the house, the boy pulled out about 25ft., and dropping a stone with a cord attached for an anchor, put worms on our hooks, telling us to cast in anywhere and we would get fish. This was our first experience in lake fishing, and it did not seem just right to fish for trout as we would for bull pout at home. The boy had a sapling about 7ft. long with the bark peeled off and painted red, with a large line, which he soon had dangling over the boat, and we took our cue from him. For a time no one had a bite. I was beginning to think

it rather slow work, when the boy gave a yank and speedily boasted a pound trout. "Ah," says Newt, "I have one." His rod was bending, the trout tugging at a great rate. "Be very careful," I said, "you can't afford tolose a nice one like that. Don't try to pull him over the boat. Work him up to my end and I will take him in for you." This he did, but just as he got it within reaching distance it made a spurt and broke away. At this moment I had one on that required all my attention, which with Newt's help I successfully landed. We fished there till about 8 o'clock, the result being nine trout of nearly a pound each and one about seven inches long.

We had some more bread and milk; shortly afterward retiring to a fair bed, without springs, where we slept fairly well, anticipating the morrow. We were out bright and early in the morning, when we secured 14 nice fish in the dooryard, so to speak, and then made a tour of the lake, working the flies, at which I am a very poor hand, with lots to learn. I had the satisfaction of seeing about a pound trout jump clear over the fly, and that's all the satisfaction I did get, although I worked faithfully and long. We anchored up the lake in several places, but the wind was too strong and we got only a few, mostly small.

In the afternoon Newt and I went out alone, working the ground all over again, getting about a dozen. At one place Newt caught five, fishing right beside me, where I did not get a bite. In the evening we again fished in the dooryard, where I got even with Newt by catching seven nice ones, while he got only one. We were up at 3 o'clock the next morning fishing the dooryard, but had to quit early so as to have breakfast and drive three miles to the 7 A. M. train.

We had our trout cleaned and packed in grass in a box, which we subsequently got iced at Sauve's hotel.

Mr. Belisle, although having quite a farm, gives a good deal of attention to fishing parties, claiming that all last summer he had not been able to go to mass once, while this summer he expected it would be the same.

He has boats on seven different lakes, his being the only ones. The lakes, as I remember them, besides the one at his dooryard, are Lac Dugas, Lac Legros, Lac La Croix, Lake Dunham, Lac à la Cabin; the last he intended to put a boat on the next week; it was about ten miles distant and practically had never been fished. The whole country is full of lakes with nothing but trout in any of them. I found his charges very reasonable. Hotel rates would have charged us practically two days, while our bill (including board, boat, boy for guide and drive back St. Agathe) was only $4 for both of us. His usual charges are $1 per day for board, $3 a day to furnish boats on the different lakes and drive you thereto, and act as guide in every respect. The $3 includes two sportsmen.

As to fishing, he claims that on many of the back lakes where he has boats fishermen have quit fishing at 4 P.M., claiming they had all the fish they could dispose of. In the smaller lakes they run from ½ to 2lbs., while a couple of 3-pounders have been caught in his dooryard. I am told there are other lakes up nearer Labelle, where they get lakers as large as 22lbs., while one Montreal party in three days' fishing brought down 150lbs. of trout.

I have seen it stated in the papers very often that the black flies and mosquitoes were fearful; in fact, in one case it stated that the party had to have a surgical operation performed in order to get back his eyesight. I took a supply of Talcott's lotion, but did not use it at all. We had got tired carrying it and left it at the house, but could have tried it the last evening, as there was no wind at all, the mosquitoes then getting in their work, and I must confess their bites were very painful.

The country has been settled the past fifty years, but it is only the last three years that they have had railroad facilities; so that the lakes have been very little fished, while plenty of them back a way have never had a line in them. Mr. Belisle says that the mosquitoes are a myth on most of the lakes, as the country is pretty well cleared up, which insures a breeze most of the time, thus preventing the mosquitoes getting their work in. He advised fishermen bringing worms with them. The soil being light, sand worms are hard to get, and by August have practically disappeared. A telegram addressed Jos. Belisle, fils, care Sauve's Hotel, St. Agathe, Que., will always catch him in a day. With a little notice he could accommodate a party of five or six, or more if they were willing to occupy the same rooms.

I asked the conductor if he would take my box of fish down in the baggage car. "Certainly," he said. "No name on it? Well, when you get to Montreal just call up for it." On arrival at Montreal the box was placed on the truck and run inside the station. The young man wanted to know if we did not want a cord around it, so as to be able to carry it, and immediately procured a cord, fixing handles so we could carry. We were not going home till the afternoon train, and asked if we could leave the box there till we called for it. "Certainly, sir; put it right in the icebox," which he did forthwith. He was very active about it, and as soon as finished went on with his other work, not even giving me time to tip him. I took charge of the valises and rods, Newt agreeing to get the box in the afternoon and transfer over to Bonaventure Station, where I duly found him.

"Did you get along all right with the box?" I asked.

"Yes, I had to see two or three parties first, but they looked up the old man, who recognized me at once; when I asked him for the fish, he said, 'Yis, sor, and doant you want some more ice poot on them?' I told him I thought they would keep till we got home, so a young man took up the box and carried it up the street for me as nice as you please."

"Well, they treated us very decently," I said; "I hope you tipped him."

"Tipped him? Why no, I didn't tip him. He ran up the stairs with the box, and by the time I arrived up he had disappeared about his business. Didn't give me a chance."

We arrived home that evening with about 20lbs. of trout in fine condition. We hope to make another trip up there some time this summer, when we will take in some of the other lakes.

The lake at St. Agathe village, Lac au Sable, I understand is pretty well fished out, but there are lots of them up there; so that one could go most any time, stop at the hotels in the village, of which I believe there are some good ones, and have guide call for him in the morning, when they can drive to some of the lakes, which Mr. Belisle assured me they very often do, returning before supper with all the fish they want.

I think any man could get all the fishing he wanted in a few days' time from the different lakes at not very great expense, if he is willing to put up with farmers' fare, which means plenty of milk, eggs and trout—if you catch them—bread of fair quality, ham and salt pork, lots of children around, ducks and hens meandering around the table picking up crumbs while you are eating, beds without springs, but withal clean.

French is almost essential, although Mr. Belisle says he he has handled English speaking parties.

I cannot speak too highly of the C. P. R. employees' courtesy, which I know will always pay in the end, and no doubt the C. P. R. officials know it too. Quite a contrast with some of your roads across the line, pretending to cater to sportsmen. J. BRUCE PAYNE.

BOYER'S TROUT.

It was a glorious day
When we, with tackle stout,
Three gallant fishermen
Saw Boyer catch his trout.

For the sky was lowering dark,
And the rain came down the spout,
And the wind was blowing right
When Boyer caught his trout.

And the worms they wriggled in,
And the worms they wriggled out,
And the fly they wouldn't take,
But Boyer took his trout.

And away in yonder bush
The birds they raised a shout,
They whistled and they sang
When Boyer caught his trout.

But a bite he first must have—
He couldn't catch without—
Three hours passed before
That Boyer struck his trout.

His fellow fishermen
They called, "Look out! look out!
Give him more line, my boy—
Oh, Boyer, hold your trout!"

An alder bush hung near;
He'll make for it, no doubt.
He'll get away, he'll break away!
Boyer, don't lose that trout!

"I see him now," cries one,
"I see his awful snout!
See what a swirl he cuts,
That dandy Boyer's trout!"

Ah, now he's coming in—
And now he whirls about—
Hold hard! More line, my boy,
Oh, Boyer, take that trout!

He's making for the brush,
That ugly alder spout;
Give him the butt, or else
Good bye to Boyer's trout.

"I'll give you fifty cents
For chances on this bout,"
A business comrade cries—
Would Boyer sell his trout?

"Hand me that landing net;
Now, steady, boys—look out!"
Swish! a racket in the boat—
And Boyer's got his trout!

Sixteen inches and a half
From tip of tail to snout—
A beauty and a dandy he
Is Boyer's noble trout.

Hurrah! hurrah! what fun
We had in getting out
From these dark waters deep
Proud Boyer's noble trout.

And the birds they merry sing
And the frogs in chorus shout—
"Oh, Boyer, Boyer ho!
Oh, Boyer's got his trout!"

EASTON, Penn., July 3. HENRY M. KIEFFER.

NEW ENGLAND AND CANADA.

BOSTON, July 13.—Forge Pond, down near Plymouth, is one of the ancient trout ponds of Eastern Massachusetts. It has been fished for a hundred years, and many distinguished public gentlemen have dropped a line into its waters in times gone by. Daniel Webster used to fish there. All of which goes to show that our modern statesmen in devoting themselves to the pleasures of angling are only following in the footsteps of the great men of long ago. The old pond has had a severe strain on its resources in the past, and I have been told that forty-five rods (representing just so many fishermen) have been seen on it in one day. It draws its main supply of water from three brooks, which in turn take their source from springs back in the woods. Its area is about twenty acres, and it seems to be a natural trout preserve, resembling in this respect the celebrated Tim Pond in Maine.

But a few years ago Forge Pond, with considerable territory in its immediate vicinity, was purchased by Mr. E. D. Jordan, Jr., one of Boston's most prominent merchants. He has built a fine home there, and taken many steps toward beautifying the estate. Delighting in the pleasure associated with rod and gun he has paid particular attention to restocking the pond with fish, and the woods with game. Eight hundred young salmon were put in the pond last spring. Since then one has been taken out 13in. in length and another 8in. long. Native brook trout are at present the principal fish there, and they have been taken out up to 2lbs. in weight. In Eel River, a tide-water stream, the outlet of the pond, 2,000 English brown trout were placed some time ago. These fish run into salt water and spawn above on the river like salmon. They have been caught up to 2¾lbs. in weight this year, and nine have been taken by one party.

Mr. Jordan has imported a number of Belgian hares. After keeping them for some time, sixty of them were turned loose to roam over the country. They are great speeders and jumpers, and ought to furnish good sport in a year or two more. Many quail have been turned out, and partridges are said to be very plentiful. There are now 110 Mongolian pheasants from one to three weeks old. As they become strong of wing they will leave for the surrounding country, but still with instinct strong enough to make their headquarters at the old home.

Mr. Jordan has 500 acres in the estate, and in addition to the resources of his own property is very fortunate in its location, as the entire surrounding country provides good sport. Great South Pond is only a short distance away, and excellent bass fishing can be had there. It is only two or three miles to the ocean, and the Manomet shore is noted for tautog fishing. It is along this shore that the great flights of coot, brant and loon occur in the fall, bringing out scores of shooters to participate in the sport. Wild geese are also abundant in the ponds in the neighborhood, and a system of blinds used there by the sportsmen is about perfect in effect. Several other Boston men have private estates near Mr. Jordan's place, among them Messrs. Howe and Blodgett. These gentlemen have also put out quite a number of quail. With good game protection, which is the urgent need of the locality, the woods of Plymouth will soon surpass their old time reputation as a resort for sportsmen.

Mr. Herbert Dumaresq, of Boston, a partner of Mr. Jordan in the firm of Jordan, Marsh & Co., has a fine assortment of tackle and delights to use it on every possible occasion. He is fond of salmon fishing, and belongs to a club with elaborate headquarters at Sebago Lake. A party consisting of Mr. Dumaresq, J. Murray Brown and C. B. Gookin, all members of the club, made a recent record of 24 salmon, with an average of 5lbs. each, in a few days' fishing some weeks ago. Mr. Dumaresq was high line, taking the largest fish, which weighed 11lbs.

J. W. Bailey, author of the new book with maps on the St. John's River and its tributaries, and Geo. Clark, both well-known Boston men, have gone on a fishing and exploring trip to the Upper St. Maurice River, in Canada. They go first to Kiskisink station, then to the Bostonnais River, and by canoe to the St. Maurice. They will be away about three weeks.

Gaston T. Hubbard and his son, F. Perry Hubbard, passed through Boston on Tuesday last bound for a two weeks' trip to Moosehead Lake. Fishing is the favorite pastime of Mr. Hubbard, senior, and he will make a strong effort to instil love of the sport into his son, who is now making his first trip. Last year he took his other son with him to Tim Pond, and says his success with him was of the best. I hope he may do as well this time.

N. N. Mason and S. S. Stone, of Providence, have gone to Cape Breton to spend a few weeks fishing the waters near Baddeck. Mr. Mason has fished in that country for sixteen successive years, and is one of those anglers who can tie a fly, mend a rod and do anything that may be necessary to repair his outfit or increase his chances of success when away on a trip of this kind. He has reduced the sport to a science and thereby insures success.

Henry W. Clarke, of Boston, has just returned from a six weeks' trip to Maine. Mr. Clarke, with David Haines as guide, has made an annual trip for twenty odd years into the Rangeley and Dead River country. After spending some time at Rangeley, he went to King and Bartlett, and was very much impressed with the beauties of the country around Big Spencer Lake on that preserve. The trip was closed with a stay of some days at Flagstaff Pond, where Mr. Clarke delights to take the pickerel on a fly. He had great success at this fishing, capturing most of them on a scarlet-ibis, and says they are surprisingly gamy taken in this manner. Generally speaking, pickerel fishing with a fly is not a pronounced success, but close proximity to trout in the Maine ponds as an example may make a difference at Flagstaff.

Mr. Louis Curtis, of Boston, has just returned to the city from a trip to the Restigouche River. He is a member of the Restigouche Salmon Club, and killed twenty-nine salmon in sixteen days' fishing. This is an excellent score, considering the poor luck this season of many older salmon fishermen on New Brunswick rivers.

Mr. E. A. Hitchcock, of St. Louis, and James L. High, of Chicago, have gone to fish the upper waters of the Nepissiguit for salmon. Mr. Hitchcock, together with hi brother the Hon. Henry Hitchcock, of St. Louis, control valuable pools on this river, but have not been fishing them for the last two seasons. They have good camps nicely fitted up for comfort and convenience. The gentlemen will be on the river two weeks, and ought to do well, as the June fishing was very poor and the run of salmon long overdue will probably occur in July.

HACKLE.

More about the Leaping Bass.

BEDFORD, Ind., July 10.—Your excellent correspondent "Kingfisher" seems to be abundantly able to maintain his end of the controversy with Dr. Ellzey over "The Leaping of Black Bass," and perhaps it is for this reason he has been left almost alone on his side of it. I am surprised that Dr. Ellzey should claim an extensive experience in bass fishing and yet deny that "Kingfisher's" statements are entirely within the bounds of probability, in fact that "Even his failings lean to virtue's side."

Black bass, both large and small-mouth, will leap and shake themselves "When the spirit moves them" to make such efforts for freedom, regardless of whether the angler plays them high, low, or Jack. Some years ago, while fishing at Grass Lake, Ill., I hooked a very large bass on a 4½ Skinner spoon. The rod and line were very light, the water shallow and very weedy, the line was quickly fouled, and parted a few inches above the spoon. I had scarcely time to realize that the fish had gone before it leaped from the water, its dorsal fin was extended, its mouth was wide open, I thought I saw that bass shake itself, I know I heard the spoon rattle, and that it was in some way disengaged and thrown to one side about 15ft. I know that I saw the spoon strike the water and that I afterwards recovered it. At the time it did not occur to me that there was anything remarkable about that spoon's flying through space; I was accustomed to seeing bass jump and shake themselves, and I then thought, and up to the time I saw Dr. Ellzey's letter had continued to believe, that the bass had shaken itself with sufficient violence to throw the spoon to the spot where I saw it strike the water; but since the doctor says that bass don't "shake" I am anxious to know how the one I write of sent my spoon so far from it?

I have frequently seen bass leap two or three feet above the surface of the water, and on rare occasions have seen them go perhaps as much as 5ft., but always in lake fishing. I have never seen a bass make a high leap from a swift stream. HOODOO,

BOSTON AND MAINE.

BOSTON, July 10.—Harry B. Moore, of Boston, and Geo. C. Moore, of North Chelmsford, Mass., are back from Europe. Both had to give up their spring fishing trip, usually taken in Maine, but latterly to the Inglewood Club's preserve—had to give it up for this trip to Europe. But they "wet their lines" in Scotland, and fished in the famous Loch Katrina. They caught what Harry describes as "sort of perch." They were not trout at all. It is easy to see that these two experienced anglers are not pleased with fishing in Scotland, in protected waters.

Salmon fishing in the Provinces is the attractive sport with Boston anglers at this season. But one must be possessed of considerable means, or have friends who are rich, in order te fish those leased waters. Dr. C. Warren and his son have been at the Restigouche for a few weeks, with fair success. Hon. George Von L. Meyer, Mr. Louis Curtis, Mr. F. L. Higginson, Mr. Henry Whitman and Mr. Louis Cabot have all been in that region after salmon. Ex-Gov. Russell, Mr. Lemuel Howe and Francis Peabody, Jr., are the guests of Mr. A. H. Wood on his river, a branch of the Miramichi. Mr. Oliver Ames (2d) has also gone to the Restigouche.

To go to Nova Scotia for trout fishing is also getting to be a feature with Boston sportsmen, who know the waters. Master Herbert L. Kidder, son of H. A. Kidder, of the Boston *Herald*, is now at a post village of a most outlandish name, three miles from Brookfield. It is at a point some sixteen miles from Truro. The young man is only fourteen, and has had no experience whatever with line and rod, and yet on his first trip he writes his parents he took twelve handsome trout. He will be joined by his father in a few days, who will also do some fishing. They expect to visit a salmon river owned by an uncle.

July 13.—Bluefishing is a popular sport at this time, and some good catches are being made off Nantucket, in the vicinity of Martha's Vineyard, and even up well into Buzzard's Bay. A number of Boston merchants and business men are summering at different points along the Cape and at Cottage City, coming up to Boston every week day by train to business. On Sundays some of them go out sailing. They say that there has been some trouble about "bluefish biting the boats," and that they have felt obliged to take some hooks and lines along. In this way the safety of the boats is assured so far as the bites of bluefish are concerned, and it is certain that several good fish have been caught. Mr. Harry Gardiner is summering in the neighborhood of Marion, not far up the coast from the celebrated Gray Gables, and he reports good fun with the bluefish about the day Ruth's little sister was born. Formerly he was an enthusiast at trout fishing, and frequented the Rangeleys every spring at the time when it was a stage ride from Farmington to Phillips and Phillips to Rangeley, and it took a couple of days to get in. But of late years he has been satisfied with easier fishing.

Master Herbert L. Kidder, mentioned in my letter the other day, is in danger of becoming an angler. He is still spending his vacation in the neighborhood of Upper Studiack, Nova Scotia, with his uncle and cousins. It seems that he has fallen into the midst of what might justly be termed an "angler's paradise," and is with men who understand the business. They have made a fishing trip to Lake d'Armandi, and camped over night, at which a young fisherman of 14 years is greatly pleased. The party took in all 145 trout, of from 4oz. to 8 or 9oz. in weight. The boy took more than his share of the fish.

Mr. Richard O. Harding, with Appleton & Basset, and so well known to the angling fraternity as Secretary of the Massachusetts Fish and Game Protective Association for several years, has just returned from the northeast branch of the St. Marguerite River, where he has been the guest of Mr. David H. Blanchard. It seems that there had been a good rainstorm a day or two before they reached the river, which put the water up to "just the right pitch." This lasted for a day or two, and during the time they took ten salmon, of which number Richard got his share. Since the fall of the water the fishing has not been as good, but good enough to bring a number of fish. The day before Mr. Harding came out Mr. Rolin Jones, another guest of Mr. Blanchard, came in. Mr. Harding was anxious to see him kill a salmon, and so gave all his attention to that gentleman. Mr. Blanchard was interested also, and the result was the capture of a salmon by Mr. Jones weighing 22½lbs. Before Mr. Harding left eleven fish had been taken, the average weight of which was 22½lbs. and none larger than 24lbs. This is considered a remarkable average. Mr. Blanchard, with his daughter and children, will remain for a month longer.

Mr. Walter M. Brackett, whose salmon privilege is on the same river, but below that owned by Mr. Blanchard, has taken a few fish only up to date. The St. Marguerite Club, the fishing rights of which are on the northwest branch of the same river, have, up to the latest reports, taken twenty-five salmon to five rods. Hence it will be seen that salmon fishing on the St. Marguerite is better than many of the other rivers in that part of the country.

SPECIAL.

Washington City Notes.

THE Potomac for the past three weeks has been a very muddy stream, and anglers have waited impatiently for a return of the good conditions prevailing during the third week of June, when what few rods were out made good catches of bass.

Frank Curtis spent the week June 17 to 22 at Edward's Ferry, a point on the Potomac about twenty-six miles west of Washington, and took nearly 100 bass. Comparatively few anglers knew that the conditions were favorable that week for fishing. After the present bad condition of the water good sport is expected.

Mr. John Devine, the well-known angler and manager of Gov. Morton's Hotel Shoreham, is back from a pleasant and successful piscatorial trip to Canada.

Landlocked salmon in Twin Lakes, Col., show evidences of thriving there. Specimens weighing 3½lbs. have been taken by an agent of the U. S. Fish Commission, and reports of quite a number of small ones have been received. These salmon were introduced by the U. S. Commission several years ago.

Black bass fishing on parts of the Susquehanna during June was good, notably at Marietta, where old anglers say it was better than for several years past. Prospects are bright for good fishing during the present month, as the river has been up and the water is cool.

B. A. BEAN.

HELL-GATE CAMP.

BOSTON, Mass., July 6.—I have returned from a short trip to my old favorite fishing waters, the Dead Diamond River, northern New Hampshire. Six years had passed since my last visit to Hell-Gate Camp, and I was anxious and curious to learn how time had dealt with the then ideal home of the trout. Many changes had taken place since I was there, and I confess to a deep feeling of sadness as I again contemplated the buildings "Old Injun" had labored so hard and long to rear, and he resting peacefully in the cemetery at Colebrook.

After Amasa's death the syndicate into whose hands the camp fell deemed it best to change the name from Hell-Gate to Deer Lick Camp, because they thought the latter would not grate quite so harshly on sensitive ears and natures. But as the camp is situated at the foot of Hell-Gate Falls, and with some little regard for the old man's memory, the present proprietors have wisely determined to restore its original name, and henceforth it will be known as Hell-Gate Camp. These proprietors are five gentlemen, all well known on the Megalloway and its tributaries: Charles M. Kelley, proprietor Kelley's Hotel, Wilson's Mills; Percy C. Ripley, for the past ten years in the employ of the Berlin Falls Lumber Co. as inspector of all their lumber possessions, dams, streams, etc.; J. Winslow York (in charge of camp), for the past ten years guide on the Megalloway and its sources; W. A. Bragg, proprietor of Umbagog House, Errol; and Fred. A. Flint, Colebrook. Now, here are five men, any one of whom is capable of swinging the old camp back to the place it occupied when Amasa left it; unitedly they can once again make it the home camp of the northern wilderness in reality as well as name.

They will not advertise at all this season. Not a circular even will be issued, but the old latch string will still hang on the outside, and they will do all in their power for the pleasure and comfort of any and all who make them a visit. They recognize the fact that they have quite a contract on their hands, and they are bending all their energies toward putting the camp and its approaches in the best of condition for the season of '96. To that end guides are working every day on all the old trails and carries (they are sadly overgrown and choked with windfalls) and swamping new ones.

In Amasa's day the only approach to the camp was by the river from Wentworth's Location, and consumed nearly a whole day. Now there are two good trails from Kelley's: the Upper or Abbott's Brook trail, which can be easily covered in three and one-half hours, and the new trail called the Brown lumber camp trail, which places the camp within two and one-half hours of Kelley's. In connection with this last trail they have thrown a light temporary footbridge across the river so that all fording and boating can be avoided; but a boat will always be kept at the bridge in case parties would prefer to make the rest of the way by river.

Parties going in, whether from Colebrook or Berlin Falls, would do well to make Kelley's the objective point, because at Kelley's, whether you notify him in advance or not, will always be found guides to pack in luggage.

Much to my surprise I found the trout just as numerous as in the past, and I found in the upper waters many more large trout than formerly. This is easily accounted for from the fact that the old dam which for years stood across the river at the Location has been removed, and now the big trout have interrupted access to the upper waters. The first week of our stay we had fine fishing. I was high line with a 4½-pounder. The second week it rained a good deal, and the river persistently kept too high for good work. In fact we were two weeks early for the best fishing. One thing the present proprietors are determined to try and put a stop to is the work of the salters; for years they have been a curse to those waters and the evil is deep rooted, but it can be stopped.

Deer signs were everywhere, and as the law prohibits hounding in New Hampshire this year good sport for the still-hunter seems to be assured in the season.

During my stay in camp a moose paid us a visit. It was during the night, and of course we could not determine just how long he lingered, but we found his tracks within 60ft. of the building, saw where he followed the footpath down to the landing and crossed the river, and he seemed to be in no hurry either. I am afraid his confidence in human nature will diminish a trifle before October is over.

J. W. B.

Adirondack Guides' Association.

SARANAC LAKE, N. Y.—*Editor Forest and Stream:* The Adirondack Guides' Association has been organized to promote and facilitate travel in the Adirondacks; to secure to the public competent and reliable guides, thus assuring the welfare of tourists and sportsmen; to aid in the enforcement of the forest, fish and game laws of the State, and to maintain a uniform rate of guides' wages.

Any person to become an active member of this Association must be: First, a citizen of the United States of America and have a permanent residence within the State of New York; second, a well-equipped, competent and in every way reliable guide, having been known as a resident of the Adirondacks for fifteen years.

Every guide holds a certificate of membership signed by the president and secretary.

Sportsmen and tourists should ask to see the certificates of guides before employment.

Write the secretary for copies of constitution, blank applications for membership, etc.

All lovers of the Adirondacks are invited to become associate members.

JOHN H. MILLER, Sec'y.

A Gunnison Rainbow.

MR. H. M. ORAHOOD sends us this note from the Denver *Republican* of July 6, recording the capture of a big rainbou trout in the Gunnison:

"There was a picture in yesterday morning's edition of the *Republican* showing a laughing Fourth of July angler illustrating the size of a fish he had caught. It was not intended to represent Receiver Trumbull of the Gulf line, but yesterday Mr. Trumbull came into town with a trout caught near Gunnison which measured 28¾ inches in length and weighed an even eleven pounds. So far as known this is the heaviest trout ever caught in this state with rod and line. The receiver confessed it broke his heart to tell that he did not catch the fish, but that Tom Harper of Gunnison did.

NOTES FROM FISHING WATERS.

OUANANICHE SCORES at Lake St. John, first week in July.—Dr. Henry F. Dean, 20 weighing 50lbs., largest 3½lbs. R. Bacon, Jr., 35 weighing 67lbs., largest 3lbs. Messrs. Allport, Klein, Penhole, 15 weighing 28lbs., largest 3½lbs. Richard Bacon, 62 weighing 127lbs., largest 5½lbs. (the largest to date). J. C. Bower, 10 weighing 20lbs., largest 2½lbs. J. T. Carpenter, 14 weighing 30lbs., largest 3lbs. D. Dean (July 4), 24 weighing 42lbs., largest 2½lbs. (and 10 pike weighing 93lbs., largest 17lbs.). J. M. Pangman and J. A. Hamilton, 13 weighing 25lbs., largest 3lbs.

SPIRIT LAKE, Iowa.—Mr. Walter N. Light sends us a photograph of a string of fish, caught by still fishing in Spirit Lake in 4hrs. 30min., and comprising forty-five wall-eyed pike, three big-mouth bass, seven cats, one pickerel, one croppie, one rock bass, thirty-six perch.

RUSTIC LODGE, Axton, Franklin, Co., N. Y., July 5.—"Report your luck." So here goes. On July 4th, with Fred Reeves for guide, I took on the Archer spinner with an extended gang, a lake trout weighing 22½lbs., length 37in., 9in. deep. Was 1 hour and 10 minutes landing him. Caught at the head of the gut on Upper Saranac Lake.

L. O. CRANE.

LAKE MEMPHREMAGOG, N. H.—Mr. S. E. Young, a guest of the Owl's Head Hotel, caught on July 1 a lake trout of 18lbs., measuring 36in. length; and on July 2 a 14-pounder. On July 10 Mr. John C. Roe caught two lunge weighing together 30½lbs.

H. W.

MISS ALICE FULLER, who is summering at Owl's Head Hotel, Lake Memphremagog, has proved herself an expert with the rod and reel by making a very fine catch of bass and landing a fine specimen of lake trout weighing 12lbs., on the afternoon of June 11. Mr. Young, of Pelham, who will pilot fishing parties, caught on July 10 five lake trout weighing altogether 75½lbs., the largest 17½lbs. On Sunday last Mr. Young caught the largest trout of the season; weight 18lbs.

GREENWOOD LAKE.—New York, July 15.—The fishing at Greenwood Lake has been fairly good this season. Several good catches have been reported. Three dogmen, Messrs. Oldham, Watson and Waters, took a day there last week, and after diligent effort caught nothing, while one easy-going sort of a fisherman on other ground not far away caught thirteen without any assistance. The heavy rains of last week decreased the number of catches and their size. It is rather late for the best sport. The bass seldom rise now to a frog bait, or to any bait which is cast. Most of the catches are made by still-fishing or quiet trolling.

PERTH AMBOY, N. J., July 15.—*Editor Forest and Stream:* Noting your request in FOREST AND STREAM that we report our luck with rod and gun, I send you the following fishing scores on weakfish: June 22, 11; June 23, 4; June 25, 2; June 29, 3; July 2, 3; July 3, 19; July 5, 2; July 6, 15; July 8, 2; July 10, 5; July 12, 15, and July 14, 2. All the above fish were caught near Perth Amboy. Much larger scores are made here, but my time is limited, and therefore the best tides for fishing are often lost. For instance, W. Hartmann, in about four hours caught fifty-seven weakfish and one bluefish.

G. M.

BAY VIEW HOUSE, Waretown, N. J., July 15.—Mr. Charles Strickler and party caught 117 weakfish on Saturday, T. M. Hagelton 66, Howard Fleck 80. Sunday, Frank Felton and party 137, C. Brown, Philadelphia, 75; T. M. Hagelton 63, J. B. Turner and party 50. Prospects good for the season. Catching a few bluefish.

J. H. BIRDSALL, Waretown, N. J.

Incidents.

IT was on one of our annual jaunts to Green River that Mel and I, sitting by the fire, he smoking, I dreaming one of those contented self-satisfied dreams that fried trout and coffee always bring—a sort of lief-as-not-stay-here-all-my-life kind of a feeling.

"Say, Kirk, let's go over to the Mill Pond and fish for eels. I heard that one of the boys got a big trout there one night. It's only quarter-past nine, and this moonlight is so beautiful I don't want to crawl in yet."

Putting a chunk on the fire I raked the coals together and patted them down, then we walked over to the pond.

After fishing patiently about twenty minutes I felt a bite and pulled out a ½lb. trout. "Got one, Mel." "That's good. What?" "Trout!" "How big?" "Half-pound or so."

Silence reigned for a time, broken only by the plunk as one or the other of us cast into different spots hoping to entice another trout. Eels were forgotton. "Hey, Mel!" "What you want?" "Got another, 7-incher." "Good. There's something fooling around my line. He picked up the bait and started with it once."

Splash! thud! and something strikes on the knoll behind Mel, the length of a cane pole and 10ft. of line. "What in thunder was that?" "Darnation big sucker, I guess," running up the knoll. "Hold him up between you and the moon, then you can see what it is." "He don't keep still long enough, seems as if he's too wriggly for a sucker." "Put it down in the sand and stroke it the wrong way, if he ain't got scales that will tell. Hurrah! Trout! Come see it, Kirk. Pound an' a-half." "Let's quit now and go over to the tent. You can smoke one more pipe and I will have a cup of coffee."

Quarter to eleven. He smoked, I drank coffee, then well pleased we turned in. Next day at evening his trout weighed 1lb. 6oz.

H. C. KIRK.

New Jersey Coast Striped Bass.

ASBURY PARK, N. J., July 12.—A welcome as royal as was ever extended to any monarch has greeted the striped bass on his advent to our coast this season in such abundance. Dignitaries of Church and State have paid him homage and justly. The true aristocrat of our waters, nothing said in song or story can be construed as flattery which his reputation will not sustain. My offer in FOREST AND STREAM to answer inquiries has been a revelation to me. A perfect deluge of letters has been showered upon me from the North, East and West, until I have been forced to the conclusion that bass fishing is a mighty fascinating pastime to your host of readers. Let the in-

quiries come, brothers of the rod and reel. I will continue to give to all who shall apply such information as I am possessed of, and find pleasure in so doing. Among those who have already given it a trial I have formed some most agreeable acquaintances, and am pleased to say not all have gone away empty-handed.

I paid a visit to Barnegat Bay recently and found the prospects there most encouraging. Weakfish are already there and are biting fairly well, although two weeks later should find the conditions much improved. Fishing one tide I took eleven, the heaviest 4¼lbs., also one 2¾lbs. bass. Bluefish have also made their appearance. I saw two fine schools at least nine miles up from the inlet. Their presence is easily accounted for. Dotted here and there over the entire surface of the water was to be seen the familiar ripple of schools of menhaden. I could easily have taken some bluefish, but had nothing but light tackle and improper bait. The wardens have cleared out the illegal nets, and with these conditions continued Barnegat will soon be restored to its old time supremacy.

To some this may seem like prophecy, but I am in position to know that that disgrace to civilization and curse to the gill and drift net men, the "modern pound," in its present condition will receive a set-back unanticipated, and from a source unexpected which will restore to the poor man some of the inalienable rights which the pound men have vaunted in defense of their destructive methods of taking fish, and which should have been promptly suppressed long ago by the authorities of our State.

LEONARD HULIT.

BARNEGAT BAY, Forked River, N. Y., July 11.—They are catching weakfish in Barnegat Bay now, from 40 to 60 to a boat. Fine striped bass are being caught and some sheepshead; so there is good fishing. B. E. ENO.

Susquehanna Pike Perch.

SUSQUEHANNA, Pa.—Three years ago I wrote you that I had received and planted in the Susquehanna River a car load of pike perch fry. It was said to be the largest plant ever made at one place. I am happy to tell you that it was very successful. We are now having good sport. Last week my brother took eight fish at one time, weighing 18lbs.; they run from 1½lbs. to 3lbs. It's a wonder there are any black bass left. Last fall hundreds were caught from 4 to 5in. long. There is no protection; there ought to be a deputy here to look after the fishing interest. Spearing goes on, and dynamiting as though there were no laws in existence. If we could stop illegal fishing some good sport could be had. I took bass last year weighing 4lbs., small-mouth; I do not think there are any large-mouth in the river at this point.

O. H. SIMMONS.

A Veteran Angler.

BIRCH HAVEN, Blue Mt. Lake, Adirondacks, N. Y.—My father, Mr. Rufus C. Allen, of Brooklyn, accompanied me on a recent fishing trip and caught forty-five brook trout in less than five hours. Besides these he caught several that were returned to the stream as under size. To do this he rode some miles in a boat and tramped about three miles. He is seventy-eight years of age, but enjoys the woods as thoroughly as ever. J. C. ALLEN.

Vermont Trout.

ST. JOHNSBURY, Vt., July 15.—Mr. Benjamin H. Sanborn, of Boston, who recently erected a cottage at Greensboro Pond, caught the largest brook trout on record for this particular body of water on July 6. It tipped the scales at 8½lbs. and was 28in. long. Greensboro Pond or Caspian Lake is a beautiful trout pond of about 1,200 acres. Several trout weighing 4 to 5½lbs. have been taken there this season. WHEELOCK.

Okoboji and the Des Moines.

A FORT DODGE, Ia., correspondent, "A. C. H.," reports, upon his return from Okoboji Lake, a good time and plenty of fish. The fishing in the Des Moines this year is not as good as usual, owing to low water in the river for the past year, as it has not been high enough to allow the fish to get over the dams, and a fishway is an unknown thing on the river.

Game and Fish Protection.

Fish and Game Protection in New York.

A paper read before the American Fisheries Society by FRANK J. AMSDEN, president of the New York State Association for the Protection of Fish and Game.

AT this moment the game laws and their enforcement are better than ever before. This is due to a very large extent to the activity of the friends of the law and through their organization.

We ask, and we think that we are not unreasonable, that all animals, birds and fish should be undisturbed in their breeding season, and that they should be allowed to mature: and that nets and unlawful devices should be prohibited, except that nets may be used for food fish, under license and regulations by the State Fish Commission.

Prior to 1890 the game laws of this State were a mass of patchwork, confusion beyond measure, susceptible of almost any construction and feebly enforced. About this time Gen. R. U. Sherman, Robert Roosevelt and Edward J. Whittaker, a committee appointed by the Legislature, after a very thorough investigation, submitted a bill of codified laws. It was passed, but not until it was sadly mutilated for selfish ends, or in the interests of the murderous element; but notwithstanding all this, so superior was its superstructure that it is to-day and will remain a standard not only for this State, but for all other States, and a monument to its builders. It repealed all the old and antiquated laws and made a basis upon which much good has since been built up.

But, gentlemen, no matter how good your laws may be, if not respected and enforced they are useless. A public sentiment in their favor is absolutely necessary. How to secure this is the problem. In this State we have, we think, found a solution in organization. In 1890, after the work of the Commission just mentioned had been accomplished, and encouraged by a set of laws that were clear and comprehensible, and by articles that appeared in the FOREST AND STREAM signed "D. H. B." (Gen. Dwight H. Bruce, of Syracuse), several hundred enthusiastic lovers of the rod and gun assembled in Syracuse and proceeded to reorganize on a protective basis the old State sportsmen's association, which had declined into an annual trap-shooting tournament, changing the name to New York State Association for the Protection of Forests, Fish and Game. Its subsequent meetings have been largely attended and deep interest has been shown for better protective laws and their enforcement. Local clubs or branches have been encouraged and formed throughout the State. We feel our increased strength and realize a rapid changing of public sentiment—particularly so whenever a local club is formed. Our influence is now felt at Albany as it was never felt before. We find that the Fish Commissioners appreciate us and look to us and our work as a great auxiliary to theirs. The protectors also regard us as their friends and supporters. It encourages them to be more active and enables them to secure more convictions than formerly. I firmly believe that this is the true and best method to pursue. The friends of fish and game must organize and combine, if we would save the birds and fish. It should be done all over the Union. It should be done locally and then in combination for strength. The local club can change public sentiment and control their representative, and the general organization can then frame the laws as desired and carry them through the Legislature. "In union there is strength." This has been our experience. Results have exceeded our expectations. We are very greatly encouraged.

The past winter at Albany has been an active one. The Senate Committee, who were instructed by the previous Legislature to prepare a new game bill, have shown a very deep interest in the subject, far more than any previous committee. They held a number of hearings in different parts of the State during the summer of 1894, at which representatives of this Association appeared and were received in a very courteous manner. The bill which they presented was in many ways a decided improvement on the existing law. Many ambiguities and contradictions were removed. The law was simplified and made clear. Seasons were not materially altered, except to make them uniform, which was one of the main principles adopted at the beginning. In carrying this out it was necessary to change the open season on wildfowl, ducks, etc., so as to conform to the season on Long Island. This is unfortunate, for our Association as a whole desires to see spring shooting abolished everywhere, believing it all wrong; and that, if persisted in, it means the total extinction of the species. But Long Island interests will not yield, therefore shooters throughout the State became restive and demanded the same privilege; and they are right. It was justice; and so the law was made uniform throughout the State, making the open season to May 1. Our Canadian friends complain bitterly and well they may, for their close season on ducks begins Jan. 1. Much criticism is made on the strictness of Canadian laws for both birds and fish. But I believe that unless the people on this side of the border do follow their example, the wisdom of the Canadians will be very apparent, for they will have all the game, and if we want any shooting and fishing we Americans will have to pay them for it.

I must not forget to mention the fact—and it certainly is very gratifying—that our State Association law committee was shown such confidence by the Senate Committee that they were asked to assist in drawing up the bill that finally passed the Senate in most complete and satisfactory form, more nearly perfect than they expected to get it in a long time. This was a great compliment and our Association appreciate it, for it shows conclusively what we have gained by organization.

I almost forgot to mention a new feature of the game law, which is a provision to license under proper regulations prescribed by the Commissioners the use of nets in some of our inland waters. After our experience with Lake Ontario, a body of water which has been exhausted by unrestricted netting, many of our associates looked with disfavor on this innovation, fearing that the privileges granted would be abused. As the provision was adopted on my suggestion I sincerely hope that the plan will not prove unwise. Very much will depend on the care taken in preparing and enforcing the regulations.

In many of our inland waters there are vast quantities of desirable food fish—whitefish, frostfish, bullheads, etc. These are not game fish and some of them cannot be taken by hook and line. If netted they will afford an excellent food fish for the people of the localities where found, and I believe that this concession will remove much of the friction now existing between these people and the friends of game and fish protection. Possibly, too, the netting will prove of advantage to the game fish by removing to some extent the competition for food and the destruction of their spawn.

As I have said, the bill left the Senate and went to the Assembly in a form which we thought was about perfect. I wish that I might stop here and say no more. But as a citizen of New York—the pioneer State of fishculture and game protection—I must confess my shame at the amendments incorporated into the measure in the Assembly. Slight changes were made in the general features of the bill, and this we consider fortunate, for we had grave apprehensions. But in some very surreptitious manner and at an hour when it was impossible to correct it without endangering the entire bill, a section was incorporated, No. 249, the effect of which is to foster and encourage crime—to put New York in the position of a fence, a receiver of stolen goods. This section will be a disgrace to our State as long as it shall be tolerated on the statute books. It permits the sale of game the entire year around. It says to the market-shooter, "Go to our sister States, shoot their game in season and out of season, invoice it and ship it to the old Empire State and we will help you to dispose of your unlawfully gotten plunder." And further, it says to those of the same disposition as to our own State—and there are many of them—"If you can get game out of season without being caught by the protectors, box it up tight and mark it eggs or dried apples, or by some other deceptive name; we will take care of it, and when it has been mixed up with Pennsylvania or Michigan game the difference cannot be told, for the invoice of your fellow market-hunter of Pennsylvania or Michigan will cover it all."

Such a blot on our statute books must be wiped out at the earliest moment. I shall not be content until it has been.

The thought occurs to me that our sister States must regard us with fine scorn and indignation for thus offering a premium to their own law breakers for the paltry gain to be won. It would be only reciprocity for these States to offer the same premium to our own pot-hunters.

But such backward steps must not discourage us. Keep up the ranks and march in line. The victory is surely with us. The fish, the birds and the game animals in their wild condition belong to the people, and the public is now beginning to recognize this fact and to demand the preservation of its interests; and our law makers are beginning to hear the demand, and they must give heed to it.

SECRETARY EDWARD P. DOYLE, of the New York Fish Commission, in defense of the game laws spoke as follows: The gentleman who has just read a paper has spoken of the crowning iniquity of the game laws, and inasmuch as he has spoken so very strong and been so severe in speaking of it as a blot upon the statutes of the State, I think it is well that I should tell what this law is that he construes as so deadly and dangerous.

The game, fish and poultry dealers of this city Mr. Amsden characterizes as "pirates" and men in a disreputable business, so to speak. There is an association composed of prominent men of this city, men like Robbins of Fulton Market, who has a large storage room. They formed th association to get what were their rights and what they were entitled to. They claim that large quantities of game were killed west of Chicago and shipped to every city of the United States except the city of New York, but that this great city of 1,500,000 people was the only city where game could not be sold (outside of New York State) that was legally killed in other States. They sent a delegation to Albany; first went to their attorney and he drew a bill which was introduced by Assemblyman Wilkes, and it was reported unanimously on by the committee and finally ordered to a third reading, then being passed by a fair representation of the people of the State of New York, and that bill was called to the attention of other people. Its adoption gives too much latitude to the introduction of foreign game. The chairman, who is just as much a protectionist here as any member, called in Senator Guy, one of the active members of the Senate, who is familiar with game laws, to modify the Wilkes bill so that ample protection would be afforded to game in the State of New York. Senator Guy modified the bill so that game coming in must be killed 300 miles from the State of New York. This would take in Chicago, providing the burden of proof was on the dealer that this game had been legally killed and killed 300 miles from the State of New York, whether north, west or south. The transportation companies should mark such game, giving the place it came from, so mark invoices, also way bills, and enter in books at office. It should be entered in books of dealers, and they should permit fish commissioners to examine the books at all times for the purpose of tracing game. This game is killed, the larger part of it, west of Chicago. We have no right to presume that laws are openly violated, nor say people out there are poachers. We should presume that the laws are enforced and think that this game is legally killed, and the good sober sense of the members of this society will accept this view. This society ought not to go on record as having said that reputable dealers and reputable transportation companies are openly violating the laws and swearing to false laws. Of course, as far as I am concerned, I belong to that unfortunate class who are not able to have game on the table.

I do not wish the statement to go on record that this is a blot upon the records of this Association and it ought to be wiped out. If it was proposed to send me to the Senate, I would fight very hard to prevent this "blot" being wiped out.

MR. AMSDEN: Do I understand you to say that the Legislature passed an act requiring that packages be properly marked game, the place they come from and their destination? A. The provision was made by Senator Guy that game should be marked when brought in.

MR. AMSDEN: Mr. President, I do not want to get this meeting into a discussion on this matter. I think it will be well to let it rest. Before next winter, I am perfectly satisfied in my mind, this bill will be repealed. Mr. President, you know what cold storage houses mean. You have seen the result in the Great Lakes, and this is one of the causes of the depletion of the lakes. How it will affect the game in New York State is uncertain. I actually know of one hunter living just west of Monroe county who last year acknowledged having shot 400 head of game birds and shipped them to New York. Our inspector was on the watch all the season and knew it, but we never got track of it. The law prohibits the shipment of game from one county to another. People can live without game, but I have boys, and I want to see the coming generation have a little sport.

The Donaldson Game Law.

Editor Forest and Stream:

The new game law for the State of New York is known as Chapter 974 of the Laws of 1895, and it was introduced in the State Legislature by Senator Donaldson, of the Eighteenth District, who is, I believe, a candidate for re-election.

To my mind, this act is the most iniquitous game and fish law that was every worked through a State Legislature, and how any body of men could have passed such an act is beyond my comprehension.

It needs careful study to fully appreciate its grave imposition on the true sportsmen of the State of New York, and the true sportsmen of the State will do themselves great injustice if they do not study it and if they do not resent it at the polls.

In the first place, it ought to be said in preparing an article of this kind that there are two big associations in this State representative of the true interests of sportsmen, one of them being the Central New York Fish and Game Protective Association, of which W. S. Gavitt, of Lyons, is president, and the other being the New York State Fish and Game Protective Association, of which F. J. Amsden, of Rochester, is president. These associations are composed of clubs of sportsmen from all over the State, and sportsmen individually can join the associations by paying a yearly due of $1.

Every year it has been the custom for these clubs to meet in convention and formulate laws for the consideration of the following session of the Legislature.

These statements are necessary, in my judgment, that all may know that there are laws which the true sportsmen want and laws which they do not want. And the Legislature which meets to make these laws has the views of the two associations placed before it by proper committees.

The pin-headed legislator will say, "Oh, you sportsmen are not united on anything you want, and some want one thing and some want another." I deny this allegation *in toto*.

The State Association is always united and knows what it wants, and it presents its wants to the Legislature in a fair, comprehensive manner. It is a stunner, however, when the sportsman asks the pin-headed legislator if he ever heard of any other body of people being divided? Do all the people think the same of capital punishment, of free passes for State officers on railways, of teaching the young in our public schools about the evil effects of alcohol?

In a study of the Donaldson game law bill one hits upon Section 49 as the first act of devilishness on the part of the last Legislature in connection with the new game law. The county of Wayne is made exempt from all the specifications of law in regard to the killing of rabbits.

In Wayne county—the only county in the State—there is no law affecting rabbits. In Wayne county the rabbit is left unprotected the year around. They can be hunted there every day in the year, with ferrets too. That's a good joke, is it not?

Whether it mainly affects the rabbit or Wayne county let the reader decide.

But again, the rabbit can be killed in this State only between Sept. 1 and Dec. 1. December is the best month in the year in which to hunt the rabbit, and about the only time for tracking them in the snow, and also about the only time the farmers' boys can hunt them, for it is not everyone who can afford to own hounds and guns and the other paraphernalia of hunting rabbits. What do the farmers' boys say to that game law? While rabbits can only be hunted from Sept. 1 to Dec. 1, ducks can be hunted from Sept. 1 to May 1, and from an hour before sunset to an hour afterward.

Instead of trying to make the open and close season on game as nearly uniform as possible, as the sportsmen have always urged, the legislators have attempted to make it as varied as they could.

Woodcock and grouse shooting opens Aug. 16 and closes Dec. 31. Take Section 79; who, do you imagine, ever asked to have the closed season on meadowlark made perpetual?

The most ravenous game butchers might ask for a temporary inhibition, but even the most conservative sportsman could give no reason why one ought to be prohibited from killing meadowlarks at any time of the year simply to help out Long Island sportsmen. Did the Legislature at Albany think it a good joke on the sportsmen of the State, except-

ing those of Long Island, when it prevented them from killing meadowlark during the whole of the year?

Section 100 says that dye stuff, sawdust, etc., shall not be run into streams or waters of the State "in quantities destructive to the life of fish inhabiting the same." The rich bank director has a law like that for his benefit. It says he cannot be held responsible for the wreck of a bank unless it can be proved that he knew of it. Before it was *prima facie* evidence of misdemeanor to run the stuff into the waters of the State inhabited by trout without any reference to quantities sufficient to destroy the life of the fish.

Section 143 allows eel weirs again to be placed in waters of the State, which will not please the true sportsmen along the Susquehanna River, who have labored hard to knock them out of that water.

Another very bad feature of this act is this: Formerly netting was prohibited in certain waters of this State. Now it is allowable in any of the waters of the State through a license to be had from the Commissioners of Fish, Game and Forestry. It would be well for the sportsmen of this State in convention assembled to take up the study of this subject and have something to say about the rules and regulations regarding this netting license clause in the game law which brings fish into politics and puts in the hands of a fish commissioner, who hardly knows a bullhead from a brook trout, a political lever to use in politics, if he deems best. Here is new work for sportsmen to undertake. It would be interesting to know if nets are to be used, by license, in brook trout streams, or in waters inhabited by lake trout, black bass, etc., etc., and if lake trout placed in such waters as Owasco Lake, Skaneateles, Seneca, Cayuga, Canandaigua and Saranac lakes, are to be used to capture the political influence of Tom, Dick or Harry by granting one of them a license to net the lake trout aforesaid. Is it for this that the people have spent their money in propagating fish and building State hatcheries? Are the people to be taxed for expensive commissions and hatcheries simply to provide good netning grounds for licensees?

It would be to the interest of the State Commission if it would also consult the State Sportsmen's Association in the matter of appointments of State protectors.

The last bad feature to which I desire to call attention is this: The law allows woodcock, quail and grouse to be had in possession at any time of the year, providing the possessor can prove that such were killed outside of the State.

The cold storage people, whose interests are hereby consulted, are very happy over this, and some of the pusillanimous sportsmen say: "Oh, well, they eat game in Chicago the year around. Why not in New York?" They surely ought to be allowed to do in New York what they do in Chicago, just as soon as it becomes well established that two wrongs can be made to make one right.

I am told on good authority that all this game is now found on restaurant tables in New York almost daily.

The sportsmen of the State of New York will never amount to anything as a body until they make one or two organized fights by literature and otherwise on bad legislation and bad legislators.

Until that day comes it is questionable just how much the name of sportsman is an honor. GEO. R. PECK.

AUBURN, N. Y., July 9.

Maryland Association.

BALTIMORE, July 13.—*Editor Forest and Stream:* It might be interesting to the readers of your widely-circulated and popular paper to know that the Maryland Game and Fish Protective Association is in a very properous condition. Though but recently organized the membership numbers over 200, and applications are coming in every day. Last week a club of twenty from Washington county joined the Association. In Maryland, as is the case everywhere, the sportsmen and anglers are largely made up from among the leading citizens, especially the various professions, and it is most gratifying to the members of the Maryland Association to see so many prominent citizens from all parts of the State enrolled upon the Association's roster.

An organization of this kind is an absolute necessity in Maryland, and we hope to make it as effective as kindred associations are in New York, New Jersey, Delaware, Massachusetts and other States. The first prosecution by the Association took place on the 6th of July, when one James Bardley was tried and found guilty for killing a rabbit contrary to the public general laws of Maryland. Upon failure to pay fine and costs, he was sentenced to the county jail of Queen Anne county. This will no doubt have a salutary effect in that part of the State. We intend to prosecute every offender who kills game or catches fish contrary to the laws of the State. The laws have been a dead letter for years simply for want of organized effort to enforce them. We will be glad to keep you posted from time to time as to the progress of the Association.

GEO. W. MASSAMORE, Sec.-Treas.

New York Law About Nets.

CONSIDERABLE discussion has been going on among the fishermen in our midst in regard to one of the provisions of the 1895 game laws. Section 151 says: "It shall be the duty of the board of commissioners of fisheries, game and forest to prescribe rules and regulations for the purpose of granting all licenses to seines, fykes and nets in water when specially permitted by this act." Some contend that this section permits the licensing of nets by the commissioners in any waters of the State, while others maintain the contrary. The section is loosely worded and the use of the word when makes its meaning very ambiguous, but a reference to the context shows plainly and conclusively that the word when is used instead of where with the double meaning of both words and that the licensing is only to apply to those waters of the State in which netting is expressly permitted by statute, for certain fish and at certain seasons of the year. Any other interpretation of the law would open our waters to the poachers and pot-hunters and lead to the almost total extinction of our game fish. The course of the commissioners is being closely watched by anglers in all parts of the State and any attempt or disposition on their part to construe the statute other than as above will be resisted to the utmost.—*Seneca Falls Journal.*

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

FIXTURES.

BENCH SHOWS.

Sept. 3 to 6.—Kingston Kennel Club, Kingston, Ont. H. C. Bates Sec'y.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17 to 20.—Rhode Island State Fair Association's third annual bench show, Narragansett Park, Providence, R. I.

Sept. 17 to 20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 24 to 27.—New England Kennel Club's second annual terrier how, Boston, Mass. D. E. Loveland, Sec'y.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

—. Morris, Man.—Northwestern Field Trials Club's Champion Stake. Thos. Johnson, Sec'y, Winnipeg.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wel's, Sec'v.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 29.—New England Field Trial Club, at Assonet, Mass. S. R. Sharp, Sec'y.

OUR COON HUNT.

PRESTON, Conn.—*Editor Forest and Stream:* The season was far advanced and, to judge from the oft-repeated gun shots that awoke the echoes of the surrounding hills, the squirrel crop was growing lamentably small, and as squirrel shooting is my hobby I concluded to go before they were quite exterminated.

I joined my two chums of sporting proclivities, and making known my intentions, by the ready assent of George and Morris I found I had but voiced their sentiments; in fact, they were but waiting for some one to propose the trip. "I am with you," said Morris. "Same here," echoed George, "but to have a thorough good time let's start to-night and hunt for the festive coon." This proposal struck the right chord, so we settled it that way.

We hustled around that afternoon, and at 6:30 P. M. Morris drove up. I was ready, clad in my hunting togs, so grabbing my Parker 10-bore, away we drove after George. We found him ready and waiting, and packing things snugly in the Concord we were off for the wilds of Franklin.

Stopping at the old Maples Farm, we took aboard the principal actor in the programme—Morris's old coon dog Keno.

Our objective point was the home of George Wheeler, who was somewhat of a Nimrod and a jolly good fellow withal. We felt sure of his company, but found the family abed and the house in total darkness. In response to Morris's thundering raps, Wheeler came shivering to the door. Acquainting him with our business in that region at that hour, we insisted that he should go with us, but no use; our eloquence was wasted upon the night air, for Wheeler, with a plea of indisposition, banged the door and retired to warmer quarters. Morris was familiar with the old farm, so we soon had the mare in the stall, and pulling the Concord in on the big barn floor, seized the guns and started across the meadow for Ayers Mountain, whose rugged crest was faintly discernible up in the west.

It was a night of Egyptian darkness and the pleasures of coon hunting soon began. We waded ditches, clambered stone walls, and when we stepped into the road skirting the mountain we were an elegant-looking trio. We had scarcely regained our wind when the rapid *yep-yep* of Keno up the mountain side announced the beginning of sport. In an instant all fatigue was forgotten, and up the slope we went, tearing along through the thick scrub, the night air rent by an occasional howl as some unlucky hunter came in contact with the concealed rocks, or mayhap as he received a stinging slap in the face from a swaying bough. We soon located the dog in a clump of poplars, exceedingly tall and slim in growth. Donning the climbers, Morris started up the largest tree, as Keno seemed convinced the coon had taken refuge there. Up went Morris, the lantern swinging at his belt, his movements followed with eager interest from the party below; but the attempt was a failure, for Morris soon called out, "I do not want coon bad enough to climb this bean pole any higher," and casting the rays of the lantern aloft in a vain effort to discover the coon, he came down.

George said he saw the coon curled up at the end of a branch, and he let go one barrel with no other result than a shower of dead leaves and twigs. Well, we left the coon to his own reflections, which no doubt were not very complimentary to the party of idiots who would go coon hunting without an axe.

Calling off the dog, we took a winding course up the mountain side. It was toilsome work, now skirting overhanging ledges, clambering up through the ragged clefts, stumbling over the concealed rocks and decaying logs. Oh, the joys of coon hunting on a dark night!

Just as we reached the summit, the deep tones of old Keno close at hand told us there was another coon in trouble. "Come on, boys," cried Morris, "this way," and in the grand rush that followed we nearly fell over Keno in the darkness. The dog was stationed at a mass of shattered rocks. One look proved that Br'er Coon was very little troubled on our account, as he had quietly crawled into a seam in the ledge out of harm's way. "Well," growled George, "this is interesting. If ever I go coon hunting again, it will be on somebody's lawn, where there are no rocks or holes. This is hard work with little results," and this expressed the feelings of the party. Throwing our tired bodies on the leaves beneath the gnarled and twisted old oaks that swayed with ghostly motion in the chill night air, we rested as we lay thus on the summit of the hoary old mountain. The surroundings, to say the least, were such as to create a queer feeling. The huge masses of gray lichen-clad rocks, the dark, dense banks of laurel, the distorted forms of the windracked old trees—all these seen in the feeble, flickering light of the lantern, produced a weird effect which, coupled with the witches' hour, midnight, caused anything but a cheerful feeling; and to make things pleasanter, Morris began to relate how some coon hunters a short time previous lost a valuable dog on this very spot, and when found he was torn completely into shreds by some unknown animal. "Shut up," cried George at this point, "let's move on. We will never get a coon up here, anyway," so we soon reached the western extremity and began the descent. Talk about the going up! You should have seen the coming down. We crawled, rolled and bumped along, myself in the lead, the lantern's dim rays only making the darkness beyond more apparent. Occasionally some unlucky member of the ill-fated expedition would step into a fissure concealed by the dead leaves, and down he would go with a rush, grabbing wildly at the various objects within reach till the downward trip ended in a whirl of leaves as farther progress was checked by a tree trunk. Oh, it is lively sport, this coon hunting!

Now all things earthly have an ending, and we finally landed in the road in a demoralized condition. We had scarcely gotten our bearings when the deep tones of the old dog again rang out above us. "Well," growled Morris, "have we got to enter tophet again." "Let him yell," quoth George, "I suppose it is the same old dodge anyway,—coon in the ledge. He can't coax me into that hole again," and with a grunt of satisfaction he stretched his tired body along the top rail of the fence. Now it certainly was discouraging to think of climbing those rocks again; but leaving George alone in his glory, back went Morris and I over the old course, and after a lively scramble found Keno and also found our usual luck awaiting us. George's words were verified. The coon was snuggly stowed away in those rocks. This was the straw that dislocated the camel's spine. Four coons old Keno had started and not a hair to show for it. Calling off the equally disgusted dog, we again slid into the road to find George in sweet repose, oblivious of all things even to the varmint that slew the hunter's dog. His shoulders were tightly wedged between two stakes to prevent rolling off into the meadow. His first words were, "Well, did you get the coon?" "We didn't expect any coon," snapped Morris. "We merely went out of respect to the dog's feelings anyway."

We discussed the situation, and considering the chances as ever against our getting a coon, we voted the hunt off and filed along the mountain road, bound for Wheeler's barn. Arriving at those sumptuous quarters, we considered the propriety of arousing the family, but naturally feeling averse to awakening them at that unseemly hour (1:30 A. M.), we decided to pass the remnant of the night in the barn, so covering the hay with horse blankets and regaling the inner man with an apple found in the Concord, two walnuts and three chestnuts from the pockets of the generous George, we pulled the buffalo robe over us, and packed like sardines tried to sleep. What a night we did pass in that barn! We slept cold. We shivered and shook till the old barn seemingly rocked on its foundations. Now and then the monotony of this was varied by the passage of a large rat over our shrinking forms, or the unearthly bellow of one of Wheeler's cattle in the stable below. Well, the night wore away, and the first rays of light were greeted with a sense of delight, and straightening our cramped limbs and shaking the hayseed from our hair, we tumbled out of doors. It was a glorious morning, and the miseries of the night were soon forgotten in the anticipation of the pleasures of the approaching squirrel hunt, and thus ended the night and thus ended the memorable coon hunt.

E. M. BROWN.

THE EFFECTS OF MUTILATION.

SEVERAL inquiries have come to FOREST AND STREAM within a few weeks concerning the effects of castration and spaying, there seemingly being a number of people who desire to own a dog or bitch without any of the sexual disturbances which to them are so annoying. They wish to own the dog for his own sake and not in any way for breeding purposes, hence if the dog and bitch will retain all the qualities of their race after being deprived of their sexual powers, they will more fully meet the wishes of such owners. Unfortunately, in reference to this matter, the dicta of the authorities is positively unfavorable to mutilation. Many good writers on the dog, particularly modern ones, ignore this subject, so that the available source of information for the seeker of knowledge pertaining to the subject is exceedingly limited.

There is no doubt of the harmful effects of the operation. Youatt writes of this subject as follows: "It has been said that the castrated dog is more attached and faithful to his master than he who has not been deprived of his genital powers; this, however, is to be much doubted. He has, generally speaking, lost a considerable portion of his courage, his energy and his strength. He is apt to become idle and is disposed to accumulate fat more rapidly. His power of scent is also very considerably diminished, and he is less qualified for the sports of the field. Of this there can be no doubt. It has been said that he is more submissive; I very much doubt the accuracy of that opinion. He may not be so savage as in his perfect state; he may not be so eager in his feeding; but there is not the devotion to his master and the quickness of comprehension which belong to the perfect dog. The removal of the ovaries or spaying of the female used to be often practiced, and packs of spayed bitches were, and still are, occasionally kept. In performing this operation, an opening is made into the flank on one side and the finger introduced—one of the ovaries is laid hold of and drawn a little out of the belly; a ligature is then applied around it, just above the bifurcation of the womb, and it is cut through, the end of the ligature being left hanging out of the womb. The other ovary is then felt for and drawn out and excised and secured by a ligature. The wound is then sewed up and a bandage tied over the incision. Some farriers do not apply any ligature, but simply sew up the wound, and in a majority of cases the edges adhere and no harm comes of the operation, except that the general character of the animal is essentially changed. She accumulates a vast quantity of fat, becomes listless and idle, and almost invariably is short-lived. The female dog, therefore, should always be allowed to breed. Breeding is a necessary process; and the female prevented from it is sure to be affected with disease sooner or later; enormous collections and indurations will form that will inevitably terminate in scirrhus or ulceration. A troublesome process often occurs when the female is not permitted to have young ones, namely, the accumulation of milk in the teats, especially if at any previous time, however distant, she may have had puppies once. The foundati

is laid for many unpleasant and unmanageable complaints. If she is suffered to bring up one litter after another she will have better health than those that are debarred from intercourse with the male."

In "The Dog in Health and Disease," the author, Dr. Wesley Mills, treats the subject as follows:

"It is impossible to predict what effect on the physical and psychic nature of the dog these operations may have. After either, the subject may be little more than a useless, animated mass of flesh, unworthy the name of 'dog.' The author would not allow any dog he owned to be thus operated on, nor could he be induced to perform it except when the parts are diseased; and he hopes the time is not far distant when every reputable veterinary surgeon will take the same view of the case, and absolutely refuse to thus run the risk of destroying the dog merely to gratify the whim of some owner who wishes to shirk his responsibility. Every owner should either not keep a dog at all or treat the animal as a dog. A spayed or castrated dog cannot win a prize on the bench."

There is good sound sense in the foregoing paragraph.

The following is the dicta of Edward Mayhew, M. R. C. V. S.:

"Castration in the dog is not of itself dangerous, but it renders the animal disposed to accumulate fat, and destroys many of those qualities for which it is esteemed. The creature afterward becomes lethargic and its spirits never are recovered."

SETTER TYPE AND OTHER MATTERS.

TUCKAHOE, N. Y.—*Editor Forest and Stream:* Although fully in accord with your Bridgeport correspondent in regard to the shameful way that noble animal, the English setter, is usually mal-judged at our shows, I do not see that he is very much better than those he justly accuses of not knowing what they attempt to judge, and, worse still, he does know and disregards the standard because he wants the English setters judged as Laverack setters. I think the proper English setter standard is good enough for them all.

"Albert" certainly is right to call the present system ruinous to the breed, but what he suggests about having the standard defined and enforced by the A. K. C. would be more so. "Albert" has, like most dogmen, no idea of the scope and composition of the A. K. C. and its delegates. The A. K. C. has more than enough at hand if it looks after the correcting and enforcing of its rules, so as to have them fair and just to each and every party alike, but certainly not to cope with standards and other matters not in his scope.

Has "Albert" ever thought a moment about the composition of the A. K. C. delegates? Does he think each and every delegate must perforce as a delegate be a perfect all-round judge, also (the *rara avis*) to demand from them the fixing of standards?

Most of the delegates are not out-and-out dogmen (thank the Lord), only gentlemen with good, sound judgment as a rule, and the majority has to rely in cases of particulars in regard to the different breeds mostly on those present who have, or are thought to have, a thorough knowledge of the respective points and rely mostly on their judgment; and for this very reason, for this composition of its body, the A. K. C.'s scope is only to make necessary rules fair and just to all, and to enforce them, which is quite wide enough a field to attend to properly without a suggestion to look after standards.

Just for the curiosity let us consider that the A. K. C. would take the English setter standard up. The majority would as a matter of course listen to the ideas and testimony of those of its members who are considered experts in the breed, and as the majority rules, how easily might it happen that the Tennessee type of setters would get the majority, and where would you be? And you having desired that the A. K. C. should settle this matter, of course will have to abide by its decision, it acting, as its position properly requires, as a "superior court" in all doggy matters.

Speaking of rules, there is one in the bench show rules which states that all prizes must be as represented in the premium lists, and another says that bench show committees can change any prizes before the closing of entries, provided they publish said change in a sporting paper, which abolishes the first rule, and is in fact quite unfair, as it compels every exhibitor to keep and read each line in all the sporting papers or get left; but it would not permit you or me to withdraw the entry money should I have entered under the first offered conditions of the directly sent premium list. A simplifying of this rule should certainly be brought about, as showing dogs is very rarely a paying fun; and if I pay my entry to compete for an offered prize, I think I am entitled to hold the offering party (the bench show) to its contract, as it will me by keeping my money. Such rules and their proper enforcement are the proper sphere of the A. K. C., and I think it absolutely dangerous for it to meddle with any particulars in regard to the different breeds, as "Albert" desires it to do. Lately something in that strain has been introduced to be acted on at its next meeting, that is, "the cropping prohibition," and I say very emphatically, this is no question for the A. K. C. to decide. It is plainly and simply a business for those clubs interested in the respective breeds, and the above-mentioned composition of its body makes it absolutely unfair to act on such vital questions to the breeds interested in the contemplated prohibition, and any filibuster could work up those delegates who are not interested in the cropped breeds (and they are naturally the majority), and by judicial application of sentimentalism have them adjudicate on breeds they do not know anything about. Do not think I am for "cropping." No, in the principle I am against it, but I do think this is such a vital question to those breeds that no body but those clubs interested in such breeds should have anything to say, and only use the A. K. C. as a last resort, to decide, if necessary, but not to take the matter up and decide off-hand, when the majority doesn't know anything of it.

Let us see how the abolishing of cropping works in England, then we have time enough to follow suit. But as we are not the original breeders of most of the cropped breeds, our abolishing rule would mean absolute prohibition to some breeds and would plainly kill them here. I hardly think that is for what the A. K. C. was created.

But I started in on English setters and land by objecting to interference with cropping. By the way, if the principle of prohibiting cruelty is to be the point, then the principle should be carried out entirely and the docking of tails stopped also, as a tail is as good as an ear. I know well enough that a puppy hardly feels any pain when his tail is snipped off; but it is a nice thing to follow out a principle to its whole length, and as the modern way of cropping, with cocaine and pasteboard and sticking plaster, has taken much of the most objectionable part away, there being no pulling necessary now. The pulling is the real cruel part of it.

But to hark back to English setters. Your correspondent hits the nail when he repeats the answer—that it is so much easier to breed poor ones than good ones; but he should go further, for it is a lack of real knowledge of breeders and judges of what really an English setter should be, and partially a lack of real sportsmanship, and our American trait "to get there" no matter how.

What has made the English setter such a conglomerate mass of just long-coated dogs with some setter appearance? It takes a real sportsman to discard everything not up to highest form so as to keep up the standard. It is so much easier to raise fifty or one hundred puppies down South, bred on paper and great reputation, without the least regard for individual fitness to keep up the standard, if one has the money to pay for it. Of course, under any kind of luck there should be five or six good field dogs among that number of puppies. The blood lines no doubt are in the purple, on paper, and the puppies raised among game, as I agree all hunting dogs should be. It would be funny if they wouldn't get a good dog now and then. But I contend that it is impossible to breed the most celebrated specimens together and add each new crack to this breeding and get an average up to the standard, if not carefully and constantly selected and mated to their individual peculiarities, so as to strengthen weak points and confirm the good ones. That is what I understand in breeding to a standard means, it being so dead easy the other way, and that easy way has brought to us dogs which make it difficult for one to define their origin at the first look.

Although the Tennessee setter started out with a good specimen—Roderigo—who was an English setter, this pernicious disregard of type and fostering only the "get-there" kind have brought out a dog which is only a setter in his royal blood lines on paper, but very little in exteriors; and as to your judges, well, they either have not learned the breed or have succumbed to the above-mentioned "get-there kind" craze; and "Albert" names the only remedy—stay away from such men, and also from those who sit on the fence, till the tide will turn again, when we will have dogs as good looking as there are in the field. That is my sportsman's ideal and can be attained with very little more trouble, as the bench show duffer, the pointer—formerly a laughing stock for field trial setter cranks—has proven by the persistency of a real sportsman breeder like Mr. Dexter.

G. MUSS-ARNOLT.

DOG TRAINING VS. BREEDING.

THE following from the New York *Sun* will be interesting reading to trainers and breeders, particularly to the latter, as a consequence of the heresies of breeding which it contains. Breeders will be slow in admitting that mongrels are more intelligent than well-bred dogs. Prof. Richards, the trainer of the troupe of dogs referred to, has wonderful skill as a trainer. One scene in particular always wins enthusiastic applause:

"A little street is shown on the stage. The night is dark and the lamps are all lighted. A firebug, of course a canine firebug, sneaks along the wall, approaches one of the houses, and sets it on fire by throwing a match inside. In a moment or two the house is in flames. The audience hears the cries of alarm, while in the distance the horn of the firemen can also be heard. The firemen, dogs of course, in their regular uniforms, arrive with their engines and life-saving apparatus. They attack the fire with energy, handling the hose like veterans, but it is already too late. The roof of the house falls in, and at the top story a mother in her night dress appears, holding a child in her arms. One brave fireman, a sort of white mongrel with a good deal of the bulldog in him, approaches the ladder, which the others place against the wall. He climbs up the ladder rapidly, grabs his precious burden and brings it down to the street in safety. But his courage is fatal to him. Wounded in his perilous enterprise, he falls down and dies almost immediately afterward. His comrades stretch him out upon a bier and send for the ambulance, which arrives upon the spot. Just then his widow comes, dressed from head to foot in mourning. She flings herself upon the body of her dead husband and goes through all the motions of the most violent despair. Three times the "firemen" drag her away, but she returns again with gestures of terrible grief. At last the body is put into the ambulance, and the procession moves away.

"All this is done, each dog performing his part without any visible command, and the Parisians are perfectly astounded at the intelligence displayed by these wonderful dogs. Some dogs also perform phenomenal acrobatic feats; others mimic the *danseuses*, and one of them goes through the skirt dance, or serpentine dance, without being any more troubled with his robe than the celebrated Loie Fuller herself.

"A well-known Parisian newspaper man, M. Guy-Tomel, has just interviewed Prof. Richards, the owner of the dogs, in regard to his methods of training.

" 'The education of intelligent dogs,' he said, 'is an easier thing than people generally suppose it to be. It requires great patience and absolute kindness. Kindness is the key of success. If an animal is beaten or hurts himself in going through his exercises he gets a horror of them, and it is impossible, at least for a long time, to coax him up to the mark again. One of my most brilliant acrobats hurt his nose last year in one of his jumps. It was impossible to get him to recommence the next day, and, what is stranger still, he refused to perform three other feats that he knew perfectly well and which were not attended with danger. It is only quite recently that he has gone to work again.

" 'The great error of amateurs in dog training lies in the notion that every dog can be made a learned dog. Now, as a matter of fact, there is not more than one per cent. of the whole dog population that is susceptible of thorough training. This is a pretty good proportion, after all; probably more than the human race can boast of.

" 'But you ask me how we are to distinguish the one smart dog from the ninety-nine stupid dogs. Well, in the first place, you must avoid aristocrats. There is no use in looking for a wise dog among them. Dogs with long pedigrees are, almost without exception, idiots. You have remarked, perhaps, that my troupe is composed exclusively of horrible mongrels, without any distinction whatever as to breed. Possibly nature, knowing that these disinherited ones will have more trouble than the others in the struggle for existence, endows them with more intelligence. But to be a mongrel alone is not sufficient to possess genius. Here again among the mongrels a careful selection must be made. Now, this is the way that I operate: I go among a pack of dogs, having first learned all their names. I call out a name, and if the animal comes to me wagging his tail I say to myself, "Hello, my old friend, you at least know your name, and that is something." Then I put him through a thorough examination. Of course the animal must conform to certain physical conditions, according to the employment which I have in reserve for him. If he passes this civil service examination I get on more intimate terms with him. I caress him, observe his motions, watch his eyes and the way he carries his tail. As a general rule the cocked tail is a good indication. At the close of the examination I bring away my pet and advance him to the rank of a pupil.

" 'The first act in training a dog consists in utilizing the instinct of the animal in fetching. When he knows how to fetch perfectly, you can teach him quite a number of elementary exercises, such as walking on his hind-legs, taking queer positions, jumping, etc. There is one important detail, however, which should not be omitted, and that is to repeat always in a loud voice the command corresponding to the act desired. Dogs understand perfectly the word, and can retain an almost indefinite number of words representing an action.

" 'My advice is to feed learned dogs once a day only a full dish made from biscuits containing one-quarter of powdered meat and three-quarters of flour. Bitches are more easily trained than dogs. Their education should commence when they are about ten months old, after they get their final teeth.

" 'It is by the application of these principles that I have been able to bring out a troupe that is without a rival in the entire world.' "

Suicide and Dogs.

Editor Forest and Stream:

During the past week there have been paragraphs in various papers relating the curious case of a dog's suicide. This one causing so much interest, was not the first case of this kind that has come under my notice.

Some friends of mine, ladies, had a large dog. On leaving their country home in the autumn he was left there in charge of the man who cared for the place. The second season of their departure he appeared much distressed when he saw the preparations being made. He knew he was to be left without his mistress, and be kept shut up much more than he was accustomed to. Under these circumstances life was a burden to him, so a few days after they left he watched his chance to get off. He went to the station, waited there until he saw a coming train, when he walked on to the track, laid himself there, and let the train go over him in the presence of the station master and others who tried to call him away.

It is most strange that a dog should know that a train would kill him and water drown him, but I feel sure Roslyn Wilkes felt that his life was not happy to him, and could bear it no longer.

Food, water, bathing and combing add materially to a dog's health, but not to his pleasure or contentment. They are never happy unless they are following their instincts.

Roslyn Wilkes was kept shut up except just enough to give him exercise. A collie dog's instincts are very strong. He wants to be with horses, people, and to see something go on. They feel the heat very much, and it was, I think, misery to Roslyn Wilkes to be kept in an inclosure, during those warm days especially. It was said that he whined piteously when the keeper tried to coax him out of the water. He was begging not to be taken back to the kennels.

This is not sentimentalism; it is simply a fact of the nature of dogs learned from experience. The finer bred they are, the longer the pedigree of race, the more need it is to allow them to follow the instincts of their race. If a pointer, setter or any bird dog, they must be allowed to hunt. One which is never hunted with, and is persistently deprived of having a few hours off among the woods or hills, becomes spiritless, thin and old before his time.

We put bits on the horses' mouths and turn them wherever we will; but one could not put a race horse to the plow, nor can a fine-bred dog be treated like a mongrel, who has in him the various races and no mind of his own very especially; thus is very pliant to whatever kind of life his master wishes him to lead.

So people who have pedigree dogs should recognize that good feeding and care are not enough, but keep themselves in touch with their feelings to keep them happy.

One of my friends has a setter, come of the best stock in the country. Its mistress pets and indulges it in every way, but cares for it so that it never is allowed a free run for fear some accident might happen. It is really touching to see it looking out of the window for hours watching every sign in the field that might be of rabbit or bird. This setter, with all the care, is poor and dejected, an object of compassion, while in the same house is another dog who cares nothing for hunting, and is as happy and free as a bird in a tree. G. L.

[A *post mortem* showed that Roslyn Wilkes died of organic disease of the heart.]

United States Field Trial Club.

TRENTON, Tenn., July 13.—*Editor Forest and Stream:* The judges for the United States Field Trials Club's winter trial, at West Point, Miss., will be Messrs. John King and A. Merriman, of Tennessee; Gen. F. F. Myles, of New Orleans, and Dr. W. F. Grimstead, of Illinois.

W. B. STAFFORD, Sec'y-Treas.

New England Beagle Club.

A MEETING of the New England Beagle Club executive committee will be held at Worcester, Mass., Friday, July 26.

W. S. CLARK, Sec'y.

Friendly Rows.

Editor Forest and Stream:

It is amusing to see how few men there are who can see merit in other people's dogs, while the good qualities of their own are ever uppermost in their minds, and are lacking in nothing which goes to make up the "great" field dog. I have a dear friend and hunting companion, whose fondness for field sports and his marksmanship are second to no man's with whom I have tramped; but his admiration for his dog is so great that, however well my dog performs, there is always a lack of something in him which makes him unworthy of praise, while the slightest movement in his dog when "'tendin' to business" will call forth such remarks as these: "Now, ain't that beautiful?" "Did you see him when he struck 'em?" "Did you notice how he wheeled on 'em?" "Did you ever see such nose?" "I tell you, he's a daisy!"

If his dog should be guilty of making a false point or a flush, however plain it may be to my mind that he ought to be thrashed for his blunder, his master will find all sorts of excuses for him. Occasionally he makes one of those mistakes which so disgust me, and is so ruinous to our sport for the day, that my usually "sweet" temper leaves me, and I insinuate that there ought to be a "hole" dug in the ground for him.

A stranger, seeing us gesticulating wildly with shooting irons in our hands, would naturally conclude that when the "war of words" was over there'd be a dead man lying on the ground; but that stranger doesn't know us, for when I got him to the point of loading his gun for me with that "extra shell" which he always "totes" for big game, I back down, and the war is over till next time. Sometimes, when a dull day strikes the produce market, some member of the Board of Trade will gather around him a crowd of men and begin to tell them what I said about my friend's peculiarities. He does not see that it's a put-up job in order to have a little fun at his expense, and when he is told that Polk Miller says that he's the most "excitable" man in the field he ever saw, the Colonel will hold his audience spellbound for an hour in telling that I am a "bundle of nerves." The first time he sees me he arraigns me for having made the statement, and when I solemnly declare that I never said it, he discovers for the first time that his friends were guying him, and as he recalls the fact that he had abused me dreadfully and undeservedly, he shows his sorrow for it by displaying the tenderest affection for his "nervous friend."

If I had the time and space to tell your readers of the laughable scenes which I have witnessed afield with this "chum" of mine, this prince of good fellows, it would furnish a lot of fun, but when your columns are always crowded with "good things" I cannot trespass upon them, for "my recollections of a friend" would fill a book.

But to return to the dogs. Sometimes when a fellow has a run of bad luck in hunting he feels out of humor and wants to quarrel with something or somebody. That "extra" shell, heretofore mentioned, prevents my tackling my companion, and the dog, of course, becomes my target. No sooner than I advance to the attack, however, than my friend admonishes me that he'll allow no criticisms upon his dog. Now this dog had been bought from a countryman for $10 without testing his field work, but on the recommendation of a Hay Seed who declared that he had "raised him from a puppy, and that he stood squir'ls, ole hyars, birds, chased deer, foxes, and that nothin' couldn't stay on dem groun' whar that dog went along." I found him an all-round dog sure enough, but, like his original owner, was slightly lacking in education; but when I undertook to "educate" him, I was told that I "hadn't been employed as teacher," and here was another row.

I had a very fine dog and he was considered so by all who knew him, so I thought I would give him to my friend and thus overcome the difficulties which embarrassed me when I felt like "letting off" my pent-up anger. It was wonderful to note the great improvement in this dog's qualities as soon as the change of ownership was made, and I felt like I could "cuss him" *ad libitum*, and felt happy. When owned by me he was hard-headed, defective in nose, pokey, had no bird sense, and was unlovely generally, but now all these had disappeared. I felt proud to think that I had made my friend happy indeed; but alas, nothing is satisfying in this life, for while I had transferred him as property, I failed to reserve the right to "cuss him when I pleased," and having left that out of the deed I was just where I was before. One day soon afterward I had occasion to reprove him for some act, as I had often done before during an ownership of several years, when I was brought to a halt suddenly by my friend, who disputed my right in law as well as in morals to say a word about him. I have given him several pups since, but never fail to make a record of the fact that I don't waive my privileges, though in the exercise of them I keep one eye on my chum to see how high the temperature is, and if it is anywhere near the "bilin" point I stop.

POLK MILLER.

Canadian Customs Regulations.

THE following is useful information to those who will compete in Canadian bench shows or field trials. It relates to animals brought into Canada, temporarily, and for a period not exceeding three months, for the purpose of exhibition or competition for prizes offered by any agricultural or other association.

"First.—Before any such animal is admitted, the importer must produce to the Collector or proper Officer of Customs a certificate, signed by the president or secretary of the association, certifying that the said animal (which shall be therein accurately described) is accepted for the purposes of such exhibition or competition for prizes.

"Second.—The importer shall present a certified invoice or certificate of some person having knowledge of the fair market value of the animal, showing the amount of such valuation, on which shall be written a full description of such animal, duly certified after full examination by the proper Officer of Customs both as to value and description.

"Third.—The importer shall thereupon make entry of the animal.

"Fourth.—In addition, the importer shall execute a bond for a sum equal to the full value of the animal, conditioned for exportation within the time prescribed—or the payment of duty therein.

"Fifth.—At or before the expiration of the term the importer, or some person authorized by him, shall produce to the proper Officer of Customs for identification, and make entry for export of the animal; and on receipt of the Landing Certificate of the Foreign Customs testifying that the same has been duly received and entered, the bond shall be cancelled.

"Sixth.—If the importer fails to comply with and fulfil any one of the conditions of these Regulations, the animal shall be liable to seizure and forfeiture.

"J. JOHNSON, Commissioner of Customs."

Manitoba Field Trials Club's Entries.

MANITOU, Man., July 9.—*Editor Forest and Stream:* Our list of Derby entries, which closed July 1, has 58 entries. Last year, 1894, we had 32, and in 1893 35. These were previously the largest on record. This year is nearly double, which is very satisfactory to the club and very pleasant for the secretary to record:

ENGLISH SETTERS.

ALICE F.—Theodore Ferkas's black and white bitch (K. C. Dawn—Lippo's Dixie), May.

BESSIE S.—Jas. Simoneau's black, white and tan bitch (Columbus—Maud à Rose), April.

RUDGE BO—Richard Merrill's black, white and tan dog (Paul Bo—Tuberose), April.

PAULINE BO—Richard Merrill's black white and tan bitch (Paul Bo—Tuberose), April.

ST. PETER—John Wootton's black, white and tan dog (Duke of Manitoba—Hickory Link), March.

LANGDON—John Wootton's black, white and tan dog (Antonio—Belle of Piedmont, Jr.), March.

VALLETTA—E. McKenny's black, white and tan bitch (Columbus—Manitou), May.

INDIAN—W. F. Ellis's black, white and tan dog (Columbus—Maud à Rose), April.

MILO—W. F. Ellis's black, white and tan dog (Columbus—Manitou), May.

JEKYL—W. F. Ellis's black, white and tan dog (Columbus—Manitou), May.

ARIEL—W. F. Ellis's black, white and tan bitch (Duke of Manitoba—Hickory Link), March.

HENRY OF NAVARRE—Chimo Kennels' black, white and tan dog (Antonio—Ruby's Girl II.), February.

MARGERY—Chimo Kennels' black, white and tan bitch (Cassio—Atalanta), July.

SAM T.—W. W. Titus's black, white and tan dog (Luke Roy—Betty B.), April.

LITTLE BILLIE—Thomas Johnson's black dog (Black Prince—Rhyl), April.

THE LAIRD—Thomas Johnson's black dog (Tom X.——), April.

TAFFY—Thomas Johnson's black, white and tan dog (Whyte B.—Dido III.), April.

REX—C. P. Mingst's black and white dog (Antonio—Columbia).

BRIGHTON DICK—T. G. Davey's blue belton dog (Brighton Tobe—Lady Brighton), January.

BRIGHTON TOM—T. G. Davey's blue belton dog (Brighton Tobe—Lady Brighton), January.

BRIGHTON MAUD—T. G. Davey's blue belton bitch (Brighton Tobe—Lady Brighton), January.

TORY FASHION—F. R. Hitchcock's lemon and white dog (Count Gladstone IV.—Fleety Avent), March.

TORY CELIA—F. R. Hitchcock's black, white and tan bitch (Roderigo—Norah II.), June.

MARK OF IGHTFIELD—Joseph Becker's black, white and tan dog (Ightfield Rhiwlas—Queen Regent), April.

GLEAM'S RUTH—Manchester Kennels' black, white and tan bitch (Count Gladstone IV.—Gleam's Maid), April.

GLEAM'S DART—Manchester Kennels' black, white and tan bitch (Count Gladstone IV.—Gleam's Maid), April.

COUNT VASSAR—J. W. Gollan's black and white dog (Dash Antonio—Queen Bess II.), April.

LADY VASSAR—J. W. Gollan's black and white bitch (Dash Antonio—Queen Bess II.), April.

KING'S DAN II.—Geo. W. Ewings black, white and tan dog (King's Dan—M'liss II.).

M'LISS III.—Geo. W. Ewing's black, white and tan bitch (King's Dan—M'liss II.).

KATE—Geo. W. Ewing's black, white and tan bitch (King's Dan—M'liss II.).

——Geo. W. Ewing's cream, white and tan bitch (King's Dan—M'liss II.).

PAUL BO, JR.—Claremont Kennel's black, white and tan dog (Paul Bo—Susie), June.

TOUCHSTONE—Avent & Thayer's black, white and tan dog (Orlando—Dollie Wilson), January.

PATRICIAN—Avent & Thayer's black, white and tan dog (Chevalier—Patsy), May.

FLEET'S PET—Avent & Thayer's lemon and white bitch (Count Gladstone—Fleety Avent), March.

FEU FOLLET—Avent & Thayer's black, white and tan bitch (Count Gladstone IV.—Folly), May.

—— Avent & Thayer's black and white bitch (Topsy's Rod—Lady Lit), May.

DOMINO—Blue Ridge Kennels' black, white and tan dog (Antonio—Ruby's Girl), February.

SELKIRK DAN—W. B. Wells's black and white dog (Whyte B.—Luna), April.

SELKIRK WHITE—W. B. Wells's black and white dog (Whyte B.—Luna), April.

SELKIRK BELINDA—W. B. Wells's black, white and tan dog (Whyte B.—Dido III.), April.

POINTERS.

STRIDEMORE—Richard Merrill's liver and white dog (Strideaway—Hops II.), January.

DOWLAH—Charlottesville Kennels' lemon and white dog (Rip Rap—Dolly D.), May.

NABOB—Charlottesville Kennels' black and white ticked dog (Rip Rap—Dolly D.), May.

INDIA—Charlottesville Kennels' orange and white bitch (Rip Rap—Dolly D.), May.

AMEN—Charlottesville Kennels' liver and white dog (Wrecker—Selah), March.

LEGAL TENDER—W. N. Kerr's liver and white dog (Little Ned—Pearl's Dot), May.

VICTOR HUGO—Tyro Kennels' liver and white dog (Mainstay—Jessica), June.

BELL DEXTER—N. Wallace's liver and white bitch (Dogwood—Maid of Kent), June.

BONNY DON OF COLDHILL—A. P. H. Lonsdale's liver and white dog (Don of Bolcord—Duchess of Bolcord), May.

IGHTFIELD MENTOR—A. P. H. Lonsdale's liver and white dog (Ightfield Torridge—Ightfield Musa), February.

PAUL BANG—Frank Aulthouse's liver and white dog (Jap—Frankie Paul), February.

COINAGE—C. G. Stoddard's liver and white dog (Trinket's Coin—Ightfield Blythe), February.

SIDMONT—P. T. Madison's liver and white dog (Strideaway—Hops II.), January.

RIDGEVIEW CASH—J. M. Avent's liver and white dog (Trinket's Cash—Ridgeview Revelette), March.

SISTER SUE—N. T. De Pauw's liver and white bitch (Jingo—Rooney Croxteth), June.

IRISH SETTERS.

DASHING NELL—Claremont Kennels' red bitch (Claremont Patsey—Sally Gold), May.

J. WOOTTON, Secretary.

International F. T. C. Derby Entries.

CHATHAM, Ont., July 8.—*Editor Forest and Stream:* I send you Derby entries for 1895 of the International Field Trials Club. Everything points to a more successful meeting than usual.

Birds are coming out in good numbers and the season has been most favorable so far.

There are twenty English setters and seven pointers, against nine English setters, three Irish setters and nine pointers last year. The Derby will be run on Nov. 5, at Mitchell's Bay.

L. H. Smith, Strathroy; W. D. Tristem, Detroit, and Thos. Guttridge, of Chatham, have consented to act as judges.

SETTERS.

BRIGHTON TOM—T. G. Davey's black and white dog (Brighton Tobe—Brighton Lady), Jan. 2.

BRIGHTON DICK—T. G. Davey's black and white dog (Brighton Tobe—Brighton Lady) Jan. 2.

BRIGHTON MAUD—T. G. Davey's black and white bitch (Brighton Tobe—Brighton Lady), Jan. 2.

MINNIE H.—Thos. Hallam's black, white and tan bitch (The Joker—Lucy H.), April 7.

BLUE LADY—Jos. Kime's black, white and tan bitch (The Sultan—Rose Roslyn), April 5.

DOTRILL—Jos. Kime's black, white and tan dog (Blue Jim—Pearl Roslyn), April 30.

CAMPERDOWN—Same owner and breeding, April 30.

SELKIRK DAN—W. B. Wells's black, white and tan dog (White B.—Luna), April 18.

SELKIRK WHITE—Same owner and breeding, April 18.

SELKIRK STAR—Bitch, same owner and breeding, April 18.

SELKIRK IRIS—Same owner and breeding, April 18.

SELKIRK BELINDA—W. B. Wells's black, white and tan bitch (White B.—Dido III.), April 25.

SELKIRK TESSA—W. B. Wells's blue belton bitch (Thiers—Cambriana), April 27.

FORREST SPRAY—Forrest Kennels' lemon and white bitch (The Sultan—Rose Roslyn), April 25.

COUNT VASSAR—J. W. Golden's black and white dog (Dash Antonio—Queen Bess II.), April 24.

LADY VASSAR—Same owner and breeding, April 24.

BOB—J. J. Spracklin's (agent for H. T. Bunberry) black and white dog (Sharpe—Susie).

TAFFY—Thos. Johnson's black, white and tan dog (White B.—Dido III.), April 25.

THE LAIRD—Same owner and breeding, April 25.

LITTLE BILLEE—Thos. Johnson's black dog (Prince—Rill).

POINTERS.

COBWEBS—A. Harrington's black and white dog (Plain Sam—Pope's Trixey), July 18.

BOWREY DAN OF COLTHILL—A. P. Heywood-Lonsdale's (Whitechurch, England) liver and white dog (Don of Bolcoed—Duchess of Balcoed), May 16.

IGHTFIELD MENTOR—A. P. Heywood-Lonsdale's liver and white dog (Ightfield Torridge—Ightfield Musa), May 10.

MERRY BOY—Leamington Pointer Kennels' white and liver dog (Count Graphic—Beppo's Mollie), June.

MARYGOLD—Same owner and breeding.

GLIDE AWAY—Dr. Totton's black and white dog (Strideaway—Warwick Nellie), May 21.

DOROTHY—Bitch, same owner and breeding, May 21.

All were whelped in 1894. Entries for the All-Age Stake close Nov. 1. A very large entry is expected.

W. B. WELLS.

Canada Notes.

CHATHAM, Ont., July 8.—J. J. Spracklin left for Manitoba per Str. Alberta from Windsor on Saturday last. The C. P. R. have put one of their fine steamers, the Alberta, on the route between Windsor and Port Arthur, and it is a most convenient and pleasant mode of reaching the Manitoba and Continental trials.

Every facility is afforded for the safety and comfort of the dogs, and those wishing their pets to travel in comfort should send them by this route.

The customs officers at Windsor, having a great deal to do with passing animals in for racing and other purposes, should be much easier to deal with than at smaller points on the line.

Spracklin has in his string dogs belonging to A. Baugham, Windsor, Ont.; H. T. Bunberry, Hamilton, Ont.; W. B. Wells, Chatham, Ont.; J. N. Gollan, Nassau, Mich.; Thos. Johnson and R. H. Agur, Winnipeg, Man.

Robert Storey went at the same time with Mr. T. G. Davey's string of six.

W. B. W.

IN a communication published in the *Times-Democrat*, Mr. James R. Randall gives a most interesting description in a reminiscent way of the life and character of that mighty statesman, Alexander H. Stephens. Tender recollections of his friendly qualities and sympathetic sketches of his achievements could not be more kindly presented. His love of the lower animals was sincere and unaffected. In this connection Mr. Randall writes: "Alexander's last negro body servant well said, when at the grave of his old master: 'He loved dogs more than some folks does people.' Wedded to the uprightness of his ethical nature was the love he had for the dumb animals as well as his fellow bipeds. * * * Once I drove with him in May through the department grounds at Washington. I admired the emerald sward, the lustrous grass, and pointed out its enchantments. He glanced at it kindly and said: 'It is fine! fine! I wish that my old cow at Crawfordville could get a whack at it.'"

DOG CHAT.

The cordiality of the "happy family," consisting of such heterogenous individuals as a fox-terrier, a cat, a wolf, half dozen monkeys and other animals, living in a cage in the Zoölogical Garden at Glen Island, was rudely broken and family ties sundered by the wolf eating three of the puppies for breakfast. The fox-terrier bitch fought valiantly in the defense of her young. A stream of water from a hose separated the combatants. The superintendent offered the wisdom-laden explanation that the monkeys had annoyed the wolf to a degree of madness and that it then ate the three puppies by mistake.

In the daily press is a story of an American gentleman who purchased a dog which was imported from Germany, and consequently the dog did not understand the English language. After deliberating solemnly, the gentleman concluded that it was much easier for him to learn German than for the dog to learn English, to the end that they could understand each other, therefore he studied German. It would be much easier to learn to bark and growl than to learn a whole language.

Mr. C. A. Stone, superintendent of the dog show of Canada's great Industrial Fair, Toronto, writes us that he will be pleased to have all those who intend to donate specials communicate with him immediately, so that he can insert all in the prize list. The Blood-Hound Club of America donates its gold medal for best dog, also for best bitch, and silver medal for the best puppy under twelve months. The American Spaniel Club donates its trophy, value $100, for the best field spaniel; and its trophy, $100, for the best cocker; the Bell cup for the best brace of cockers. Quite a long list of other special prizes are already promised.

Mr. Wm. Brailsford has written to Mr. W. B. Wells, Sec'y of the International Field Trials Club, that he will arrive about the first of August, going to Manitoba to attend the trials there, thence returning to attend the International Trials.

A lady lost her dog last week,
And this week, when she went
To interview the butcher on
The style of meat he'd sent,
He pointed to a sausage link.
The lady turned to look,
And when she said she'd take it home
It wagged right off the hook.
—*Stock-Keeper* (England).

The Eldred Kennels, Eldred, Sullivan Co., N. Y., have issued a circular which is the perfection of the printer's art. It contains portraits of Champion Antonio, Brighton Tobe and Gamester. A reference to their large list shows the best of setter and pointer blood. The kennel has issued a notice as follows: "For the convenience of Southern breeders, our stud dogs, Champion Antonio, Brighton Tobe and Gamester, will be sent to our training quarters in North Carolina, Sept. 1, where they will remain until Feb. 15.

In our business columns this week the United States Field Trials Club announce their Derby, which stake commences their spring meeting, at West Point, Miss. This trial will give an excellent opportunity for a competition when birds and grounds are at their best, and in respect to these important necessities no club is better equipped for a spring trial. The entries so far show a negligence or lack of interest on the part of Eastern sportsmen, save a few who have stanchly supported all good trials these many years. Those who have neglected the fall trials have yet a good opportunity to enjoy the sport of competition in the spring; for, though February is a winter month in the North, it is springlike in the South.

From a notice sent out by Spratts Patent we learn that their kennels have been thoroughly reorganized and in the near future will be much enlarged. W. H. Mackay is resident manager. Dr. T. G. Sherwood is consulting veterinarian.

Mr. Geo. R. Krehl's famous collie Eclipse died recently in his fifteenth year. He, besides his success on the bench, was a noted sire.

An Albany correspondent of the *Globe-Democrat* (St. Louis) says: "Landlord Moses of the Brunswick Hotel, at Eagle Mills, has a fourteen-year-old house dog which is a more correct barometer than many of the mechanical instruments. For two hours before the approach of a shower, and with no visible signs of the arousing of the elements, he is as uneasy as a fish out of its natural element. He will roam from house to house, call on all his old acquaintances, and when the shower is near at hand he will seek a comfortable place at home and go to sleep. This peculiarity has been noticed on a number of occasions lately, and has won much renown for the brute." Next!

In our business columns Mr. H. H. Green, Sanford, Me., offers pointers; Mr. F. A. McGrath, Philadelphia, offers fox-terriers; Mr. W. H. Pierce, Peekskill, N. Y., offers to board and train pointers and setters; Swiss Mountain Kennels, Germantown, Pa., offer St. Bernards and cockers for sale and at stud; F. J. N., Saratoga Springs, N. Y., offers fox-terriers; Mr. F. G. Tripp, New Bedford, Mass., offers bull-terriers; Mr. W. A. Freed, Homewood, Pa., offers beagles.

The Continental Field Trials Club announces in our business columns its All-Age Stake, to be run on chickens at Morris, Man., commencing on Sept. 2. The popularity of the chicken trials and the magnitude of those events this year, make almost a foregone conclusion of their success.

Mr. Noel Money, the famous trap shooter, received July 15, on s. s. Mobile, three Welsh fox hounds, one dog and two bitches. They are from the Llangibby pack.

The Omaha Kennel Club selected Messrs. John Davidson and H. W. Lacy to judge all classes at their show, to be held Sept. 18 to 21, the former to take the usual sporting classes, and the latter the others. A change will, however, have to be made in regard to non-sporting classes, as Mr. Lacy had already accepted the invitation to judge at Providence the same week when advised of the Omaha K. C.'s action.

The Wilkesboro *Chronicle* mentions a remarkable freak, a puppy which has three well-developed eyes, two of them in their natural positions, the third about half way between the other two, but higher up on the head.

In a pleasant letter, Mr. Thos. Johnson says: "Mr. Brailsford cables me three aged entries, viz., Deemster and Musa, pointers, and Roma, a setter. He will run them in the Manitoba, Continental and International Trials. He does not mention any others, so I presume he will not visit any of the American (U. S.) meetings this year. He expects to arrive here about Aug. 10. Birds are reported very plentiful. Nearly all difficulties with the customs are about overcome, so I anticipate one of the best meetings—when I say one I mean the three—ever held anywhere.

"Mr. Bell has accepted the position of one of the judges. I have not yet heard from Mr. Wells."

Our Dogs (England), in so vigorously defending Mr. Taylor in a recent issue, is wrong in its assumptions pertaining to the matter, and therefore wrong in the conclusions drawn from them. Mr. Taylor, in a weak explanation, claimed that the counterfoils taken from his book, containing a list of the awards at the New York show, was all that the management was entitled to. Though Mr. Taylor's book was morocco bound, with his name on it in gilt letters, that fact conferred to him no title to the books. The books, for the use of the other judges, were similarly arranged. At smaller shows the judges' names are sometimes put on their books with common, every-day ink, but in either case it is as a matter of convenient reference. Usage in this country requires that the judges return their books to the club after they have completed their list of awards. The books alone are considered official. The counterfoils are for the information of reporters and others, and for convenience sake are tacked on the wall of some adjacent room. The books are carefully guarded against surreptitious changes, and only as an act of courtesy is a reporter or others not directly interested permitted to see them. The catalogue, with its list of awards, is not official in a strict sense. When Mr. Taylor took to England the book containing the awards which he had made, he took the club's official records of his judging. Had he cared to learn fully the duties appertaining to judging in this country, he would have saved himself much humiliating notoriety. Mincing airs and supercilious graces may or may not be unbecoming to a judge, but careless statements are so. The explanation that the Messrs. Woodiwiss' dogs could not be given a prize without a violation of the rules has been in a manner ignored. Under the rules the dogs had no right to compete, but by inadvertence having competed, the only way out of it was to correct the error. The management, however, did not shirk any responsibility in reference to the prizes won by the dogs. In the meantime, there is no doubt but what Mr. Taylor thought, from the dignity and training he had acquired, that he owned that book; but there is no doubt of the knowledge on this side that he did not.

We received the entries of the Derby of the U. S. F. T. Club Tuesday afternoon, too late for publication this week. There are 47 nominations—24 setters and 23 pointers.

R. I. S. F. Association.

THE premium list of the Rhode Island State Fair Association is ready for distribution. The judges so far selected are James Mortimer for mastiff, bloodhound, great Dane, Russian wolfhound, pointer, Chesapeake Bay, dachshund, poodle, bull, Scottish, Bedlington, Skye, Dandie Dinmont and Yorkshire terrier, pug and miscellaneous classes; Louis Contoit, English, Irish and Gordon setters; German Hopkins, fox-terriers; E. M. Oldham, all spaniels. All other classes, H. W. Lacy, excepting Boston terriers, the judge of which will be announced later. Entries close Sept. 2.

The show will be benched and fed by Spratts Patent, and superintended by Mr. Oldham, the expert in such matters. The disinfecting will be done by the Imperial Hygenique Fluid Co. In challenge classes for mastiffs, St. Bernards, pointers, English and Irish setters there is $12; and in open classes, $10, $5 and $3; puppies, $8 and $4. Newfoundlands, one class, $10 and $5. English foxhounds, Skyes, Bedlingtons, Yorkshires, Chesapeake Bay dogs, Italian greyhounds and miscellaneous have $10 and $5 in each class.

There is a challenge class for all breeds of spaniels over 28lbs., prize $10. Field spaniels, four classes, $10 and $5. Cockers, two challenge classes, $10; five open classes, $10, $5, $3. Clumbers (two classes), $10 and $5. Irish water spaniels, $10 and $5. Bloodhounds, Great Danes, deerhounds, American foxhounds, black and tan terriers, Dandie Dinmonts, dachshunds, Russian wolfhounds, greyhounds, collies, bulldogs, bull-terriers, fox-terriers (wire and smooth respectively), Irish terriers, have in challenge classes $10; open classes, $10 and $5; some have a third prize, $3. Puppy classes have $8 and $4, and $6 and $3. Poodles, challenge, $10; open (four classes), $10 and $5. Boston terriers, challenge, $10; open classes (four), $10 and $5; puppies, $6 and $3. American Spaniel Club's Classification No. 2, with additions, has been adopted. A kennel prize of $15 has been made for mastiffs, St. Bernards, beagles, pointers, English and Irish setters, spaniels, collies and fox-terriers; and $10 to Gordon setters, bulldogs, bull-terriers, pugs and poodles. Spratts Patent offers $20 in gold for the best exhibit of dogs owned by one kennel or exhibitor, awards to be decided on the following values: First prize, 7 points; second, 5; third or reserve, 4; vhc., 3; hc., 2; c., 1 point. All additions or changes in the premium list will be published soon as possible.

Game Laws in Brief.

THE *Game Laws in Brief*, new edition, now ready, June 27, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Yachting.

FIXTURES.

*Dates marked thus are unofficial.

20. Sea Cliff annual, Sound.
20. Royal St. Lawrence A, 30ft., 25ft. and 21ft. classes, Montreal.
20-21. San Francisco cruise, San Francisco Bay.
21. Cor. San Francisco regatta, San Francisco.
25. Riverside special, Sound.
27. Indian Harbor annual, Greenwich, Sound.
27. Quincy, Quincy Point, Boston Harbor.
27. Cor., Marblehead, second cham., Marblehead (Mass.) Bay.
27. Royal St. Lawrence, 18ft. skiff and steam yacht class, Montreal.
27. Duxbury club, Duxbury, Mass.
—. Cor., Atlantic City annual, Atlantic City.
28. San Francisco outside sail, San Francisco Bay.
29. New York Y. C annual cruise, rendezvous and race, Glen Cove.
* New York Y. C., first run, Sound.
* New York Y. C., second run, Sound.
* New York Y. C., third run to Newport.
* New York Y. C., Goelet Cups, Newport.
* Ne York Y. C., fourth run to Vineyard Haven.
* New York Y. C., at anchor, Vineyard Haven.
—. New York Y. C., special races at Newport.

AUGUST.

—. Lake Michigan Y. R. A.
2. Lincoln Park, Chicago.
3. Columbia, Chicago.
7. Racine, Racine.
3. Cor. Fleet annual, New Rochelle, Sound.
3. Monatiquot open, Boston Harbor.
3. Shelter Island annual, Greenport, Shelter Island, Sound.
3. Larchmont, 34ft. and 21ft. classes, Sound.
3-4. San Francisco chowder cruise to Pinnacle Rock, San Francisco.
10. American special, Milton Point, Sound.
10. Winthrop open, Great Head, Boston Harbor.
10-11. San Francisco cruise to California Y. C., San Francisco Bay.
10. Squantum, ladies' day, Squantum, Mass.
10. Duxbury Club, Duxbury, Mass.
13. American open, Newburyport.

22. Riverside special, Sound.
24. Norwalk, Norwalk, Sound.
24. Squantum open, Squantum, Mass.
24. Horseshoe Harbor annual, Larchmont Sound.
24. Cor., Marblehead third cham., Marblehead (Mass.) Bay.

THE New York *World* has, in answer to an inquiry, received from Sir Francis Knollys, private secretary to the Prince of Wales, a letter stating that the Prince will not visit America this year. There is no longer any chance of Britannia coming over.

UP to the date of writing, July 16, practically nothing is known of the merits and defects of the new Cup defender. No doubt those intimately connected with her, Messrs. Herreshoff, Iselin and Morgan, have been able to form some definite conclusions; but the newspapers and the yachting public know far less of her than of Valkyrie III. The daily papers are publishing about one column per day of important news from Bristol, mainly describing the yacht as a great success, but her performances thus far may be summed up as but four trials under canvas, almost entirely in light airs and with no pretense of racing. The much vaunted victories over Colonia, the latter only half sailed, and with a foul steel bottom, and the burlesque trial with Vigilant on Sunday, are absolutely valueless in giving an idea of the yacht's speed and stability. If the projected special races off Sandy Hook take place on Saturday and Monday next they should show something positive; in the meanwhile such trials as have been made seem to indicate no serious defect, though very far from affording the needed guarantee of Defender's superiority to the older boats.

FOR some time past nothing has been heard from Boston about either Jubilee or Volunteer, both of which were generally looked for in the 90ft. class. Last week, however, Gen. Paine announced that Jubilee would not take part in the special races of July 20 and 22, nor in the trial races later on. Mr. Forbes's intentions as to racing Volunteer are as yet unknown.

SINCE Valkyrie III. has left the racing the duel between Britannia and Ailsa has continued, the former usually winning. The 20-rating class is divided, none of the Solent boats going to the Clyde. Niagara seems to be a little better than the new Eucharis or the old Zinita, and Dacotah continues her attempts to spoil sport by going into the 20-rating class under an allowance of 12min. The *Field* states that Niagara will have a new suit of sails, made by Perry, of Birkenhead; and also that Mr. Howard Gould is talking of a Herreshoff 40-rater for next year.

THE proposed new rule of the Y. R. A., which we recently published in full, was adopted at the general meeting of the Y. R. A. on June 17, and afterward was submitted by a mail vote to all the members. The result, as just announced, was for the rule 79, against 13, some 50 members not voting. The rule is thus adopted, to go into force next year.

Huguenot Y. C.

NEW ROCHELLE—LONG ISLAND SOUND.

Wednesday, July 10.

THE Huguenot Y. C. sailed its first open regatta on July 10, in a moderate breeze, the times being:

21-FOOTERS.

	Length.	Elapsed.	Corrected.
Houri, E. B. Hart, Jr.	21.00	3 06 48	1 39 26
Celia, C. A. Gould	21.00	3 02 52	1 35 37
CABIN SLOOPS.

Question, L. H. Huntington	12.06	3 48 55	2 21 40

The winners are Celia, Water Lily, Kittie, Fairy and Question.

On July 11 Capt. A. Peterson, of the schooner Emerald; Andrew Morrison, the mate, and one of the crew were injured by the premature explosion of a cartridge in saluting. The yacht was off Bay Ridge at the time, and the mate and man were taken to the Norwegian Hospital. Capt. Peterson was but little injured, and the others not very badly.

The Larchmont-Atlantic Cruise.

THE two busy periods of the yachting season—that of the spring regattas, so called, covering the last three weeks of June, and that of the annual cruise of the New York Y. C. in the first half of August—have always been separated by an awkward interval which the various clubs have sought, with but little success, to bridge over by their annual cruises. Of late years this interval has been shortened by a week, the June regattas on New York Bay, once so important, now being secondary to the many races of the Sound clubs in the first week in July. It has always been the custom of the clubs other than the New York Y. C. to sail their annual cruises during the last three weeks of July, the results being that several small fleets start out from the west end of the Sound, some of the yachts finally bringing up at Shelter Island or possibly Newport, where the cruise is formally disbanded several days after it has died a natural death. The Seawanhaka C. Y. C. after many trials has given up all attempts at an annual cruise, and though the Larchmont and Atlantic clubs have started off boldly enough each year, the cruises have been purely family affairs, of interest mainly to those favored yachtsmen whose boats were reported in the daily papers, truthfully or otherwise, as winning on the runs from port to port. With a view to remedying this state of affairs by the assembling of a fleet sufficiently large to hold together for more than a few days, the officers of the Atlantic and Larchmont clubs last winter proposed a joint cruise, and the idea was at once acted upon, and in a manner which promises the most satisfactory results. It has been the custom of the two clubs to sail over the same water at much the same time every year, each with a small fleet, it being difficult for a yacht enrolled in both clubs to accompany both cruises. While the cruise has been pleasant enough for those who go every year and are well acquainted, each has been strictly a family affair, of no particular interest to yachtsmen. This year the two clubs have mustered a fleet not only far larger but superior in quality to any previous ones of either club, and the cruise begun on Saturday promises to be a successful and memorable one.

It was expected that Defender would be ready long before the date set for the rendezvous, July 12, and the two clubs were ready to offer suitable prizes for a race of the 90-footers, to be sailed any time during the cruise, but the delay in the completion of Defender proved an insuperable obstacle to the projected race.

The yachts of the Atlantic and Larchmont clubs, to the number of nearly a hundred, assembled at Larchmont Harbor, the rendezvous, on July 12; a few of them taking part in the special races on that day, but most of them were in cruising trim. The start was set for 11 A. M. on Saturday, July 13, the first run being to Black Rock, the yachts being timed as they started off Larchmont Harbor and again as they finished off Penfield Reef Light, 26 miles distant. Saturday morning was clear enough, but before the hour for the start a violent squall came up, the rain falling in torrents, and the start was postponed. The squall was soon over and just at noon the preparatory signal was fired, the first division, the smaller yachts, being started at 12:10. The classes above 49ft. racing length were started at 12:35. The wind was light from the south and many of the yachts were handicapped.

The race was a quick run with a freshening breeze over the starboard quarter, the wind being light at times, but keeping all the yachts in motion. The event of the day was the sailing of the little schooner Loyal, in the 70ft. racing length class, she beating both Amorita and Elsemarie, in the 80ft. class, on corrected time. The two larger boats wasted some time in luffing each other, but their times serve to show the excellent work of the smaller one. The official times were:

SCHOONERS—CLASS A, 80FT. AND OVER.

	Start.	Finish.	Elapsed.	Corrected.
Ramona	12 37 17	3 17 47	2 40 30	2 39 55
Sachem	12 38 35	3 22 23	2 44 48	2 36 53
Alsacienne	12 38 57	4 02 21	3 23 24	. .. ..
Crusader	12 40 00	3 41 56	3 01 56	2 49 51
Phantom	12 40 00	3 50 17	3 10 17	3 00 04
Emerald	12 38 35	3 17 15	2 38 40	2 30 09

CLASS B, 70 TO 80FT.

Amorita	12 40 00	3 42 43	3 02 43	3 02 43
Elsemarie	12 40 00	3 46 33	3 06 33	3 05 10
Florida	12 40 00	4 07 10	3 27 10	3 24 36

CLASS C, 70FT. AND UNDER.

Loyal	12 40 00	3 41 45	3 07 45	2 57 07
Viator	12 40 00	3 46 22	3 06 28	3 03 03
Cavalier	12 37 57	3 53 15	3 15 18	3 15 18

SLOOPS—CLASS 2, 50 TO 70FT.

Katrina	12 40 00	3 31 37	2 51 37	2 51 35
Huron	12 40 00	4 23 33	3 43 33	3 37 41

CLASS 3, 53 TO 60FT.

Wasp	12 41 00	3 48 18	3 08 18	3 08 11
Eclipse	12 40 00	4 01 50	3 21 50	3 21 50
Clara	12 40 00	4 03 51	3 23 51	3 23 51
Vixen	12 40 00	4 32 40	3 52 40	. .. ..

CLASS 4—46 TO 53FT.—FLUSH DECK.

Gossoon	12 15 00	3 54 57	3 39 57	3 39 57
Verena	12 15 00	4 12 53	3 57 53	. .. ..
Xara	12 15 00	4 08 40	3 53 40	3 50 36
Minerva	12 15 00	3 50 16	3 35 16	3 32 03

CLASS 4—46 TO 53FT.—TRUNK CABIN.

Penguin	12 15 00	3 56 50	3 41 50	3 41 18
Choctaw	12 12 29	3 49 03	3 36 34	3 31 55
Harriet	12 14 40	4 14 36	3 59 56	. .. ..
Awa	12 15 00	3 52 36	3 37 36	3 33 41
Iola	12 15 00	4 28 12	4 13 12	. .. ..
Wenona	12 15 00	4 10 33	3 55 33	. .. ..
Ventura	12 15 00	4 06 48	3 51 40	3 48 19

CLASS 5—40 TO 45FT.

Kathleen	12 15 00	4 21 44	4 06 44	3 58 28
Bonnie Kate	12 15 00	4 23 48	4 08 48	3 00 32
Tigress	12 15 00	4 09 42	3 59 47	3 54 42
Norota	12 14 58	3 50 36	3 35 38	3 35 18
Senorita	12 15 00	4 21 29	4 06 29	3 55 42

CLASS 6—35FT. AND UNDER.

Infanta	12 15 00	4 05 52	3 50 52	. .. ..
Fidello	12 14 16	4 35 16	4 21 00	. .. ..
Modesta	12 14 09	Not timed.		
Dragoon	12 14 09	3 53 19	3 39 10	. .. ..
Gunhilde	12 15 00	4 24 03	4 09 03	. .. ..
Almira	12 12 34	4 18 58	4 06 24	. .. ..

The above is official, but there is apparently an error in the 53ft. class, Verena being a trunk cabin boat and Ventura flush decked.

On Sunday morning service was held aboard Fleet Chaplain W. L. Moore's yacht Kanapaha, and in the afternoon the fleet sailed for Morris Cove. On Monday an early start was made for New London, many of the yachts being late at the line. The wind was light from the east all day, and very slow progress was made over the 38 miles. The times were:

SCHOONERS—CLASS A.

	Start.	Finish.	Elapsed.	Corrected.
Ramona	7 40 00	3 51 01	8 11 01	8 11 01
Sachem	7 40 00	5 30 27	9 50 27	9 39 36
Phantom	7 40 00	7 28 51	11 48 51	11 36 34

Fidello	7 15 00	6 58 48	11 43 48	11 36 42
Gunhilde	7 15 00	Did not finish.		
Almira	7 15 00	6 25 22	11 10 22	10 43 51

The winners were Ramona, first prize, and Sachem, second, class A; Amorita, first, class B; Viator, first, class C; Ventura, first, class 2; Wasp, first, class 3; Choctaw first and Awa second, class 4, cabin trunk. Minerva first and Gossoon second, class 4, flush deck. Norota first and Senorita second, class 5; Infanta first and Almira second, class 6.

The special race off New London for schooners, cutters and sloops takes place on Tuesday, July 16.

Unfortunate.

THE "knockabout" in Eastern waters has attained a well-deserved popularity. It is a safe, comfortable and somewhat speedy type of craft. Its inception was as a cruising rather than a racing boat, but having developed some speed, the boats are now raced to a considerable extent.

In order to retain some of the sterling qualities of the other boats, the following definition was established. "A seaworthy keel boat (not to include fin keels), decked or half decked, of fair accommodations, rigged simply, without bowsprit, and with only mainsail and one head sail."

Further restrictions governing l. w. l., beam, freeboard, position of mast, thickness of planking, size and spacing of frames, deadwoods, rudder and ballast, are also set forth in the circular of the Knockabout Association, adopted November 30, 1894.

These limits are not to exclude any Knockabout built prior to the above date.

The mode of measuring the sail area is as follows: "The sail area shall be limited to 500sq. ft., measured by the formula, viz.: Multiply 85 per cent. of the base by half the sum of the gaff and the distance from the top of the sheave of the upper throat halliard block to the stem head."

By the above method of measurement the new boats easily evade the sail area rule of 500ft. by the following means: Shortening the luff of the sail, lowering the the throat halliard block, and shortening the forward overhang. Thus La Chica, one of the fast ones, sails with an actual measurement of 530sq. ft., while the rule shows her to be carrying only 498sq. ft. The unfortunate point is, that Bessie Lee, one of the best boats of the type and the handsomest in the fleet, sails with an actual area of 495sq. ft., but under the rule measures 540.31sq. ft.

The reason for writing this article is the manifest injustice of the measurement rule. In spite of the fact that La Chica is a knockabout under the rules, she is nevertheless as near a racing machine as the rules will allow, with no cabin and lead ballast. Bessie Lee, on the other hand, while fast, is the best boat of her type, with cabin house and most excellent accommodations below, and with iron ballast, and in consequence of her cruising features she weighs about 1,000lbs. more than her open sisters. On account of her speed she is, however, protested in racing on the ground of her excess in sail area by the rule, when in reality she sails with nearly 40sq. ft. less sail than her rivals.

The accompanying diagram shows the working of the rule and how it is worked. The dotted lines show the snub-nosed boat caused by the shortening of the base line, the lowered throat halliard block, etc.

I am interested in none of the knockabouts, but it seems a decided injustice to rule out a good, wholesome, speedy cruiser, carrying less than the limit of sail, because by an inaccurate system of measurement she appears to have too much sail, while others carrying more are charged with less. The owner of Bessie Lee has been to the expense of having his sails measured accurately, with a resulting 494.71 sq. ft., while by the system herein mentioned he is charged with 540.31sq.ft. A very accurate system, is it not? No account being taken, under the rule, of the size of the stemstaysail, this sail is cut way back, and in reaching serves as a balloon jib, and in running is poled out as a fair sized spinaker.

There can be no difficulty at all in measuring the actual sail area in these small boats, and why such is not done is a mystery to ILEX.

Defender's Speed.

Editor Forest and Stream:

I presume that it is too early yet for a land lubber to glean anything about the merits of Defender, and I must say that I for one am in a very "unsartin" state in regard to her merits; but I trust that this week's issue of your paper will set me straight. When I read of Defender's trial against Colonia it seemed to me that the new boat was a flyer, especially down wind, as I believe Colonia at her best was a trifle better than Vigilant at running, and not so very many minutes astern of her to windward. But as there seems to be some doubt about Colonia's bottom being in good shape, I surmised that there must have been some "grass" on it, though I could not quite understand the daily papers even hinting at a foul bottom—it seemed like encouraging Lord Dunraven and Englishmen in general.

A few days afterward I read in one of the dailies that Defender sailed so fast when sailing alone that she actually ran away from the wind and had to wait for it. That satisfied me; all my doubts were set at rest. A boat that could do that, I thought, could run right away from any number of Valkyries, especially only the third. Why, they would have to build at least a hundred of their boats before they could build a "phenomenal wonder" that can run away from, say, a fifteen-mile-an-hour breeze. So I take the liberty here of warning Lord Dunraven that he had better call off the challenge and go to work on a few more Valkyries. He might begin by trying at least a dozen more, and then challenging with Valkyrie XV. just to see if Watson can produce a boat that can run away from a small blow—perhaps a three-mile-an-hour wind. If he can, then there may be a small hope of his winning the cup some day.

But what is this? This morning I read that, after all, perhaps there was something the matter with Colonia's bottom, for Defender and Vigilant, in a four-mile run, only come out about even, and in reaching and windward work Defender apparently has but a little the best of it; whereas, it seems to me as though Vigilant should have been run away from on every point of sailing—that is, if Defender is going to keep the Cup here, as it was apparently just the sort of a wind that Valkyrie III. would have delighted in. It seems fair to assume that with her large sail plan she would have run away from both boats.

Is it not possible that Vigilant, in a light wind, is several minutes slower than she was before her recent alterations? It seems as though it would be a good idea to put Colonia in first-class shape, if for no other reason than to find out how much faster or slower Vigilant is now than she was in 1893. It might at least give the American public a good "line" to bet on in the coming races. It seems that perhaps the syndicate members are a little nervous themselves; as, if reports are to be believed, they are going to give Defender a larger sail plan. Does she not quite come up to their expectations? LAND LUBBER.

NEW YORK, July 15.

[We regret that we cannot enlighten our correspondent, as he is but one of thousands of yachtsmen who would like just now to know something accurate and reliable about the new yacht. The best advice we can give, as at least a temporary relief from their anxiety, is that they should read only the headlines in the daily papers, in which Defender's speed is fully vouched for, not looking at the details which follow of her "races" with Vigilant, Colonia, Hattie Palmer, Sheerwater and the winds of Narragansett Bay.]

Larchmont Y. C.

LARCHMONT—LONG ISLAND SOUND.

Friday, July 12.

THE Larchmont Y. C. had a good breeze on July 12 for its race for the Drexel cup, presented by John R. Drexel, yacht Sultana, in the schooner class, and the special races for the 40ft., 34ft. and 21ft. classes. The wind was S.W., light at the start, but freshening to a good sailing breeze. Only three schooners started—Ramona, Amorita and Elsemarie, Emerald being kept out by an accident which injured Captain Petersen and two of her crew. The course for the schooners was the 15-mile triangle marked by the easterly buoy and the Prospect Point mark, sailed twice. The 49 and 34ft. classes sailed to the second Mid-sound Buoy and then to the Prospect Point Buoy, and home, 11 miles, sailed twice; and the 21-footers sailed twice over the smallest triangle, 11 miles in all. The schooners were started at 12:05, being timed on the line:

Ramona.....12 06 46 Elsemarie.....12 06 52
Amorita.....12 06 46

The cutters were timed, start 12:13:00:

Minerva.....12 13 36 Dragoon.....12 15 14
Gossoon.....12 13 54

The 21-footers started from the gun at 12:21.

The broad reach of six miles to the first mark opened with a luffing match between Amorita and Elsemarie, the former coming out ahead; the two, however, rounded the mark together at 1:30:30, half a minute ahead of Ramona. Elsemarie held the new boat very well in the heat to second mark, the times being:

Amorita.....2 15 20 Ramona.....2 25 40
Elsemarie.....2 16 05

On the 4-mile reach home Amorita showed a more decided gain, the times being:

Amorita.....2 32 58 Ramona.....2 44 05
Elsemarie.....2 34 40

With a freshening breeze Amorita continued to gain on her sister, the second leg being timed:

Amorita.....3 08 45 Elsemarie.....3 11 40

Ramona withdrew at the end of the first round.

This time Amorita did better to windward, the times at the Prospect Point mark being:

Amorita.....3 59 50 Elsemarie.....4 05 25

The last leg made little change in the positions, the finish being timed:

Amorita.....4 18 38 Elsemarie.....4 24 00

Gossoon and Minerva sailed a very close race, being within less than a minute of each other through the two rounds, Gossoon finishing first, but losing in allowance. Dragoon sailed fast, but none of her classmates were on hand to make a race for her. Vaquero was well sailed by Mr. Camacho and beat Celia, while Shrimp withdrew. The times were:

SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Amorita	12 06 46	4 28 38	4 11 50	4 11 50
Elsemarie	12 06 52	4 24 00	4 17 08	4 15 33
Ramona	12 06 46	Withdrew.		

49FT. CLASS—CUTTERS.

Gossoon	12 13 54	3 42 15	3 28 21	3 28 21
Minerva	12 13 36	3 42 45	3 29 09	3 26 26

34FT. CLASS.

Dragoon	12 15 14	3 56 25	3 41 11	3 41 11

21-FOOTERS.

Celia	12 21 00	2 29 26	2 06 05	2 06 05
Vaquero	12 21 00	2 27 05	2 08 26	2 08 26
Shrimp	12 21 00	Withdrew.		

Defender.

ALL last week the new Cup defender lay at the Herreshoff works, where men were busy all over her in the endeavor to complete the work. The joiner work was put in below, the decks planed and finishing touches put to all parts. Some of the aluminum work about the masthead gave out in the first trials and was replaced with steel, and it is generally reported that some of the steel tubular braces within the hull were badly bent on the first sail, being replaced with heavier material.

On July 9 Vigilant came to Bristol for her new cross-cut sails, and it was expected that the two yachts would have a trial. On July 11 Defender was ready, but Mr. Willard was absent, so Vigilant did not start. Defender went out in the morning and her compasses were adjusted by Mr. John Bliss, of New York, after which she sailed around alone, trying various sails. Mr. Willard returned next day and Vigilant was under way, but Defender laid at the dock. On July 14 the two towed down to Newport and went outside for a trial, sailing around for a time in a very light air with no particular results, there being no timing and nothing like a race. On Monday Defender returned to the shops, being still uncompleted, while Vigilant sailed to City Island. It is expected that both will be in New York the latter part of the week, as the two special races are set for July 20-22, as announced by the regatta committee of the New York Y. C.

The start will be off Sandy Hook or Scotland Lightship, dependent on the wind.

The preparatory signal will be made at 11 A. M.; ten minutes later the signal for the start will be given.

Two minutes will be allowed to cross.

The first course, signaled by the letter B, will be from the starting line around a mark 15 miles to windward or leeward, and return, the mark to be left on starboard hand.

The other course, signal letter T, will be from the starting line 10 miles around a mark, thence 10 miles around a second mark, and thence 10 miles to the finish line, turning the marks on the outside of the triangle, to port or starboard, according as the yachts are sent around.

The flagship Sylvia will be the judges' boat, and the starting and finish lines will be between a white flag raised on her and the mainmast of the lightship.

The New York Y. C. offers a $200 cup for the winner if two or more start, and a $100 cup for the yacht finishing second if four or more start.

The 34 Foot Class.

Editor Forest and Stream:

The yachting season has now well advanced, and yet that greatly advertised "34" class of Larchmont has not had one interesting race. There are four boats in the class, two of which seem to be unable to cross a line, and one of which is somewhere in the dim east. The other boat has kept every engagement, has thrown her gauntlet at every boat in the class, and has been raced for all she is worth all over the Sound. Is it sportsmanlike for a yachtsman to enter into an agreement to fill a class and then back out?

When the Larchmonts made up their rules men built in good faith for the class. They were assured sport, and the club certainly did all it could to make the classes interesting, but it seems that its labors are to be undone by a lot of so-called yachtsmen who build boats to race and then spend the season in dilly-dallying around shipyards and moorings. "Dragoon had a walkover" is becoming rather monotonous.

Can't it be cured, or are all the other fellows afraid of the "freak"?

SWEDE.

YACHTING NEWS NOTES.

Hermione, steam yacht, lately chartered by Robert Goelet, arrived at New York from Gourock on July 8 after a twelve-day passage, including a stop at St. Johns for coal. She met with head seas and some bad weather.

It is reported that Col. A. J. Drexel, owner of Margarita, steam yacht, has ordered a steel steam yacht of the largest size.

White Ladye, steam yacht, under charter to Ogden Goelet, was in collision with a car float on July 8 in Hell Gate, the plates on her port bow above water being stove in. She was repaired at the Erie Basin Dry Docks.

Yampa, schooner, R. S. Palmer, was seriously damaged on July 12 at Southampton, while several workmen were killed or injured. The yacht was hauled out at Fay's yard, and as she was about to be lowered the chain of the railway broke. The yacht fell on her side, striking the schooner Ursula as she fell. Two men were injured—Schubert, a sailor, who was thrown from the masthead to the ground, and another named Carton, while a third man was crushed to death beneath the yacht. The hull is badly damaged, but no details are given. Mr. Palmer has given $1,000 toward the sufferers by the accident.

Burgee and Pennant has just come out in a new cover, in which the word "Yachting" in large letters occupies the most prominent place, the old title being retained in addition. The paper is still devoted to the Naval Reserve as well as yachting, but will give still greater prominence to the latter.

The annual race of the Seawanhaka Cor. Y. C. for the Alfred Roosevelt memorial cup will be sailed on Saturday, July 27, in Oyster Bay, being open to all yachts of not over 50ft. racing length. The start will be from the gun.

Col. Jos. T. Perkins, owner of the schooner Columbia, died of apoplexy on board the yacht on July 12, when anchored at Yorktown, Va.

Milwaukee Y. C.

MILWAUKEE—LAKE MICHIGAN.

Thursday, July 4.

THE annual regatta of the Milwaukee Y. C. was sailed on July 4 in a very light wind, the times being:

CLASS A—SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Priscilla	10 05 00	1 41 21	3 36 20	3 34 36
Idler	10 05 00	Withdrew.

Peri	10 14 04	2 07 30	3 53 26	3 49 09
Frolic	10 16 00	2 24 32	4 08 32	
Beatrice	10 16 00	2 20 10	4 13 10	4 06 16
Rambler	10 16 00	2 37 07	4 18 07	4 18 07
Hattie B	10 15 10	2 04 00	4 47 50	4 41 28

Enola, Mamie and others did not finish.

CLASS C—SLOOPS.

Viola	10 16 00	2 32 07	4 16 00	4 15 06
Pinta	10 16 00	2 33 27	4 17 27	4 17 05
Allie T	10 13 55	2 53 31	4 39 36	4 29 36

Thirsa, Pilot, America and Ellida did not finish.

CLASS D—SLOOPS.

Dione	10 26 27	2 12 25	3 28 37	3 28 35
Infanta	10 25 05	1 55 04	3 45 20	3 47 20
Venus	10 25 16	2 25 00	3 59 44	3 53 06

CLASS F—OPEN BOATS.

Athlete	10 23 16	1 47 17	3 24 01	3 19 38
Ida K	10 23 25	1 57 10	3 33 45	3 27 41½
Dorothy	10 35 42	1 50 48	3 28 06	3 28 06

Skeate did not finish.

Priscilla wins the Pabst trophy, Hawthorne wins the Canadian cup, Valiant the Camp cup and side lights, Viola the Plankinton cup and Dione the Nunnemacher cup. The second prizes in all classes consisted of field glasses and ensigns.

Corinthian Y. C., of Marblehead.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 13.

THE first championship race of the Corinthian Y. C. was sailed off Marblehead on July 13, being started in a light easterly air, which was followed by a lively squall from S.W., the smaller yachts dousing canvas. The times were:

SECOND CLASS.

	Length.	Elapsed.	Corrected.
Susie, J. F. Cole	28.06	3 16 40	3 16 40
Marena, D. H. Follett, Jr	39.01	Withdrew.	
Ariel, J. Barrett	36.02	Withdrew.	

THIRD CLASS.

Exit, A. H. Higginson	31.04	3 18 10	3 14 11
Reaper, H. P. Benson	34.07	Withdrew.	

SPECIAL CLASS CRUISERS.

	Handicap.		
Tomahawk, G. H. Perry		2 27 30	. . . .
Gorilla, Odin Roberts		2 35 15	. . . .
Katrina, L. Whitcomb		2 50 00	. . . .

CLASS A.

Brenda, Goodwin		2 21 15	. . . .
Anaqua, A. P. Loring		Withdrew.	

CLASS B.

Mosca, F. E. Peabody		1 48 40	1 48 40
Delphine, C. M. Baker	3 00	1 52 56	1 49 56
Edith, F. M. Wood		Withdrew.	
Hera, P. Fowle		Withdrew.	

CLASS C.

Maia, E. Paine		1 34 00	1 34 00
Tedesco, C. Morse		1 35 45	1 35 45
Aluna, A. L. Stearns	5 00	1 47 45	1 42 45
Sally, D. C. Percival		1 47 30	1 47 30
Comet, A. A. Lawrence		1 51 45	1 51 45
Dorothy, F. Brewster	3 00	1 59 45	1 56 45
Toyo, F. O. North		1 40 30	1 40 30
Carl, C. H. W. Foster		Withdrew.	

The winners were: Second class, Susie; third class, Exit; special class, Tomahawk; second prize, Gorilla; Class A, Brenda; Class B, Mosca; second prize, Delphine; Class C, Maia; second, Tedesco; third, Aluna.

Horseshoe Harbor Y. C.

LARCHMONT—LONG ISLAND SOUND.

Tuesday, July 9.

THE Horseshoe Harbor Y. C., of Larchmont, sailed its annual regatta on July 9 with a fleet of eighteen yachts. The course was a 5-mile triangle off Larchmont, and the start was made from the gun. Mary and Polly were matched together, each being alone in her class, Mary allowing Polly 5m. handicap, while another match was made between Flounder and Question, the latter receiving 10m. The start was made in a light N.E. wind, which finally fell entirely, a long calm being broken by a light west wind which made a late finish to the first round, with which the race was called. The times were:

SPECIAL 34FT. CLASS.

	Length.	Elapsed.	Corrected.
Dragoon, F. M. Freeman	34.00	1 21 29	1 21 29

SPECIAL 21FT. CLASS.

Emir	2 36 42	3 46 40	1 09 58	1 09 54
Cute	2 39 20	Not timed.		
Our Own	2 38 04	Not timed.		

September Weather.

THE peculiarities of model of the challenger and defender of 1895 indicate that while the former was designed with special reference to such light weather as nearly all of the past Cup races have been sailed in, the latter was designed in no small degree for such weather as marked the latter half of the last Cup race of 1893. Considering the differences in the two yachts, so far as they are now known, it is probable that the weather may prove the great factor in determining the result. The New York *Evening Sun* has compiled the following interesting table, showing the force and direction of the wind and the state of the weather during the second week in September for the past ten years:

SEPTEMBER	7	8	9	10	11	12	13	14	15
1885.	*a* 5 S.S.W.	*b* 0 S.E. Rain.	18 N.W.S.W Rain.	22 N.E.N.W Rain.	*c* 16 E.N.E.	*d* 12 S.S.W.	16 S.S.W.	*e* 10 S.S.W.	22 N.W.S.W Rain.

1891.	26 W.N.W.	14 N.W. Rain.	17 N.W.	8 N.W.	12 S.	13 S.	17 S.	21 N.W.	18 S. Rain.
1892.	12 S.W.N.W	13 N.E.S.E.	13 N.E.S.	18 W.	20 N.E.	14 S.E.	29 S.E. Rain.	13 S.E.S.W Rain.	13 S.W.
1893.	34 S.E. Rain.	20 N.W.	13 S-N.	12 S.W.	28 N.E.	20 N-S.E.	16 E.	22 S.E. Rain.	22 S.E. Rain.
1894.	13 N.W.S.W	20 S.W. Rain.	16 S.S.W.	45 S.S.W. Rain.	26 N.W.	11 N.	12 S.E.	16 S Rain.	14 S.W.

We add the following details to the *Sun's* table:

a Puritan-Genesta—Not finished in time.
b Puritan-Genesta—Puritan fouled Genesta, no race.
c Puritan-Genesta—Clear and light wind at start.
d Puritan-Genesta—Race called at outer mark.
e Puritan-Genesta—No wind up to 1:30 P. M. No start.
First race, time for 38 knots, 6.06.05. Second race, sailed on Sept. 6, hard blow on latter half of course.
f Mayflower-Galatea—First race, 38 knots in 5.26.41.
g Mayflower-Galatea—Not finished in time.
h Mayflower-Galatea—Second race, 38 knots in 6 49 00.

Hempstead Harbor Y. C.

GLEN COVE—LONG ISLAND SOUND.

Saturday, July 13.

THE Hempstead Harbor Y. C., of Glen Cove, L. I., sailed its annual regatta on July 13 with a fleet of 26 starters. The courses were: For all over 18ft., from the starting line off the club house around the red spar buoy on the easterly end of Execution Reef, thence around the spar buoy off Matinnicock Point, and thence to the line, distance 12 miles. The smaller yachts rounded Execution Reef and returned, distance 9 miles.

The weather was unfavorable. In the morning a very severe storm passed over the Sound and the upper part of New York city, the hail and rain doing much damage, and in the afternoon another hard thunder squall overtook the fleet. The start was made at 1:55 from the gun. The times were:

Miramichi Y. C.

THE first race for the Thos. D. Adams silver cup, a magnificent piece of sterling silver plate, was sailed on Thursday, July 4, the course being from Chatham to Newcastle and back, with a loop off Chatham; 15 miles. The entries were: Maude, J. C. Miller; Oriana, J. L. Stewart; Learig, Alex. Burr; Kittoch, Dr. Pedolin; Kilbride, Charles Sargeant.

The first leg was a mile before the wind. The wind was light. Oriana started in the best position, behind the others, and ran past the fleet, turning two minutes ahead. She held the lead five miles in windward work, when the wind shifted to the beam, and Learig passed her, getting around the Newcastle mark two minutes ahead. The others were far astern. Oriana caught and passed Learig on the reach down, but the big sloop left her again, and crossed the line first, Oriana winning by 1m. 45s. corrected time.

American Y. C.

NEWBURYPORT, MASS.

Saturday, July 13.

THE first club race of the American Y. C., of Newburyport, was sailed on July 13 in a light to moderate S.W. wind, the times being:

With the W. C. A. at Ballast.

BEING THE LOG OF A SUMMER GIRL.

JULY 1.—To-day I was 18. I think I shall keep a diary this summer. Mommer says she kept one when she was 18, and she was married in less than a year after she began it. A diary is a Dear Thing, because you can say anything you please to it, and it won't tell. Your friends always tell. Mommer says. Bought a new silk waist to-day. It was a Bargain. I look very well in it. I have some new tan-colored gloves. Never looked better than I do this summer. Am going to get a skirt for my gown, to match the waist. I look very well in pink.

July 2.—Got the skirt. It is a Love. Must hurry to get it made. I am looking very well to-day. Mommer says I mustn't wrinkle my forehead in thought, for the wrinkles will stay. How can I think without wrinkling? But Mommer says it is not necessary to think. Got two pair of russet shoes and a white yachting cap to-day. Mommer says sailor hats are common. Think I look well in organdies or cool stuffs of the sort. Memo. that I owe Pop $7.30 over my allowance. Dear old Pop. Wonder if 20 is too old to marry.

July 3.—Oh, glory, you dear diary. Mommer says I can go to Ballast Island after all, to the canoe meeting. She says that Put In Bay is not desirable for me, but that if I visit Mrs. B. on the Island I shall be in the way of meeting some very eligible young men, and besides be doing a very correct thing in putting in part of the summer. Bought a new parasol to-day. It is very becoming. My new silk handkerchiefs have a narrow border of blue. I hope there will be a good many of those canoeists.

July 4.—Most of the people that I know have been eating ice cream and firing off fire crackers to-day, but I spent the day packing my things. They say there are a good many of those canoeists who come to Ballast Island. I know it is going to be awfully poky, for of course they will be off sailing, or something, all the time. Mommer says most of the canoes are too small for two and besides, the man has to be busy all the time with ropes or things, and can't talk much. Got a new girdle to-day, with the clasp silver and turquoise, because I am still young. Think I shall wear the Marquise ring uncle Doc. gave me. My new hose have blue clocks. Mommer says not to use cold cream very much. The proper thing is to get brown and tanned.

July 6.—Here I am at Ballast with Mrs. B. Dear me! such a day. Those canoeists have begun to come. About twenty of them came over on the tug. They shouted and sang and carried on so we thought at first it was one of those horrid labor riots. But they say they come of excellent families. Their tents are in a row over on the other side of the island, large tents with board floors. They have their meals all cooked up at the sort of hotel place. Each tent has a box behind it, why? Those men sang pretty near all night. Mrs. B. said it reminded her of old times. She got out her prettiest gown for to-morrow. Wonder if that woman thinks she is going to be in it with me. Why, she must be 35, if she's a day. My nose is sore to-night. The sun was very warm.

July 7.—Some more of those men came. There are a lot of those little boats they call canoes. They keep them up on the grass, I presume so they won't get scratched. It would be too bad to spoil them. The men put up their sails on the trees. They keep fixing at the sails and things. I presume they can get at them better on the grass. Mrs. B. and I happened to stroll over that way this afternoon. Those men look very nice in knickerbockers and Tam O'Shanters. I will wear my Tam O'Shanter to-morrow. A most remarkable thing happened. A very bold young man with lovely dark eyes and a brown moustache was coming around from behind the tent, where I saw him looking down into the box, and he saw Mrs. B. and me, and though he hadn't a thing on his arms he just spoke up to us as if he had been introduced. "Good evening, ladies," he said, as if he was waiting for us. Mrs. B. answered him, and that man invited us to sit down on the grass, and he sat down too, and he went to talking as if he had always known us. Can this be what they call flirting? I am not sure. Mommer says flirting is not much account. Mrs. B. said this was one of the customs of the canoe camp. It certainly saves much time and formality. Believe I am going to like Ballast.

July 8.—Mrs. B. and I happened to stroll over toward the canoe camp again to-day. The same dark young man saw us and was walking toward us, when another young man, light complexioned, with a yellow moustache, ran in ahead of him and said "Good evening, ladies." Am quite sure I never met him. The canoe men's ways are very odd, yet I am not sure I dislike them. Talked two hours with the light young man. His moustache is cute.

July 9.—Have found out why they leave the sails hanging in the trees. It is because they make lovely shady places where one can sit and talk without seeing anyone else. The dark young man said they kept ice in the boxes behind the tents, and that they had to go there so often to see if the ice was not melting pretty fast, it was so warm. I think the canoes look sweet up on the grass, they are so new and shiny. The men call a canoe "Her." Asked why they did this, and a young man with glasses said it was because a canoe was the next nicest thing in the whole wide world. The young man with glasses is nice. His eyes are a very lovely blue. I wonder if he is married. I cannot tell by looking at these men whether they are married or not. Mommer says never to waste time with married men at summer places. I looked very sweet to-day, much better than that horrid girl from the East. The light young man talked with her some. I shall not speak to him any more. To-night those canoe men are singing songs around the fire. They sing pretty glees and choruses. This was a warm day. The ice needed much watching, but I think they saved some of it, for I heard one ask, "How's she holding out, Johnnie?" and he said, "Oh, pretty well; but you wait till the gang from the far North gets here." Wonder what he meant. Mommer says I must always find out about a young man's prospects. I think all these young men must be of easy circumstances, their manners are so perfectly easy. Five more of them spoke to me to-day. I think the young man they call Fred looks lovely in knickerbockers. He is a very good figure of a man.

Nearly all of these young men look well. Mommer says appearances must not count for too much, for rocks are what count. Am sure these young men all have rocks, or they could not buy all this ice. They sang some new songs to-night. To-day they put some new flags and things around among the trees. One man put his boat in the water. It floated. Then they all sat down and sang a song that told about "Sailing, sailing, over the bounding main." I don't think the lake bounds enough for them, not so much as the main. My nose is a little redder to-night. The new girl is not burned much yet, but if it is warm to-morrow she will be a sight.

July 10.—Oh, you dear diary, what shall I say to you? Mr. ——, of Chicago, asked me if I would marry him some day! Told him to ask Mommer. My nose is much better. Wore the pink silk waist to-day. It is a winner.

July 11.—Mr. —— of Milwaukee, and Mr. —— of Detroit, both proposed marriage, I have insisted in each case that they should make known their names to me, and I have referred them to Mommer. Nose quite well, and my hands are brown now. Mrs. B. says I have hit a good gait. She is busy talking most of the time with some of the men, but she doesn't bother me. We find it better to separate early in the afternoon. The new girl only had four young men talking to her, I had six. I find canoeing a delightful sport. It is fine nice on the water to-night, and I should have liked a sail, but the young men said they were "tuning up" their sails, and could not take them down from the trees to put them on the boats. It seems that sails need a lot of tuning, whatever that is. Some alarm felt to-day over the supply of ice. The dark young man said that he wished night or Milwaukee would come. Wonder what he meant. A thin gentleman from Dayton made me something nice in a glass. He said they always took some along into camp, in case of sickness. Yet I was not in the least sick. What odd people canoeists are!

July 12.—Mr. ——, of Chicago, Mr. ——, of Cleveland, and Mr. ——, of Madison, all proposed marriage to-day. This is the best day so far. Have told them all to ask Mommer. Of course I can not marry all these men, but I have a confidence in Mommer's judgment. My complexion is now a lovely brown. Mrs. B. says I am in good workin order. I suspect her of being a trifle vulgar at times, but one cannot always be too particular about chaperones, for those who own cottages on Ballast are not so very numerous. Mrs. B. said a young man with a brown monstache told her he regretted deeply to hear she was a married woman, as he had never loved any one before. I feel bad for that young man. All the young men who have proposed marriage to me have told me I was the first woman they had ever loved. I am so glad of that. Canoeing is great sport. All these men are perfect gentlemen. And they look so well in their canoeing clothes—"togs," they call them. I should be sorry if the ice did not hold out. To-day they fired a little brass cannon several times. They said it was to see if the thing would work. Ballast is a great place. In the evening the tents are deserted. It is lovely under the trees, where it is cool and shady. I have one tree where three young men have proposed marriage to me. I have to refer to my list of descriptions to keep them straight in my mind. Only two proposals to-day. I think the tan-colored gown might be improved. So far have done best in pink, with blue a good second, as Pop says. I believe I should prefer Chicago to Detroit or Milwaukee to live in. There is a slender young man from Chicago who has been looking at me. His eyes are very speaking. The sails must be pretty well tuned by to-day. Another man put his canoe in the water to-day and put his sail on it. It looked so odd. I think this was an old gentleman. They call him commodore. There are several commodores in the camp and several men they call "Grandpa," though some of the grandpas look very young. Canoe men are certainly very strange. They do not do things the way other folks do, and I never saw such actions among grown people before. But I like them very much. My cousin Bella spent last season in Washington, and she only had six proposals in three months. I have had that many in two days at Ballast. Should prefer Ballast to Washington, I believe. Am glad the young men have never been in love before. Saw the first young man that spoke to us talking to Mrs. B. under my favorite tree this evening. Must caution Mrs. B. discreetly, as I suspect that young man of flirting.

July 13.—Some of the young men from the West have brought out guitars and mandolins, and this evening they sat about the fire and played and sang beautifully. Canoe men seem to be inclined to sentiment. There are a great many ladies and sweethearts in their songs. I think they are lovely songs. Mommer says I can fool away some time with sentiment while I am young, till I come to marry and settle down. Am taking her advice in these matters. Only three proposals to-day. The young man with the light moustache proposed to me again! That was very strange, but he apologized, and said he felt like proposing every time he saw me. That was nice of him, and explained it all. My complexion now is lovely. Mrs. B. to-day accused me of flirting. The idea! She also said the young men were only flirting. I ridiculed the idea. To-day some of them went to Middle Bass and Put In Bay. They got some ice. Had two lovely talks down at the canoe wharf this evening. They say it is a great deal of trouble to build a good wharf for these meetings, but I think it is worth the expense, the wharf is a lovely place to sit after sunset, and look out over the water. One of the young men fell off the wharf to-day. He coughed when he came out, and said the water made him sick. He went after some ice.

July 14.—The canoe hop was the sweetest evening of the whole meet! I declare, there never were such men as these W. C. A. men! They look simply elegant in their knickers and negligees, and every one of them dances elegantly. They certainly are gentlemen in every way. This was the nicest ball I ever attended in all my life. The men were so attentive. I had a great many knots and favors and flowers given me. I am sleepy, so shall not write any more. I looked very sweet at the ball.

July 15.—It seems they did put in some of the boats and sail around some things they have anchored out in the water. They sail for silver cups and for flags and things. Sailing is such a bore when it is warm, they don't do very much of it. I wonder why they bother to bring all those boats along. If they left them at home, they would have more time to talk to me.

July 16.—A young man to-night told me he loved me devotedly, but when I told him there was no obstacle to our marriage he sighed and said it grieved him, but that could never be. I wonder why. I am sorry for him.

July 17.—I have learned from Mrs. B. that that young man is married. The mean thing!

July 18.—Most of the young men at the camp have now proposed, and I know all the best spots around the island. I shall come here again next year, even if I am married. Mrs. B. says she has had a delightful time, and I am sure I have also. Never before have I known the full effect of summer costumes and moonlight in conjunction with numbers of handsome young men with canoes. Aren't canoes sweet little darlings? Some say that yachting parties are the best to bring about engagements, but Mommer says this does not always work that way, and that a canoe meet offers more variety. I suppose Mommer knows. For my part, they can have their yachts, where you have to go out in the hot sun on the water; but for my part, I prefer a canoe, for you can lie down beside it on the green grass, and the sails make such lovely shade while they are being tuned up. It takes a long while to tune up a canoe. Some of the young men told me it takes them as long as two weeks sometimes, and then they have to go home. They told me they never had found as good a place as Ballast to tune up canoes. I was going to be nautical to match my blue yachting cap (not the white one; I wear that mostly of evenings), but the dark young man told me he really didn't know which end of his canoe went first, and didn't care, so long as my eyes remained the same color. (Do eyes change color?) He said canoes were all right, but without the tug, where would their lice have been? Then he asked me if I would prefer a high ball or a mint julep. I like this young man, but the slim gentleman from Dayton mixes up the loveliest things in glasses! The young men from Chicago are nice, but they seem more careless about mixing things. One thing in a glass at one time seems to do for them. To-day a young man from Cleveland took off his jacket for me to sit upon. He said something about that eminent canoeist, Sir Walter Raleigh, and Queen Elizabeth, and then he looked at me ever so! Wonder what he meant? But I liked to sit on the jacket, all but one place, which was lumpy, and he said, Holy Moses! I had broke his pipe, and what was Walter Raleigh without his pipe? Another young man from somewhere out West showed me a new apple tree to-day, and we played at being in the play, and I said for him to shake some more apple blooms down on me, and he shook, only little bunchy apples fell off, and one hit my nose, and he asked me if he should make it well. Wonder what he meant? Shall ask Mommer. Mommer says men are such people to be plaguing one. Wore my seersucker to-day. It is a bit old, but it got me one proposal. Of course, I must remember that I have nearly gone through the list, and as the canoe week is nearly over, it is not likely any new young men will come. That girl from the East is out of the running, as Pop says. She asked one young man why he didn't wear braces, and he was offended, and said it wasn't professional. But the others heard of it, and she has not been so popular since. I looked lovely to-day.

July 19.—A very busy day. The rest of them proposed. Changed my gown four times to-day. Went to lunch with Mr. —— and Mr. ——, one on each side. Mr. —— was waiting at Mrs. B.'s cottage to take me to breakfast. Dined with Mr. —— and Mr. —— and Mr. ——. Of course, all the canoe men take their meals at the restaurant. No one cooks at his tent. They say cooking is a great deal of bother, and that no canoeist does such things now. After dinner went to the tent of some C. C. or other, I forget which. The young men have a lovely brussels carpet on the floor, and pictures of canoes on the walls. Mr. —— played beautifully for us on the piano. This lub brought a cow along this year, so as always to have fresh milk, they said. (I believe punch is better if the milk is fresh.) We tried to get into the Cincinnati tent, but they have a padlock. To-night all the C. Cs. had what they called a camp-fire, with lots of music and things. They burned quite a good-sized store box all up, because there isn't any wood you can get on Ballast. Then they said, "Well, we have to go away to-morrow, but will we ever have a meet anywhere else but at Ballast?" Then everybody said, "Not in a thousand years!" Then they all got a little ice, and began to sing songs about a man with a hat with woollen binding, and a man from Borneo, and things of that sort. At the close they sang, "Good night, ladies, we're going to leave you now." I did not like this song. Retire very late. Am sleepy, having been so busy to-day and up so late. If not too warm to-morrow, shall wear the close-fitting tan Bedford cord. I want to find out about a certain young man with glasses, who has not yet proposed, if I remember rightly. Mommer says the tan gown is one of the best killers I have. Mommer says a girl of my looks ought to be able to marry for at least $20,000 a year. Pop said, "Bless her heart, she's worth a million!" Dear old Pop. Wonder if he was ever a canoeist? To-morrow is the last day of the meet. The men were piling up the boards of the wharf and of the tent floors to-day and putting them where they will be safe for next year. They were packing the furniture and pictures nearly all day and putting the canoes all in the long boxes. I feel sorry for the foolish young men—there were only a few of them—who put their canoes in the water, because they got them all wet. I am very blue to-night. To think of all these nice young men going away. It must be awful to be a nun. Mrs. B. was cross to-night. I think she is sorry, too. We both think canoeists are the nicest men in the world, though they are so funny in the way they do things. We are glad Ballast Island was discovered. Mrs. B. and I often wondered what the letters W. C. A. meant. To-day she said she knew, and that it was Woman Conquering Association, or something of that sort. Why do they have the boats? It must be a great bother. Good night, dear Diary, I am so sleepy.

July 20.—I feel dreadful. I cannot write. There was talk that the canoe meet would be somewhere else next year, somewhere up in the woods. Isn't that awful? But the awfulest thing of all is that all those nice young men have gone away. I am so desolate I don't want to speak to anybody, even Mrs. B., and she doesn't want to speak to me. All those men went away in a body on the big tug, and when they left the landing they all stood in line along the side of the boat and waved their caps and sung one of their songs. It said:

"Fare thee well, for I must leave thee,
Do not let the parting grieve thee,
But remember that the best of friends must part, must part!"

I can hear those terrible words, "must part, must part," ringing in my ears. This is awful. It is the awfullest thing I ever knew. I do not think Ballast is a very cheerful place in summer, and I think I shall tell Mrs. B. that I must go home. I hope she will ask me to come again next summer—if the canoe meet is to come here again, and not to some dreadful poky place away up the woods somewhere. I am so unhappy I cannot write. Mommer says a diary is not of much use, only when you are in love or having love made to you. I do not know whether I shall have much to write now for a while or not.

[NOTE.—The above log of a summer girl came into my possession in the course of human events, and I offer it in the hope that it violates no confidence and causes no heart-burnings. In innocence there is sometimes truth, and I hope that the innocent writer of the above has in the confidence of self-communion set down nothing unfair or unkind. As a writer in comment should always be gentle as a girl, perhaps the comment of a girl may do for comment for the writer. And at all events, whether next year's meet be at Ballast Island or elsewhere, let us all hope and trust that our friend the summer girl will be with the happy canoemen at their meeting to add to the joyousness of an occasion always full of joy.—E. HOUGH].

Irondequoit C. C.

THE I. C. C. held their spring regatta at Irondequoit Bay on July 4th. The regatta was a very successful one, some very good time being made. The entry lists were large, considering the fact that the club was only organized last fall.

The unlimited sailing race was a very good one, Gull and Pirate having a very hard fight for first place, but Pirate finally losing on the last leg of the third round on account of her skipper not being able to keep her up well in the very puffy wind. The open canoe sailing created a great deal of amusement. The canoes were towed a half mile to windward and started on two guns, one minute apart. On the first signal the crews began to set sail and come about for the run in, the paddle being used until the second gun, when no more strokes were allowed, the paddle being used only for steering.

In the combined race the wind was very light and it was a drifting match to the first buoy, all turning the buoy in a bunch; the paddle across to the second buoy was a procession, with Toodles in the lead, followed in order by Pirate, Nan, Gull and Kite. After turning the buoy the wind died away entirely and the canoes lay for 15 minutes without a breath, finally Nan caught a breath and made at least a half mile to windward, the other canoes not moving. The race was conceded to Nan, as she held the wind and was steadily working to windward, but finally they all caught a breeze and Gull started off with a bone in her teeth. She, by very clever sailing, overhauled and passed Nan, winning by a very small margin.

In the paddling races all were bunched from start to finish, the old standbys, McVean and Smith, winning the tandem, as usual.

The times were:

Unlimited sailing, A. C. A. handicap, 4½ miles, time limit 2 hours; Pirate and Gull, scratch; Kite 2¼m., Toodles and Nan 4½m.; start at 11 A. M:

	1st Round.	2d Round.	3d Round.	Time.	Points.
Gull, McVean	0 20 20	0 12 50	0 22 35	0 55 43	10
Pirate, F. L. Smith	0 20 40	0 13 30	0 25 00	0 59 10	9
Kite, Moser	0 21 30	0 20 40	0 23 45	1 05 55	8
Toodles, Kirby	0 20 00	0 22 12	0 25 32	1 07 54	7
Nan, Enoch	Capsized.				0

Open canoe sailing, ½ mile to leeward:

Naiad, Allyn	0 05 05	10
Sevilla, F. L. Smith	0 05 07	9
Wanderer, McVean	0 05 15	8
Zale, Moser	0 05 18	7
Tahiuda, W. S. Smith, Jr	0 05 21	6

Combined sailing and paddling, 1½ miles:

Gull, McVean	0 46 10	10
Nan, Allyn	0 46 40	9
Toodles, Kirby	0 48 10	8
Pirate, F. L. Smith	0 48 30	7
Kite, Moser	0 49 10	6

Ladies' tandem paddling:

Kismet, Misses Stewart and McVean	....	..
Flo, Misses Kirby and Moser	....	..
Pathfinder, Mrs. French and Mrs. Smith	....	..
Sevilla, Misses Wright and Robbins	....	..

Single paddling, ½ mile with turn:

Kismet, F. L. Smith	0 05 42	10
Naiad, Allyn	0 05 45	9
Flo, Moser	0 05 51	8
Zaleinda, W. S. Smith	0 05 57	7
Wewanda, McVean	0 06 01	6
Lion, Kirby	0 06 06	5
Sevilla, Wright	0 06 12	4

Tandem paddling, ½ mile with turn:

Kismet, McVean and F. L. Smith	0 03 20	10
Naiad, Newell and Allyn	0 03 25	9
Flo, Moser and Kirby	0 03 27	8
Zaleinda, W. S. Smith and Sully	0 03 30	7

Standing in record:

	Average points won.		Average points won.
Allyn	9.250	Kirby	7.000
F. L. Smith	9.000	Sully	7.000
Newell	9.000	W. S. Smith	6.666
McVean	8.800	Wright	4.000
Moser	7.400		

On July 6 the trial race for the commodore's cup was sailed. This was to fix the time allowances for the first of the series and resulted as follows:

Sailing, commodore's cup, 4½ miles; wind medium and puffy:

	1st Round.	2d Round.	3d Round.	Time.	Allowance.
Pirate, F. L. Smith	21 45	20 40	20 55	1 03 20	Scratch.
Az Iz, Stewart	21 20	20 45	21 30	1 03 35	7½
Gull, Allyer	23 25	24 35	22 40	1 10 40	3 40
Kite, Moser	23 40	23 55	23 55	1 11 30	4 05
Toodles, Moser	24 30	23 00	29 10	1 16 40	6 40
Nan, Enoch	Did not start.				

A. C. A. No. 1511.

CANOE NEWS NOTES.

MR. WM. WILLARD HOWARD has returned to London after being in Persia and Russia since last winter, but his canoe Yankee and his new half-rater had not arrived on the Thames up to July 12, the date of the R. C. C. challenge cup race at Greenhithe, for which Yankee was entered. She was shipped back from England to Clayton last fall to be rebuilt by Mr. Fry, her builder, who at the same time was instructed to design and build a half-rater for a match with Spruce IV., Mrs. Howard sailing the former and Miss Constance Bennett the latter boat. Mr. Howard will have both Yankee and the half-rater at the B. C. A. meet on the Solent next month.

The St. Lawrence River Skiff, Canoe and Steam Launch Co. will at the close of this summer remove from Clayton to Ogdensburg, N. Y., and will shortly commence the construction of a large and most complete factory, which will be furnished with the most modern and approved wood-working machinery and power. The reason of this concern's removal is on account of the far superior building and shipping facilities that Ogdensburg affords. This firm originally commenced business by building the famous St. Lawrence River skiffs (which have attained such a world-wide repution), and have of late years gone into the construction of all kinds of small pleasure and racing craft. In 1887 they built a factory 100ft. by 50ft. ground space, with four floors, which has become altogether inadequate to their requirements on account of the rapid increase of their business. The result is the building of the much larger factory at Ogdensburg, which will be completed and running by next October.

Revolver Shooting in England.

LONDON, England, June 28.—The members of the North London Rifle Club are, with practice, improving in their new competition shooting with alternate hands. Mr. Winans has now also made a 41 in this style of shooting, which, in the English way of counting, beats the other scores of 41 made by Lieut. Chitty and Mr. Knapp earlier in the season, as his score was the worst shot at the beginning, and the others have theirs later on. The below 41 is therefore the best on record to date for shooting alternately with either hand.

June 22.—Twenty yards, alternate hands:

Walter Winans	677777—41	F A Gould	744745—31
Lieut W W Chitty	676777—40	R W Glanville	224276—23

On June 26 the scores did not count toward the revolver championship, so several members did not care to shoot.

Annual prize meeting, June 26 (not for the revolver championship):

Maj H Palmer	39 37—76	May	36 33—69
Lieut Chitty	37 36—73	E Howe	34 32—66
C Knapp	36 35—71	F H Frost	32 34—66
Maj H Munday	36 35—71		

At the South London Rifle Club scores have been made as follows:

June 20.—Twenty yards, stationary target:

Capt T W Heath	667766—38	C Knapp	675767—38

Fifty yards target:

Capt T W Heath	577567—37	C Knapp	445537—28

Scores for the revolver championship of the club to date:

	20yds.	50yds.
Walter Winans	41 41 40 40 39	40 39 39—319
Capt T W Heath	39 39 38 38 36	37 36 36—301
C Knapp	40 40 38 38 30	38 35 31—290
E Howe	38 37 37 36 36	32 31 30—277

The first revolver competition at the revolver gallery in Swallow St., Piccadilly, London, is just over.

The gold badge has been won by Walter Winans with two scores of 41, three of 40, and a lot of 39 and 38. Mr. Knapp being second with a score of 38. Both competitors used Smith & Wesson revolvers.

For a Revolver Tournament.

ELLICOTT CITY, Md., July 15.—*Editor Forest and Stream:* The great success of the shooting festival at Glendale again brings up the question—Why cannot an up-to-date tournament for revolvers and pistols be held in New York some time next spring, the best time being somewhere near the next Sportsmen's Exposition? If the great range belonging to the 71st Regiment could be obtained, or some similar place, what a great meet could be had! Can't we who love the pistol and revolver get together and put this through? SAM'L J. FORT, M.D.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

July 24.—WORCESTER, Mass.—All day shoot of the Worcester Sportsmen's Club, under the management of Chas. E. Forehand, Sec'y.

July 25.—GUTTENBURG, N. J.—Sixth monthly tournament of the New Jersey Trap Shooters' League, under the auspices of the Union Hill Gun Club, of Hoboken, N. J.; league contest at 2 P. M.

AUG. 7.—PLAINFIELD, N. J.—Seventh monthly tournament of the New Jersey Trap-Shooters' League, under the auspices of the Climax Gun Club League contest at 2 P. M.

Aug. 9-10.—NEW ORLEANS, La.—Tournament of the Inter-state Association, under the auspices of the Louisiana Gun Club; $200 added money.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

Aug. 21-22.—FREDERICK, Md.—Two days' tournament at targets.

Aug. 27-29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Sept. 2-3.—NEWARK, N. J.—Tournament of the South Side Gun Club; targets New Jersey Trap Shooters' League contest at 2 P. M. on the second day. W. R. Hobart, Sec'y.

Sept. 4-5.—UTICA, N. Y.—Two days tournament; live birds and targets.

Sept. 4-5.—SHEPHERDSTOWN, W. Va.—Morgan's Grove Fair Association's tournament, under the management of the Interstate Association

Sept (second week).—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Sept —.—ROCHESTER, N. Y.—Fourth annual tournament of the Rochester Rod and Gun Club; three days of the week following the Clover tournament

Sept. 10-13.—DETROIT, Mich.—The Des-Chree Shos-Ka annual tournament, under the management of Jack Parker.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Oct 23-24 —ELIZABETH, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

1896.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the management of Texas Field; $2,500 added.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2,000 added money.

May (second week).—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

A new shooting Park in the vicinity of New York city will shortly be opened with a "housewarming" tournament, At the Elkwood race track, near Long Branch, N. J., Phil Daly, Jr., purposes to have one of the best equipped grounds in the country. There are 100 acres in the inclosure, with grand stand and excellent hotel accommodation right on the spot. The background, too, is as good as any. The opening shoot will be somewhere about Aug. 14, the special feature being a 100-target handicap race, $10 entrance.

A note from Mr. J. A. Creveling, secretary of the Endeavor Gun Club, Jersey City, N. J., informs us that the club proposes holding its annual tournament at Marion, N. J., on Labor Day, Sept. 2. The Endeavors have unquestionably overlooked the fact that the South Side Gun Club, of Newark, N. J., have already claimed Sept. 2 and 3 as the dates for their tournament. As these two dates would clash, we have written to Mr. Creveling calling his attention to the fact, and suggesting that his club choose some other date, as the result will then be far more satisfactory to both clubs.

Programmes of the Pennsylvania State shoot will soon be in the hands of shooters. The shoot takes place on Aug. 21-24 at Holmesburg Junction, a station on the P. R. R. main line, a few minutes' run from Philadelphia. The Keystone Gun Club, under whose auspices the shoot will be held, promises to give its guests a good time and a big shoot. The annual meeting of the Pennsylvania State Sportsmen's Association will be held on the evening of Aug. 21. The report of the legislative committee will be listened to with considerable interest.

Ralph Trimble, of Covington, Ky., won the championship of the State of Kentucky at Louisville the other day. His score of 45 out of 50, unknown angles, is not so low as it appears, the targets being thrown low and far, a good wind blowing at the same time. Trimble's work at the traps while on "the circuit" proved that he was somewhere near the top of the tree. His victory at Louisville was not, therefore, expected.

Mr. Chas. W. N. Keefer, writing from Frederick, Md., July 13, informs us that a tournament will be held at that place on August 21, 22. The main event on the first day will be a team shoot, five men to a team, for a purse of $50; all members of the team to be *bona fide* members of the same club. He adds that the grounds are unsurpassed, with a perfect sky background. Sweepstakes will be shot off each day.

A. L. Ivins, of Red Bank, N. J., is booked to shoot a 100-live bird race next Wednesday, July 24, with L. Finletter, of Philadelphia. In the Hollywood Futurity Handicap, which was shot on July 6, Ivins was the winner, standing on the 28yds. mark. Finletter killed 23 out of his 25, being handicapped at 27yds.

Harry Craft, of this city, has gone to Texas on a business trip, and expects to be away for the next three months. It is not so long ago that Craft was about the best target shot in the State of New Jersey. All the boys here have told him to look up Oscar Guessaz at San Antonio and Messrs. Moore, Holzapfel and Miller, if he happens around their respective cities.

One of the most complete programmes ever issued was that which was gotten out by the Multnomah Rod and Gun Club, of Portland, Oregon, for the eleventh annual tournament of the Sportsmen's Association of the Northwest. The preparation of such a programme must have entailed a vast amount of labor, the results of which are shown plainly on every page of the little book.

The seventh monthly shoot of the New Jersey Trap Shooters' League will be held at the Climax Gun Club's grounds, Benner's Hotel on Aug. 7, the shoot being under the auspices of the Climax Gun Club. Hacks to take shooters, their guns and shells to the grounds, may always be found at the Fanwood station of the Central R. R. of New Jersey.

We have received too late for notice a copy of the programme of the three days' tournament of the Fox River Hunting and Fishing Club, of Oshkosh, Wis. The shoot commenced on Thursday and ended to-day.

Some of the members of the Paterson (N. J.) Gun Club are going to take part in a 100 live-bird race, $50 entrance. The project was suggested at a shoot held at Bunn's Hotel, Singac, N. J., on July 10.

Mr. F. M. Dawson writes us that the Lynchburg (Va.) Gun Club held its annual picnic at its grounds on the Fourth of July. The day was bright and cool, and there was a large attendance of ladies and children.

Don't forget that the next shoot of the New Jersey Trap-Shooters' League takes place on Thursday, July 25, at the Guttenberg race track. Street cars run direct to the track from the Hoboken station of the D. L. & W. R. R.

Courtney won the Class A medal of the Onondaga County (N. Y.) Sportsmen's Club on the Fourth of July, breaking 45 out of 50 targets, unknown angles. This was Courtney's fifth win, hence the medal became his property. Several other members of the club claimed a record of four wins.

At the Syracuse Gun Club's shoot on July 11 Uncle Dan Lefever won the A Class medal with 47 out of 48; R. Hunter won the B Class medal.

Fred. Hoey is doing good work on live birds at Aix-les-Bains. He has struck a good gait and is beating some capital shots.

The Lott Gun Club, of Lott, Texas, held an all-day shoot on July 18.

EDWARD BANKS.

American Trap-Shooters' League.

At a recent meetingof the executive committee of the American Trap-Shooters' League, the question of the necessity of drawing up a set of rules for live bird and target shooting was discussed. The committee was unanimously of opinion that such rules were a necessity. It accordingly appointed B. C. Everingbim, of the Peekskill (N. Y.) Gun Club, chairman of a committee on rules, as the following letter sets forth: "Peekskill, N. Y., July 3, 1895.—*Editor Forest and Stream:* The American Trap-Shooters' League has appointed the following representative sportsmen as a committee to formulate rules for the future use of the League. I wish every gentleman named, who is willing to act with the committee, to send me his exact post-office address at once. B. C. EVERINGHIM."

The committee referred to is as follows: B. C. Everingbim, Peekskill, N. Y., Gun Club; H. C. Higginson, West Newburgh, N. Y., G. and R. Assn.; W. F. Sykes, New Utrecht Gun Club, Brooklyn, N. Y.; Fred. G. Moore, Larchmont, N. Y., Gun Club; John S. Hoey, Hollywood, N. J.; Justus Von Lengerke, New York City; Jacob Pentz, of *Shooting and Fishing;* Major J. M. Taylor, of *American Field;* Ed. Hough, Chicago, of FOREST AND STREAM; Capt. A. W. Money, Carteret Gun Club; Major R. H. Brelmnall, South Side G. C., Newark, N. J.; C. M. Hostetter ("Old Hoss"), Pittsburg, Pa., Gun Club; Edward Banks, of FOREST AND STREAM, New York City; T. A. Divine, Memphis, Tenn., Gun Club; F. C. Etheridge, Macon, Ga., Gun Club.

Marlin Gun Club.

MARLIN, Falls Co., Tex., July 11.—The Marlin Gun Club held its first shoot of the season to-day, and although the club is of long standing and has several barrels of bluerocks, traps and money in the treasury, the membership was only partly represented. There were two matches shot as follows:

No. 1, 10 bluerocks, known traps and angles:

Judge S R Scott	10100000111—5	A Stumbach	0011101111 — 7
W W Turner	1111111111 —10	E R Emery	1111110100 — 7
C W Rush	0001001011 — 4	Ed Brown	0100100011 — 4
W E Hunnicutt	1110111110 — 8	D S Eddins	1101111001 — 7
E K Herring	1111111011 — 9		

No. 2, same:

Judge S R Scott	1110110000—5	A Stumbach	1001000111—5
W W Turner	1110101111—8	E R Emery	0100111011—6

W E Hunnicutt	1010001110—5	D S Eddins	0011001110—5

Most of the boys will shoot at the press match at Latt on 18th inst.

E. R. EMERY.

Works on Sunday—

Talks business seven days in the week—a "Forest and Stream" Kennel Special advertisement.

Fourth of July at San Antonio.

THE San Antonio Gun Club held a prize shoot on the Fourth as follows:

No. 1, 15 targets, unknown angles: Piety 13, Whitworth 10, Veith 9, Chabot 12, Gregg 9, Schryver 8, Thiele 12, Frank 7.

No. 2, 7 live pigeons: Schryver 7, Chabot 6, Whitworth 5, Frank 6, Veith 6, Gregg 6.

No. 3, 15 targets: Piety 12, Campbell 8, Schryver 11, Veith 5, Chabot 10.

No. 4, 7 live pigeons: Schryver 5, Chabot 6, Veith 7, Sullivan 5, Shields 7.

No. 5, 15 targets: Shields 12, Campbell 11, Schryver 8, Davidson 5, Chabot 10, Stevens 8.

No. 6, 10 targets: Piety 7, Davidson 3, Vollbrecht 8, Samuels 8, Stevens 8, Veith 6, Chabot 9, Epp 8, Schryver 6.

No. 7, prize shoot at 50 single targets: Class A—Piety 44, Thiele 35, Samuels 40, Rothwell 42, Black 34, Kelley 35. Class B—Shields 31, Chabot 32, France 35, Epp 35, Pancoast 40, Smith 35, Veith 31, Phillips 33. Class C—Schryver 22, Vollbrecht 32, Wagenfuhr 30, Bodet 22, Polk 21, Grassman 30, Stevens 27, Davidson 23, Eppstein 36, Campbell 29, Rahmsdorf 15, Learn 35, Carpenter 28, Simpson 38, Modoc 32, Burnett 24.

No. 8, 15 singles: Piety 15, Rothwell 12, Black 9, Campbell 8, Simpson 10, Kelley 11, France 8, Thiele 13, Chabot 11, Vollbrecht 9, Pancoast 11, Samuels 10, Shields 7, Phillips 13, Learn 12, Schryver 9, Hummel 13, Grassman 9.

No. 9, 15 singles: Thiele 13, Schryver 6, Simpson 11, Learn 6, Vollbrecht 6, Grassman 4.

July 7.—To-day the San Antonio and Powder Hill gun clubs held their regular shoots as follows:

SAN ANTONIO GUN CLUB.

No. 1, 15 targets, unknown angles: Shields 12, Samuels 7, France 8, Simpson 11, Chabot 12, Phillips 8, Thiele 9, Epp 8, Volbrecht 13, Piety 13, Rieden 7.

No. 2, medal shoot at 30 targets: Piety 25, Epp 12, Chabot 21, Vollbrecht 22, Grossman 18, Shields 16, Samuels 21, Thiele 26, France 21, Learn 15, Simpson 21, Phillips 16.

No. 3, 15 targets: Shields 9, Grossman 9, Chabot 9, Simpson 13, Vollbrecht 7, France 9, Thiele 13, Epp 6, Campbell 7.

No. 4, 15 targets: Phillips 8, France 13, Simpson 10, Chabot 11, Shields 9, Grossman 11, Thiele 13, Samuels 12.

POWDER HILL GUN CLUB.

No. 1, 10 targets, unknown traps and angles: Critzer 7, Lieut. Foster 9, Lieut. Whitworth 7, Ohnesorge 8, Shaw 7. Wassnig 6.

No. 2, same: Critzer 9, Lieut. Foster 6, Lieut. Whitworth 7, Wassnig 7, Shaw 8, Ohnesorge 8.

No. 3, 30 singles and 5 pairs: Lieut. Whitworth 32, Shaw 33, Lieut. Foster 23, Ohnesorge 35, Wassnig 23. TEXAS FIELD.

Shooting at Singac, N. J.

PATERSON, N. J., July 10.—The Paterson (N. J.) Gun Club was to have had its shoot on July 4, but on account of the heavy rain which fell on that day the shoot was postponed until to-day, when it took place at Bunn's Hotel, Singac, N. J. The birds were an excellent lot, as the scores show, most of them being pigeons of Bunn's own raising. Scores were as below, Nos. 1-9 being miss and outs, $3 entrance:

	No. 1.	No. 2.	No. 3.
N E Money	212—3	222122—6	222111—6

No. 1 was 5 birds, $3, Long Island rules; No. 2 was 10 birds, $5, Hurlingham rules, 50yds. boundary, ties miss and out. A miss and out, $2 entrance, was also shot, resulting as follows: Wright 2, Morgan and Post 1, H. Smith and Lee 0. DUTCHER.

Valley City Gun Club.

GRAND RAPIDS, Mich., June 29.—The following are the scores of the club's last two weekly shoots:

No. 1: Wharton 8, Widdicomb 6, Gilmore 8, Nickerson 10, Hanson 9, Coleman 8, Young 7.

No. 2, semi-expert: Wharton 9, Widdicomb 6, Gilmore 8, Nixon 7.

No. 3, semi-expert: Gould 8, Porter 5, Hansen 8, Crossman 2, Coleman 7, Plant 7, Fox 7, Nixon 7, Gilmore 5, Widdicomb 7, Young 7, Kelsey 6

No. 4: Hansen 9, Porter 5, Wharton 7, Fox 8, Crossman 3, Coleman 8, Kelsey 7, Gould 9, Widdicomb 6, Gilmore 8, Wharton 8, Young 10.

No. 5: Fox 10, Coleman 9, Nixon 7, Kelsey 9, Gould 10, Widdicomb 7, Porter 6, Wharton 9, Young 10.

No. 6, 5 pairs: Widdicomb 7, Fox 6, Gould 7, Wharton 10, Crossman 4, Young 6, Nixon 7. Coleman 7.

No. 7, same: Widdicomb 5, Fox 5, Coleman 7.

July 14.—No. 1, 10 targets: Widdicomb 6, Kelsey 7, Holcomb 9, Gilmore 8, Nixon 8, Young 5.

No. 2, same: Widdicomb 9, Kelsey 6, Holcomb 10, Gilmore 7, Nixon 5, Young 7.

No. 3, 15 targets: Young 8, Nixon 7, Gilmore 11, Holcomb 12, Kelsey 11, Widdicomb 14.

No. 4, semi-expert: Widdicomb 8, Holcomb 9, Gilmore 6, Kelsey 5, Gould 9, Temple 8, Nixon 8, Freligh 7, Plant 9.

No. 5, same: Widdicomb 8, Holcomb 4, Gilmore 7, Kelsey 6, Gould 8, Temple 4, Nixon 7, Freligh 5, Plant 8.

No. 6, 20 targets: Kelsey 12, Gould 18, Gilmore 16, Widdicomb 17, Holcomb 20, Nixon 15, Freligh 11, Macfie 16.

No. 7, 10 targets: Kelsey 5, Holcomb 8, Gould 9, Widdicomb 8, Gilmore 9, Freligh 6, Macfie 6.

No. 8, 10 targets, reversed traps: Kelsey 9, Holcomb 8, Nixon 7, Gould 8, Widdicomb 10, Plant 8, Freligh 7, Gilmore 8, Temple 5.

No. 9, same: Kelsey 10, Holcomb 8, Nixon 7, Gould 8, Widdicomb 8, Plant 5, Freligh 8, Gilmore 8, Temple 0.

Fifty-target race for the targets: Wharton 39, Walton 46.

No. 10, 15 targets: Kelsey 9, Widdicomb 14, Holcomb 15, Gilmore 12, Temple 11, Young 13.

No. 11, 5 pairs: Widdicomb 9, Holcomb 8, Temple 3, Gilmore 7, Young 4.

No. 12, 20 targets: Gilmore 15, Gould 18, Holcomb 15, Widdicomb 13, C. F. ROOD.

Binghamton Gun Club.

BINGHAMTON, N. Y., July 12.—The table below gives the scores made in the 10-target events shot to-day on the grounds of the Binghamton Gun Club. All events were at unknown angles, $1.50 entrance:

Kendall	7	8	6	7	9	7	8	9	6	10
Boss	7	8	8	9	6	7	6	8	6	9
Adams	8	9	7	10	7	8	8	8	9	9

W. H. B.

The Hot Springs Gun Club's Fourth of July Shoot.

The members of the Hot Springs Gun Club had the satisfaction of having their third tournament this season crowned with success. Last winter the club attempted to hold a tournament, but the inclement weather at that time was such that the results were unsatisfactory. The club also announced that the fifth annual tournament of the Arkansas State Sportsmen's Association would be held under its auspices in April, but the existence of a few cases of smallpox, which were greatly exaggerated by newspaper reports, and the fact that the neighboring cities had quarantined against the place, made it necessary to hold the meeting elsewhere, and Little Rock was selected. Thus it is evident that it was through no lack of energy and enterprise on the part of the members of the club that its previous efforts were not rewarded with success, but due entirely to unforseen complications that arose at the last moment, and could not be overcome.

For several week it has been raining every day, and the outlook on the morning of the Fourth was not over bright; dark threatening clouds were to be seen in the west, and the heat was oppressive, everything to indicate a storm, which broke over the grounds about noon, but fortunately lasted only a short time, having the effect of cooling the atmosphere considerably. The shooting ground was on a ridge, on the edge of which traps were order and but for a large building that stood in line with No. 4 and 5 traps, though several hundred yards away, the background would have been perfect. The ground arrangements were good. A large awning had been erected over the score to protect the shooters from the sun and rain, while just in the rear of the score was a large building, where the shooters could lounge about when not shooting and where all kinds of refreshments were served gratis.

The programme called for ten events, to which $85 in cash was added. The tenth event was to have been a team race, two men to a team, 50 targets per man, entrance $5 per team and $20 added. This was changed, however, as only three teams entered, one from Hot Springs, one from Little Rock, and another from Texas. Had the race taken place, the teams would have finished in the order named. There were enough shooters on hand to make up six or seven teams, but a number of the boys were conceited enough to think that the rest were too slow for them, and for this reason no more teams were entered, and instead two 25-target events were shot, $2 entrance, and $10 added to each. fifteen shooters participating in each of these events. As some of the best talent in the South took part in the tourney, some very fine shooting was done. Old Man Hughes, as he is familiarly called, acted as pace maker, and the pace that he set was just a little too fast for the rest of the boys; 91.06 is a very good average for a man of fifty years. Holzapfel was also very much in for money; he scored only three targets less than Hughes and wound up with an average of 89.78. The visitors in attendance were A. Holzapfel, Cuero, Tex.; Wallace Miller, Austin, Tex., who were *en route* home from the New York State Shoot; Dr. Cabell, Carrolton, Mo.; John Munnerlyn, Maysville, Ga.; Col. J. A. Woodson (Jim), W. R. Duley, Dave Alexander, your correspondent, and Dr. J. H. Lenow, from Little Rock, who came over to shoot John J. Sumpter, Jr., a pigeon match All arrangements had been made for the match, which was to take place on the 5th, but on that morning when John Sumpter went out to look at his birds he discovered a hole in the coop, and instead of sixty birds, as he expected to find, only twenty-two remained, the rest having made their escape, much to the chargin of both of the principals. each of whom, singularly enough, never felt better in their lives; each, of course, would have made a straight, at least they imagine they would. The question of supremacy between these two pigeon shooters will be settled at Little Rock in the near future.

The purses at this shoot were divided on the "equitable plan," which gave general satisfaction, and is the only plan on which to run a shoot for amateurs who shoot for sport and not for revenue only. It equalizes matters and pays a shooter according to his skill. In event No. 2 only four men got a place, two made 20, one 19, one 18; under the old system the 19s would have paid more than the 20s. The purse amounted to $27.00; 50 per cent. would have been $13.50, half of which would have been $6.90; second money, 30 per cent., would have been $9.60, and third money, 20 per cent., would be $6.40. Under the "equitable plan" each target scored by those in for a place was worth 35 cents, thus the 20s paid $7, 10 cents more than they would have paid under the old system, the 19 paid $6.65, or $2.95 less than it would have paid under the old system; the 18 paid $6.30, just 10 cents less than would have been received under the old division. In event No. 6, a 20-bird race, $2 entrance, $10 added, there were twelve entries, four moneys, eleven men got a place, yet everyone received more than his entrance money. Nineteen was high only once, this paid $2.85; the 18s, four of them, received $2.60 each, or just 25 cents less than 19 got; 17, three of them, got $2.45, while 16s paid $2.30, three also. Now let us compare the old system and see what each would have received. The purse was $29.20, 40 per cent. would be $11.65, or $9.80 more than was paid, as there was only one, but there were four 18s, and 30 per cent. of the purse is $8.75. They would have received $2.15, just 45 cents less than was paid; the 17s would have got 20 per c nt., $5.85, and would pay each $1.95, or 50 cents less than they did get; 16 got fourth, 10 per cent., $2.90, and each would have received 95 cents, or $13.35 less than it did pay. This shows the unfairness of the old system. In one instance the man who scores 19 would receive $1 60 more than those who scored 20, simply because he was fortunate enough to be alone, while in the other instance the man who scored 19 would have received $0.80 more than those who broke 18, although he scored only one more target. This system encourages dropping for place. While the "equitable plan" does not absolutely obviate this contemptible practice, it is only possible in isolated cases, and the remuneration would be so small that a man must certainly be devoid of all principle who would practice it.

TABULATED SCORES.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

Collings	..	..	..	..	..	..	..	..	..	19	..	..	..	25	19	76.00
Short	..	..	..	..	..	..	..	..	..	..	10	..	..	25	10	40.00
Lenow	..	..	..	..	..	..	..	..	..	..	..	11	15	15	11	73.33

All events were known traps and unknown angles, and two cents each were deducted for targets. To each of the first 15-bird events there was $5 added money, while to each of the 20 and 25-bird events $10 was added. Events Nos. 12 and 13 were extras, and nothing was added to these. Purses was divided as follows: When less than 12 entries, three moneys; and when 12 or more, 4 moneys.

PAUL R. LITZKE.

New Utrecht Gun Club.

BROOKLYN, N. Y., July 13.—The scores given below were made by members of the New Utrecht Gun Club this afternoon. The club shoot at 10 live birds, handicap allowance, was the main live-bird event decided. The scores made were as follows:

G Coulston (A).. 2101•21222 —8 C Furgueson (B).2011•22201+0 —7
Furgueson,Jr,AA 12•2222222 —9 W Wynn (A).....1112221021 —9
W Stuart (C).....1022120021+10—8 H Fessenden (B).10111•2112+2 —9

Furgueson and Coulston shot three 10-bird matches for the price of the birds; the results were as follows, Furgueson winning all three shoots:

Furgueson	2222222222	0222122220 2120221212
Coulston	2002220228w	2210120012 2222001112

At the target traps D. Deacon and C. W. Floyd shot a little race at 50 targets, 30 singles and 10 pairs, $15 a side and the price of the targets. The result was as close as it could be, one man to win, as Deacon only beat Floyd out by one target. Floyd led by three targets at the thirtieth round, and it was only by excellent work on the doubles, in which he broke 17 out of 20, that Deacon managed to pull through as he did. The score:

Deacon	1111101111111101011111111100110
	11 11 11 11 10 01 11 10 11 11—41
Floyd	1101101111111111111011111111111
	10 01 00 11 11 10 10 11 10 10 11—40

Other events were shot as follows, Nos. 1 and 2 being at unknown angles:

	No. 1.	No. 2.
C W Floyd	1011111110 —8	1111111111—10
D Deacon	0111111111 —9	0110100101— 5
Dr O'Brien	0110100000— 3	1001100101— 5
G E Pool	1101011101— 7	0111110100— 6
J Lott	1111000110— 6	1011011010— 6
P Hegeman	1011101111— 8	1011001111— 7
G W Cropsy	0011111111— 8	0000011110— 4

In a race at 5 pairs, 50 cents entrance, the following was the result: Deacon 9, Hegeman 6, Floyd, Cropsy and Pool 5, O'Brien 4

Championship of Kentucky.

LOUISVILLE, Ky., July 4.—To-day, on the grounds of the Kentucky Gun Club at Louisville, Kentucky, a most enjoyable day was spent in trap shooting, this being the day set apart by that club for the championship at targets. In October the pigeon championship of the State is decided on the same grounds.

The Kentucky Gun Club bears the superlative distinction of being one of the few clubs at which pigeons and targets are shot every week. The club house is a model of neatness and convenience, and the grounds being enclosed seclusion is secured. The trapping of pigeons and targets is just as good as one can find anywhere. Few places are so fortunate as Louisville in regard to the large membership of the club, its *personnel*, the general interest manifested by many of its members, its easy access from the center of the city, and the splendid trapping and management one always finds there. Louisville is to be congratulated on having a set of men who so thoroughly enjoy trap shooting, and whose means allow them the privilege of trap shooting in the very best form.

Anyone examining the scores may consider them low. Well, there is no disputing that for the most part they are so, but, when the speed of the targets is considered, that alters things somewhat, so much so that men who have been making very high scores elsewhere here found themselves completely at sea. A brand new set of improved blue rock traps has just been put down and they have succeeded most admirably in keeping every one guessing as to what they were throwing out of them, whether blue rocks or black poker chips. I freely admit that outside of Knoxville I have seen nothing that could compare with these traps for speed and distance, although here the background is very much better.

The scores:

Targets:	10	15	15	10	15	15	10	15	10	15	15	15	10	15	15
Alexander	9	10	11	7	10	..	..	..	..	..	..	..	..	..	..

Chess	..	..	..	..	..	..	..	..	10	5	..	..	..	..	..

Championship of Kentucky, 50 targets, known traps, unknown angles, $5 entrance: Sam Hutchings 31, Smyser 28, H. J Lyons 37, Church 40, Phelps 34, Alsop 31, J. W. Smith 24, Mastin 33, W. W. Watson 42, Williamson 31, R. H. Smith 30, Clegg 29, Lewis 36, Alexander 28, J. D. Gay 44, Davies 31; Ralph Trimble 45. Pragoff 32.

Ralph Trimble won championship and first money, J. D. Gay second money, W. W. Watson third money, Church fourth money.

Team contest, 25 targets per man, known traps, unknown angles:

Frankfort Team.		Kentucky G. C. Team No. 2.	
Mastin	15	Alexander	19
Payne	19	Smyser	15
Church	21—55	W L Lyons	14—48
Kentucky G. C. Team No. 1.		Owensboro G. C. Team.	
W Watson	13	Lewis	10
H J Lyons	21	Alsop	17
Sam Hutchins	15—49	Davies	12—39

During the championship match, by one of those unavoidable accidents, Gay had the misfortune to lose a target that was chipped—a very small break—and landed in second place. One of the judges saw the break, as did also many of the spectators; the other judge and referee were so situated that they did not see the chip, so the bird had to be scored lost. Gay, however, had the honor of scoring highest average for the day, as will be seen from the following figures: J. D. Gay shot at 155 targets, broke 134, 86 4%; R. Trimble shot at 155 targets, broke 132, 85 1%; H. J. Lyons shot at 260 targets, broke 198, 76.1%.

Messrs. Gay, Trimble and Harry Lyons shot Parker guns. While Trimble shot DuPont powder, Gay E. C. and Lyons hard-grain Schultze. All used U. M. C. Smokeless shells.

Sandwiched between the sixteen events was served under the spreading boughs of a fine old tree a dainty luncheon, which was heartily enjoyed by the contestants and their friends.

To a fellow who knocks about from pillar to post, and who is forced to eat (or go hungry) the stuff one generally finds at tournament lunches, a well-served, appetizing meal like this one was a decided innovation, and one that was highly gratifying to all who had the good fortune to partake.

Long live the Kentucky Gun Club, with its membership of good solid manly men and its enviable record for hospitality and fair treatment. This grand old club is formed for the most part of sportsmen whose skill afield is of national reputation, and whose generous courtesy places them on a par with a few other gun clubs which are an ornament to any city or civilization.

In October we will meet again, brother Kentuckians, and strive for the pigeon shooting championship.

GAUCHO.

Michigan City, Mississippi.

MICHIGAN CITY, Miss., July 9.—The Michigan City (Miss.) Gun Club will hold its first semi-annual tournament on Thursday, Sept. 5. Many valuable prizes will be offered and a handsome gold medal for highest average of the day. Programmes can be had by addressing Secretary, Chas. M. Tway.

The regular weekly shoot took place July 2, on account of regular day coming on the 4th and the members going to different shoots on that day. There was only a small attendance, but some good shooting. Medal race, 25 singles, unknown angles:

Brewer	1011001010101011101011101—15
Aldrich	1011000010100000111111110—13

W. H. Hardaway	0000000000001110000111111— 8

Handicap shoot for wood powder and leaded shells, 25 singles: Brewer 24, Aldrich 21, Robinson 19, Brinkley 25, Hardaway 25, Oakley 25, McCarley 25, Tway 21.

SECRETARY.

Trenton Gun Club.

TRENTON, N. J., July 11.—The regular monthly shoot of the Trenton Gun Club was held to-day. The club contest was for two badges, first and second. Conditions were 30 targets per man, each man shooting first at 15 targets for place, the men breaking 11 and over being placed in the first class, all below 11 in the second class. C. H. Allen won the first class medal; W. Williams the second class medal. The scores were as follows:

No. 1, shoot for place:

D Williams	111101111111111—14
C H Allen	111011111111111—14
W Mickel	111101110111111—13
C Stout	111111110011111—13
H Bumbough	111111010111110—12
E C Hutchinson	010111111110101—11
M Hicks	111011001101111—11
Ed Hill	010101101111111—11
E Willson	011111101110011—11
E Robinson	010111010110111—11
C Zwerlein	101111010111111—12
J M Allen	110111000110111—10

Greensburg Gun Club.

GREENSBURG, Ind., July 9.—The Greensburg Gun Club held its first shooting tournament here to-day. It proved to be a grand success. The day was not a perfect one, as the very high wind interfered greatly with good scores. The best average was made by C. Pea, he breaking 101 bluerocks out of 115. The programme for the day consisted of eleven events, eight of which were at 10 targets and three at 15 targets, entrances 70 cents and $1 respectively. Shooting commenced promptly at 10, and during the day 2,950 targets were thrown from five expert traps, using the Empire electric pull. All events were well filled, 34 shooters taking part. The visitors were from Rushville, Columbus, Brookville, Indianapolis, Newpoint and Surmans. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11

MULT.

Newburgh again Wins from Passaic.

NEWBURGH, N. Y., July 11.—The West Newburgh Gun and Rifle Club defeated the Passaic City Gun Club, of Passaic, N. J., in the second team race between those clubs this season. The victory was an easy one, the home club winning by 51 breaks The score of the day was devoted to sweepstake shooting, some good scores being made. Details of the team race are as follows:

Newburgh.

D. W. BRISTOL.

Paducah Gun Club.

PADUCAH, Ky., July 8.—This afternoon sixteen of the club members met to contest for the gold medal. The scores, with the exception of Hinkle's 23, were the worst made this season. The wind was very high, while the targets were thrown low and fast. We promise a better score at our next shoot, which will take place next Monday, July 15. The club has decided to shoot for the medal every Monday. Scores:

Nathan	1000110011001101001100100—11
Lang	1101100010011110101111111—17

T. J. MOORE, Sec'y.

On Wopsy's Heights.

In the programme for its third annual tournament, which was held on Wednesday, Thursday and Friday of last week, July 10, 11 and 12, the Altoona Rod and Gun Club opposed its introductory with the following: "All these * * * will stimulate you to a better fulfillment of your various vocations and stamp in your memory a meeting that a prolonged life will gladly retain." There's no error there. It was true, every word of it. Not a visitor who took part in any of the three days' sport, not a member of the home club who worked for the success of that organization and who laid himself out, as they all did, to make things pleasant for their guests, but will bear witness to the accuracy of the above quoted sentence.

There was only one thing lacking to make the tournament an entire success—more shooters. Among the visitors were: Elmer E. Shaner, Vandergrift and Julius Low, of Pittsburg, Pa.; Ferd. Van Dyke, of Dayton, N. J., representing the Winchester Repeating Arms Company; Tom Keller, of Plainfield, N. J., a representative of the U. S. Cartridge Company; Gus Greiff, of Von Lengerke & Detmold's, New York city, shooting a Francotte gun and Schultze powder; W. H. Skinner, of Chicago, with a Forehand Arms Company's gun and the new W. A. Smokeless powder; Major R. H. Breintnall, Newark, N. J.; "Dutchy" Smith, of Plainfield, N. J.; Billy Fieles, of Christiana, Pa.; J. E. Ross, of Homestead, Pa.; H. W. Burnham, of York, Pa.; J. O'H. Denny, of Ligonier, Pa.; etc. But where were the Philadelphians we expected to meet? Where were Hepler, "Brewster," "Sullivan" and the Worden Bros., of Harrisburg? Where were Smeck and Shaaber, of Reading; "Nelse" Hughes, of Williamsport; and the representatives from Millintown, Johnstown and Braddock? Are they all waiting for the State tournament at Holmesburg Junction on August 21-24? It looks like it. Whatever was the reason, their absence was regretted, and they missed a most enjoyable shoot.

The preparations made by the club, and the forethought displayed in looking after the comfort of its guests, were unexceptionable. All cases of shells shipped in care of the club were transported to the shooting grounds free of charge, and were to be found there on the morning of the shoot. The club's large tent was erected back of the firing lines and afforded ample accommodation, while two large awnings stretched above the shooters' heads were a capital protection from the rays of the sun that beat down with considerable force on the summit of "Wopsy" during the months of July and August. A hack that conveyed shooters to and from the hotel over the 1,200yds. that intervene between it and the brow of the hill, where the tournament was held, was another proof of the care the club took of its guests. At the hotel also everything was done to add to the success of the shoot. In past years this has not been the case, but this year it was all one could wish. To Mrs. McCoy, of Pittsburg, the present manageress of the hotel, the credit of this change must be given. The inner man lacked for nothing. The Italian orchestra, too, was a good one, but it was not Di Cillo's. One missed the jovial face of Frank di Cillo and the music which he and his compatriots, Briglio and Massino, discoursed at the tournaments of the Altoona Gun Club in past years. We missed the "Darky's Dream."

Of course the shooting took place at the grounds at Lookout Point, the same spot where the target shooting of last year's State tournament was done. If there is anywhere a more perfect spot for a target tournament, send FOREST AND STREAM a photo of it for reproduction. The beauties of Wopsononock have been so often described in these columns that we must ask forbearance while a short story of the location of the shooting grounds is given for the benefit of those who may not have read of them before. On the summit of Wopsononock Mountain, 2,600ft. above sea level, stands a four-storied pavilion, crowning a bluff that has about 800ft. of sheer descent. From the top floor of the pavilion a magnificent panorama is spread before the eyes of the tourist. On a clear day seven counties can be discerned. Below, but slightly to the right, lies the city of Altoona, some four miles distant as the crow flies. To the left are Bellwood (six miles from Altoona) and Tyrone (ten miles still further toward the east). Bald Eagle and Brush mountains, across the valley, blue with haze, form the horizon on nine days out of ten. On the tenth day mountain peaks in far distant counties are seen stretching away to the south. Behind, looking back over the hotel, lie the mountains of Cambria county, rendered glorious as evening passes into night by the rays of the setting sun. At that hour, silhouetted against the sky, stands sharply out the slender spire of Carrolltown church, a score of miles away. A man who can't appreciate such scenery can scarce be called a man. Anyway, he's no shooter.

It is on each side of the pavilion mentioned above that the Altoona Gun Club last year went to work and cleared and leveled at considerable cost two plots of ground, each 25yds. square. Right on the brow of the hill a set of traps is placed on each of these plots. The shooters stand back and have the blue of heaven for a background—a pure sky background. No black smoke, no houses, no clumps of trees, no fence variegated with advertisements, prevents an instant "getting on to" the targets. Of course there are no "pickups." Once a target leaves the traps it is pulverized by the shooter or else dashes itself to pieces on the rocks, hundreds of feet down the forest-clad mountain side. Yet with all this, each target is surely gone, whether shot at or not, the Altoona Gun Club ran its shoot and charged only 2 cents a target. And it will do so again next year.

Not the least interesting part of attending a shoot at Wopsononock is the railroad ride of seven and a half miles from Juniata to the summit, during which a height of 1,100ft. is climbed by the locomotive and cars. The trip from Altoona to Juniata is about 12 minutes by electric cars; at the last-named place connection is made with this mountain railroad, the A. C. & N. R. R., a railroad that does much to help on the tournaments of the Altoona Rod and Gun Club. Looking down from the shooting grounds, the train looks like a mechanical toy as it creeps along and upward, following the windings of a railroad that does not possess a half mile of straight track from end to end. So much for Wopsononock and its surroundings. Now for the shoot itself.

On Wednesday, the first day, sport opened with a few practice sweeps at 10 targets each, unknown angles, $1 entrance. In these sweeps Gus Greiff didn't do a thing but break his 30 targets straight. This work, coupled with his shooting on Tuesday afternoon, when a little practice was indulged in, had a good deal to do with his receipt of but five extra targets in the big race. Fifteen competitors took part in the 100 target handicap event. Van Dyke was placed scratch, Kotty being the limit man. To show the difficulties that beset a handicapper, take the cases of "Dutchy" and Killits, who were given 110 and 112 respectively, and who scored 99 each, tieing for first money. "Dutchy," as all his friends know, has not been shooting well for some time; yet in this race he broke 90 out of his first 100. In the extra events he broke only just over 82 per cent. Killits broke 88 out of his 100, and scored 99 in all, missing his last target, a shot that cost him quite a little money. In the sweeps he broke less than 82 per cent., while the next day, Thursday, it hustled him to break 70 per cent. in the ten 15-target events on the programme! On this same day (Thursday) "Dutchy" scored 83½ per cent. "Clover," with his handicap of 10 targets, won second money with 96 out of 110, a fraction over 87 per cent., yet in the extra events he averaged only 80 per cent., averaging the same percentage on Thursday, when he shot seven 15-target events. Van Dyke's 91 out of 100 was his regular gait at Altoona, and shows what a really good shot he is. The quick way in which he punched the targets out whenever there was any wind that threatened to play tricks with them was a source of delight to the boys, who always like to see Van come out on top. When Gus Greiff started in and knocked out 24 out of his first 25 he was looked on as a sure winner; he next totaled 21, following this with another 24, making 69 out of 75; by dropping 5 out of his next string, and only getting 4 out of his allowance of 5 extra, he landed one point behind Van Dyke with 93, tieing Elmer Shaner, who was allowed 10 extra, for fourth money. There were thus six out of the fifteen contestants who claimed part of the purses; not so bad a handicap after all, considering the length of the race. Two men also made 91, one scored 90 and two totaled 89. Breintnall made a bad skip in his first 25, scoring only 17, yet he finished with 50; while Fieles lost 13 birds out of his first 50, and still came out with 87. Kotty broke 43 out of his first 50, and it looked a moral for him with his 20 extras, but out of his remaining 70 he scored only two above 50 per cent.; a most unaccountable falling off. "Clover" shot a very regular race, scoring 22, 20, 22 and 22, finishing with 10 straight on his allowance. Bill Clark shot as any man does who has the duty of running a shoot upon his shoulders and in his mind. The race in detail was as follows:

Handicap race, 100 targets, unknown angles, handicap allowance of extra targets, $5, targets extra at 2 cents:

Kotty	..	6	8	7	..	..	..	30	21	70
Greiff	..	10	10	10	13	13	..	60	56	93½
Bell	..	..	6	9	10	11	12	65	48	74
Sureshot	..	..	5	6	..	..	4	35	15	43

AVERAGES FOR THE DAY.

The best averages made during the day in all events were as follows: Van Dyke 93½, Greiff 90⅘, Shaner 88¾, Dutchy 86½, Killits 86, "Clover" and Keller 84½, Clark 83½, Fieles 83⅓.

Second Day.

All the events on this day, the scores of which are given in the table below, were 15 targets each, unknown angles:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Skinner	14	11	11	14	11	9	..	12	12	9	..	11	..	..
Van Dyke	14	15	14	13	15	15	14	12	15	14	14	15	..	..
Killits	13	11	11	9	10	8	14	11	10	9	..	..	..	..
Keller	13	15	14	11	12	13	12	12	13	14	13	12	12	..

Burnham	12	14	13	12	15	13	13	11	10	13	12	12	13	..
Ross	11	8	11	13	13	12	14	12	14	12	13	..	..	..
Clark	..	..	..	..	..	..	..	13	12	15	9	13	14	13	12
"Clover"	..	..	..	..	..	..	..	..	15	9	14	12	11	12	11
Denny	..	..	..	..	..	..	..	..	15	13	11	12	13	12	13
Fay	..	..	..	..	..	..	..	..	7	11	..	5	..	..	..
Shank	..	..	..	..	..	..	..	..	14	9	9	..	..	..	..
Bell	..	..	..	..	..	..	..	..	13	10	12	11	11	..	8
McPherson	..	..	..	..	..	..	..	..	..	..	11	13	8	11	8

In the above list Van Dyke, of course, leads with a percentage of almost 95. He was (and this is no joke) head and shoulders over all the shooters in more senses than one. In order of merit the others are: Fieles 89, Greiff 88¼, Keller 85, Denny 84⅘, Clark 84⅕, Burnham 83⅗, "Dutchy" 83½, Ross and Shaner 81⅔, "Clover" 80, Skinner 76. Edwards 75½, Breintnail 75½, Bell and Shank 71, Killits 70⅚, McPherson 68, Fay 51.

After the above events had been shot off the shooters who had fired close on to 200 shots called a halt, as they had had enough shooting for one day. As it was yet early, probably about 4:45 P. M., Skinner proposed that the boys try their hands at "California freeze-outs." These "Skinner games," as Dutchy promptly named them, took at once as soon as the boys saw how they worked. The way they are run is as follows: The shooters who enter shoot at No. 1 trap in rotation; all who miss retire and pay 5 or 10 cents into the pot, according as it has been agreed upon. The survivors then shoot at No. 2; next at No. 3, and so on, those who miss each round dropping out and paying 5 or 10 cents (whichever it is) for each bird shot at. It's really a miss and out, with compulsory division as soon as it is down to two shooters. At 10 cents a target it is an easy thing to find one's self with a dollar or more to pay. Greiff liked the freeze-outs, breaking something like 48 out of 50 targets in them.

What with the practice work on Tuesday, the number of shots fired on Wednesday in the big race and the extras, added to the work on Thursday in the programme events and in the "Skinner games" Friday, the

Third Day

found the majority of shooters not only lazy, but also out of their own ammunition. As there were also only a little over two squads on the grounds, and not all those anxious to shoot, freeze-outs and a team race between the "Irish" and the "Dutch" took the place of the programme. It is safe to assert that a more pleasant day's sport, and one that was more enjoyed, has very seldom been spent. In the freeze-outs during the morning Greiff and "Dutchy" led by a length, both shooting very well. The team race was shot during the afternoon, and was a purely sporting affair. Van Dyke and "Dutchy" captained the Irish and Dutch respectively, the event ending in a decisive victory for those who wore the green. Van Dyke only shot along after being very pressingly urged, as he was a sick man, suffering from an attack of malaria. Considering that he was thus decidedly under the weather, and that he was shooting "anybody's shells," *i. e.*, whatever he could get, his total is not as bad as it looks. The targets, too, were thrown harder than in the 100-target event, the trappers lining them up and down the screens in great style.

It was after 6 P. M. on this day before the shooting was over, and even then it was only lack of shells that put a stopper to the sport. There wasn't a shell left in anybody's possession; those who had had more than they wanted shared with those who hadn't any. The details of the team race, with its conditions, follow:

Team race: Six men teams, 50 targets per man, unknown angles, losing team to pay for the targets. Race divided into three optional sweeps, two 15-target events and one 20-target event.

First Round:

Irish.		Dutch.	
Van Dyke, Capt	111111101011111—13	"Dutchy," Capt.	111011111111011—13

Edwards	111111101111101—13	"McPherson"	111101110110110—11
Kotty	111011010111001—10	"Any"	100000010110011— 6
	75		61

Third round:

Irish.		Dutch.	
Van Dyke	111101111011110010—14	"Dutchy"	111111110111101101—17
Greiff	101111111101111111—18	Keller	111111101111011110—17
Clark	101101110110111111—16	Killits	001111100111101000—11
"Clover"	111111011111001111—17	Bell	110110011011011111—15
Edwards	101101101101111011100—13	McPherson	111110101010111111—16
Kotty	111001000111010111—13	"Any"	110011101111110111—15
	—91		—91

The team totals are therefore as follows:

	Irish. 1st round.	2d round.	3d round.	Total.
Greiff	13	15	18	46
"Clover"	12	13	17	41
Van Dyke	13	13	14	40
Clark	11	12	16	39
Edwards	12	13	13	38
Kotty	9	10	13	32
	70	75	91	236
	Dutch. 1st round.	2d round.	3d round.	Total.
Keller	14	13	17	44
"Dutchy"	13	11	17	41
"McPherson"	10	11	16	37
Bell	8	10	15	33
Killits	9	10	11	30
'Any"	9	6	15	30
	63	61	91	215

In the cashier's office, W. C. MacDonald and W. S. Bookwalter handled everything that came their way with ease and promptitude Compared with Altoona's previous tournament's, "Buckshot's" work in this department was a sinecure. The manifolding of the scores was excellent—and how much that means to a press representative! Traps and targets worked capitally. The traps used were Paul North's bluerock experts, empire targets being thrown for them. The pull used was an Empire Target Company's wire trap pull.

EDWARD BANKS.

Council Bluffs Gun Club.

THE Council Bluffs Gun Club held one of the most exciting, best attended and successful matches in its history July 5, at its grounds in the western part of the city. The match was at live birds, 25 to each man, 30yds. rise. The shooting began at 10 o'clock in forenoon and continued during the remainder of the day. The score of the principal match was as follows:

Trap Score Type—Copyright 1894 by Forest and Stream Publishing Co.

Graham and Hardin divided first money, and Konigmacher and Beresheim divided second money. The score of Konigmacher was remarkable, in that this was the second time he ever shot at live birds.

A second match at 5 live birds, similar conditions, followed, with the following entries and score:

Pyper	↖←↑↖←	0 1 1 2 0—3	Evans	↙→↗↖↙	1 1 2 2 1—5
Kingsbury	→↗↗↗↓	0 2 0 2 2—3	Sargent	↖←→↓↗	1 2 1 0 •—3
Graham	↗↗↙←←	1 1 1 1 1—5	Beresheim	↗↘←←	1 1 1 2 0—4
Stubbs	↗→↖↑↖	2 2 2 2 2- 5	Riekman	↘↗→←	2 • 1 2 2—4
Hoffmayer	↗→↖↙↖	2 • 0 • 2—2	Halley	↗←↙↗↑	2 2 2 2 2—5
Campbell	↗↗↖↘↖	2 • 0 1 0—2	Miller	↙↖↖↓↘	2 0 2 1 2—4
Oliver	→↗→↑↘	2 0 1 0 0—2	Harl	↗↘↖↑↗	1 1 1 1 1—5
Highsmith	↙→↗↗↗	0 1 2 0 0—2	Hardin	↗↗↙↘→	1 2 • 0 1—3
Hart	↙↖←→↑	1 2 0 2 1—4	Beno	←↓↙↖↖	0 0 0 2 0—1
Heinrichs	↑↗↙↙↗	• 2 1 1 2—4			

First and second moneys were divided between those who killed 5 and those who killed 4 birds respectively.

The day's sport was then wound up by a match miss-and-out, with the following results:

Pyper	↖↗↖↖	1 1 2 •	Sargent	↙	0
Kingsbury	←↩	1 0	Beresheim	↙→←↙	1 2 2 0
Graham	↙↖↙	2 1 0	Riekman	↗↙	1 0
Stubbs	←.	0	Halley	↖↙↙↙↗↗	1 2 1 1 2 0
Hart	↙→↓↙	2 1 1 0	Miller	↘↗→↗	1 1 1 0
Heinrichs	↖	0	Harl	↙↑↘↘↗	1 2 2 1 2 0
Evans	↙↙↘↖	1 1 2 0	Hardin	↘↗↖	1 1 0

Holley and Harl divided the money. CHARLES MATTHAI, Sec'y.

Riverview Rod and Gun Club.

THE following scores were made June 27 by members of the Riverview Rod and Gun Club, just lately organized. It was our fourth shoot, all members being green hands at target shooting.

Fifty targets, known angles: George Shirmer 30, J. Bolland 34, A. Loeffert 27, Kirsch 21, Cullen 31.

GEORGE SHIRMER, Sec'y.

Bedford Rod and Gun Club.

BEDFORD, Ind., July 9.—Handicap, unknown angles, empire targets, $1.50 entrance, A. S. A. rules:

J. B. STIPP, Sec'y.

Tournament of the Sportsmen's Association of the Northwest.

THE eleventh annual trap-shooting tournament of the Sportsmen's Association of the Northwest is over, and, as at the Knoxville tournament, the boys are wondering where their 90 per cent. records are, that point not having been reached by any one of the shooters in the general averages.

The Multnomah Rod and Gun Club, of Portland, Ore., under whose auspices the tournament was held, feel highly gratified at the fact that they have succeeded in almost totally eliminating all known trap and known angle events from any future tournaments in the Northwest. They also succeeded in having the Sportsmen's Association of the Northwest adopt the Levengston system of purse divisions for all future tournaments, as also the trap-shooting rules of the Interstate Association in preference to the old American Shooting Association rules.

The tournament was held inside the city limits on the athletic field of the Portland Amateur Athletic Club. The traps were properly screened, a good walk with foot screens provided, and good, comfortable trap-puller and scorer stands erected. Scoring was done both on the blackboard and in the official score book belonging to the Association. Proper tents, gun racks, coat racks, chairs, desks, etc., were provided for the contestants and every attention paid to their requirements. The background was excellent, being a board fence, with a clear sky above. The traps did not work as well as they should, and by reason of their bad working caused a breakage in connection with that in the barrels of over 25 per cent. of the targets.

The springs on the traps were a poor lot and required extra wiring to make them throw targets over 40yds. The field was all staked off for the different angles and distance with 6in. circular galvanized iron markers and flags, and the line of flight marked off on the grounds with land plaster by means of a lawn-tennis marker. This prevented any argument as to whether the traps were throwing targets right or not.

It was the intention of the management to introduce eight trap events into the programme, but owing to the peculiar dispositions of the two leading gun store men in the city, it was impossible for them to rent more than five traps. One must reside in this city for a short time to appreciate the difficulties that beset the successful management of a tournament here.

The programme of the tournament is probably the neatest one issued so far this year in the United States. It contains, among other information, descriptions of eleven different varieties of purse divisions, and of thirty-seven different kinds of shooting events in inanimate target shooting.

The programme of events is more varied, novel and interesting than any ever presented before in the United States, and were demonstrated to be all practical in the tournament.

The purse divisions were changed on the second day of the shoot to the Levengston, although strenuous efforts were made to introduce a combination of the Minnesota and Levengston.

The *Globe* trophy will be shot next year similar to the championship team event this year.

Next year's tournament will probably introduce the new features, a new automatic trap pull that can be used in any of the thirty-seven events mentioned in the programme, and indicators for the use of the trap setters in setting traps for unknown angles. It is also possible that the Interstate Association will be asked to recognize the Pacific coast in their distribution of patronage.

The first and second days of the shoot were hot and exceedingly windy and dusty, and the third day of the shoot the thermometer reached 96° in the shade. This, together with the exceedingly hard events, accounts for the 90 per cent. mark not being reached in general average.

The tables which follow will give the reader a more complete idea of the shoot, and for comparison the percentages of each contestant in the different style of events is given.

As will be seen, a local man, Mr. A. J. Winters, carried off the high average and most of the honors. He bids fair to be a second Rolla Heikes, using as he does a Winchester repeating shotgun, Leader shells and E. C. powder. The team contest was also won by local men on a handsome score.

NOTES.

The annual meeting of the Association was held Monday evening, June 24, and the most important business transacted was the election of officers, adoption of the Interstate Association rules and the Levengston purse division, and a resolution that known trap-known angle events be eliminated as far as possible from the programmes of all future tournaments of the Association.

The Multnomah Rod and Gun Club entertained the visiting sportsmen with a grand crawfish feast the second evening of the tournament.

The field shoot took the starch out of most of the boys; so easy to miss.

The gun store men were conspicuous by their absence.

The Multnomahs will offer a premium for eight traps that are guaranteed to throw over 60yds. at their next tournament.

We are still waiting to hear from any one having any knowledge of "indicators" for unknown trap events.

Lack of enterprise on the part of the parties most in interest prevented a good live-bird shoot the day following the tournament.

Amberite powder made its initial appearance on the coast at this shoot.

There is a good opening for an inanimate target factory on the coast. Who will start it?

Missoula Rod and Gun Club.

MISSOULA, Mont., July 7.—After a lay-off of a couple of weeks the Missoula Rod and Gun Club, represented by a half dozen of its members, came to the front on time for the medal shoot. Trout in the surrounding streams are beginning to rise too freely to the fly, and as the club is composed about equally of fishing, field and trap cranks, it is safe to predict that, with the advent of the fishing season followed close by the hunting season, the traps will now be for the most part overlooked until another year.

The following were the scores knocked out to-day in the medal contest, unknown angles:

A Class.

J Menard..1101111011101010111—15 C Lemley...1011111111111101111—18

B Class.

J M Evans.1001110111010011111—14 F P Kern..0101011110110101100—12
W H Mace.1111011101101110000l—13 Will Cave..1010011100011111111—14

Shoot off ties for silver medal:

J M Evans.....11101—4 Will Cave.....01110—3

The following re-classification of the shooters of the little club shows that they are improving somewhat. The last four shoots having placed two-thirds of the members in A Class:

A Class.

	Broken.	Possible.	Percent.
J P Menard	43	60	71⅔
W P Brayton	46	60	76⅔
A M Sterling	42	60	70
W H Mace	36	60	60
A M Stevens	37	60	61⅔
H W Thompson	23	40	70
Will Cave	53	80	66¼
C A Searles	46	60	76⅔
J M Evans	54	80	67½
C J Lemley	43	60	71⅔
Lieut Devol	27	40	67½
Robert Rogers	17	20	85

B Class.

L L Hunt	15	40	37½
Frank Woody	28	60	46⅔
F Allison	8	20	40
F P Kern	38	80	47½

Capt Andrews	20	40	50

WILL CAVE.

Trap at Portsmouth.

PORTSMOUTH, N. H.—*Editor Forest and Stream:* Our gun club has taken a new lease of life, and on the glorious Fourth held a grand all-day shoot at the grounds on the outskirts of the city. We have had a number of small practice shoots, but this was the first of any importance. We were joined by the Exeter Club, and the result was a most delightful one to all participating.

The day was rather overcast and quite cool, making the conditions very favorable for enjoying a shoot. Our Exeter friends were received at the depot by our delegate, and a coach in waiting conveyed them to the grounds, where we were in readiness to receive them. Our guests certainly could not complain that their reception was a cool one.

A series of shoots were soon under way, among which were the following events:

No. 1, 10 singles, known angles. No. 2, 5 singles, unknown traps. No. 3, 5 pairs doubles. Team shoot, 10 singles, known angles. No. 4, 4 singles, 3 pairs doubles, known angles. No. 5, 10 singles, unknown angles. Other events were also added at the suggestion of those desiring.

We must admit our defeat in the team shoot, the score being 49 to 40. With one exception, our opponents were all crack shots. In the other events we held our own well. One of our best shots made the highest score of the day on singles, 16 straight, and a total of 21 out of 25. We all enjoyed the fun immensely, and took our defeat cheerfully. A finer, more companionable set of sportsmen it would be difficult to find.

A large tent at one side of the grounds gave shelter to those who desired, and here was spread a long table, from which were dispensed liberal refreshments.

But hours ever so pleasantly occupied will slip away, and all too soon came the time for our guests' departure. Regretfully we bade them good-by with ringing cheers, returned by them as the coach left the grounds.

This shoot has wakened us up wonderfully. We intend to accept the invitation to visit Exeter very soon, and also hope to make matches and enjoy such shoots with other teams. General interest has also been aroused and we are constantly receiving applications for membership, and we hope soon to do more and better shooting. WILO.

Boiling Springs Gun Club.

JULY 4, in the rain. 25 single: Richmond 19, Apgar 23, Paul 22, Baker 22, Lenone 16, Abbott 13.

No. 2, 25 birds: Apgar 20, Paul 22, Abbott 8, Richmond 21, Lenone 20, Huck 25, Baker 19.

No. 3, 15 birds: Apgar 10, Coe 5, Frank 12, Richmond 10, Lenone 8, Strader 5, McAlpin 9, Blue Rock 4, Baker 8, Paul 14, James 8.

CHAS. E. FOREHAND, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

G. B. S., Taunton, Mass.—What is the size limit of brook trout allowed in Maine? Ans. Five inches.

H. K., Brooklyn.—The *Brief* gives the law correctly; the close season on meadow hens for Long Island is Aug. 16 to Dec. 31.

MULT., Portland, Ore.—A and B agree to shoot a match at 4 or 5 live birds for $5 a side. A goes to score and loses his first bird dead out of bounds; B kills his first bird; A and B both kill their second and third birds; A kills his fourth bird, and B then goes to score and calls "pull;" bird refuses to fly and he says, "Pshaw, no bird; the bird is caught in the trap." Trapper advances to fill trap and bird flies and is killed by an outside party within 30yds. of the trap and at a point where, if shot by B, would endanger the life of the trapper. B still standing at the score and without breaking his gun calls "pull" and is interrupted at this point by A, who claims that B had failed to call "no bird," simply saying, "Pshaw, the bird is caught in the trap." Referee when appealed to says he "did not hear B say 'no bird,' but would not call it a lost bird." B then claimed a "new bird" for the following reasons: First—That he had held his gun a reasonably long time waiting for the bird to fly and that he had called "Pshaw, no bird; the bird is caught in the trap;" second, that it was very apparent to the referee that the bird had refused to fly and that it was at the time caught in the trap, and that in view of both circumstances it was the referee's duty to call "no bird;" third, that B had shot at the bird after it took wing that he would have endangered the life of the trapper; fourth, that the bird being killed by an outsider within the boundary entitled B to a new bird. Referee still refuses to call the bird lost, and states that he was not sufficiently posted on the rules to render a decision. B then calls "pull;" bird refuses to fly; calls "no bird," and then calls pull again; gets a bird out of a new trap and kills it with the first barrel. Does B win or simply tie A on the four birds? Nothing was said about rules, although all decisions rendered during previous sweepstakes were in accordance with the A. S. A. rules. Ans. B's claim to a new bird was correct, and on 4 birds the score was A 3, B 4. B won.

Micrometer Combined Powder and Shot Measure.

THE introduction of the micrometer powder and shot measures by the Bridgeport Gun Implement Co. marks another step in their progress toward perfection and absolute accuracy in the loading of ammunition. The micrometer measure can be adjusted to the fractional part of a grain of powder, making it absolutely the most accurate measuring device ever originated. The use of this measure does away with special measures for nitro powders, as it is adapted to all powders, even if of different specific gravity.

Remington Catalogue.

THE Remington Arms Company have recently issued a catalogue and price list of firearms, which is a handsome specimen of the printer's art. This catalogue illustrates and describes the new Remington automatic and non-automatic ejector hammerless guns, as well as the older models of shotguns and rifles which have made the name of this company famous.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SUNDAY DRINKS AND SUNDAY FISHING.

NEW YORK CITY is just now undergoing an experience with its Sunday liquor law, which all good citizens are watching with deep satisfaction, the rogues with disgust, and the whole country with interest.

The law forbids the opening of liquor saloons on Sunday. Under the rule of a former police board, the law was not honestly enforced, but was debauched into an agency of official blackmail. Saloon keepers were made to put up or shut up. If they paid money to the police they were permitted to sell on Sunday; if they refused to contribute to the police they were compelled to close or undergo arrest. The Sunday saloon law was not a dead letter; it was an instrument of unjust discrimination, oppression and corruption.

When the present Board of Commissioners took office and set about the tremendous task of reforming a rotten police system, one of the first reforms to engage their attention was that of the Sunday saloon law enforcement. They announced that they interpreted their duty to be to execute the law impartially. That meant that it was to be applied to all; that every saloon keeper was to close his saloon on Sunday and every hotel proprietor his bar. No one was to be exempt on account of a "pull." Politics counted for nothing; Republican or Democrat, Tammany, Anti-Tammany, every man must shut up on Sunday. And they shut them up, even when the officer detailed to arrest a saloon keeper did so at the peril of his life among the thugs.

This determined, straightforward, unswerving and thorough enforcement of the law has created consternation among those men who, having paid their blackmail or worked their pull for years, now find that the methods successful with knaves no longer work when honest officials are in control. And it has excited a silly hullaballoo among journals of the *World* and *Sun* type. President Roosevelt of the Police Commissioners said in an interview: "I would rather see this administration turned out for enforcing laws than see it succeed by violating them. I am an executive, not a legislative officer. I indulge in no theorizing about the performance of duty. We suffer from overlegislation and lax administration of legislation."

Thereupon the *World* advances the extraordinary doctrine that it is only certain ones of the laws on the statute books that are to be enforced, and it thinks that the people are the ones to determine which they want enforced and which are to go unobserved.

The *Sun* is constitutionally and consistently opposed to municipal reform and in sympathy with the vicious elements in city rule, and so the *Sun* has been severe and savage and jocular and puerile in its criticisms of an honest police board's honest enforcement of the law. Nothing is too silly for its adaptation to this end.

Last Saturday its editorial page came out with this: "The Hon. Theodore Roosevelt is interested in the game laws, being a thorough-going sportsman. As President of the New York Board of Police, however, he seems to have overlooked a provision of the game law of the State of New York which it is manifestly his duty to enforce. Section 6 of the game law, as amended in 1887, reads thus:

"The English or European house sparrow (*Passer domesticus*) is not included among the birds protected by this act, and it shall be considered a misdemeanor to intentionally give food or shelter to the same."

"The police should be instructed at once to arrest any little girl who may be detected in the act of throwing a crumb of bread to an English sparrow. Enforce this vital law! Put the police onto the *Passer domesticus!*"

The law which the *Sun* quotes does not exist, though quoted on its editorial page. The statute was repealed in 1892. This fact probably has no importance to the *Sun*, for its notion of a law is that, on the books or repealed, it is equally a dead letter or a living force, according as the subject against whom it is directed has not or has a "pull," or will submit to pay blackmail.

The *World*, following the *Sun's* lead, and in equal ignorance of the facts, devotes considerable space to a cartoon which has for its text the same long repealed law.

If these papers want to make out a case for fighting President Roosevelt on law enforcement with special regard to his sportsmanship, let them look about more carefully; there are statutes which are never enforced.

TROUBLE IN JACKSON'S HOLE.

A TENNESSEE correspondent, writing of a hunting expedition West, gives an enthusiastic description of Jackson's Hole, which he says appeared to his eyes to be "an amphitheater especially created by the great and just God for the habitation of His creatures." The Hole is just now a troubled habitation, for that is the seat of the Indian troubles, so called. They are Indian troubles in the sense that they are troubles for the Indians, and so far for no one else in particular.

The story is a very old one, which has time and time again been thrashed over in the FOREST AND STREAM. For nearly ten years there has been annual complaint in these columns that the Indians came into Jackson's Hole and the adjacent mountains and killed game at any season of the year, and since, Wyoming has been a State, much of this killing has been done in violation of the laws of that State. Against such game slaughter the residents of Jackson's Hole and its neighborhood and many visiting sportsmen have often protested with loud voice. To this it has been replied that the Indians, by their treaty made with the United States, have forever the right to hunt outside of their reservation on the unoccupied lands of that region.

Since the admission of Wyoming as a State different conditions of course prevail, but the admission of this State does not alter the fact that the United States has solemnly pledged itself to permit the Indians to hunt off their reservation indefinitely. On the stupidity of having made or ratified such a treaty no comment need be made. The legislative and executive branches of the Government share equally the responsibility for so gross a blunder.

In the many comments we have made on this annually recurring trouble, we have taken the ground that the matter was one of such importance that the Indian Bureau was justified in ordering its agents to refuse passes to the Indians to leave their reservations. The question goes far beyond the destruction of deer and elk, which sooner or later will all be killed. It is a question of the safety of human life, either of red men or white men.

If Indians, away from their reservations and uncontrolled, meet with settlers, far from civilization, and smarting under what they believe to be a wrong, neither party is likely to be very patient, and it takes but little to make bad blood between them. Last year a hunting party of Sioux were arrested for illegal game killing in Wyoming, and there was every prospect of a fight before they were persuaded to give themselves up.

This year the Indians have gone into Jackson's Hole on their hunting expedition, and, so far as can be learned from the newspaper dispatches, a party of settlers tried to arrest some of them for killing game. The Indians resisted and several of them were killed. The Governor of Wyoming has ordered the State militia to be ready to proceed to the scene of the trouble and Federal troops are also marching in to the Hole. Meanwhile the newspapers are full of absurd rumors of what the Indians are doing and are going to do.

The one fact about all this matter which cannot be got over is that the United States Government has pledged its faith that the Indians shall have the right to do certain things, and that United States citizens are now preventing them from doing those things. It is the plain duty of the Government to buy back from the Indians this right which it will not allow them to exercise, and so to put an end to this annual excitement.

ADIRONDACK PRESERVES AND HOTELS.

IN our issue of Dec. 22, 1894, was printed a map of the Adirondack game and fish preserves. The State Park, as defined by the Forestry Commission, comprises an area of 2,807,760 acres. Of this territory the State owned at the date of our compilation only 551,093 acres, while of the two million more acres within the Park limits, 825,000 acres were shown to be private preserves.

As a matter of fact, in the State Park there is vastly more territory in the control of private hands than there is open to the public; and in the private territory are to be counted most of the good fishing waters. The desirable streams open to the Adirondack visitor are growing less and less every season. The hotel keepers are beginning to feel the effect of such a condition. Their guests are complaining that there is no more fishing and hunting to be had in the Adirondacks; and there is broached the plan of restoring the State Park section of the Adirondacks to its previous condition by exercising the right of eminent domain. Men who appear to be deeply in earnest declare that they shall agitate the subject.

SNAP SHOTS.

Mr. A. M. Quivey died at Billings, Mont., July 10. By his death Montana loses one of its oldest inhabitants and the Yellowstone Park a consistent and earnest friend. Mr. Quivey was an old-time hunter, trapper and scout, having gone to the West more than forty years ago, and having lived there the free life of an old-time trapper until the advent of the railroad and of the settlements made such a life no longer possible. He was closely associated with the Crow Indians, and had held positions under the Government in connection with these people. He also served as scout in some of the earlier Indian wars, and we believe was with Gen. Miles at the time the Nez Percés crossed Montana. Mr. Quivey was a graceful writer and had communicated to the Montana Historical Society a number of sketches of old-time events, some of which have already been published in the transactions of that association. He was a not infrequent contributor to FOREST AND STREAM, and what he said about the West bore the stamp of unquestionable authority. Along the Yellowstone River, where Mr. Quivey was well known, his loss will be deeply felt.

In these days of questioning where one may go with a chance of finding any game at all, he must be counted lucky whose chief concern is to find time to gather the assured harvest in store for him. Mr. Horace Kephart, of the Kephart-Kennedy syndicate, which has been telling such good "Stories of a Western Town," confides to us that he has been scouting in eastern Missouri, and has there discovered a picturesque country, some queer characters, a great crop of mast and wild fruits, and prospects of wild turkeys galore in the fall. "I believe that I shall have to split my vacation," he adds, "putting in two weeks for gobblers in the new Missouri Eden, and two more for deer in Arkansas in January." That is an enticing programme; the one thing to make it perfect would be a partnership in the fun and the spoils with Kennedy.

Mr. Alvan F. Sanborn records in the *Independent* a night experience in a ten-cent lodging house in Boston. Even there, it appears, they tell fish stories. "My nearest neighbor," he writes, "told of catching a halibut weighing 300 pounds, and a turtle weighing '1,300 pounds, 14 pounds and 13 ounces exact.'"

The Nova Scotia Game and Inland Fishery Society adopted last year the system of an uniform opening day for all game. The law has created much opposition, but the Society has held to it because of the comparative ease of enforcing such a law.

The Sportsman Tourist.

NORTHWARD TO THE FAR WEST.—IV.

[*Continued from page 47.*]

OUR three days at Glacier are gone, and once more we resume our way toward the setting sun.

We soon drop down below the Glacier House, and it is out of sight behind the mountain which we circle. We can look back to Rogers Pass and still see Sir Donald above the surrounding peaks as we double on the "Loop."

This is one of the sights of the line, and was one of the engineering triumphs of the construction. To reach the bottom of the valley the railroad has to double on itself and come back to where it started. Four tracks in all can be seen at one time, looking like four different roads, but it is our own iron way. Ross Peak station is 522ft. below Glacier and only seven miles away.

The gorge of the Illicelliwac is a very rough one, but densely timbered with immense trees, which are part of this wonderful country. We drop another 850ft. and the train pauses at Albert Cañon, along the very brink of which the road runs.

A platform has been built up over the side of the precipice and the passengers flock on to it to gaze into the depths below.

The chasm or crack in the solid rock is about 300ft. deep, and the water of the rushing river is pressed together into a mad, boiling current, not much over 20ft. wide. The sight is a beautiful one, and we would willingly linger longer, but the bell rings and "All aboard!" bids us tear ourselves away.

Still downward we glide, passing Twin Butte, named for the Mounts Mackenzie-Tilly, which rear their joint heads into the clouds above us. The valley narrows and again becomes a gorge, and at Illicelliwaet Cañon the river and rocks again strive for supremacy; they each win, for the rocks crowd the river into such a narrow space that it roars and rumbles as it dashes against the rocky walls in its efforts to escape, and escape it does, though through a narrow passage with vertical walls only a few yards apart, and out into the open valley it glides to join the mighty Columbia, that here comes down from the north. Only twenty-two miles from the Albert Gorge and we are down 1,370ft. and in the town of Revelstoke.

Here the Columbia flows to the South. When we left it at Golden and Beaver mouth it was flowing northward. We have come straight "across lots," it had to go round the massive Selkirks and now comes down between them and the Gold range.

Revelstoke, while not a mining town, has been built up by the mining interest and is at present the head of steam navigation on the Columbia, though at certain seasons a boat could run further north, and small boats with mining supplies are still taken toward the Big Bend country. A great trip for those fond of adventure would be to start with canoes from Donald and go around the Big Bend to Revelstoke. The chances for big game would be excellent, a wild and practically uninhabited country would be seen and some rapid canoe riding could be indulged in.

The trip could be continued southward for hundreds of miles. But a word of warning: let no one attempt it without a guide, for there are some very bad rapids—one called "Death's Pool or Rapids" has claimed several victims in the past.

Revelstoke is a good point to outfit in for the lower country, and good caribou hunting can be found up the Columbia and in the Gold range inside of twenty miles from town; but if the Gold range is hunted, it must be on foot. Up the Big Bend trail horses can be taken.

A little local steamer can be taken to Arrow Lake landing, and then back over to Trout Lake, where there are mines, and a caribou can be gotten quite easily—if you are in luck—but it is not a trip to take a lady with one.

Across the Columbia, Mount Bigbee looms up with its sides covered with eternal snow and ice. There is no record of a white man ever having scaled the Great Glazier, which we could see from our bed-room window, but the Siwashes hunt caribou on Mount Bigbee, and claim they found the skeleton of a white man who got lost in the trackless forest below the ice fields.

The hotels at Revelstoke are of the usual order in a mining town, and as it was Madame's first experience it was a little "tough" after the fine accommodations, etc., at Banff, Field and Glacier.

Three dollars a day ought to pay for a good hotel, but it does not always do it in the mining regions, or any price for that matter. However, the three days we had to remain at Revelstoke were not unpleasant ones, and our time was spent in photographing and getting pointers on the region round about as regards game, etc. A very fine boat for this country (The Columbia) had been running down the river, but unfortunately she had burned just before we reached there, so her sister boat had to take her place. When we went down to get aboard in the evening (as the steamer left at daylight the next morning) we found a genuine Western river steamboat, "built to run in a heavy dew," with a stern wheel. Owing to the heavy freshets of the spring the wharf was all washed away and in bad shape, and we had to walk a plank to get aboard. Madame was a little nervous, and when she saw the kind of a craft she was booked for she opened her eyes, and when we reached the upper deck and entered the cabin where a game of poker was in full blast she opened them wider.

She was fast seeing the "West and its ways." However, our stateroom, though small and not lighted by electricity, was neat and clean, and we found the steamer Lytton, her captain, her crew, her steward and his cuisine like the "singed" cat in the tale, much better than they appeared at first sight, and we spent a very pleasant two days aboard, and the writer repeated his experience with no cause for regret, of which more anon.

From Revelstoke to Northport, Wash., is about 200 miles, and the Columbia & Kootenay Navigation Company run steamers twice a week, connecting at different points for the interior. We had not left our berths the next morning before we felt the motion of the steamer as she turned her prow down the swift-flowing current of the Columbia. We hurried on deck, anxious to see the scenery that this section is noted for. We were fast leaving the Gold range behind us, and the snowy peak of Mt. Bigbee was just discernible through the masses of vapor which overhung the Glacier.

The dark green of the firs and cedars came down to the water edge and joined the great piles of drift-wood which had been thrown high up by the unprecedented floods of early spring and summer.

The Siwashes had never seen anything like such floods. The water rose in places over 100ft., and no one, except those who have seen the Columbia, can have even the faintest conception of what that means. The scenery along the banks of the Columbia is of the wildest description, and when backed by a vista of snow-capped and rugged mountain peaks it is beyond compare. A few miles below Revelstoke the river widens into a broad, even flowing stream with shores stretching into the distance, forming what is known as Upper Arrow Lake, and we now are treated to a different kind of scenery from that we have been viewing for some days.

The mountains are still with us, but they are more distant and not so bold and prominent; the effect is softer; a blue haze in the atmosphere lends beauty to the scene, and the rippling of the water, caused by a gentle breeze, catches the sun's rays, turning the lake into a mass of molten gold.

Flock after flock of ducks is startled into flight by the passing steamer, only to circle and re-alight after she has passed.

We keep on down the lake to Nakusp, from which point a railway has been built over to New Denver and Slocan Lake and into the Kootenay mining country.

Here we make quite a stop and unload a lot of mining supplies. The town is new, and like all Western mining towns has lots of saloons and unpainted board structures. There has been considerable excitement all through the Slocan and Kootenay country the last year or two over very rich gold and silver discoveries, and large lots of ore are being shipped to Tacoma and Omaha to the smelters. If British Columbia could be taken into Uncle Sam's territory, there would be a boom at once.

Southward from Nakusp the lake grows narrower and finally becomes a river again. Here the mountains reach greater altitudes.

We had made the acquaintance of two gentlemen from Boston, who had come out into this region on a hunting trip, and we enjoyed our day's sail very much, while chatting of game and the country. This was their second jaunt and they were after caribou this time. Passing through the narrow part of the river we again come into an opening in the hills and Lower Arrow Lake was before us. As the afternoon waned we reached Fire Valley, where our Boston friends left us. They had made their arrangements and were met by their guide, who came out to the steamer in a dugout, an immense canoe, hollowed out of one of the great trees of this country. The steamer's nose was held against the bank, their duffle was piled into the dugout and we left them standing on the little point, looking a bit forlorn, but they probably "braced up" and we heard afterward on our return trip that they had killed caribou, goats and deer and sheep galore, but had let a big grizzly bear get away.

From Fire Valley we kept on down the lake, passing Deer Park and the Natural Bridge, of which more later.

Sixteen miles from Deer Park we again enter the river through a narrow gateway, guarded on either side by huge rocks. The current here becomes very rapid and flows swiftly through the rock bottom sluiceway. The evening is with us, but a full moon rises from out the east and sheds its mellow rays over the high peaks, lighting up the dark and somber trees and rocks and turning the glistening water into a sheet of silver.

Moonlight on an ocean or a great lake is beautiful, but moonlight on a mountain river is more than beautiful.

We are at one moment in the deep shadow of some huge fir hill, and the next in a halo of silvery light, gliding by some massive rock that stands with its rugged sides kissed by the foam-crested waves of the dashing rapids as they are hurled high up on it by the swiftly flowing stream.

We do not see as much or as far as when the orb of day lights our way, but fair Luna lends a more mystic light, and her silvery beams add to the romantic scene a charm and peculiar weirdness that is most enchanting. Just before reaching Robson at 9 in the evening we passed through a very bad place in the river which is considered quite dangerous, but Jerry McBride, a local character, whom we got acquainted with on the return trip, hangs out a lantern so as to guide the pilot of the steamer—a sort of movable lighthouse as it were.

At Robson we were getting into that part of the river where rapids were frequent, and it was really exciting to sit on the deck and see the steamer plunge down the rapidly shooting waves. Sometimes the spray and water would dash back, making the deck quite wet.

Indians in their queer-looking bark and canvas canoes were fishing here and there along the river, while their wigwams with the smoke curling out of the open tops could be seen hidden among the pines or near some grassy bottom land, where the ponies could find good pasture.

There are few ponies in this country, however, as the chief mode of traveling is by canoe. Here we see evidences of the placer miner's work, and wheels to lift the water into the sluice boxes are run by the swift current of the river.

A few lines published in the *Northwest Magazine* last June are brought to mind by the sight of an old bearded miner, who stands in the water in his gum boots, shoveling the gold-bearing sand into the sluice box, working on, hoping on—

"Where the fir trees whisper like mourning ghosts,
On the rugged mountain slopes,
And deep in whose somber and silent shades
The treacherous grizzly gropes.

"Down to the verge of the noisy stream,
All stony and shadowed and worn,
Where the fretted waters babble anon
Of the rocks from the mountain torn.

"Here the miner bends o'er the glittering sands,
Silent and bearded and old,
Hope lending strength to his shaking hands—
Panning the gravel for gold.

"Panning the gravel with heart of trust,
With hope of ultimate gain,
Flecks of gold from the somber dust—
Fruition of toil and pain,

"Patiently washing, day by day,
Unconsciously growing old;
Heart of trust and hope alway
Panning the gravel for gold."

"MAUDE MEREDITH."

The old placer miner is a character fast passing away, and those who have met him regret this, for he is distinctly alone and rare.

At noon we reach Northport and after an interview with "Uncle Sam's" customs officer step on United States soil once more.

We had crossed the boundary line some miles back, but did not land. Old Fort Shepard used to be at the boundary and the line between the two countries can plainly be seen, as the trees are cut down, making an open way, or lane.

At Northport we board the Spokane Falls & Northern R. R. and follow the Columbia on down. Near Marcus, where there is a large summer hotel, we turn away from the Columbia and at Meyer's Falls turn east to the great "boom" town of Colville. We now follow the Colville River and see many Indian outfits all along. They live in log cabins and wigwams, evidently using both as fancy pleases them.

This is a great hunting country for small game, ducks and chickens with grouse, in the high hills, abounding. There are a number of small lakes all through the country, and parties come out from Spokane. We were not sorry to reach Spokane and were more than pleased to find the Professor looking for us, and we all smiled when he ran along the train before it stopped and thumped on the windows to attract our attention. We had been companions on a trip through the Yellowstone country and Idaho ten years before, and what is there that either cements or breaks friendship more than a hunting trip of several months?

The Professor was a New York man, but had become so enamored of the West that he had settled near Spokane. Some days were spent here, visiting, resting, fishing and in the fields after birds, and then we began to think of a hunt we had planned.

The fishing in the Spokane River is excellent, and though we were a little late, we managed to catch trout weighing 2½lbs. The Professor had caught one of 7lbs. just before we arrived, and held the record.

Down in the field below the ranch could generally be found a family of chickens, but as they would fly over the river when raised, we did not get many. Up in the hills the blue grouse had been plenty, but they had gone higher, and we hoped to find them on our hunt.

The Spokane River heads in Cœur d'Alene Lake and is a fine stream for fish, large basketfuls being taken from it by the residents of the city. Some make a practice of going out ten miles or more Saturday evening and camping and fishing all day Sunday. There are also a large number of lakes near by which are much frequented, and it is not far to Cœur d'Alene, to which place there is a daily train, and then beautiful Pend d'Oreille is only a little further. Spokane is a fine little place, with everything modern, and a good place to reach fine hunting grounds from. It is, like all Western towns, feeling the effect of too much boom, but it has a bright future.

Ranch life on such a ranch as we had found was very pleasant, but we wanted to get into the mountains, so we hustled about and got our outfit in shape; and one bright, cold September morning we put two of the Professor's horses into the light farm wagon, loaded it with the pack saddles, riding saddles, etc., for we could not reach our destination with the wagon, and with a fond farewell to the two mesdames, who stood on the porch and watched us as we loaded in the guns and a few last "tricks," we were off for old Baldy.

We made the end of the wagon road about noon and unhitched. After a lunch and feeding the horses the circus began. We were sadly disappointed by a friend not joining us, owing to a bad accident, and he was going to bring two horses; so we were short on horses and long on stuff to pack. Finally we borrowed a little mare from a rancher to pack some blankets, and got the rest of the duffle on the others, reserving only two horses for three men to ride. The packing was not done without some trouble, as any one knows who has tried to put packs on the first day out, and besides there was only one in the party who could throw the diamond hitch. However, we got off at last.

H. led the way with one pack horse, Frank following with the mare, and the Professor forming the rear guard leading Old Baldy, an old pack horse we had picked up on the ranch and named for our destination.

The Professor did not last long as a leader, though in some ways he is a first-class one; but his forte was not leading Baldy, so the old fellow was turned loose and made to follow the mare. We then got along better. The trail led us up a steep mountain right at the start, and it continued up steep mountains all the way. The distance was called only seven miles, but it took us four and one-half hours to make it.

We had to climb up about 4,000ft., over a trail but little used, through down timber and over rocky places. It was all up but one little piece of trail, and that went over a sharp peak and jumped off on the other side, at least it seemed to. The afternoon grew dark and rain was threatened. We dreaded that, as the bushes were so dense that it meant a regular bath.

So much climbing made the packs slip, and they had to be readjusted and the diamond tightened; one pack about came off. But these are the mere trifles always expected in mountain travel, so we did not waste much breath repining.

The seven miles seemed long indeed, even to the riders, and as for the man who walked—well, he did not say. It was just getting dark when H. said, "We are about there, boys; the cabin is only a little further; but where is the Professor?" We had not noticed he was not keeping up and had not heard from him for the last half hour. "Guess we better go back and get him," said Frank. "No, let's go on, get our packs off and he will surely be along," replied H. So on we went and having reached the cabin we unsaddled and got our horses unpacked when out of "the gloaming" came a voice: "Hello, you fellows! if you want to go off alone why in blazes didn't you say so and I would have stayed home. Come and help me get this old rack of bones to camp." Poor Professor, we had traveled too fast for Old Baldy, and he having got pretty tired and missing the rest of the horses, had tried to take the back trail. Then the circus—and no audience. H. went back and caught Baldy and the Pro-

fessor came in all right, but minus his coat, which he had lost in the fracas.

H. took the horses off to find some good feed where he could hobble them and Frank proceeded to cook supper. We found the old cabin pre-empted by a couple of prospectors, but as H. had helped build the place, they did not object to making room for us, and it was not long before the bacon was sizzling, the coffee steaming and supper ready on the slab table. A great wide fireplace made the old shack quite comfortable, only there was no door and the cold wind had a way of blowing down the poor excuse for a chimney and making our fire smoke. This was a mere trifle, however, and we were glad to be in out of the cold storm which was now raging. We managed to find room for the five men, two dogs and all the pack outfit and saddles in a cabin built for two, and we did not have any space to let.

The next day continued stormy until about noon, when the prospectors decided to pull out. We were not sorry, as we felt a "lettle crowded," as one of them remarked.

Hunting trips are of two kinds, successful and unsuccessful, and the records of each are told but seldom—that is, no one ever tells much about the unsuccessful ones—and yet every one that hunts much does not strike it rich, but to read the stories in FOREST AND STREAM one would believe every hunt was a success. Maybe it is with some people. We had been informed that if we went up to Old Baldy (which is a mountain named on the maps Mount Carlton and which is over 7,000ft. high) we would find lots of grouse, plenty of deer, and a chance for a bear and maybe a cougar. This is all true sometimes, but to get the game one must be there in the proper season and must expect to hunt over a mighty rough country. The snow had not been plenty in the higher mountains and the ranges to the north and east, so the deer had not been driven down yet. The mountains we were in seemed to be detached from any regular range and were right on the border of the Idaho.

From the summit of rock mountain, on which the cabin stood, we could count seven lakes, from great Pend d'Oreille on the north to Cœur d'Alene on the south. The view was grand on a clear day. We were up so high we felt the difference in temperature, and the nights were cold, ice forming quite thick. Spokane lay below us to the southwest and we could see its smoke very plainly from the mountain's top.

The game proved rather scarce, but we did not go hungry, and spent several very pleasant days exploring the country. There are several big bear swamps near the cabin, but though we saw some sign we did not see bruin. To the northward of us, toward Priest River, is a fine hunting country; but we did not have time to go further. The country round about Mount Carlton is very rough and wild, and though only a day's hard travel from Spokane, one is in the wilderness surely and yet very near modern civilization. The Professor felt that he must get back to his store, and H. said it would not pay him to stay up while deer were so few and far between, and as Frank was only a tourist he did not want to keep the rest; so we decided to pack in.

One of the party took to the woods, so as to be prepared for all kinds of game, packing both a shotgun and a rifle. Buck jumped up, and before the shotgun could be dropped was in the thicket, where the two shots sent after him did damage only to the trees. Buck jumped a bear, which also got out of harm's way. Moral—When you hunt, don't try to hunt too many kinds of game at once.

September soon glided away and the days passed too quickly, spent amid such pleasant scenes and with such time-killers as trout in the river and birds in the field. The cooler days of October warned us that it was time to turn our faces toward British Columbia, where we hoped to do some hunting and also wanted to finish the sightseeing.

F. F. FRISBIE.

(TO BE CONTINUED).

IN APPALACHIAN FOLDS.

TUCKED away in a little pocket of the Allegheny chain, with mantling forests all around and the mountain streamlets droning lullabies through the cozy upland valleys, we pass the lazy summer hours in aimless æstivation, sampling the ozone and speculating on the cosmic forces which induced such vast upheavals. And in the absorbing contemplation orology becomes imposing as a scientific study, and enlarged respect is engendered for those intrepid railroad builders who were able to swing their precarious lines from crag to crag, boring through aspiring summits and clamping their iron bands against the sheer walls of beetling cliffs. Verily, it is grand! transcendant! and who shall say that the beneficent hand of the Creator himself does not well up in admiration for the creatures of His own image who have been able to demonstrate by such emulous achievements that their faculties are God-given and divine?

IN THE SPOKANE VALLEY.

While much merited panegyric has been expended on the marvelous transits of the Rocky Mountain range, via the Canadian Pacific, Great Northern, Northern Pacific, and the rest, this stupendous passage of the Appalachian chain by way of the Chesapeake & Ohio Railroad seems to have been but gingerly regarded by correspondents; when as a matter of fact it affords the longest continuous stretch of changeful mountain landscape in America, the distance across the divide from Gordonsville to Kenova being at least fifty miles greater than from Midvale to Spokane on the Great Northern. It is true there are no snow-capped peaks in Virginia, but there are ice mountains, vast caves, natural bridges, mysterious hot springs, iron and sulphur—and the route pierces no less than twenty-two tunnels, of which several exceed or approximate a mile in length. As a whole, the construction is an engineering marvel. The expense has been enormous, and more than a quarter of a century has been employed in perfecting it. The expansive West is great, but our midland craftsmen should not be overlooked because they live East. One blanket for us all! As the Dutchman says, "One countree, von peebles, and zwei glass beer!"

Last summer my sojourn was in the Catskills; this season it is the Alleghenies, just for a change. The situation here at Covington is much like that at Haines Falls, only this upland valley is surrounded by higher peaks and more of them, and is accessible to more novelties and points of interest by rail and wagon, and there is better fishing and hunting in season—bass, trout, pickerel, sunfish, fallfish and silversides in the streams, and deer, bears, turkeys, squirrels and ruffed grouse in the covers. Then there is more cultivation on the hillsides, valleys and slopes, with a better grade of cattle and more genial climate, and the raspberries are larger and juicier. As for bed and board, the Hotel Intermont is incomparable, at the price; and if visitors require a more varied and expensive menu, the Hot Springs and White Sulphur are within an hour's ride, with a tariff to suit the longest purses. There is exhilaration in these upper altitudes, and one seems never to tire of inflating his lungs. Existence proves a comfort. One need not feel blue because he is within reach of the Blue Ridge, unless he angles the mountains the wrong way. The chains all run parallel, and if he disturbs the alignment he is apt to take them at cross purposes. *Voyez?* While their trend is northward toward the frigid pole, the valleys open to the southward and let the cheerful sunlight in, so that dwellers may all be happy, if they only will.

Seated on the apex of the main divide at Allegheny station, which lies just west of Covington, and viewing isometrically the wrinkled, rock-ribbed, corrugated water-shed which faces the Ohio River, we discover no less than fourteen parallel mountain ridges with corresponding depressions, through each of which flows a limpid river, tributaries either of the Potomac or Monongahela. To the eastward is the expansive Shenandoah Valley; to the southward the forested country which incloses the feeders of the Roanoke and Jennes; and the mural breastworks which barricade these streams are the selfsame barriers which so effectually barred the migration westward in the days of flatboats and Conestogas, and during the civil war, for four persistent years, afforded a covered way for the Confederates on the flanks of the Union armies. In fact, the whole mountain system, with its cohorts, phalanxes and ranges, looks for all the world like the map of a battle-field. Threading the devious passages of this maze, the aboriginal trail of the Indians led from the Chesapeake to Lake Erie. Later the stage route followed, and then the railroad; and today it appears on the wheelmen's charts as a most delectable bicycle route that can be selected for a century run. The landscape changes constantly. Some views are Alpine, others pastoral. Vistas constantly open. Forests and orchards alternate. The Delaware Water Gap and Kaaterskill Clove are duplicated over and over again. Coke ovens, cornfields, cattle ranges, ore dumps, narrow tramways leading to the mines, rifts and cañons, wagon roads following up the shrunken watercourses and dry beds of creeks, isolated railway stations, with here and there a negro cabin or a cabbage patch tucked away in a crack of the mountain, and sometimes the wreckage of an illicit distillery; rising fogs, fleecy clouds, a flurry of mist, cascades, rivulets running clear as crystal, with every pebble visible on the bottom and magnified there, are what we see from the windows of passing trains, and a very interesting kaleidoscope it is. Between Clifton Forge and Charleston, a distance of 150 miles, it is one continuous game country. Last November, just east of Millboro, I saw from the car window a small black bear scratching for acorns on a side hill. Early in the same month sixteen deer were started by five persons at Allegheny Station, and at Covington one young buck jumped the hotel fence, crossed the grounds and forded the Jackson's River, and was killed by druggist Ritsch. Dunlap's

Creek, three or four miles up, is a good place to find deer, and as for wild turkeys they are very abundant in the eastern part of West Virginia near Dowell. Brook trout are caught in considerable numbers in Falling Springs Creek, Anthony's Creek, Cherry River, the Quinnamont and various other branches, runs and creeks, as the smaller water courses are designated in these parts, all within easy reach of Covington by railroad or wagon; and black bass are abundant in Jackson's River and Dunlap's Creek on the edge of town, and in Greenbriar River just west of the main divide. These streams have been liberally stocked and are protected.

On the first of July the close time limit expired, and everyone in Covington went fishing, pretty much as they do on Long Island when the trout season opens. On that occasion it so happened that one of the guests at the hotel, who had a little attack of *Krankheit*, was unable to procure a doctor. Every physician in town had gone fishing! so that there is a proposition now to call close time on the craft, to prevent more than one being absent at once. By the way, isn't it phenomenal that there are so many anglers among the doctors? Look over Cassino's Naturalist's Directory and you will find a very large proportion of the names tabbed with an M. D. And what would FOREST AND STREAM do for contributors were it not for medicine men? Coues, Gill, Gordan, Bean, Merriam, Ellzey, Greenough, Henshall, Fottler, McChesney, Metcalf, and the host of army surgeons who have contributed to it from first to last? I suppose their success as fishermen is largely due to medicaments and occult arts; though I could never detect with my own eyes whether they used asafœteda or saliva on the bait. I happened to be out with a friend of one of them on opening day. A servant dropped us three miles up stream on Dunlap's Creek, and we were to wade down to the town. I tried it for a couple of hours, but the experience was more like a plunge bath than angling, as I caught nothing worth basketing. Hygienically, it is considered imprudent to remain immersed in cold water more than ten minutes. For my own part, I did not wade in above my waist; and my partner said that was the reason why I didn't catch any fish. When I left him, he was up to his armpits, making for a big rock from which to obtain a masterful cast. We were fishing with "mad toms" for bait; that is what the local fishermen call diminative bullheads. These and helgramites were the favorite baits, and very killing ones they are, as I have since discovered. My partner's catch that day was fifteen.

When I reached the Intermont I took a dry rub and a cup of coffee, than which there is no better this side of Delmonico's. By the way, several of the waiters there are graduates of Hampton, who served soup or fishes (*superficies?*) or solids, I am pleased to say, with mathematical accuracy. I may be permitted to mention this, *en passant*, by way of encouragement to the Hampton faculty.

Wading waist-deep or up to one's neck in a running stream, where the bottom is covered with slippery stones and obstructed with boulders, is no easy task, but this method seems to be the only successful one. The angler who expects to stand on the bank and fill his creel will save time by buying his fish in market. With several spare hooks stuck in his hat band, minnow pail filled with live bait and trailing from his waist by a string so as to keep the fish submerged and alive, and whatever fish he catches fast to another string, the angler goes into the deep water with the abandon and firm courage of a Baptist minister at an immersion. Hooking a "mad tom" by the lips, so as to allow it full freedom of movement, he picks his way out carefully over the stones and casts toward the middle of the stream. Then he waits. Sometimes he fishes the pools and anon the rapids. Both yield a fulsome reward, but the pools are the most prolific. Presently he feels a slight twitch on the line, which begins to run out slowly at first. The fish is not yet fast, but as soon as the line is taut and begins to run off rapidly it is time to check him. A slight jerk is sufficient to fasten the hook, and from this moment the bass fights and cavorts until he is lifted from the water. Your readers all know the play of a bass by this time, either from hearsay or experience. Put it on the string and drop it into the water, and it will continue to struggle as long as it has any life or strength left, and will often be found alive at the end of the day's outing. If the fish is extra large and pulls hard the best plan is to make for the shore and land it. Standing in the water trying to get a big fish off the hook on to the string may involve a ducking or the loss of the fish. These contingencies an old angler will seldom risk. A minnow usually does not survive the onslaught of a bass, but my friend claims to have taken four with one bait, and to have missed but one strike in capturing fifteen bass. This is a remarkable performance, and shows much judgment in letting him have the bait before maneuvering with him. When once firmly hooked a taut line should be kept on him, for he is apt to unfasten from a slack one.

Next to knowing how to play and land a fish, the thing most necessary is to be able to keep the hook from getting fast, for a lively minnow, especially a "mad tom," will make for under a rock every time it touches the bottom; in which case the hook may be accounted a dead loss, for pulling and jerking the line seldom dislodge it. If the water is sufficiently shallow, the angler may wade out to the trouble and release the bait, unless he should meanwhile slip into a deep hole and get drowned.

As a writer in the Baltimore *Home Journal* declares, the fisherman who can undergo all these hardships for a full day, and brave every risk, is entitled to a long night's rest and a sweet pipe at the farmhouse where he has left his store clothes and valise.

On the Greenbriar much comfortable fishing is done from boats with expert oarsmen, who drop down stream for any given distance, fishing all the way, and then haul back by rail or wagon. Portable boats of canvas would be just the equipment on these waters. I have heard of some strings of forty and fifty being made. Fort Spring or Alderson's, which are only a few miles apart on the Chesapeake & Ohio Railroad, are the best points to stop at. The hotels and boats are good, and the guides understand their business.

CHARLES HALLOCK.

COVINGTON, Va., July 10.

Game Laws in Brief.

THE *Game Laws in Brief*, new edition, now ready, June 27, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Admires Mr. Avis's Grit.

MOBILE, Ala.—*Editor Forest and Stream:* You will not find my name on your list of subscribers in your office, but every Saturday evening for the past two years I invariably make sure there is a dime in my pocketbook with which to purchase a copy of your paper while on my way home after business hours. I am not much of a marksman, nor am I a successful fisherman or very much of a yachtsman, but I like to try my hand at such pastimes and endeavor to interest my wife and boys in these pleasures and the contents of your paper.

I fancy I derive more enjoyment in reading the experience of others than from my own realization, especially such trips as Mr. W. H. Avis made up the St. John's River in Florida. I have often wished for the command of language and the ability to vividly describe human character, location, incidents and surrounding natural conditions, in order to give to others the impressions made upon my mind. Some years ago I spent six months living in a tent in Florida, with my youngest brother for my only companion. I have been over much of the ground Mr. Avis writes about, and a great deal besides. He gives everything true to life, without the slightest exaggeration. I can fully appreciate the amount of grit or nerve required to make one's first trip through a cypress swamp in search of a dog belonging to another fellow.

W. C. P.

Natural History.

TINAMOUS.

Editor Forest and Stream:

Mr. Frank M. Chapman's advice to "W. O. B." in regard to the introduction of tinamous into this country is worthy of indorsement. The tinamou as a game bird would hardly prosper where Bob White fails to keep up his family. Instead of introducing a species for which I have very little respect, why doesn't "W. O. B." go to work and help *Ortyx virginianus*, one of the best of his kind?

While on a specimen collecting trip to the Argentine Republic in 1886, I had excellent opportunities of testing the value of the two tinamous most frequently met with, so far as my experience goes, between Buenos Ayres and Bahia Blanca. And first let me give my opinion as to their table qualities. Contrary to Mr. Spears's opinion, our party found both species, especially the smaller one, decidedly dry and insipid. We tried them every way, but found them always the same. Compared with Bob White, they are as a steamed buffalo chip to a Delmonico beefsteak. We ate them—when we couldn't get anything else. They were certainly preferable to an *asado*—you couldn't chew the latter. The birds I refer to were called by the natives *Perdiz grande* and *Perdiz chico*. (Mr. Spears and Mr. Chapman will kindly correct my Spanish; nine years makes one's memory rusty.)

The large partridge (*Perdiz grande*), as I remember it, is about the size of a Dominick hen, but shaped something like a guinea fowl, which bird it resembles both in flight and running powers. I never shot any save at La Tigra and Curumulan, on the line of the Ferro-Carril del Sud. Having no dog, we hunted them on foot. The *modus operandi* was: As soon as we saw them running ahead of us, we sprinted up to where we had seen them and then looked out. Apparently they ran about 30yds. and then flew, always giving us quite long shots. What they might have done with a dog to pin them I can't say. Once we had found out how poor a table bird they were, we never bothered them.

My introduction to the little tinamou (*Perdiz chico*) also took place at La Tigra. Around the fonda and station they were to be found everywhere, but not in coveys. Except in one instance, I never saw more than two or at the most three together. Generally they were equally distributed, one here, another there, and so on; just like quail scattered after being flushed. Their actions at La Tigra and other spots where we met them south of Buenos Ayres always excited my sympathy. Walking along in the grass, a little dowdy bird would suddenly start from a bunch of grass and *run* off in front of one; it never ran very fast and sometimes chirped as it ran. To get a large bag or even a dozen of these birds required a good deal of lung power if one wanted to kill them on the wing. They had to be chased before rising, and I know we afforded the Guachos who hung around the fonda lots of amusement when they saw the "crazy Englishmen" chasing such small game. They laughed at us most because we did not pot them on the ground. At Curumulan, Casey's estancia, where we were most hospitably entertained by Mr. Shoebridge, the manager, I saw the birds' actions before a dog. They had there an old pointer, liver and white, with a body like a barrel, swarming with fleas, but good-natured withal. This old dog would trot off by himself when he felt like it; find a bird somewhere near the house; point it and stand staunch for quite a length of time; then rout it up and go on after another. There was no question as to whether the bird would lie to a dog.

As to the flight of both kinds, that is a point also on which I differ from Mr. Spears, and I imagine that he draws his conclusions from birds which he found away from civilization, where they had not been hunted much. At La Tigra, Curumulan and such places they certainly made short flights, but at Chascomus and in the vicinity of Buenos Ayres they were far wilder and flew like bullets (I am referring now solely to the smaller tinamou). I remember having a very nice day's sport only a few miles south of Buenos Ayres during the month of June, '86. We found the birds as usual in pairs or singly. They rose often 25 to 30yds. away and flew far and strongly, affording us really good sport. Of course it was all open shooting, nothing for the birds to get behind. I can liken it to nothing more than a "walking match" at targets with the targets thrown low and fast, the flight of the tinamous being very steady.

Mr. Spears talks about tinamous in a "flock." As stated above my experience during four consecutive months right out on the pampas was that they were not gregarious when full grown. Like our ruffed grouse, they no doubt form a covey until well able to look out for No. 1. The only time that I met with what looked like a covey was during my second day at La Tigra. We had spent the day preparing the skins of birds killed the previous afternoon. Toward evening I thought that a mess of tinamous would not be bad, as the beef was uneatable. Crossing the railroad track in front of the fonda, I went to a spot where I had seen quite a number of tinamous as we came in the night before. This particular place was a deserted miniature brickyard where the bricks for the fonda had been made, at least that is what I took it for, although it may have been the ruins of some more ancient fonda. The spot was overgrown with thistles (the big thistle of those parts), all trampled down and by no means easy walking, but it was full of the lesser tinamous. The first one got up under my feet and looked small enough as it went buzzing off over the pampas. At the report of my gun others rose and kept on rising as I fired and fired until my gun got too hot to hold. All this time I had not walked a dozen steps from where the first tinamous rose. The dead birds were hard to find and I fear I didn't recover more than two-thirds of those I dropped. Now, if that was a "flock" of tinamous it was a mighty big one, as at a modest estimate there must have been twenty-five or thirty birds in that patch of old thistles and bricks, a patch not more than 20yds. square. My idea was then, and is still, that the birds were there for feeding purposes, not for conversation and good fellowship. Mr. Chapman's experience with tinamous on this point would be of interest.

As for natives scaring them to death, as reported by Mr. Spears, I cannot speak; neither did I ever see one feign death. It would, however, be no particularly hard feat to pick them off with one of the long whips used down there, as they run off to one side out of the way of a wagon. So far as I saw they didn't scare worth a cent at a wagon nor at a man on horseback, nor for the matter of that not much at a man with a gun away from civilization.

My vote is, therefore, recorded as against any introduction of tinamous with a view to acclimatization and propagation. The success of such a scheme would be extremely doubtful, although there is no reason that I can see why they should not thrive in any portion of the United States south of the South Carolina line. The pine lands of Florida would suit them to a T. But where would be the advantage? Who wants anything better than a bunch of Bob Whites before a dog's nose? Look out for Bob White's interest, and save the game of this country so that there may be some sport for shooters fifty years hence. I don't suppose I'll be here then, but there'll be others who would like to do some shooting, unless the children yet unborn are very different from those that are now figuring upon their first gun.

EDWARD BANKS.

NEW YORK CITY, July 17.

DO ANIMALS PRACTICE HYPNOTISM?

AS REGARDS those acts of the lower animals which appear to imply a high degree of intelligent design—of adoption of exceptional means to special ends—it may still be regarded as an open question whether they proceed from a process of ratiocination similar to that which would influence a human being under the same circumstances, or whether they are prompted by instinctive impulses. My own view is that every creature has a narrow intellectual range, within which his mental processes are as acute and active as those of man's; but although the intellectual grasp of the lower animals covers only a very narrow range, their nervous constitution is so exactly similar to man's in kind, and their emotions of anger, fear, love, hate and their instinct of self-preservation so precisely the same as in man, that in all those cases in which a defenseless animal submits to his fate without an effort at escape, or even rushes into it as described by your correspondent "V." in your issue of July 6, the most common-sense method for interpretation of the phenomena is, I think, to look for parallel cases among men.

I do not believe in the power of any animal to fascinate its prey by its gaze—that is, in the sense of charming it—but the gaze of a ferocious creature upon its defenseless foe at close quarters serves to inspire terror, which is greater the more sudden and unexpected. A deer running through the jungle and coming suddenly within a few feet of a crouching tiger stands paralyzed; the heart's action ceases. A bird seated on its nest, too, and becoming suddenly aware of a snake poised to strike, undergoes a similar experience; the hopelessness of escape paralyzes the whole nervous system; a man, unarmed, in like circumstances would undergo a similar experience. At least there are numerous instances where the heart's action has been arrested by terror in the face of impending danger. There are even cases on record where such arrest of the heart's action has itself proved fatal.

Where the danger is imminent, although not so imminent and sudden as to preclude all possibility of escape, the nervous system, although not absolutely paralyzed, may be so deranged by the paramount influence of terror that the creature is apt to lose its presence of mind, and to forfeit its chance of escape. A deer suddenly confronted by a tiger a few yards off, and afraid to turn, will bark and try to back away while the terrible beast crawls within spring of him. The mainsprings of action are more complicated when maternal instincts counterbalance or rise superior to fear. In such cases any combative creature, however feeble, will be prompted to assail the foe, sometimes so boldly as to put him to flight, at others so hesitatingly as to insure its own fate.

The case of the squirrel described by V. is more or less abnormal; most squirrels after getting up a tree out of danger are level headed enough to keep out; but one instance similar to that described by V., came under my observation just forty years ago, in South Australia. A couple of collie dogs I had with me started a little animal resembling a red squirrel; the little fellow was near a big tree, and ran up its trunk about ten feet, when it turned and faced the barking dogs, came down a foot or two, sprang, and alighted on the back of the neck of one of the dogs, and held on to his ear with tooth and claw. The second dog made a good attempt to seize him, but the movements of the first dog were so vivacious and erratic that he did not succeed at the first or second attempt; V.'s squirrel too probably attempted a similar feat, but the more active cat succeeded in catching him as he sprang.

It would be rash to dogmatize as to the mental processes which prompt an animal thus to rush into danger which might possibly be escaped; but arguing from the known to the unknown, from what individual men have done in more or less parallel cases, I am inclined to conclude that the unreasoning creature, unduly excited and thrown off his mental balance by terror, is unable to endure the

suspense, and feels impelled to do something to put an end to it. Byron forcibly illustrates this frame of mind in the words:

"And some jumped overboard with fearful yell,
As eager to anticipate the grave."

In the case described by me the squirrel was out of danger, for the dogs could not follow him, but that was a fact of which he had no knowledge. CHAS. F. AMERY.

The Plume Bird Traffic.

ST. AUGUSTINE, Fla.—*Editor Forest and Stream:* In one of E. Hough's always interesting communications he mentions that Percy Stone met Billy Griggs, and that Billy told him he "had cleaned up about a thousand dollars on egrets this season; had cleaned out one or two roosts and was then on his way to another that he knew of."

Now all this may be very entertaining to the general reader, but sets the blood to boiling in the veins of those who know about this devilish business. No man who has a right to call himself a sportsman would engage in this plume hunting traffic even if he could "clean up" five thousand. The plume birds of Florida have been thoroughly cleaned up and professional bird butchers are scattered all through South America.

Let us look into this business of "shooting out a roost." A few years ago a well-known literary man was spending the winter in Florida, and as he was anxious to get a few plumes for his lady friends he watched a roost at night, and when the swarm of birds had all got in he would fire both barrels into the tree, and of course cover the ground with birds; but as it was impossible to find the very few plumed ones among the dead and dying, as it was dark and the cover thick, he would go home, indulge in innocent dreams and in the morning go the tree and from the scores of useless ones pick up probably from one to five and leave the rest to rot. This is the sort of work that the political fools who compose the Florida Legislature have allowed to be carried on for years and have not yet waked up to the importance of stopping. DIDYMUS.

[Billy Griggs's plume bird harvest was not credited to him as a sportsman. Griggs is a professional market-hunter, and kills plume birds just as he does ducks, for what there is in it.]

The Deer's Whistle.

OKONAGON, Wash.—*Editor Forest and Stream:* I should liked very much to have seen that herd of deer challenging, as described in FOREST AND STREAM of June 15.

When deer are tracking each other in running season and occasionally out of it, they make a kind of low bleating or blubbering noise; and just before coming together for fight they will open their mouths, run their tongues out and blow or whistle, and will sometimes keep it up during a fight. They often whistle when they smell a hunter and cannot locate him. They invariably move as soon as they whistle. Sometimes they will run back and forth a number of times, and will stop and whistle. This is done through the nostrils and is a different sound from the one made when in anger.

There is a notion among a good many that in the fall they rub the velvet off from their horns on brush or small trees. Yet this is not so; and I do not think any hunter has ever seen where a deer horned the brush, until about the time they separate in the fall. The skin covering comes from the horns when they get ripe, and will often be seen in strips six or eight inches long, and nature disposes of it the same as it does of the red hair in the fall. LEW. WILMOT.

A Capybara in Philadelphia.

A FINE specimen of the largest of rodents, the capybara, was on exhibition at the Zoölogical Garden yesterday. It is a very peculiar member of the rat family. It looks something like a prairie dog, only it is about the size of a small pig. One of its peculiar features is its feet. They are webbed like those of a duck, for the capybara is a water animal, at least an animal with great fondness for the water.

It occupies a cage in the elephant house and has a tank to bathe in as often as it pleases. It is not yet used to its quarters and crouches in the rear of the cage in a timid fashion, venturing out now and then to eat the vegetables which form its diet. Then it plunges into the mud-colored Schuylkill water that fills its tank and hides itself from view for some time. There was a capybara in the Zoo some months ago, but it died. It was much larger than this one, and like this was brought from South America.

This country furnished two nice specimens to the Garden last week. One was this capybara and the other an infant jaguar. It is a sleek, pretty looking beast, about a year old, and has a large appetite.—*Philadelphia Press.*

We are Promised a Horn.

LOUISIANA, July 10.—*Editor Forest and Stream:* Please accept my thanks for your thorough explosion of the duck egg fake. Your evidence is satisfactory.

I have been reading Mr. Hough's article on the horn snake; I killed one here two years ago; it was black, with red and brown checks about ¼in. square on its belly. The horn was about 2in. long, with a needle or sting in the end of it, which protruded on pressure. There have been several killed in this part of the country. I have requested some of my friends to bring me the horn if they killed one; and if I should have the luck to kill one I will send it whole to Mr. Hough to adorn FOREST AND STREAM'S natural history department. We don't believe here that it can "split a wagon tongue" or "kill a tree with its sting" either; but that the horn or sting is for defense, as are the fangs of other snakes. J. D. USHER, M.D.

Robins North and South.

MERIDIAN, Miss.—It is a pity some of those laws relating to the killing of robins could not be passed and enforced here. When we have a flight of them here they are slaughtered right and left. In my old New England home a boy would throw a stone at most any bird; but the robin, the first welcome visitor, or nearly the first, was held sacred. Yes, the whole family, children and all, would hasten to catch a glimpse of this sweet bird when the first note was heard from the neighboring fence. G. S.

Mink in New York City.

THE morning papers of Monday last announced with a flourish of trumpets the capture of a mink in an eel pot in the Harlem River, near the ferry below Queen's Bridge or about 210th street. The animal is said to have been caught by Thomas Brown, the ferry man. This is not unexampled, nor, we imagine, are minks very rare along the upper river shores. Within a year or two a man named Wagner, who keeps a fishing place on Flat Rock on the Hudson River, below Fort Washington Point, which is the old Jeffrey's Hook, captured one, and another was taken on the Hudson River at the foot of West 152d street. We have no doubt that mink are to be found occasionally in the Central Park.

Game Bag and Gun.

IN A MICHIGAN CAMP.

TO CAMP in the woods with what traps one can carry on his back is frequently attended with difficulties. But to live for weeks in large, roomy, heavy ducking tents is quite a different experience. The full measure of benefit derived from this mode of camping impresses itself on one during inclement weather. While the forest is bending to the blast and waves are lashing the shores of the lake, within the tents all is warmth and comfort.

In my boyhood days coon hunting was much in vogue, and many a night have I lain by the side of a log under a bit of bark for shelter, waiting for daylight, that I might see to shoot the coon.

But for a protracted outing give me three, four or five boon companions and such an outfit as is now stored away in my back room, viz., two 10oz. wall tents, a sheet iron stove, two stew-pots, two frying-pans, coffee-pot, buckets, table ware, axe, hand saw and small cross-cut for sawing tree trunks. Now add to this bread, crackers, butter, lard, potatoes, beans, bacon, salt, pepper, coffee, sugar, eggs, fruit, canned goods and any delicacies you choose, all securely packed, not forgetting gun box, and the trunks containing bedding and wearing apparel.

Follow this outfit as we take the train via Fort Wayne, Chicago, Milwaukee, Green Bay, Iron Mountain and pass Floodwood, Mich., to which place we are ticketed. Our conductor has orders from the superintendent's office, and in obedience thereto the engineer whistles down brakes and we slow up and come to a full stop four miles beyond the station, just where the work of Creator and the creature have united to form one of the most convenient and lovely camping spots imaginable. A beautiful little lake about a mile in length, surrounded by wooded hills, is just touched at its western edge by the railroad grade. Some person apt in speech named it Witch Lake. Truly, it had bewitched us, for we have come 525 miles to camp on its shores and drink of its waters.

Now the train has sped on, and here we are with our trunks and boxes, a dozen or more, containing everything we shall need for a three weeks' outing except what we knew we would find in plenty, viz., pure cool water, game, fowl and fish, and a pine-laden atmosphere; for are they not in abundance in the lake and the forest about us?

We have timed ourselves so as to reach here in the morning, and while we have the entire day before us a feeling possesses us as though thirty years had by one magic stroke been lifted from our shoulders; and a lonely tramp, passing from station to station, saw six coats dangling from bushes and six joyous, light-hearted men lugging baggage, cleaning away briers and erecting tents, as though in a race against time. A circular ridge, covered with a forest of pine, hemlock, live birch and sugar, forms a cove, the natural opening of which is closed at the edge of the lake by the railroad grade, which here is a fill some 10ft. high. This charming spot furnishes us not only shelter from the wind, but wood and water at our very door. Through the kindness of the railroad management only could we reach this spot, for there are no wagon roads nearer than two miles, and our baggage weighs nearly 2,000lbs.

So by noon six men, who thirty hours before were "chained to business" in their stores and offices over 500 miles distant, are partaking of a substantial meal spread on a newly made pine board table, while around the tent wall boxes containing a store of provisions occupy convenient positions. The two 12×16 tents have been erected end to end, and an opening made between, then the uprights lashed together. The front tent contains the stove, placed on a mound of earth inclosed by boulders or logs, and in a rear corner, so some warmth may penetrate the rear tent. There are also some rocks near the rear tent for hanging cooking utensils; likewise cupboard for the tableware, etc., made from boxes. The table and camp stools complete the outfit and leave plenty of room for the cook. In the rear tent may be seen three wide beds, made inside a frame of small logs, which are staked to the ground. These beds consist of hemlock boughs to the depth of a foot or so, upon which are spread from five to eight blankets or comforters, the most desirable place being usually found just under the third cover, for this is the first of October, and in the Lake Superior region the nights are quite cool in a canvas tent. The remainder of the rear tent contains the individual trunks, and is used as a dressing-room.

Dinner over, the volunteer cook for the day arranges the kitchenware, two others fall to with saw and ax, laying in a supply of wood, while the remainder of the party overhaul guns and fishing tackle.

Sign in the immediate vicinity assures us we have not far to go to find deer; and the big brown rabbit I shot with my revolver while lugging the first box off the railroad was very good evidence that we could find small game close at hand. So when the evening train sped by and the train men waved us a friendly salute, we cheered in chorus, while our self-constituted culinary god beat a tattoo on the dish basin. After some social games and arrangements for the morrow, we betook ourselves to our hemlock couches, and what a soft springy bed. Have you ever slept on such a bed in such a climate under like conditions? If not, you can't possibly account for a freak of old Morpheus which carried me, gun in hand, into the dense forest, where gliding between hills I surprised a doe feeding behind a log, and as she looked up blew the top of her head off with a snap shot, the said doe with one mighty bound over the log landing at my feet.

But that old Morpheus knew his business the occurrence of the day following is in evidence. I was brought back from my nocturnal outing and at the same time awakened from a refreshing sleep by the crowing of a chanticleer, and glancing through the tent door saw old Reuben cutting off a shindy and making the welkin ring with such lively cock-a-doodle-doos as would have ruffled the feathers of the tamest barnyard boss had one been in hearing. Ere the last gray streaks of dawn had left the horizon, we had breakfasted, and to Reuben's question, "What shall I cook for dinner?" the answer came, "Beans," which brought from the veteran George the camp song: "Beans for breakfast, beans for dinner, beans for supper—beans—beans—beans," sung to the tune Martin.

But it must not be supposed that George was throwing all of his energy into that vocal effort, for at the same time he was filling his cartridge belt, and as he slung his rifle onto his shoulder and departed up the railroad he gave us the encouraging information that he knew where there was a very comfortable seat in a leaning tree about a mile away, and judging from what he saw there two years before he thought there would be a deer along that way during the day.

As for Sam he wanted very much to kill a deer. Nat and Charley thought they knew where there were some hungry fish, and providing themselves with a lunch, gathered up their fishing tackle (incidentally taking their guns to keep vicious animals at bay) and started for a lake about a mile distant, reached by an old lumber supply road. There were plenty of fish such as trout, lawyer and perch in White Lake, but a ramble through the forest was essential to their complete happiness the first morning in camp.

Leaving Reuben in charge of the camp I climbed the wooded hill in our rear and was soon alone in the forest. Not alone either, for in my hands was a .38 Winchester, in my belt hunting knife, tomahawk and a supply of cartridges, and distributed about my clothing might be found a reliable revolver, a drinking cup, matches, compass and timepiece. No hunter could feel lonely when thus provided for any emergency, and as I glided along the ridge that skirted a beautiful lake three-fourths of a mile in length I thought myself one of the happiest mortals on earth. The poet who penned the line "I wish I were a boy again" expressed a vain wish; but the fulness of the thought comes near a realization to the sportsman when situated just as I was at that hour, wending my way over hill and through hollow. I here note sign where deer have passed along this path, or there nipped the tips of the soft raspberry bushes; grouse, that have been feeding from buds and bits of pine cone dropped to earth by the frisky pine squirrels, strut away and are lost to view in the bushes, or take wing as I approach; and the saucy pineys, how they do chatter and whistle, and race up and down trees and over logs, and sometimes startle me as they rustle the leaves just over the hill; it sounds so much like a deer coming my way. Once while standing on a log motionless, as a deer hunter must, one of those saucy little fellows came skipping along, and, taking me for a stump no doubt, ran up my leg, then nearly to my shoulder, and stopped to gaze in my face a second before becoming convinced of his mistake. How he did skedaddle when he found the thing was alive. Birds also come twittering around me, and as I turned my head to see what had become of one, I found it sitting on my gun barrel near my shoulder.

Presently, as I step foot by foot along a well-beaten trail, I catch a glimpse of some object in a hazel thicket. Rigid as a stone pillar I now stand, gun at my waist and cocked. There! something is moving, but I cannot make out what it is. See! it is coming toward me, gliding through the brush—one, two, yes, three deer in single file and not 75yds. away. Steady now, let them come. No "buck ague" here. Now the doe is out in the open, and following the trail turns her right shoulder toward me. Up comes my rifle, and as it reaches my face the forest reverberates with its report and the doe totters and falls headlong. Pumping the lever, I send a parting shot at the other deer, which have turned tail and dashed off through the thicket. I followed the fleeing deer only far enough to ascertain that I had not wounded one, then hung the doe, satisfied with sufficient camp meat and the knowledge that Morpheus had been vindicated. Crossing over to where Nat and Charley were feeding the fish, I found them partially prepared for the news, as they had heard the report of my gun. The prospect of bean soup instead of cold lunch, with a supper in which venison would figure as the chief course, overcame Nat's and Charley's sympathy for the poor fish, and they readily consented to go with me and assist in carrying the doe to camp. We made a litter with poles and lin bark, and lashing the carcass on to this, two men made very good headway with it while the third man carried the guns. So after much scrambling over logs and through brush, we reached camp in time to join our comrades at the dinner table. G. W. CUNNINGHAM.

INDIANA.

Running Down Flappers.

ORION, Ill., July 16.—*Editor Forest and Stream:* The Sidney (Neb.) *Telegraph* reports that "the boys are enjoying themselves running down young wild geese on the river. They are nearly full grown, but not able to fly." Is it at all probable that this statement is true? or do geese not nest on the Platte River? Also, is there not a law protecting young geese? O. B. JOHNSON.

[There is no reason to doubt the statement. The *Game Laws in Brief* says that there is no close season on wild geese in Nebraska. Might it not be an excellent scheme to direct against the Indians of the Platte some of the surplus of the indignation which has been misdirected in the Alaska Indian duck egg fake?]

Well, the Time is Coming.

MILTON, W. Va.—I hope I will see the time when FOREST AND STREAM'S platform plank, "Forbid the sale of game at all seasons," will be a law in full force in every State. If it is not made a law in a very few years we will not have any game at all. Just as the hide-hunter killed the buffalo, so are the market-hunters killing all of our game. Make FOREST AND STREAM'S platform plank a law, and all will be well.

In issue of July 6, "Von W." on spring shooting voices my sentiments exactly. All honor to the FOREST AND STREAM for exposing that duck egg fake and showing up game law violations. B. W.

ADIRONDACK NOTES.

Editor Forest and Stream:

Three deer have wandered about the clearings here for some time. One is an old doe, the others spotted fawns. When Freddie Spoll was driving his father's milk wagon one morning last week he saw them in Miller's oats. They were not greatly alarmed by his wagons jangling over the rocks, but stood with heads erect and worked their ears in a doubtful sort of way as they eyed the cans and wagon. They went over into Johnny Jones's woods and slept comfortably that day. At night they wandered on and away.

Down on the flats behind the house in which I am writing, about a third of a mile away, a deer crossed the creek a while ago. A dog was after him, but he was not too scared to stop and gaze upon the men who were working the roads. He was a pretty sight, they tell me. Horns with big nubs on their ends, being soft yet, wide open eyes and long, graceful limbs that quivered to shake the flies away. The little white tail bobbed up and down as the deer ran down through the lots to plunge into the still water. He crossed the creek and disappeared. The men stopped the dog.

We will kill a few deer here this fall. Up the creek are a lot of runways, and a dog started over near Little Black Creek will send the deer that way. We always get some—enough for six or eight messes during the fall. We would get more if the dogs were kept tied up now, and some of the men too. As a whole the woodsmen would kill a deer if they got a chance, but they do not approve of those who hunt all the time, or fish, nor do they do it themselves, excepting one or two who hunt and fish or trap the year around. It is these men who bring down on honest woodsmen the name "poacher" or "lout." They are hated outcasts who seine the cold beds and kill the mother partridges and deer in June.

I am told that five men were arrested at Mill Creek Lake on July 7. They were floating for deer and a game protector lay in wait three nights and at last caught them in the act. It is well. There is not a man who kills game illegally in this region but shakes in his boots.

"Yew can't tell 'most allus. Them pertectors is liable tew be sneakin' on tew ye 'most any time. I hain't a-goin' tew dew nothin' no more, long ez thar's a chance on gittin' intew sech a fix," is the way they put it.

It don't take more than two or three determined prosecutions to bring down the score of illegal game killed. There are woodsmen who fear neither man nor law, and these would kill anyhow, but it shuts off the sneaking trap stealers and trout seiners. An easy-going detective would learn a good deal about matters of summer and winter killing. I have heard it declared that a detective would get shot if he went around cold beds on certain nights when seines were being drawn. He wouldn't, though. The seiners are too cowardly. A boy here was losing traps off his line once. He watched one day and saw a trap taken up. The boy went down the bank with his gun cocked and talked to the thief. He never lost but one trap after that, though it was four years ago.

There is no fishing here now, but along about the last of August a few may be caught. The best time is in the spring, and then they haul them out on flies by the dozens—milk-pans full.

The natives do not fish much in the late summer, preferring to hunt deer, although some fine messes might be taken.

I was up to Moose River last week, staying at The Plains. I got what fish five men required, using flies on the cold beds and in the deep water, just above the natural dam of rocks, cut up chubs were best. I saw a number of deer and among them the largest doe I ever saw. She was long and lean. I wish her fawn or fawns had been with her.

A man who knows the Moose River region as well as anybody, probably better, said that the deer were as plenty at The Plains as they were ten years ago. Very likely there are as many, for the persistent hounding about the clearings and the hunting in the adjacent region have tended to drive them back to the deeper woods.

When I came by, two loons out on Canachagala Lake were having an interesting confab. Male and female I guess they were. One, the larger, would stand on the water erect and flap his wings, then he would settle back again and "holler." He would fly along a rod or so, splashing the water and flapping his wings, then again he would yell. The other one sat sedately on the water answering now and then and swimming at times toward the displayer. The last I saw of them they were swimming along side by side out near Watcher's Island.

The Holland Patent camp, so called, near the new outlet of Lake Canachagala, has been burned "by order of the Adirondack League," as the men who set it afire informed an inquirer. It used to be a favorite stopping place for hunters on their way to the river, but now the parties will push right through and get there the same day, instead of taking two days, as they formerly did. A day gained, and so much more will the deer suffer.

I never had such an utter feeling of lonesomeness as while rowing down the still water at The Plains. It was nearly dark. From down the valley a violent thunderstorm was coming. The rain drops pattered here and there on the water and sent out widening circles on the smooth surface. On my right dark woods overhung the river; to my left was a stretch of land covered with low ferns and marked with tall, gray pines stripped of their bark and jutting forth long, dead limbs. After a bit a start of wind ruffled the water, and the sough of wind-tossed branches made me shiver. It seemed to take a good while coming down that short stretch from the Pine Tree runway to the upper cold bed. The chuck-chuck of water against the bow of the boat was not a cheerful sound.

I walked up the path and saw the gleam of fire on the trees. A moment later I saw a 6ft. blaze spring out of a pile of green birch logs. It died away, then again leaped up. Back on the evergreen-tree boughs were stretched my companions, smoking, talking. 'Twas a cheerful sight. The rain pattered down on the bark roof, but did not sound so saddening. The sighs of trees no longer sent chills down my back. After a little I felt better, but even now to think of that mile and a half ride makes me shaky. I guess I must have been badly scared, or something.

I do not wonder that men have so much to say about the camp fires. I could write a week about them, I guess—the one up on Little Black Creek, six years ago, that ate down under a peeled hemlock back log and spread through a hemlock chopping (the first camp fire I ever saw). Then the one the night after I killed my first deer. Every stick they put on the fire, every spark and shoot of flame I seem to see yet. I was fourteen then. Then the ones that were wet and would not burn and those that burned too much and drove us to the open air, and the night we had visitors and the stories they told. One likes to think about them, to remember their savor, and feel again their warmth.

Three nights at Moose River it was cold, and when we stirred up the fire the warmth that came back into the lean-to was most welcome. The fog rose in dense clouds from the river, and it was hours before the sun next morning dispersed them.

I hated to leave the woods even though I live on their outskirts—the big woods are less than a mile away, but I would rather have them all around than on just one side.

I expect to hear from the bears any day now. The berries are beginning to ripen and back in the woods bear signs are plenty. The trappers are beginning to oil their traps.

RAYMOND S. SPEARS.

NORTHWOOD, N. Y., July 19.

THE SQUIRREL HUNT.—II.

PRESTON, Conn.—*Editor Forest and Stream:* The morning dawned clear and cool, a perfect day for the squirrel hunt, and after an impromptu race down the old road to quicken the congealed blood in our chilled anatomies, Morris and I returned to the hotel and found George busily engaged with a bag of Wheeler's apples, discovered while on a tour of inspection through the old barn. This windfall partially appeased the interior cravings of nature, so we girded up our loins and sallied forth. There were no signs of life about the house as yet, so Morris, assuring us there would be a substantial breakfast awaiting us on our return, proposed a short trip through the chestnut grove across the road. We ranged through the grove and returned, the trip netting us three grays, whose capture was not wholly due to the prowess of the bipeds of the party, for Keno, spying a big fellow on the ground, stretched his old legs in the race, and grabbed him just as he gained the trunk of an old oak. One shake, a sickening crunch of bones, and it was all over with poor bunny.

As we came out of the grove I had a beautiful snap shot at a ruffed grouse as he came whizzing from the swamp, and as beautifully missed him.

Reaching the house, we found Wheeler at his chores, and meekly listened to a robust lecture on (as he put it) the cussed foolishness of roosting in the barn like chickens, when good warm beds were free in the house—a lecture which perhaps was not wholly unmerited.

After a refreshing wash at the old wooden sink, we filed in to the well-laden table, and lost no time about it either, as after our twelve hours' fast (barring the apples and nuts) we were nearly famished. We immediately attacked the fried potatoes, ham and hot corn griddles, and as we sipped the hot coffee we listened to a somewhat revised edition of her husband's open-air lectures from the good lady of the house.

At last with a general sigh of satisfaction we laid down the implements of war and cried enough. We were full to repletion, and the table looked as if swept by a cyclone.

Well, breakfast over, the party, including of course Wheeler and his dogship, made ready for the hunt. We carried the climbers and a coil of fuse, used by Wheeler for blasting rocks.

Entering the grove, the scene of the morning's hunt, the deep tones of Keno, mingled with the shriller yelps of Shep, were soon heard in advance. We found the dogs at the foot of a lordly old chestnut, and a likely looking hole some 25ft. from the ground denoted the hiding place of the game. On went the climbers and up went Morris. The scolding and complaining from the interior indicated the presence of a whole family.

Comfortably seating himself astride a projecting stub, Morris dropped in a lighted fuse. A moment of suspense, a lively commotion in the interior of the tree and Morris yelled "Look out below there!" and out scrambled a bewildered looking squirrel, followed by a cloud of yellow smoke. As he paused a moment, as though to get his bearings, he afforded a good shot, and Wheeler blazed away lively, with no other results than to chip off the bark in rather uncomfortable proximity to Morris's head. As he whipped around the tree I gave him my compliments, with no damage but the loss of part of his bushy tail, but at the report of George's gun the squirrel came to the ground with a thump.

"Look out there below again!" called Morris from aloft, and out popped another smoke-grimed squirrel. Down the tree he came along the fence, and down the hill like a rocket, myself, Keno and Shep in pursuit, the dogs yelping like mad. The chase soon became too warm for him, and he took refuge in a convenient hole in the earth.

In my absence, the third squirrel had left the hole and was dodging about in the tree tops, George and Wheeler keeping pace below. I soon caught sight of his gray coat 'midst the leaves, and brought him down with a charge of No. 6s. This proved to be the last one in that burrow, and Morris came down.

The hunt was now directed to the west, where at the extreme outer edge of the grove lay a little ravine, lined on either side by lordly oaks. This ravine was a favorite spot of Wheeler's, where, as he averred, one had only to open the game bag and scoop the squirrels in with the gun barrel.

Well, we arrived at the ideal spot in due time, taking positions according to Wheeler's directions. Morris mounted a huge oak with a splendid looking hole fifty feet up, and we awaited results. A huge limb grew from this tree and ran clear across the gully against an immense oak on the opposite side, with a corresponding hole at the top. Well, Morris began the fuse act, and what fun we did have knocking them off that limb as they scuttled across to the opposite hole. The first one to make the attempt escaped scot-free, which fact was not due to any good intention of mine, but I must be truthful if (as the vulgar saying goes) it takes a leg. As he skipped across, Wheeler shouted "Nail him," and accordingly I threw my gun to my shoulder and pulled the trigger. The squirrel kept on and the gun spoke not. Shifting my finger to the opposite trigger, the same results followed, and the squirrel popped into the hole with a chuckle of satisfaction. Much chagrined I lowered the gun for inspection. I had forgotten to raise the hammers, which discovery was followed of course by an audible smile.

We now followed a rambling course across country to the Shetucket River—the large groves bordering the banks of that beautiful stream affording plenty of nuts and good quarters for the rodents. The walk of two miles was a very enjoyable one, now stopping to chat and rest in some pleasant nook, or, in response to a call of the busy dogs, leaving the trail to bag one of the gray-coated tribe as he threaded the branches above.

We in due season reached the stream and started west. Ranging along in its immediate vicinity in the first grove, Morris by two splendid snap shots knocked a large squirrel from the opposite sides of a walnut as they started for the top. We kept adding squirrel after squirrel to our bags, the capture of each being accompanied by the usual excitement, the yelping of the dogs, the hustling around under the trees, the usual chorus of "There he is, look out for him! he's on your side etc!" then the ringing report, then the tell-tale thud on the leaves.

Possibly squirrel shooting may not compare with the higher branches of the art, such as hunting the lordly moose or bounding deer, or bagging the whirring quail or metor-winged grouse, but with an ideal day, good companions and abundance of game, it is a sport not to be despised.

A laughable incident occurred in a belt of young timber. While passing an old decayed stub of perhaps ten feet in height, I threw my weight against it and over it went. As it struck the ground with a crash, a large owl emerged from the ruins and slowly winged its way up the hillside, passing so close to George's face as to nearly knock that astonished individual off his feet. In fact, we were all so startled that we stood like a lot of dunces and watched him out of sight, and then turned on one another with the natural inquiry, "Why didn't you shoot him?"

We soon passed a small clump of large oaks overhanging the river. Wheeler made the remark, "Those trees look mighty gamy." "Yes," replied Morris, "strange the dogs did not put up a squirrel there." We had passed well by them when Wheeler chanced to turn his head. "Great thunder, look a-there!" he cried, and wheeling about we saw two of the cunning rascals on a dead run for the largest of the group. Away we rushed to head them off from any possible hole that might exist in the old oak. Three of us arrived at the tree a close second to the squirrels. Looking back, we saw George hopelessly entangled in a mat of grapevines which had caught him in his wild rush, and there he hung, kicking and talking.

Helping George out of his difficulty, we camped under the tree. The only opening was at the end of a large limb, broken off 6ft. from the trunk and located 20ft. from the ground. Straddling this stub, Wheeler lay at length upon his stomach, and dropped a fuse into the hole, which ran directly back to the tree. A moment of waiting, then out scrambled an immense buck squirrel. Seeing no alternative but to jump into the river or over Wheeler, he chose the latter course, and with a mighty bound landed square on top of Wheeler's head. "Oh! let go," yelled Wheeler, as the sharp claws entered his scalp; and forgetful of his position made a wild grab at the squirrel, and in consequence nearly fell off the limb. His career was short, for as he bounded up the tree Morris's gun spoke, and he dropped. The second one tried the same game, but Wheeler dodged, and I soon disposed of him.

As Wheeler started to descend he in some way slipped, whirled under the limb, and there he hung, his back to the earth, with his legs and arms locked around the stub.

Never will I forget that picture as he hung squirming and twisting to regain his seat. We offered him plenty of advice as to how to gain the top of the limb, when in exasperation he shouted, "Oh, if I could only turn the limb over I would be on top anyhow."

At length, by some hitherto unthought-of contortion, he regained his seat and reached the ground completely exhausted, and now the lengthening shadows warned us of approaching darkness. We started direct for Wheeler's farm, where we arrived in good time, incidentally picking off a few squirrels along the route. The good wife had a bountiful supper awaiting us, to which we did ample justice, and then drove homeward in the twilight with twenty-eight squirrels in the wagon, and if there is anyone to say that we did not pass an enjoyable day I am calmly waiting for them to prove the assertion.

E. M. BROWN.

Louisiana Quail, Ducks, Wildcats, Coons, Deer.

OPELOUSAS, La., July 14.—I don't know what the prospects for a good crop of birds are, as I have not been around enough to find out. But I am afraid, though, that the rainy summer has destroyed lots of young birds as well as nests. Even as I write I can hear the old cock birds whistling their "Bob White" a short distance from the house. At this season of the year, as you know, it is a common thing to see the old birds in the roads every morning and evening, dusting themselves; and they are so gentle that they will let you drive within a few feet of them without their getting frightened.

I would not be at all surprised if we did not have as good duck shooting this coming season as we had last, for the rice-planting industry has been revived among the farmers, and after the crop is harvested in the fall the fields will be a great resort for mallards, which seem to favor the shattered rice over all other foods. Winter before last the rice fields were alive with mallards, and it was an easy matter to bag them. They would alight in a lot of grass and weeds, and all one had to do was to move a little cautiously in a stooping position, and he could walk them up like snipe. Last year there was very little rice planted, and the consequence was that there were few ducks in the winter.

The favorite sport out here in the country now seems to be wildcat hunting with hounds, and that truly Southern nocturnal sport (?) known as "coon hunting." The thickets hereabouts seem to produce an inexhaustible supply of the species of the feline tribe above referred to, and some of my country friends manage to have a little sport once in a while.

Not long ago a negro from the western portion of the parish captured and brought to town a pair of young cats of the stump-tail species. They are in a large wire cage, and are on exhibition at Dr. J. E. Shute's drugstore,

They are a little larger now than the common house cat, and are very gentle. They can be handled like their more domestic relative.

Reports from the swamp section of the parish say that deer are scarce this summer. This is no doubt a good sign that the deer are being rapidly done away with. They are hunted from one year's end to another, and no attention is paid to the protecting (?) law. They would have all been killed long ago except for the great protection afforded them in the vast forest known as the Atchafalaya swamp. T. A. JACKSON.

VERMONT DEER.

FERRISBURGH, Vt.—*Editor Forest and Stream:* It was by just wanton butchery, as is described by Mr. Spear, that the deer were exterminated in Vermont sixty or seventy years ago; and it was done without even the pretext of supplying lumber camps with poor meat. I can never forget how in my boyhood my blood ran hot and cold with wrath and horror at an old man's relation of his brief participation in such slaughter. The deer were driven out of their yards, and then, almost helpless in the deep snow and sharp crust, were knocked in the head with clubs and left where they fell to rot or feed the wolves and foxes, for they were not even worth skinning. The sight of one such ruthless murder was enough for my informant, and he went home sick with disgust. This cruel work went on till, excepting in the uninhabited northwestern part of the State, where they had no worse enemies than the panther and the wolf, the deer were practically exterminated, though throughout the range of the Green Mountains thousands and thousands of acres of woodlands still afford them a home.

At first thought it is hard to believe that men of our own race, and of a generation so near us, could be capable of such savagery, or their kinder fellows capable of committing it. But we have only to look about us to see it in some degree still going on, and only to examine ourselves to discover the same apathy that existed then. Laws for the protection of fish and game are violated by men of high and low degree; and under cover of these laws men shoot at and fish for count and the shameful record is published in the newspapers without a word of condemnation, but rather as something worthy of admiration.

More disheartening is the fact that a plain statement in a sportsman's journal of the illegal and wanton killing of deer is met by attempts to ridicule and discredit it. If "Dick" was acquainted with the conditions that exist in the northern forests during the latter part of winter, when the deep snows and hard crust make it difficult for the deer to move outside of their yards and easy for men to make rapid headway on snowshoes, he would not have tried to be funny at Mr. Spears's expense, wherein he succeeds in showing only his own ignorance. AWAHSOOSE.

The Rutland *Herald* of July 17 tells this story of a deer's unfortunate invasion of that city: It is not every day that, in a city of 15,000 inhabitants, a crowd of men and boys have the sport, if it may be termed sport, of chasing and capturing alive a full-grown buck deer fresh from the mountains. Yet, strange as it may seem, such an animal was taken in H. W. Wilcox's garden on South Main street shortly after 1 o'clock yesterday afternoon.

It happened in this wise: About 1 o'clock, when South Main street was filled with men going to the Scale works, a workman at the Chase Toy works happened to see through the window a full-grown deer running through the lots at break-neck speed in the direction of Main street. The animal was evidently insane with fright, as he rushed through the fields, gracefully leaping barb-wire and board fences with ease, and rushing frantically through the Bates farmyard and market gardens and around about the outbuildings of the houses in that vicinity.

Hardly had the man at the toy works observed the deer and raised the cry of "Deer!" deer!" before the animal was seen by a score of people in the neighborhood, who one and all joined in a hot chase. Large and small, fat and lean, engaged in the run. In fact it was a free-for-all as hotly contested as many a track event. A man named John Barrett and a fellow workman were the first to catch up with the prize, who, evidently greatly fatigued by a long run and bewildered by his unusual surroundings, was soon overtaken and thrown down. Hardly was he cornered before he showed fight, and forming himself into a hollow square let his feet fly in all directions. Inside of two seconds Barrett had received a disabling blow in the stomach and was completely covered with black mud, while his companion had come off but little better. Before either man could recover from his surprise the buck was on his feet and away.

In H. W. Wilcox's garden the now thoroughly tired animal got mixed up in a muck hole, a corn patch and a barb-wire fence, and before he could extract himself from his position and gain the main highway he was pounced upon by three young men by the names of Fish, Shortsleeves and Ellis. But they had no easy time holding their captive, who kicked, bucked and bleated, and made every endeavor to gain his freedom. It is doubtful if he would have been taken at all had his antlers not been in the velvet, and broken and shivered at that.

After the buck had been strapped down he was taken to a box stall in Lester Fish's barn and released. Shortly afterward the news of the capture was sent to F. H. Chapman, president of the Rutland Fish and Game Club, and other local sportsmen.

About 3 o'clock Mr. Chapman, City Judge J. A. Merrill, S. E. Burnham and a *Herald* reporter went to the Fish farm to see the animal. After carefully inspecting the buck, President Chapman advised the men to keep the deer until it had fully recovered from its fright and chase and then release it. After supper last evening Mr. Fish informed Mr. Chapman that the deer was acting in a peculiar manner and he was afraid it was going to die. In company with Mr. Fish, Mr. Chapman and S. E. Burnham went to the barn, where the animal was found stretched out dead. A careful examination disclosed the fact that the buck had been torn somewhat by barb wire fences and that the left antler had been torn for about 6in. from the base upward. No bullet holes were found on the body or any evidences that the animal had been shot at. It is not known what caused death, but it is surmised that the buck died from fright.

Where he came from is a mystery. Mr. Chapman thinks that his appearance in the city might have been the result of "hounding," but of this he is not certain. A small boy who lives in the vicinity of the fair grounds says that he saw a deer in Dyer's woods yesterday morning. If this is so it is probable that the two are identical. Mr. Fish will skin the animal this morning, when it will be easily discovered whether or not he has sustained internal injuries, and if so of what character. He will then be disposed of according to law.

Local sportsmen are especially interested in the capture of the buck owing to the fact that at a time some years ago when the animals were almost extinct in the State they imported a dozen from New York and turned them loose on the mountains about here. These animals were procured by S. E. Burnham, A. W. Higgins, the late Martin Evarts and others at a considerable expense, and have now multiplied until they are said to be fully as plentiful as in the Adirondacks, from whence their progenitors came.

THE WOODCOCK SUPPLY.

WHAT has become of our woodcock is a question not very difficult to answer, when we consider the hundreds, yea, perhaps thousands, of miles those game birds travel both during the spring and fall migrations, shot and shelled the whole distance. These birds in their passage to the south to winter are hunted and killed as flight birds, which is perfectly legitimate. But the hunting and killing of the woodcock in his flight to the north to his breeding grounds is a crime not to be forgiven.

Your correspondent in your issue of June 29th writes that unless prompt measures are taken to save the woodcock from extermination, this beautiful and wily game bird is doomed to follow the wild turkey here in Canada on the path of extinction. As far as Canada is concerned it is my opinion that she has very little to do with the scarcity of the woodcock. In this locality (where I have seen more woodcock in one day than I ever saw in a month anywhere else in Ontario) with a few exceptions the same covers stand just as they did ten, fifteen and twenty years ago—covers I am sorry to say devoid of a single brace of these great game birds, except late in the fall, when a few flight birds drop into them for a day or two's rest on their journey south. It is hard to credit it now, but it is nevertheless a fact that not further back than 1885 I have raised in one afternoon in these coverts fifty woodcock, and that with very indifferent spaniels, no such dogs as I hunt with at the present.

In Ontario follow the Nottawasaga River from its outlet into the Nottawasaga Bay, south through North and South Simcoe, and we have 100 miles of the best woodcock ground in Canada, ground that used to teem with woodcock. This ground is black with soft loam to an endless depth, spread over with decaying vegetation and filled with an abundance of worms, and shaded by covers of briars, underbrush and small shrubs, with wild grapes and other clinging vines dispersed through it. This was the great breeding ground of the woodcock in North Ontario, and at the present time I am convinced that not a dozen brace hatch their young out in a season in this great extent of ground. Last fall, in the months of October and November, the woodcock were more numerous with us than they have been for many a year, all flight birds. Other seasons, by the 1st of November, all our woodcock had left for the South; last fall being so fine and warm these birds prolonged their stay.

A woodcock is a very easy bird to hit if you can get him in the open, but this is generally what you cannot do. However, on the 2d of November last I got a snap on a woodcock (a thing that I never got before in my thirty years' experience of hunting these birds). I was out on the afternoon of that day when I came on an old woodcock ground that had been chopped down some three years ago, and let grow up again with swamp willow and poplar to about 3 or 4ft. This low cover was very thick and close, there being about five or six acres of it. The spaniels, on working through this covert, raised ten large fine fat birds, nine of which I killed without a miss; the tenth bird, when I first started in, flew over to and lit in some high grass alongside of a rail fence. I left him for the last, but when I went after him he was nowhere to be found. These birds had nearly a quarter of an inch of fat on them, and were the largest lot of woodcock I have seen. A friend to whom I sent two wrote me that he thought they were as large as the English bird.

How far north the woodcock is found in Canada, or what his range may be, I am unable to say. I have shot a few birds in the northern townships of North Simcoe, that being the next county to Muskoka. I never shot a woodcock in Muskoka, nor have I ever heard of one being killed in that district.

In the spring of the year I have flushed woodcock and snipe together, but never in the fall. The snipe, I fancy for warmth and protection from the storm and cold, take shelter at that season among the swamp willows and poplars.

To the young sportsman who wishes to become a proficient woodcock shot, I would say, fire at every bird that gets up, if you get the slightest glimpse of him; fire when you think or feel he has gone. Do as the Irishman said he played the fiddle, neither by sound nor by note, but by main strength. Just so must you make many a shot at this game, taking all the chances of probable, possible and very doubtful shots.

Years ago, when the woodcock were plentiful with us, the season opened on the 1st of July. Then these birds were to be found in small clusters or families, generally composed of about four—mother and father and two young. How this came I do not know, as all the nests I have discovered in every instance held four eggs, leaving two young, or two eggs not accounted for.

About the first week in August these birds commenced to disappear, leaving behind just an odd on or two, and reappearing again in numbers about the latter end of September. Where the woodcock go to during the moulting season is, I know, a thrashed out question, but it will always be a puzzle to me, as I never succeeded in thrashing it out satisfactorily; in fact, in all my searches I never got the slightest inkling as to where the birds were.

When the woodcock were plentiful, so also were the wild pigeons; I could always when out in the covers kill half a dozen or a dozen young pigeons without the slightest trouble. I cannot bring myself to believe that the complete extermination of the wild pigeon is owing altogether to the netting and killing in the rookeries of these birds. I am of the opinion that disease of some kind must have had a good deal to do with such a total extermination as the wild pigeon has suffered There must be numerous places quite inaccessible to man where these birds could and did hatch their young that would have prevented the bird from becoming extinct.

COOKSTOWN, Ont. HENRY B. NICOL.

DEER HUNTING ON THE CHOWAN.

WE had been bird shooting several days last autumn in the Chowan country with varying success, and on at least one occasion down by the river had seen marks of deer, although they were some days old.

There had been a good deal of talk about deer and various ways suggested to secure one. We had tried one of them; that was to carry our right hand vest-pocket full of buckshot shells to load the gun when passing through a thicket where birds were not to be found. This brought no success and was a nuisance as well, although we were frequently told of a young man in the locality who had shot several deer that way.

Another way suggested was to secure a deer in Washington on the homeward trip, where Virginia venison is sold to returning sportsmen at 30 cents per pound.

We finally decided to spare a day from the quail and organize a hunt. The day came, or rather the darkest hours before daylight, and we looked out to find the cover all soaking wet.

However, the mules hitched, we drove on to the meeting place, but the driver and dogs failed to appear. Our friends fortunately owned several hounds of deer-hunting breed and we journeyed on, bouncing over the rough road in the old Tennessee wagon, making enough noise to drive all the deer out of the county.

After passing the forks of the road, several miles nearer home than the selected hunting grounds, we halted. Mr. Lehry, owner of the hounds, alighted, leaving his unloaded gun in the wagon, approached the fence, looked sorrowfully at the wet underbrush, and threw in a stick to encourage the hounds, when almost from under it up jumped a deer and slipped cat-like into thicker cover, from which it appeared in view for an instant as the voices of the now excited dogs broke forth.

There was excitement for a few minutes. The mules were run into the pines and left to look after the wagon themselves. Tom caught his pointer, which had followed us, now terribly excited and bewildered, and stuffed him in my new dog crate, where he made himself useful by chewing at the door.

Mr. Lehry drove to a well-known crossing in the opposite direction from which the deer ran. My brother-in-law (the fellow who had brought us into the muss), now the most excitable of us all, ran to the forks of the road and then up the one toward home, running two sides of the triangle to the deer's one. The deer came out ahead.

We then spread out along the road some hundred yards apart and quieted the pointer in the box and the mules in the woods. In fact, we made every preparation to kill the deer should it return; and stood there quietly while a cool drizzling rain came tumbling down. The deer, it never came back. But Mr. Lehry, a hunter of experience, said it would two or three days later, as it had not been scared much.

It may be well to state that the deer, after crossing the road to which my brother-in-law was running and where jumping the fence it nearly alighted on a man walking along without a gun, journeyed through the woods some miles to an old strawfield, acres in extent, then no doubt recollecting that it had played there many a time when it was young, circled round and round over the same track until the hounds had become bewildered or were led to apprehend that the deer were combining for dangerous motives. It then retired to the deep recess of a large swamp to rest its weary limbs and smile with others of its kind at those fellows from the North.

The hunt being up, as the long drawn calls of Mr. L.'s horn indicated, we returned homeward, stopping at a cornfield in sight of the house, and soon found a covey, which the pointer stood. The birds arose, but before they reached the pine thicket we killed several of their number, which in part allayed our thirst for the blood of the deer that we didn't get.

Then we walked over the fields to the house and to our dinner. EDGAR J. PARKER.

In Indian Territory.

LOCO, I. T., July 15.—*Editor Forest and Stream:* I often read in your paper of men who walk all day and at night return almost or quite empty-handed. Then I think that we who live on this frontier have little cause to complain of a scarcity of game. In our immediate vicinity there is very little of the larger varieties of game, although we occasionally hear of some one killing a deer or turkey. Only a few miles north of our little town, in the foothills of the Arbuckle Mountains, are quite a number of deer and turkeys; and occasionally a wildcat or panther is found. But the latter are very rare even in this wild and rough country. Of the smaller varieties, we have an abundance of quail and squirrels, while of rabbits "the woods are full of them." Prairie chickens nest here; and no matter how severe the weather, remain in large flocks all winter.

Any one used to shooting can take his dog and gun and in a few hours' time kill all the game he wants. The only drawback to the visiting sportsman would be a lack of hotel accommodations. There are, however, some towns along the Rock Island Railroad that are very well supplied with hotels. There are no "posted" signs and no opposition to be met with by shooters in these parts, and every one generally shoots where and when he pleases. In winter the quail retreat to the dense thickets of dogwood and green-brier that abound here; this makes hunting them very difficult. I have lost many a fine old Bob White by his falling in vines so thick that I could never reach him.

There is an article in the Indian code making it a misdemeanor for any one not a native to kill and ship game from the Territory. It is, however, very little regarded, as there are shippers located at different points who not only ship, but advertise their business in the local papers. As a result there are men who follow netting quail and shooting deer and turkeys as an occupation during the winter months. This, if persisted in, will soon do the business for us, and if the country ever does become the property of the white man he will find very little in the way of game to "protect," and nothing for the true and law-loving sportsman but the depleted haunts and the sad recollection of what this now excellent game country once was. W.

THE ADIRONDACK DEER SUPPLY.

PORT RICHMOND, N. Y., July 19.—*Editor Forest and Stream:* It gave me pleasure to read the published letter of Mr. J. C. Allen, dated at Blue Mountain Lake, relating to the increase of deer in the Adirondacks.

For the past five years the daily papers and the sportsmen's journals have been publishing reports of the annual diminution of the numbers of deer in the Adirondacks, and predicting their early and untimely extinction unless protection was soon afforded them. The first article was probably written by some person for whose idle hands and brain Satan found nothing worse to do. The others took their cue readily and filled space with like matter for lack of other ways of employing their time.

Let these stay-at-home, closet writers go to the woods. Let them take pack-baskets upon their shoulders and rifles in hand and tramp over hill and dale, through watercourse and ravine, in the Adirondacks from the Boreas River to Chateaugay Lake.

They will see deer, deer, at every point along their route, springing from their leafy beds in the early morn, startled from their noonday rest in the shady forest lanes, and as one paddles silently on the little ponds and lakes which dot the Adirondacks in confusing numbers the stalwart buck and timid does will raise their heads from the lilypads and gaze at the strange intruder with frightened eyes. Yes, there are deer in the Adirondacks, and will be for many, many years.

It has been my good fortune for the past ten years to spend a month or two in this beautiful mountain country during the last days of summer and the early fall. I have met some of the guides whose names have become almost as famous as their native hills, and I have formed an intimate acquaintance with the lakes and streams and ponds, the birds and the beasts and the fishes, so I may also vouch for the increase of deer in the Adirondacks; my voucher not founded alone upon personal observation, but also upon the statements of natives and guides, whose opportunity for observation is of the best.

It was not my purpose when I began this letter to stir up again the much mooted question of hounding. The position of FOREST AND STREAM upon this question is too well known to admit of discussion, but let me say this: If the attention of sportsmen was drawn from this little iniquity (if such it be) of hounding deer to the greater evil, namely, the crusting of deer and consequent destruction of whole yards by this mode of hunting, such investigation might be productive of good and show to your readers and Adirondack sportsmen that hounding deer is not quite as bad as it is painted, and that other and more necessary work can be done than trying to prohibit this form of sport. EDWARD SIDNEY RAWSON.

The South Dakota Game Law.

FARGO, N. D., July 18.—*Editor Forest and Stream:* The following note, taken from a St. Paul paper, outlines the condition of the South Dakota game laws at present:

"At the last session of the North Dakota Legislature a law was passed providing for a license fee of $25 for non-residents who desire to shoot at game within the borders of the State. A test case was made up, and a couple of days ago the Supreme Court of North Dakota decided that the law could not go into effect prior to the Governor's proclamation, which cannot be issued until the codes are published. Railroad officials, sportsmen and others interested in this matter state that the contract for printing the codes has not yet been let, and that, as the printers have at least ninety days in which to turn it out, the law will not be effective before Oct. 15. Good legal authority in North Dakota says it will not become effective before Dec. 1. Besides, the constitutionality of the law is questioned, and a test case will probably go through the courts next year to ascertain the merits of the claim that it discriminates against citizens of outside States. Many hunters from Minnesota go there every year. The Northern Pacific and other railroads have received information that the chicken crop this year will be unusually large, and that the season promises to be in every respect satisfactory."

You will see that the new game law will not be effective this season but the old law will remain in force and be observed.

It has been commonly reported that Minnesota would require all sportsmen of North Dakota and other States having a hunters' license law to pay a license of $25 for a permit to hunt in that State. The game and fish laws of Minnesota, approved April 5, 1895, as compiled and issued by the State board of game and fish commissioners, do not contain any such provision or restriction, and I have reliable information that such a measure was introduced in the last Minnesota Legislature, but did not receive the Governor's approval and failed to become a law.

C. E. R.

Illegal Game Seizure.

[*Special Dispatch to Forest and Stream.*]

CHICAGO, Ill., July 22, 1895.—The notorious Merritt Cold Storage House, at Kewanee, Ill., was yesterday raided by game warden Blow. The entrance of the officers was at first resisted, but after they succeeded in getting in, three hundred illegal game birds were seized. The evidence on which the raid was based was secured by means of a decoy letter. This house has long been known as handling illegal game, but there is now every reason to believe that the matter will be brought before the courts. E. HOUGH.

They Sprint on Snowshoes.

NORTHWOOD, N. Y.—*Editor Forest and Stream:* If Mr. Dick, of Hartford, will go and borrow his Uncle Harry's three-year-old heifer next winter and drive it into a six-foot-deep Connecticut snowdrift, he will understand how Adirondack lumbermen are able to overtake deer. Adirondack snow in the woods is not a miserly foot or so in depth on the level, like that Dick is acquainted with, but lies 5 and 6ft. deep for two or three months every winter.

RAYMOND S. SPEARS.

Canvas Boats.

LODI, O.—We wish to add our opinion in favor of canvas boats to that of E. R. E., having used an Acme No. 2 (12ft.×45in.) for the past two seasons. We prefer the canvas to any wooden boat we can ever find, on account of its lightness for the amount of space. Would advise sportsmen to get a size larger, as it will enable them to carry a good sized camping outfit and three persons. The No. 2 is roomy enough for two and a light camping outfit. We soon discarded the camp stools as too small and easily upset, and we use in their places Kahnewalle's life preservers with sacks filled with leaves or straw, which make very comfortable seats.

In the stern, which is V shaped, we place the life preserver upright and place cushion on bottom of boat, the life preserver forming a nice arm chair as it were for the back and arms, discounting any hard boat seat. With comfortable tent, Acme boat, Buzzacott's camp cooking outfit, blankets, and grub box well filled, we are quite independent in our wanderings after health and recreation. BUCKEYE.

Sea and River Fishing.

NEW ENGLAND ANGLERS.

C. A. TAFT and H. F. Woodmancy, of Whitinsville, Mass., will leave in a few days for Flagstaff, Me. Mr. Taft has a fine camp near that place, which he generally visits two or three times each season, taking with him a few friends. They will stay this time about two weeks, and will fish for trout. The camp is only a short distance from Spencer Stream and several good ponds, and on this trip Mr. Taft will try some new brooks, which he is quite confident will provide good sport. Parker Pond, one of the greatest places for deer in that section of Maine, is only a short distance away, and frequent trips are made over there to look them over. Mr. Woodmancy killed a moose while at the camp last fall, and the entire party who were with him at the time had good shooting.

C. T. C. Whitcomb, of Wakefield, Mass., left on Saturday last for a visit to Conway Lake, N. H. He will devote the trip to bass fishing, and feels confident of success, as he made a trip last year to the same place with excellent results, getting a number up to 3 and 4lbs. in weight.

Although only just returned from King and Bartlett, where he had three weeks of good fishing, F. H. Talcott, of Boston, is still thirsting for more glory, and in company with Mrs. Talcott and a friend from Worcester made a trip to Braintree Great Pond a few days ago after bass. One lusty fellow of 4½lbs. and several lighter weights repaid their efforts, and the trip was enjoyed well enough to bear repetition in the near future.

A Michigan man stopping in Boston over the Christian Endeavor convention tells me a story of fishing near his home on the shores of Lake Michigan across from Milwaukee, which is quite interesting. Black Lake, a body of water which makes in from the big lake, is the place described, and he says the white bass (a fish new to me) come in there from the deep water of the big lake in schools, immense numbers covering the surface of the small lake at times, jumping and feeding on the surface, so as to make a wonderful sight. They run from 1½ to 2lbs. in weight, and resemble a black bass in every respect but the color. When they are schooling in that way the fishing is fine, and large numbers are taken by the natives, who go out after them in force. The small channel connecting the two larger bodies of water is also a favorite place to fish for them, and he assures me that no better sport can be had than to stand at this point and cast with a short, light rod after them as they are passing through.

President Franklin Carter, of Williams College, Williamstown, Mass., and his son have gone on a salmon fishing trip to the St. Marguerite River in Canada. They will fish the stream during August, and although it seems quite late in the season, they had such a satisfactory trip last year at the same time that they naturally expect to do well now. Mr. Carter is a great friend of Prof. Sewall, of Braintree, Mass., who fishes the same river, and who will probably be there during a part of August. Prof. Sewall has been very successful on the river in past seasons, and is, I believe, a member of the Marguerite Club.

The Megantic Club limit of membership (300) has been reached and hereafter applicants will have to register their names on the waiting list just started and take their turn. The club is having a prosperous season, and reports of good fishing are brought to Boston by returning members. W. A. McLeod, a director and one of the club's attorneys, left on Friday to spend some weeks on the preserve, and Dr. George Ainsworth, of Boston, has sent his family on ahead to the club house, intending to follow them early in August.

H. H. Pray, of Boston, is following his custom of the past few seasons by camping out on the shores of Lake Cochituate, within twenty miles of the city. He is very pleasantly situated at the lake and has already had some excellent bass fishing, landing one a few days ago that weighed 4½lbs. Very large perch are often taken at Cochituate, and Mr. Pray speaks highly of their gamy qualities.

Prof. Eben H. Davis, of Chelsea, Mass., principal of all the public schools of that city, and Mr. Ambrose, of New York, will soon leave to spend the month of August at their camp near the head of the Narrows, Richardson Lakes, Maine. The camp was built last season, and is jointly owned by the two gentlemen. Mr. Chas. Stevens, of Boston, who owns camps at the same place, will leave the city July 25 to stay until October. Mr. Stevens was down there last fall in company with his nephew, and together they killed several deer on the trip. He likes the Rangeley region very much; so well, in fact, that he often goes down in the spring before the ice goes out.

A. B. F. Kinney, Worcester, Mass.; W. H. Smith, Springfield, Mass., and V. A. Cooper, D.D., of Boston, have left for Camp Cooper, situated on Upper Wilson Pond, six miles from Moosehead Lake. This makes the twentieth year that Messrs. Cooper and Kinney have visited that vicinity together. There are two ponds connected, one called the Lower and the other the Upper Wilson, and both usually furnish good trout fishing. These gentlemen have taken them up to 3½lbs. in weight, and always feel sure of good fishing. They will be away four weeks, and may go to Roach's River before returning.

Robert E. Strahom and C. A. Strahom, of Boston, and W. B. Waters, Fred, James and Chas. H. James, of Chicago, will leave the latter city on Aug. 1 for an extended trip into the Big Horn and Yellowstone Park country. They expect to be there about six weeks, and the trip will be entirely a camping affair. Sheridan, Wyo., at the base of the Big Horn Mountains, is the place at which they will outfit for the trip. Fishing and shooting will be the features, and they expect to get plenty of both. Mr. R. E. Strahom has been making an annual trip through the Western wilds for nineteen years, and has had volumes of pleasant experiences during that time. Last winter he entertained the members of the Appalachian Club in Boston with the story of one of his trips into the interior of British Columbia. Mr. Waters has accompanied him several times. After the present trip is completed Mr. Strahom will go on to the Pacific coast, where he will fish for trout in the Spokane River and Lake Chelen, and for silver salmon (as they are called there) at Bellingham Bay, on Puget's Sound.

The cottagers along the north shore are beginning to find the tautog rather plentiful. A number of good strings have been taken, but the heaviest fishing is not due until the middle of August. C. H. Dillaway, Jr., of Boston, is summering at Rockport, and has captured seventeen during the last two weeks. The largest weighed 7lbs., the next 5lbs., and balance from 3 to 4lbs. Last season he caught one of 10½lbs., and in one day took twenty-four off Eastern Point, Gloucester, the achievement making him high line for the season.

HACKLE.

SUSQUEHANNA BASS.

RIVER in good condition. Fishing fair. A number of bass being caught.

The Tucquan Club of Lancaster is having its annual outing at York Furnace, on the Port Deposit Railroad. Among those enjoying the week at this delightful camp are: Maj. Muhlenberg and Gen. Stanton, of Washington; Messrs. Fridy and Seitz, of Mountville; Rhodes, of Pottsville; Raub, Hartman, Reinoehl, Apple, Cochran, Demuth, Stahm, Heinitz, Shirk, Hassler, Rev. Hooper, Kendig, Riddle, Herr and Wiley, from Lancaster.

The camp consists of three large tents and a pavilion. Caterer Payne, of Lancaster, noted for the excellence of his cooking, keeps the table well supplied with solids, fluids, luxuries—not gases—the latter being supplied by the more veracious anglers in camp.

A number of fish are being caught, mostly bass. The lady visitors to York Furnace praise highly the attention paid them. The Tucquaners go home on Saturday, the 20th.

Crist Hoover, Bernard Myers, Sam Herst, of Philadelphia; Cliff Hipple, Squire McNeil, Squire Bare and others are making fair catches. B. A. BEAN.

BAINBRIDGE, Pa., July 18.

WELLSVILLE, N. Y., July 16.—*Editor Forest and Stream:* I send you an article taken from the Buffalo *Times* of July 15, which I thought might interest fishermen enough to put in your paper, as it gives points of Susquehanna River fishing. G. E. F.

The *Times* correspondent is Dr. M. M. Brown, of Buffalo, who writes: "For more than twenty-five years I have tested the bass fishing in the Susquehanna River annually. This tortuous stream of some 400 miles in length was stocked some thirty years ago with game fish, and as soon as the fish reached a legal size the fishing in many parts of this stream has been unexcelled. From Athens, Pa., to Tunkhannock the rarest sport can be had.

"One with a taste for beautiful scenery and possessed with Izaak Walton proclivities will stand in his own light if he does not at least once a year take in the rare sport and the most delightful mountain scenery along the Susquehanna valleys.

"The most enjoyable way to indulge there in angling is to float down from Athens or Tioga Point in boats as far as Wyalusing or Laceyville. Black bass of a weight as great as 7lbs. have been caught there. One angler, Jabez Chamberlain, of Wyalusing, caught three that weighed 16½lbs. A fisherman trolling near Hornet's Ferry caught six black bass with minnows for bait, that weighed as follows: 4½, 5, 5½, 6, 6½ and 7lbs. I saw seven bass caught at Wyalusing that weighed about 28lbs.

"I was of a party that floated down the river from Elmira, and we captured fifteen yellow pike, besides a large number of black bass and other fish. The writer and a friend caught forty-two black bass in a few hours, not one of them less in weight than 1½lbs. Dr. C. W. Brown and T. F. Brown, of Elmira, took a bushel basketful of large ones in a single day's fishing near Laceyville.

"The bait used commonly is helgramites and stone bullheads, known by the Pennsylvanians as clippers and tonies. I floated on one occasion with a party from Towanda to Wyalusing, and we caught some seventy-five large ones. The floating is most delightful, as the river is made up of numerous riffs or rapids, one or two in every mile. Between these swift-flowing waters are eddies, some of them very deep, in which yellow and black bass grow very large. One requires very strong tackle to hold them. A 4-pounder will tow a skiff for twenty or thirty minutes before it can be tired out. Frequently the writer has been obliged to go ashore and drag the bass out on the beach.

"The bass in the Susquehanna are the most beautiful of any waters. They are greenish black with beautiful light brown stripes. Their shape is also different from bass caught in still waters. They are much longer and shapely. There are no large mouth or Oswego bass in the river, so far as I know. All along the stream are lofty mountains alternated by narrow valleys. These mountains are beautified with white and pink laurels, interspersed with mountain shrubs in bloom, such as the dogwood, the mountain ash with its pretty red berries, and other flowering bushes not known to the writer.

"How can one fail to enjoy such a trip, with the keen appetite one has and the means of satisfying it on every hand? Sweet milk, buttermilk, fresh eggs, berries and home-made bread, salt-rising, seldom tasted in the city. Also an abundance of fried, boiled and baked fish, hot and cold. The best time is from now on to Aug. 1 for early fishing, and from Sept. 1 to the middle of October for the late season."

Ouananiche Scores at Lake St. John.

JULY 7.—J. G. Hecksher (one day's fishing) 84, weight 127lbs., largest 4lbs.

July 9.—J. Gamble (one day's fishing) 62, weight 103lbs., largest 4lbs. J. S. Codman (two days' fishing) 10, weight 22lbs., largest 3lbs. W. J. Schefflin (two days' fishing) 29, weight 56lbs., largest 3½lbs.

July 12.—J. E. Hecksher (one day's fishing) 45, weight 101lbs., largest 3lbs.

July 14.—G. W. Cottrell (two days' fishing) 18, weight 27lbs., largest 3lbs. M. H. Hulbert (two days' fishing) 16, weight 31lbs., largest 2½lbs.; 6 pike, 20lbs., largest 4lbs.

July 15.—W. B. Neal (two days' fishing) 44, weight 87lbs., largest 2lbs. W. Sargent (two days' fishing) 36, weight 69lbs., largest 2½lbs.

BOSTON AND MAINE.

BOSTON, July 18.—The fishing trips are not yet all over, though the height of the spring season has gone by. Mr. N. G. Manson, with a friend in the iron trade, have gone to Mr. Manson's camp on Upper Richardson Lake, Me. They are to be absent for eight or ten days, and will give the fly fishing a good try. Mr. Manson is well posted on the fishing in that part of the country, and is anxious to try certain pools in late July. He expects mosquitoes and black flies to some extent, though the worst season for these pests is over. He has Camp Leather Stocking fully fixed with window screens, so that the night time will be endurable. It is the daytime that the gentlemen dread.

Mr. Manson had very fair fishing at his early trip to his camp, from which he returned three or four weeks ago. On this trip he was accompanied by Mr. Ezra P. Howlett, of Syracuse, N. Y., and Mr. Luther Little, of Boston. The trip was a new one to both gentlemen and they were delighted with the country and the surroundings, but not especially pleased with the mosquitoes and black flies. Mr. Little has about decided to build a camp on Richardson Lake, a short distance below Camp Leather Stocking. But he is obliged to be in Europe a good deal of the time this year, and that is likely to delay his camp building.

Mr. H. A. Kidder, of the Boston *Herald* staff, with Mrs. Kidder and Master Henry D. Kidder, will leave on Monday for a vacation trip into the fishing sections of Nova Scotia. They will visit Upper Stewdiac, where Master Herbert L. Kidder has been doing his remarkable fishing, as mentioned in the FOREST AND STREAM last week. Mr. Kidder and the boys are likely to find better fishing than the city boy who does not get away can dream of.

Mr. H. S. Kempton, also of the Boston *Herald* editorial staff, is back to his desk again after a couple of weeks at Winthrop, Me., where he has had a good deal of sport with the black bass and pickerel. He was hindered from his usual spring trip to Camp Steward, for trout fishing, and he has tried to get even with the black bass. For every trout he did not catch a couple of bass have had to suffer. Not that he regards two bass as equal to one trout, but perhaps the sport of catching the two may compensate for each of the trout he did not catch. He had all the bass fishing he cared for and took a good many fish, some of the larger weighing 2½lbs. The wonder is the amount of sport there is to be had in the fishing of those ponds, where twenty years ago only a few pickerel were to be found. Now sportsmen by the hundreds, from all parts of the country, fish the ponds of Winthrop, Readfield, Belgrade and Monmouth. To the credit of the Main Fish Commission be it said that all of this fishing is due to their exertions in restocking. It is a feature worthy of note also that more trout are being taken in nearly all of these ponds than was the case under the domination of pickerel that existed fifteen or twenty years ago. White perch have also fared better since the ponds were stocked with black bass. Commissioner Stanley has a theory that in time the bass will destroy all the pickerel.

July 22.—Better and better reports of black bass fishing are coming from Lake Maranocook, Winthrop, Me., and the adjacent waters. At Craig's Point, on that lake, there is quite a settlement of summer cottages, besides a summer hotel, which is well patronized. It is a resort considerably favored by theatrical people. Manager Harris, of Boston, has a cottage there, and so has Manager Isaac B. Rich. Mr. Harris has just returned from Craig's Point, where he has been spending a vacation with his family. Everybody he found enjoying the bass fishing. New cottages are being built and steam launches put in. An island in Maranocook, or in Anabesacook, the lake below Winthrop, has become something to be desired. They are rapidly being bought up and arrangements being made for cottages. The sporting and summer cottage interest is growing rapidly in Maine, but the one does not flourish without the other. A pond or lake with the finest of scenery is of no use without a fair chance for fishing.

Trout fishing in Lake Auburn, Me., continues. I have seen a letter to-day that mentions the taking of several fine trout from that lake; only the claim is that they do not rise to the fly freely. Generally the expression is one of surprise, with those interested in that lake, that the fishing has held out till so late in the season. But there is another and a worse matter of great surprise. The newspapers are full of it, and I have seen a gentleman to-day who is a good deal wrought up about the affair. The shores of the lake, in some sections, have been lined with fish for some days, dead and in a struggling condition. The dead fish seen have been principally suckers and perch, with a few hornpouts and occasionally an eel. The theory is that some rascal or rascals is fishing with dynamite; that the explosive is being put down into the water and the fish killed. The trout and salmon are saved while the poorer fish are not wanted and are suffered to drift away, and by force of the wind and the waves they reach the shore. This is the only reasonable explanation offered, and a bad one it is, if true, for a lake that has begun to be of much value to those who are willing to fish fairly. Lake Auburn is within a short distance of two cities, and while a good deal has been done in the way of restocking with trout and salmon a good deal has also been done toward enforcing the fishing laws, and it is possible that the lawless element has been offended and is seeking revenge.

The very latest dispatches say that Supt. Merrill, of the Lake Auburn fish hatcheries, reports that the dead and dying fish are the work of dynamite, and an investigation is to be commenced at once. At first he thought that it was disease, the ordinary fungus, that was killing the fish. But he has made careful investigation and found no fungus. Commissioner Stanley is reported as stating that there is disease in other ponds in Maine, but on the dead fish in and about Lake Auburn no disease is found. There is a poaching element in many sections of Maine that is not satisfied except with utter destruction of that which the law attempts to preserve, that all may share it equally.

Mr. Edwin C. Stevens is spending a vacation of two weeks at Lake Dunmore, Vt., where he reports good sport with pickerel and bass. Several good catches are already set down to his account.

A report from the Oquossoc Anglers' Association camps mentions the taking of a big trout by Dr. Charles Haddock, of Beverley, Mass. The fish is reported to have weighed 10⅝lbs., to have measured 28¾in. and to have been 16½in. in girth. The report says that the fish was weighed by C. W. White, of Boston, and Frank H. Lovell, T. A. Perkins and T. B. Mills, of New York. These names ought to establish the weight of the fish and satisfy those who every season profess to believe that the big brook trout of the Rangeleys "exist only in the imagination of untruthful fishermen."

Mrs. R. W. Bartleman, of Boston, with her son J. G. Bartleman, is at the Middle Dam, "Anglers' Retreat," this year. It will be remembered that they have fished for many seasons at the Mountain View. SPECIAL.

THE BIG UN.

I AM not quite done feeling good over it yet. I am not much proud of it, but feel like shaking hands with myself once in a while and congratulating myself. "There are others," lots of them, who could have done the trick and a whole lot more who could not. But I cannot find out that anyone ever did catch a trout weighing 21lbs. 10ozs. with rod and reel and in northeast waters anyway, not this year. "Laker," says one. "Togue," says another. Well, say I, what is that? and I do not hear anyone answer. He is a trout, a gray trout, nothing more or less. Good to eat broiled as any trout, not so good fried or baked. Not so handsome. Fights just as hard, but not the same way.

Now for the story. I started out fishing on what I call a poor day, too much wind and too cold. Orrin Templeton, my guide, had so little faith in our luck that he left his fish box on the wharf. We dawdled along, got a fish or two of fair size, but not much sport. Orrin wanted to go on shore and get a club for killing fish, which we did, and while there I overran my tackle and put on a new leader and a hook, No. 40 Sproat. We turned around Deer Island, and about two miles down the back side was moored a raft of logs. "We'd better go down there and pick up one or two, and sometimes you get a big laker here in Moosehead under logs like that," said Orrin.

We went there and caught three square-tails. Then I got caught on brush, and we moved out about two lengths. "There," said I "caught again. No; coming up, big root I guess." So I hauled away slowly, bending the trolling rod sharply. Then out came that head, one big eye toward us; like a flash he changed ends, showing a tail like a palm leaf fan (ten inches wide). "Oh," shouted Orrin, "there's the grandfather of all the fish in Moosehead." *Zee-e-e-e* screamed the reel. Orrin tore in frantic haste at the painter made fast to the raft. "Hurry up! Say, will you ever get after him?" I yelled. I have seen some canoe whisk in my time, but that one flew, bow out a foot every jump, rod bent all it could bend, thumb so hard down it was sore for days after; and in spite of it all, that whale was going with the line; the metal of the spool showed bright; my heart was pounding like a drumming partridge; only four turns left of ninety feet of line, when the tip flew up and I got a few turns on again. Then slowly inch by inch until we were nearer him. Down he went togue fashion, and he might have been a log, a rock or any other inanimate thing for fifteen long minutes. Then he started for the boom again, but played out and stopped, and from that on it was a twenty yard rush, a downward boring and a minute rest and another rush, until the end came thirty-three minutes from the first wild drive.

Then came the problem; a small net, and no more, to land him with. Orrin ran the giant's head into the net, leaned far out, ran his arm under the tail and stood the fish on its head inside the canoe, with about a washtub of water with him. I met her on the roll, or we would have gone over like a flash, and for once I was glad of my two hundred pounds. Then I stood up and if I did not wake the sleeping echoes from Mt. Kenio to old Katahdin it was not my fault, for I tried to with all my heart and soul. PINK EDGE.

IN CASE HE JUMPS.

Editor Forest and Stream:

As I am one who has always advocated dropping the tip of the rod when a fish jumps, I may perhaps be permitted to explain why, as well as to account for the jump.

Ichthyologists at least are generally aware that the black bass has a parasitic louse ⅛in. long, which fastens itself at certain seasons, varying somewhat with the latitude, just abaft the gill rakers, and sometimes at the angle of the jaw, and also at the base of the pectoral fins. I have been led to surmise that the captive fancies the prick and tentative annoyance of the hook in like situations to be due to one of these persecuting lice, which he attempts always to rid himself of by jumping clear of the water, and he adopts the like tactics, too, in respect to the detestable water beetle so well known to all fishculturists. More than this, the incentive to jump is abetted and accelerated by the lift of the arching rod, which is bearing, all the time that the fish holds on to the water, a much heavier strain than the dead weight of the fish, because the fish is exerting its utmost muscular strength to break loose. The bass holds hard until his strength is exhausted, when he relaxes, of course; whereupon he becomes immediately conscious of a diminished tension of the restraining force, and forthwith takes advantage of the opportune moment to leap into the air and endeavor to shake off his tormentor. He will do this on a long line and straight rod as well as on a short line and bent rod, but the arch is an obvious power and encouragement. The shake may come either before or after the leap.

Of course the fish comes out of the water with his mouth open, and my argument in favor of dropping the tip at such a time is simply to lessen the strain on the line so as to prevent the suspended dead weight of the fish from breaking tackle or tearing the hook out, and not at all with the idea of circumventing any little scheme of the bass to cut loose by throwing himself on the line, which is all bosh and quite on a par with the fallacy of a trout slapping ephemera into its mouth by a flip of its tail. When my tip drops I do not observe that my line slackens sufficiently to make even a curve, though in conjunction with the straining rod it is momentarily relieved of a moiety of the weight as well as of risk to the tackle and of the hook tearing out from a hold perhaps already seriously impaired.

All this little exegesis, I may say, is outside of the recognized fact that bass not captive often leap from the water for other reasons than to rid themselves of lice, for they jump after hovering insects as well as for sport, and they jump when pursued by larger fish, and I have seen them leap the edge of a drag net by the score to escape being caught. CHARLES HALLOCK.

LEAPING BASS.

EAST ST. LOUIS, Ill.—*Editor Forest and Stream:* What a lot of cranks "we anglers" are, to be sure, and how we do love to talk and read of our favorite sport when we are "chained to business" and can't get out on the lakes and streams. Indeed, I more than half suspect that the pleasure of thinking and reading and writing our experiences over again is the principal reason why, when some one makes a crack, as Dr. Ellzey has done, we keep at him for weeks. And is it not a little strange that with all that has been said on the subject of "leaping bass" not a single witness has appeared to help the Doctor out, and assist him to establish his "scared" theory? Can it be possible that among the thousands of readers of FOREST AND STREAM there are none that think as the Doctor does? Personally I am very sure that the Doctor is wrong in this matter, as all my experience tends to contradict his theories. To be sure, we can never know to a certainty whether the hooked bass jumps from the water from fright, or whether he does it from a knowledge that in the air he is much more likely to be able to free himself from the hook, because the fish is never able to tell us, and we have got to draw our conclusions from the circumstantial evidence offered. But to me this evidence has been presented in such a manner that it amounts to almost an absolute certainty that the bass does not leap from fright.

Up on Lake John in northeastern Wisconsin, last August, my friend Dr. McMillen, of Alton, and myself were casting frogs for bass. We were in a boat on very deep water, out some 70 or 80ft. from the lilypads and grass that fringed the shore. I made a nice long cast, landing my frog just on the edge of the lilypads, and a slight raising of the tip dropped Mr. Frog with a pleasant plunk into clear water. Instantly there was a strong swirl, and a splash that I am sure I can hear yet when I close my eyes and let old memory work, and my reel did a merry tune and my line went for the bottom of the lake as though a keg of nails was fast to the end of it. A good stiff tug, however, seemed to have the effect of changing the mind of the fish, and up with a rush came a magnificent bass; and bringing with him a silver shower of pearly drops, he vaulted clean and clear over a projecting point of grass and rushes, which I afterward noticed came well up toward my shoulder as I sat in the boat, and I feel safe in saying were all of 2ft. high from the surface of the water. He then made a rush to the right into clear water, and as I slowly reeled him in he made four successive leaps above the surface of the water, and I as plainly saw his mouth to be open as I see this paper before me as I write, and I not only saw but plainly felt the rapid, vibrating shake he gave to his head and body while in the air.

Close to the boat, perhaps 10 or 15ft. to the left, was a detached bunch of lilypads, like a little green island, covering not over 4 or 5ft. square of water. As my fish came up to the right of these lilypads he made a last jump, freeing himself from the hook, and throwing it with the frog 3 or 4ft. away. He threw it sideways toward these lilypads, and not toward the boat, showing that it was thrown by the force of his shake and not by my pull on the line. And now the rather remarkable part of the incident occurred, and that which proved to me that this bass, at least, was not doing this jumping and shaking from fright. Finding himself free from the hook, he slowly turned his head to the weeds and then with a quick dart shot down 5 or 6ft. and under the overhang of this lilypad island. I was so chagrined and "riled" at thus losing a beauty after having him almost to the boat's side, where my companion stood ready with his landing net, that I just sat limp for a moment, expecting and hoping that the Doctor would kick me good from where he sat behind me, and while thus sitting I let my hook with the frog still on it slowly sink in the clear water, never for an instant losing sight of either fish or bait, when to my utter and never-to-cease surprise this bass turned and pounced upon my frog like a flash of light, and with every appearance of one who would say, "I'll eat you this time if you are full of tacks." And this time I landed him, and he weighed 5lbs. and a trifle by the Doctor's scales, and I sent the beauty along with a 12lb. muskallonge and a couple of dozen speckled trout to the friends at home.

Thus in one single incident I find refuted every premise or proposition of Dr. Ellzey. My bass jumped two feet from the water; my bass had his mouth open while out of the water, and shook his head, and shook it so "fiercely," if you please, that he drew the hook and bait several feet from him; my bass was plainly mad and not scared, for he deliberately turned and took my bait again, and that too almost within arms reach—right under the tip of the rod. A fish so frightened that he would leap out of the water five times in a short struggle would, on finding himself free, be very likely to make for parts unknown without lingering.

And if Dr. Ellzey can tell me how, with fifty to seventy feet of line out, and anywhere from thirty to a hundred feet of water under me, I can so play my fish as to keep him on or near the surface of the water, he will certainly confer a great favor. If the Doctor can do this he certainly owes it to the guild to come forward and tell us of the angle, just how it is done, as it will save to us many a big one which would otherwise free himself among the rocks, snags and weeds of the treacherous bottom.

But I trust the Doctor will kindly let us rest in the delusion that our matchless bass jumps, and shakes, and fights, with a clearly defined purpose of out-maneuvering us and freeing himself, and give us rather some of his experiences with rod and reel, for he must have a good store of interesting incident and information, having fished and so carefully observed such a large portion of our country.

POTTAWOTAMIE.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

NOTES FROM FISHING WATERS.

Correspondents are invited to send us notes of fish, fishermen, fishing conditions and fishing facts, so that they may reach this office on a Monday.

FORKED RIVER, N. J., July 18.—The weakfishing in Barnegat Bay is very fine. Guests from hotels are making catches of from 25 to 100 per boat, weighing from 1 to 3 and 4lbs. each. ASA TILTON (Lafayette House).

BARNEGAT CITY, N. J., July 18.—Bluefish are biting freely at this point. One boat on Monday caught 109 weighing over 400lbs. I. MOFFETT.

CRYSTAL CITY, Beulah P. O., Mich.—Black bass fishing O. K. here in Crystal Lake, with an occasional muskellunge and salmon trout. Speckled trout fishing in the Betsy and Platte rivers bang up. L. T. VAN WINKLE.

WARETOWN, N. J., July 17.—Taking from 50 to 150 weakfish to a boat, and good bluefishing in the inlet, only five miles away. J. H. BIRDSALL.

MANHANSET HOUSE, N. Y., July 21.—A party from Manhanset House with the old fisherman Josh Fournair, fishing off Moore's Point, Long Island Sound, on July 19, made a catch of 65 blackfish and sea bass, weighing 120lbs. The largest was a blackfish weighing 8½lbs., caught by D. B. Lyon, of Sherman, Tex., and it is said by the fishermen to be the largest ever caught in these waters. We also had three bass weighing a trifle over 5lbs.
D. B. L.

DINGMAN'S FERRY, Pike Co., Pa., July 19.—Never has the bass fishing been as good as the present. Mr. Stelwagon, of Philadelphia, returned from a morning's fishing (16th) with a string of 14 fish weighing 19lbs. On the same day Hale Jones and Herbert Whitlock brought in 25 weighing 33lbs. This was followed next afternoon by the Messrs. Coe, of Newark, with a string of 15, and Messrs. Jones and Stelwagon with 18, and the next day with a string of 35. Yesterday Messrs. Jones and Whitlock capped the climax by returning with 25 fish weighing 39½lbs.—one of them weighing 4¼lbs., the largest small-mouth bass caught this season. It is the best fishing we have ever had here.
P. F. F.

ROUSE'S POINT, Lake Champlain, N. Y.—I send you a photo giving some idea of a good day's sport up here on the lake. The sportsmen are Messrs. Holcomb, Cook and a guide. Yesterday Messrs. Denton Umford, of New York city, and G. Julius Rohr, of Montreal, took a fine string of bass in a few hours. Mr. D. W. Coon and sons, of Saratoga, N. Y., bring in some days from 10 to 40lbs. of fish. WINDSOR HOTEL.

BAINBRIDGE, Pa., July 20.—Fishing good. Harry Snyder took twenty-seven bass on July 19. Several reverend gentlemen of the town were out all day the 20th, making good catches. B. A. B.

SEA COAST FISHING.

ASBURY PARK, N. J., July 16.—*Editor Forest and Stream:* Now that the bluefish season is with us, a subject comes before me I had intended asking our salt-water anglers about at an earlier date. I refer to a small parasite which I have found on the young of that family, the snappers. Three years ago I found them very abundant, about one fish in three being so affected. Directly back of and partially under the gill opening was to be found a parasite or tick, in size nearly the same as the common potato beetle, though much less convex in form; in color a steel gray, with darker gray stripes. The tenacity with which they clung to the fish was remarkable. The past two seasons have produced but few of them. And I have never found them on any mature fish, neither have I ever seen them on any I have taken in the Raritan or Barnegat. They seem to be confined to our rivers here, the Manasquan and Shark rivers. I would be pleased to hear from any of our friends who may have noticed them, as it would be interesting to know whether they are entirely of a local character or not, and to what extent, if any, they affect the fish.

I have taken every variety of fish indigenous to our waters, and have never seen the parasite referred to on any other species.

Bass fishing has taken a set back the past few days, owing to the variable and light winds prevailing, comparatively few having been taken, and those of light and medium weights. The Ocean Grove pier seems to have had the call the entire season for both bass and kingfish, which may be accounted for by the formation of a great flat within easy casting distance from the pier, around the margins of which the fish feed.

The proprietors of both piers have reaped a golden harvest already from the eager throngs which have come from many States to lure the gamy bass.

Mr. J. A. Bradley has in preparation a magnificent gold medal, to be presented at the close of the season to the party taking the largest bass from his pier. At present the record stands in favor of Lloyd E. Marshall, of New York city, with one of 21½lbs. LEONARD HULIT.

Mussels Caught with Hook and Line.

FERRISBURGH, Vt.—*Editor Forest and Stream:* It is not unusual, in trolling in Little Otter Creek for pike-perch and pickerel, to catch fresh-water mussels quite as often on the line as on the hook, the shell closing immediately upon whatever chances to be thrust into it. The same thing happens in bottom fishing for bull pouts, to the disappointment of the angler who feels his line coming in heavily only to find a big worthless mussel fast to hook or line. It might prove a profitable catch if it occurred in the upper waters of the Winoski, where these mussels sometimes contain valuable pearls; but I have never heard of one being found in the mussels that inhabit Lake Champlain and contiguous waters. In trolling for pike-perch, bass and pickerel, the bowfin or mudfish, the sheepshead, the bull pout and the gar-pike are sometimes caught, the latter most rarely, though his nibbling, jerking bite is not infrequently felt, but the hook does not pierce his hard, bony bill. The yellow perch also is not an unfrequent biter at this glittering trolling bait.
AWAHSOOSE.

Here is a Black Bass Puzzle.

Editor Forest and Stream:

Can you or any of your readers give a satisfactory explanation of the fact that in some waters black bass will readily take the artificial fly, while in others—under practically the same conditions—they seem to be so indifferent to its attractions as to make fly-fishing a very thankless task? Cases in point are Greenwood Lake and Lake Hopatcong, N. J., which are scarcely twenty miles apart, and where the seasons, surroundings and food conditions are about alike, while the natural conditions of the lakes for fly-fishing, viz., rocky and shallow shores, insect life, etc., are, if anything, in favor of Hopatcong. Now, I have fished both lakes very assiduously, and while in the beginning of the season I can always make a fair creel on Greenwood Lake, Hopatcong has invariably proved most disappointing. The bass in Hopatcong is as much of a surface feeder at that time of the year as his confrère in Greenwood, which is clearly demonstrated by the fact that he is fished for very successfully with the artificial bait spun on the surface, by skittering, bait casting, etc., but the fly he will hardly ever touch. As far as my experience with bass goes, he is not nearly so nice a fly discriminator as the trout, and as a rule it makes little difference what kind of fly you offer him, provided it be big enough, yet on Hopatcong I have tried all sorts, from the smallest bass fly to a medium salmon fly, and from the gayest colorings to the most sober and Puritanical hues, with very poor results. I have been trying to think out a theory for this waywardness of the Hopatcong bass, but I cannot arrive at a satisfactory conclusion. Can you or some of your readers throw a light on it?
PUZZLED.

Fun and Fishing.

WE have received with regret (that we may not accept it) an invitation to join in the fourteenth annual encampment of the Allegheny, Pa., Champion Hunting and Fishing Club. The convention went in on July 23 and will extend to Aug. 14. The committee sends us, perhaps not for publication, but as a guarantee of good faith, these particulars of the accommodations and amusements:

ACCOMMODATIONS.

Seven hotels on camp ground—all first-class—hotels "Two Johns," "Scandrett," "Girl Wanted," "Nit," "Dago," "Never Sleep" and "G'rad' wie in Deutschland." Large dining hall, etc. Pleasures in season. Mosquitoes, gallinippers and other insects to be had six miles from camp (charges, extra). Skiff ferry across sixteen-mile run, under prominent sea captain's charge. Safe landing guaranteed. Passengers can have life insured before sailing, or have life preservers attached to feet without extra charge.

AMUSEMENTS.

Merry-go-round, toboggan slide, fireworks and numerous other attractions, by the members. Champion Hunting and Fishing Club brass band in attendance during the whole camp. Good fishing at the docks and hunting in the markets. Barn pheasants in abundance (in the cook house).

Game and Fish Protection.

The Work of the U. S. Fish Commission.

BY TARLETON H. BEAN, M.D.

[An address to the American Fisheries Society, June 12, 1895.]

THE work of the United States Fish Commission has been very forcibly brought to my attention by a member of this Society who is now assistant in charge of the Division of Fishculture in that organization. Having been at the head of that division for several years, and being naturally very much interested in the growth of the Commission, I was much struck by his presentation of this year's operations, now nearly finished. It is the climax of twenty-four years' continuous activity of the National Fish Commission, and represents, chiefly in the form of eggs, almost a billion in number. The totals of distribution of fish by the numerous stations not having been fully reported up to the present time, we will present the principal items in the form of eggs of fishes and lobster.s

EGGS OBTAINED BY THE U. S. FISH COMMISSION.

Pike-perch	450,000,000
Whitefish	150,000,000
Cod	120,000,000
Shad	115,000,000
Lobster	70,000,000
Lake trout	13,000,000
Quinnat salmon	4,500,000
Flatfish	4,000,000
Brook trout	1,500,000
Rainbow trout	1,250,000
Steelhead trout	1,000,000
Atlantic salmon	200,000
Landlocked salmon	180,000
Total	930,630,000

Besides the above output of eggs, the Commission has distributed 70,000 young rock bass and 30,000 black bass ranging from 4in. in length to adult size. These eggs and fish were produced at about twenty active stations. The cost of production and distribution, including the maintenance of the stations, was about $200,000.

I do not cite this as the greatest work done by any Fish Commission, but merely as one of the great triumphs of fish-cultural operations. There are present other members of the Fisheries Society who can point with pride to their hundreds of millions of fish deposited during the past year by State commissions.

The United States Commission was not the first in the field. The States of Massachusetts and Connecticut had commissions six or seven years before the national organization was in existence, and the American Fisheries Society, under its old name of the American Fishculturists' Association, was largely instrumental in establishing the National Commission.

The system of public fishculture, which originated in New England, has grown and increased in popularity and usefulness until there is no longer any need of supporting it except in the matter of appropriations.

The United States Fish Commission is a great fish and egg producing organization, but it can do nothing to enforce the protection of fish. From the nature of our laws, the United States cannot protect fish except in national waters. Fishery regulations are in the hands of the States, and the States Fish Commissions combine with their fishcultural operations the equally important duty of fish protection. I believe the time is coming when the States will accomplish their object and regulate their fisheries in such a manner as to give proper protection to the fish.

What do we see in many centers of active fishery? There are laws, it is true, which are sometimes properly enforced, but in other localities there is no provision for enforcing them. This is particularly true of Alaska. The only thing which saves the salmon of Alaska, the most valuable fish in the Territory, is a law of commerce—the law of supply and demand. There are fish enough to last for years to come; there are perhaps as many as there were fifteen years ago, when I first studied the fisheries. Independently of the laws regulating the capture of salmon, for the enforcement of which there is no adequate provision, the law of supply and demand offers temporary protection for the fish. The canners must sell their wares. If they could sell all they can get they would take them without hesitation. Some of them have dammed the rivers, contrary to law, so that the fish cannot get up to their spawning grounds; but inability to market an over supply is now the only efficient safeguard of the salmon.

To return to the United States Fish Commission. The annual cost of the propagation and distribution of fish and maintenance of stations is about $200,000. The work is constantly growing; the demand for fish is increasing, but the appropriations for the past two years have been at a standstill. The Commissioners of the States, when their work is enlarged, urge their claims for increased appropriations and do not ask in vain; but the National Congress pays little heed to the wants of its Fish Commission. We have fallen upon a period of unwise retrenchment which has hurt the cause of public fishculture.

If the results so far obtained in the waters of the States and of the Nation are satisfactory in the light of statistics so well established, let the American Fisheries Society and the friends of fishculture in general unite in urging that the organization which has made such a splendid record be provided with the funds necessary to continue its achievements.

New York Game Protectors.

STATE OF NEW YORK FISHERIES, GAME AND FOREST COMMISSION OFFICE, Albany, N. Y., July 13.—*Editor Forest and Stream:* The Commission have not made all the appointments of protectors, and in view of that the districts have not been formed.

There are now on duty of the old protectors Robert Brown, of Port Richmond; Willett Kidd, of Newburgh; Matthew Kennedy, of Hudson; Charles H. Barber, of Greenwich (Washington county), and Joseph Northup, of Alexandria Bay.

The new protectors to date are:
Orla. S. Potter, Sandy Creek, Oswego county.
Bentley S. Morrill, Plattsburgh, Clinton county.
Robert Bibby, Olmsteadville, Essex county.
James W. Littlejohn, Loon Lake, Franklin county.
E. J. Lobdell, Northville, Funton county.
A. B. Klock, Herkimer, Herkimer county.
Eugene Hathaway, Harrisville, Lewis county.
Archibald Muir, Fine, St. Lawrence county.
Alvin Winslow, Stony Creek, Warren county.
Wm. A. Ten Eyck, Ballston Spa, Washington county.
Edward I. Brooks, Brookmere, Monroe county.
Daniel N. Pomeroy, Lockport, Niagara county.
Spencer Hawn, Cicero, Onondaga county.
S. N. Prouty, Whitehall, Washington county.
John E. Leavitt, Johnstown, Fulton county, and Mannistee C. Worts, Oswego, are the two protectors who have been designated as assistants to the Chief Protector.
Wallace T. Reed, Canandaigua, Ontario county.
Egbert R. Benjamin, Bay Shore, Suffolk county.
Lester S. Emmons, Oneonta, Otsego county.
Geo. B. Smith, Horseheads, Chemung county.
James H. Lamphere, Weedsport, Cayuga county.
Riley M. Rush, Camden, Oneida county.
George Carver, Lyons, Wayne county.
John L. Ackley, Penn Yan, Yates county.
Harry Lipman, New Yory city.
Ira B. Elmendorf, Broadhead Bridge, Ulster county.
Moses E. Sawyer, Factoryville, Tioga county.
Edgar Hicks, West New Brighton, Staten Island, is the Oyster Protector, and Sebastin Heabach, Ozone Park, is the Assistant Oyster Protector. J. W. POND.

FIXTURES.

BENCH SHOWS.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.
Sept. 17 to 20.—Rhode Island State Fair Association's third annual bench show, Narragansett Park, Providence, R. I.
Sept. 17 to 20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.
Sept. 17 to 20.—Montreal Kennel Association's show, Montreal, Can. Geo. K. Lanigan, Hon Sec'y-Treas.
Sept. 24 to 27.—New England Kennel Club's second annual terrier show, Boston, Mass. D. E. Loveland, Sec'y.
Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris Man. P. T. Madison, Sec'y, Indianapolis, Ind.
Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.
Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.
—. Morris, Man.—Northwestern Field Trials Club's Champion Stake. Thos. Johnson, Sec'y, Winnipeg.
Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.
Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.
Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.
Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.
Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.
Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

CROPPING.

ON this subject, which is now exciting so much interest in the kennel world, the writings of a few of the old medical authors may not be without interest, as showing that they were far from concurring in the practice. Of cropping Youatt writes:

"I have some doubt whether I ought not to omit the mention of this cruel practice. Mr. Blaine very properly says that 'it is one that does not honor the inventor, for nature gives nothing in vain. Beauty and utility appear in all when properly examined, but in unequal degrees. In some, beauty is pre-eminent, while in others utility appears to have been the principal consideration. That must, therefore, be a false taste that has taught us to prefer a curtailed organ to a perfect one, without gaining any convenience by the operation.' He adds, and it is my only excuse for saying one word about the matter, that 'custom being now fixed, directions are now proper for its performance.'

"The owner of the dog commences with maiming him while a puppy. He finds fault with the ears that nature has given him, and they are rounded or cut into various shapes, according to his whim or caprice. It is a cruel operation. A great deal of pain is inflicted by it, and it is often a long time before the edge of the wound will heal; a fortnight or three weeks at least will elapse ere the animal is free from pain.

"It has been pleaded, and I would be one of the last to oppose the plea, that the ears of many dogs are rounded on account of the ulcers which attack and rend the conch; because animals with short ears defend themselves most readily from the attacks of others; because, in their combats with each other, they generally endeavor to lay hold of the neck or the ears; and therefore when their ears are shortened they have considerable advantage over their adversary. There is some truth in this plea; but otherwise the operation of cropping is dependent on caprice or fashion.

"If the ears of dogs must be cropped it should not be done too early, otherwise they will grow again, and the second cropping will not produce a good appearance.

"The scissors are the proper instruments for accomplishing the removal of the ear; the tearing of the cartilage out by main force is an act of cruelty that none but a brute in human shape would practise, and if he attempt it, it is ten to one that he does not obtain a good crop. If the conch is torn out there is nothing remaining to retain the skin round the auricular opening; it may be torn with the auditory canal, and as that is otherwise very extensible in the dog it is prolonged above the opening, which may then probably be closed by a cicatrix. The animal will in this case always remain deaf, at least in one ear. In the meantime the mucous membrane which lines the *meatus auditorius* substance, the secretion of the wax continues; it accumulates and acquires an irritating quality; the irritation which it causes produces an augmentation of the secretion, and soon the whole of the subcutaneous passage becomes filled, and seems to assume the form of a cord, and it finishes by the dog continuing to worry himself, shaking his head and becoming subject to fits.

"Mr. Blaine very naturally observes that 'It is not a little surprising that this custom is so frequently or almost invariably practised on pug dogs, whose ears, if left alone to nature, are particularly handsome and hang very gracefully. It is hardly to be conceived how the pug's head—which is not naturally beautiful except in the eye of perverted taste—is improved by suffering his ears to be removed.'

"If the cropping is to be practised, the mother should have been previously removed. It is quite erroneous that her licking the wounded edges will be serviceable. On the contrary, it only increases the pain and deprives the young ones of the best balsam that can be applied—the blood that flows from their wounds."

English Setter Type.

BRIDGEPORT, Conn.—*Editor Forest and Stream:* "Cinna," in protesting or criticising my letter published in FOREST AND STREAM of the 29th ult. *re* English setter type, says that he has read Stonehenge, also the English Setter Club standards, but attaches very little importance to either, saying that his idea of judging is by comparison. Comparison with what? I presume if he were judging a class of setters resembling bulls, he would compare them with his ideas of the bovine kind, and make his awards accordingly.

Now to "Cinna" and any others of his belief I would say that comparative judging is what is wanted, but there must be a type and standard to compare or judge by; not to have any judge set up his own standard.

"Cinna" speaks of comparative judging of fowls, etc. Did "Cinna" ever see a lot of prize-winning fowls that were not so near alike in formation that only a judge of them could tell when one was superior to the other? and what produced such results?—breeding to a standard.

Can "Cinna" say that he ever saw a class of setters that showed such a resemblance among the winners?

"Cinna" contends that the English setter is the king of field dogs, and that the fancy should keep their hands off him. Did he ever see them judge a dog's field qualities in a soft sawdust ring? No, they are there to be judged as to their form or their shape as it were, and I venture to assert that "Cinna," or any other field sportsman, if he sees one built on the Stonehenge plan, will have to agree that he looks like doing the very business "Cinna" claims he wants them to do—field work.

Further, "Cinna" says the English setter has other work to do than sit up like a pug and look pretty at a bench show. I would rather see him sit up and look pretty like a pug (if a pug be pretty) than I would have him resemble so much the little animals we see so many of at a circus, and "Cinna" will have to admit, if he looks closely, that they are approaching those animals in appearance at both ends, or will, if something is not done to straighten out their caudal appendage.

In conclusion, "Cinna" thinks my advise good for the breeders of the Lavarack type to keep their dogs at home unless judges of that type are appointed, and recommends admirers of the field type to do likewise unless Major Taylor or one of his lieutenants is on the card. He admits then that the Major judges the field type and has lieutenants who follow him. Now, as he has mentioned the Major, I will ask him if he ever saw the Major judge at the New York show? If so, what conclusions could he draw as to the type of dog required when he was through? I have and am free to assert that he awarded prizes to as many types as there were ribbons to distribute. As to its effect on entries at shows (and it's entry fees that keep them going) I would call "Cinna's" attention to the late Boston show; Major Taylor, judge. English setter dogs had about half the usual entries. Three bitches competed against nineteen competing in '94 and twenty-one, I think, in '93. Take Pittsburg, fall of '94; J. Davidson, judge; also spring of '95, C. Mason, and see if the entries do not show which type is desired; therefore, whose admirers support the exhibitions, which are given, if we are to believe the committee, for the improvement of the breed. ALBERT.

Kingston Kennel Club.

KINGSTON, Ont., July 15.—*Editor Forest and Stream:* The Kingston Kennel Club not being able to make satisfactory arrangements with the Fair Association for the holding of its bench show, I regret to have to announce that in consequence there will be no show held at Kingston this year. H. C. BATES, Secretary.

Irish Setter Club's Trials.

ATLANTIC CITY, N. J., July 16.—*Editor Forest and stream:* The Irish Setter Club of America will hold their annual trials at High Point, N. C., on Dec. 2 to 4, 1895. I will send you further particulars later.

GEO. H. THOMSON, Secretary.

POINTS AND FLUSHES.

Bolting Food.

REFERRING to the manner in which dogs eat, *Our Dogs* says: "Many dogs are given—especially when hungry—to bolting their food. This is a bad habit, and is sure to have an ill effect sooner or later. To prevent a dog from habitually doing this, it is best to give him before his proper meal a hard, dry biscuit. This will take off, as it were, the edge of appetite, and so, when the usual basin is given, it will be consumed more moderately."

Yes, it is quite true that dogs bolt their food, and it is equally true that it is perfectly natural for them to do so. The dogs' teeth are not adapted to grinding or chewing. Being a carnivorous animal, his manner of taking food into his system varies as widely from that of the ruminants as does the food itself and his manner of securing it. When fed meat, the dog bolts it greedily. His stomach is by nature fitted to digest any meat that he can swallow. Even bones are digested by it. The fact that man suffers ills if he bolts his food is not data from which to draw a similar conclusion concerning the dog. His teeth and stomach are quite distinct, as the latter is also in some of its functional powers. He chews his food only when it is a physical impossibility for him to bolt it. Because his manner of taking food is different from that of man, it does not necessarily follow that such manner is wrong or harmful. Cattle chew the cud, but it does not follow that it is harmful to them because mankind does not do so. It is quite as wise to concede that, when acts are common alike to all the individuals of a species, they are natural to them, and therefore useful and necessary.

The Bulldog's Mallgners.

While incidentally reading a work on dogs entitled "Homo et Canis, or the Autobiography of Old Cato and Some Account of his Race," which was dressed in all the richness of morocco and gilt, I was much impressed with the unfairness of a writer attempting to teach on matters of which his knowledge was little or imperfect. The work is quite voluminous, and as I am told it was written by an eminent clergyman, there can be no question concerning the author's intention to be fair. But while fair in intention he was most unfair in fact. Of the bulldog he says: "This dog, whose name comes from the former custom of bull-baiting, is not so numerous now as he was a quarter of a century or more ago; and it would really be a matter of congratulation if the breed were to become extinct. He has been persistently claimed as a production of the British Isles, and I see no good reason why this claim should not be acquiesced in without argument. He is not a source of honor to any country, and even John Bull's dog fanciers are not loud in his praise. He is not a good watch dog for several reasons, namely, his silence, watching and attacking in silence, his stubbornness and disobedience, his lack of judgment and discretion, his unwillingness to let go and his lack of disposition to distinguish between friend and foe.

"He is really fit for nothing but to fight and give courage to dogs that are deficient in this quality. And as a prize-fighter he can only pander to the lowest elements of communities, those similarly endowed to himself. He is not indeed without his counterpart in the human family, both in his striking physical make-up and also in the elements of his character. He is not so bad that some man may not be found who not only looks like him, but also acts like him.

"By crossing him the timid greyhound and others have gained some courage and perseverance, but from the bloodhound and others these qualities may be acquired with much better general mental traits. There is, in fact, little to be said in favor of his perpetuation.

"To speak of symmetry and elegance in reference to this dog would be quite ridiculous. His head and muzzle are the most striking parts, and the more outlandish these are the more he is prized. Some of the choicest specimens seen in the shows are entirely hideous or grotesque. In the whole demeanor and aspect of the bulldog there is an inseparable air of burlesque. He seems to be ever putting forward the prize ring and the slophouse ward politician. Still some good deeds have been put down to his credit, if not enough to save him."

The reverend author surely was inconsiderate in ascribing to the dog all the evil which pertained to the prize-ring and the lower form of the ward politician. It is manifestly unfair to blame the dog for the faults of his owner. The courage of the bulldog is undisputed, but that he is ill-tempered and malevolent is far from the fact. He is even-tempered and even sweet-tempered when treated kindly, and his loyalty and devotion to one master are something exceptional even among dogs. That he was used in old times for bull baiting is in nowise the fault of the dog, for he only engaged in it at the will of his owner. Any breed of dogs, by training, could be used for acts of cruelty, thus perverting their association with man as guards and intelligent companions to agents of violence and cruelty. B. WATERS.

New England Field Trial Club.

TAUNTON, Mass., July 20.—At a meeting of the field trial committee it was decided to hold the open Sweepstake as proposed by the club at its annual meeting. The details as decided are as follows: Sweepstake, open to all setters and pointers. Entries close Oct. 1, with $5 forfeit to nominate and $10 additional to start. The club will add $100 to the purse; 50% to first, 30% to second and 20% to third.

This is the fourth annual field trial of the club, and will be run on the club grounds, Assonet Neck, Mass., beginning Tuesday, Oct. 29. Mr. N. Wallace, of Farmington, Conn., will judge.

The committee have decided to make arrangements with the City Hotel, Taunton, and members and visitors will drive from there to the grounds. The City Hotel has changed hands since the last trials and is now under first-class management, having been thoroughly overhauled and refurnished. Handlers, who prefer, can no doubt obtain board nearer the grounds, but they will find the hotel the most practical and comfortable way. We have a great plenty of birds on the grounds at present, and if the young ones do well we will have more than ever before. We look for a most successful meeting and a nice entry of dogs. ARTHUR R. SHARP, Sec'y.

The U. S. F. T. Club's Derby Entries.

Editor Forest and Stream:

The nominations for the Derby of the club's fall trials number 47—24 setters and 23 pointers, all whelped in 1894.

ENGLISH SETTERS.

CLAUDE—P. Lorillard, Jr.'s, black, white and tan dog (Eugene T.—Maiden Mine), February.

FANNIE L.—P. Lorillard, Jr.'s, black, white and tan bitch (same litter).

ARAPAHOE—P. Lorillard, Jr.'s, black, white and tan dog (same litter).

FRED—P. Lorillard, Jr.'s, black and white dog (Eugene T.—Ightfield Rosalie), May.

MARIE'S SPORT—H. B. Ledbetter's black, white and tan dog (Gleam's Sport—Marie Avent), May.

GLEAM'S RUTH—Manchester Kennel Co.'s black, white and tan bitch (Count Gladstone IV.—Gleam's Maid), April.

GLEAM'S DART—Manchester Kennel Co.'s black, white and tan bitch (same litter).

ROD'S TOPSY—W. A. Hinesley's black, white and tan bitch (Toysy's Rod—Lulu Hill), January.

ROD'S BOY—King Graphic Kennels' black, white and tan dog (Roderigo—Laney Gladstone), April.

TORY FASHION—F. R. Hitchcock's liver and white dog (Count Gladstone IV.—Fleety Avent), March.

TORY CELIA—F. R. Hitchcock's black, white and tan bitch (Roderigo—Nora II.), June.

MAZEPPA—T. H. Gibbs's liver and white dog (Rod's Dan—Bondhue's Nellie), February.

VERGE—M. Fly's liver and white bitch (Noble—Vergie), February.

HARWICK—H. R. Edwards's black, white and tan dog (Topsy's Rod—Opel), June.

DOMINO—Blue Ridge Kennels' black, white and tan dog (Antonio—Ruby's Girl), February.

TOUCHSTONE—Avent & Thayer Kennel's black, white and tan dog (Orlando—Dolly Wilson), July.

PATRICIAN—Avent & Thayer Kennel's black, white and tan dog (Chevalier—Patsy), May.

FEU FOLLET—Avent & Thayer Kennel's black, white and tan bitch (Count Gladstone IV.—Folly), May.

FLEET'S PET—Avent & Thayer Kennel's liver and white bitch (Count Gladstone IV.—Fleety Avent). March.

LOULANIER—Avent & Thayer Kennel's black, white and tan bitch (Topsy's Rod—Lulu Hill), January.

FLIRTY LIT—Avent & Thayer Kennel's black, white and tan bitch (Topsy's Rod—Gody Lit), May.

EUGENE T., JR.—Thos. Bond's black, white and tan dog (Eugene T.—Fanny Rice), August.

PATSY'S BOY—Chas. Snow's black, white and tan dog (Chevalier—Patsy), May.

MAID—J. C. Ennis's black, white and tan bitch (Topsy's Rod—Novelist), June.

POINTERS.

BEDOUIN—Dr. O. Totton's lemon and white dog (Strideaway—Warwick Nellie), May.

SAPPHO—Dr. O. Totton's lemon and white bitch (same litter).

SISTER SUE—N. T. De Pauw's lemon and white bitch (Jingo—Rooney Crexteth), June.

STRIDEAWAY'S LAD—S. W. Aldsdorf's lemon and white dog (Strideaway—Ightfield Teign), April.

LEO—G. A. Castleman's lemon and white dog (Rex—Bess), January.

CRACKER JACK—Adams & Thompson's lemon and white dog (Lad of Rush—Cyclops), July.

BLITHSLY—J. L. Adams's lemon and white bitch (Trinket's Coin—Ightfield Blythe), February.

COINAGE—C. G. Stoddard's lemon and white dog (Trinket's Coin—Ightfield Blythe), February.

PLATO—C. Cooledge's lemon and white dog (Kent H.—Rhody), June.

KENTESS—C. Cooledge's lemon and white bitch (Kent H.—Daisy), March.

VIRGINIA—H. K. Devereux's lemon and white bitch (Little Ned—Pearl's Dot), May.

RIDGEVIEW CUSH—J. M. Avent's lemon and white dog (Trinkett's Cash—Roulette), March.

IONE OF ELGIN—W. A. Porter's lemon and white bitch (Kent Elgin—Fly C.), June.

HESSIE D.—T. T. Ashford's lemon and white bitch (David of Hessan—Fritz's Fay), March.

KENT'S TRIBULATION—G. Chisholm's liver and white dog (Kent Elgin—Suanna), May.

BESSIE ELGIN—E. C. Arnold's liver and white bitch (Kent Elgin—Suanna), May.

BOY—J. Shefley's liver and white dog (Tip—Nell), January.

LADY GAY KENT—E. L. Odom's liver and while bitch (Kent's King—Laura Will), May.

CHIMMIE FADDEN—Thos. Bond's liver and white dog (Kent H.—Nell), July.

LAMPLIGHTER—Thos. Bond's liver and white dog (Jubetor—Countess Adams), April.

MISS ADAMS—Thos. Bond's liver and white bitch (Jubetor—Countess Adams), April.

ABDULLAH ROMP—J. B. Turner's liver and white bitch (Rex—Tiney Kent), June.

——— —H. S. Smith's liver and white bitch, May.

W. B. STAFFORD.

Toronto Bench Show.

TORONTO, Ont., July 22.—For the guidance of intending exhibitors from the United States who intend exhibiting at the Toronto dog show, Sept. 9 to 13 next, and the other shows of the Canadian circuit, I would suggest that they enter Canada via Montreal, as this would enable them to show at Toronto and then back to Montreal the following week. By so doing they will get the advantage of the return free transportation made by me with the different railway and express companies. These arrangements not only apply to the dogs, but also to passengers as well. C. A. STONE, Sec'y.

The Montreal Kennel Association.

MONTREAL, July 16.—The Montreal Kennel Association's show will be held on the Exposition Company's grounds on Sept. 17, 18, 19 and 20. The Hon. Sec'y-Treas.'s address is P. O. Box 692, Montreal.

GEO. K. LANIGAN, Hon. Sec'y-Treas.

SAIL PLAN—CUTTER ZERUAH.

"Sayings and Dislikes of Old Cato."

UNDER this caption, in "Homo et Canis," the reverend author makes Old Cato a medium for the uttering of some aphorisms. It is plain that, concerning the immortality of the dog, he differed radically from that intrepid writer, Rev. Charles Josiah Adams, who writes so sympathetically and so convincingly of the life hereafter. But to return to Old Cato's sayings:

A dog has no immortal part, although he has a spiritual origin.

It is not the flesh or nerve of a dog's body which feels, has pleasure and suffers pain, more than man's. It is the life within.

In the count between men and dogs, the latter are not always the losers.

The greatest difference between a man and a dog is that the one lives forever, no matter how mean he may be, and the other ends his existence in this world, no matter how good he is.

A very short life is better than no life, even to a dog.

A life more or less miserable, or full of hardship, want and misery, is better than no life at all.

To live but a day, an hour, secures man an eternity.

A man is immortal in this world only in his deeds, words or reputation. So may a dog be immortal.

Generally dogs have better noses for things than men.

A dog is a wonderfully short-sighted creature, yet he is as stupid in finding out the fact as the man is in finding a similar defect in his own mind.

At 400 or 500ft., to most dogs a street riot is the same as a battle in the clouds.

The points in which most men are superior to the best dogs are so numerous, and those in which some men are much meaner than the worst dogs are so well understood, that comparisons are of little consequence.

A man should see that his dog is in a presentable condition as well as himself.

If you have a dog by your side, let him be well formed, fine-looking and spirited of his kind.

No wideawake, well-dressed, refined, intelligent man should have for his companion or own a mean-looking, diseased or badly kept dog.

A man may be judged by the character of his dog companions as well as by that of his human associates.

Do not have any but clean, good-looking, perfect, good-tempered dogs for associates of your children.

Every man of spirit will make an effort to have the best of everything.

No right-minded man will be contented to be represented by or have called after him anything which is not the best and most satisfactory of its kind.

Only beautiful animals and things should be selected as the companions of men, women and children.

All companionship, whether it be rags and mean dress, or good and suitable dress, flowers and clean animals, or men of rude and coarse or model character and bearing, or what not, will have its adequate natural influence on your own mind and character as well as upon your success in life.

At best the companionship of dogs is not without some drawbacks to man, even from an æsthetic point of view.

No mere animal will show the good or bad effects of high or low breeding and life so readily as the dog.

There is a matter of choice even in the association of dogs among dogs.

Every respectable dog will carry his tail lightly and gracefully.

Do not be angry at your dog if he cannot see a cow or a hog at the other end of the field. His eyes have a very short range.

You can never make a willing, useful, amiable, spirited dog by beating and abusing him.

Take good care of your dog for his sake and for your own.

If you are poor do not keep many dogs, unless you want to starve them and have the reputation of being a shiftless and worthless fellow.

In the cities, one dog is generally too many to each family.

Some poor people have as many dogs as they have children, and the poorer, meaner and more ignorant they are, the more they have of each.

Have a house for your dog and let him understand that he has no other. If he uses your house he soon becomes unwilling and unfit to use his own.

A dog needs a warm dry bed in cold weather, but no fire. As he cannot put on great overcoats and warm boots, sitting or sleeping by the fire, makes him unfit for outdoor life and renders him liable to colds and other troubles.

Some dogs have constitutionally bad breaths, and otherwise they help to render impure the air of the family or bedroom.

Carefully speaking, only one animal, man or dog, should sleep in an ordinary-sized room.

If a dog gets wet in cold or chilly weather, by rain or otherwise, keep him running until he gets dry.

Do not take your dog with you or allow him to follow you everywhere you go.

Other people may not have the same opinion about your dog that you have, nor the same views about dog management.

But you ought to have your dog and your children alike so well trained that your neighbors and friends would not dread to see them coming with you.

Unfortunately many a child and many a dog will behave much better on a visit or among strangers when his owner is not present.

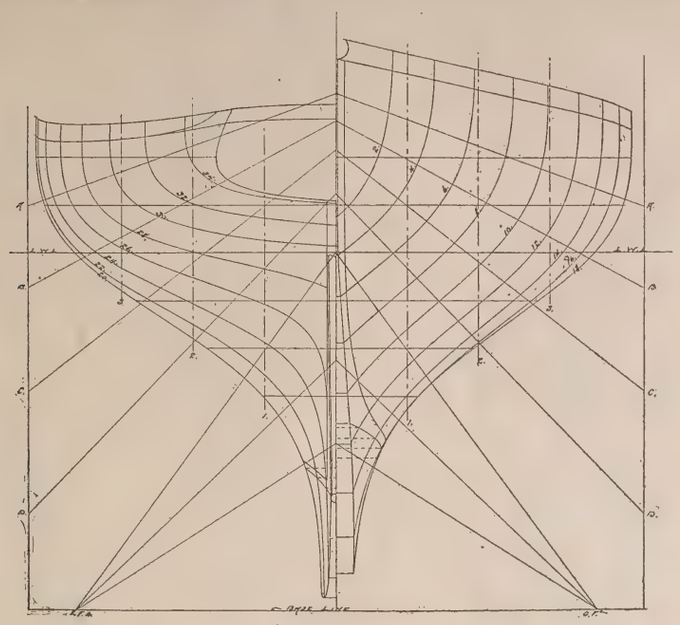
Do not allow a dog to lick your face. It is not a pretty nor a safe practice.

Do not eat in the presence of your dog unless you are going to feed him at the same time.

Do not play with or allow your pet to monopolize your attention in the presence of visitors. They do not call to see you make a fool of yourself.

Do not take your dog with you to church. He will not add anything to the spiritual peace of the occasion.

Do not go on a visit for a day or two, or a week, and leave your poor dog to shift for himself. It is the way to make a thief out of him, or cause him to lose his interest in your and his own home.



Do not lead your dog into temptation, but deliver him from evil.

Do not lie to your dog or cheat him. The practice will injure him and do you no good.

Do not feed your dog every time you have an opportunity, but give him a good feed or two every twenty-four hours and a bone for the rest of the day.

Do not hack, dock or cut off your dog's tail. The practice is thoughtless or wicked.

Cutting off the tail does not help the dog on in life, and does mutilate his body and deprive him of much comfort,

ZERUAH—BODY PLAN.

The tail and tongue are to the dog what your hand and speech are to you.

Take off the tail of the dog and you deprive yourself and him of half the pleasure there may be in the friendship between you.

By his tail your dog welcomes you home, and at all times it is an index to his disposition.

With his tail the dog does not lie, although it may wag between serious doubts.

A bobtail dog does not present an agreeable picture. Every man is under some kind of obligation to aid in keeping ugliness out of the world.

Socially and as a matter of ornament and bodily perfection the tail is indispensable to the dog.

DOG CHAT.

The *British Fancier* says: "There is a whisper that the success of the Ladies' Kennel Association is to be followed by a ladies' carriage club, which, in the fullness of time, will have its meet in the park, there to display their varied equipages, their draft and riding horses, and their pedigree ponies, besides their multiform vehicles. The sex are going the pace. Mention of the Ladies' Kennel Association reminds us that Mrs. Stennard Robinson is now circularizing the executive of all shows asking for Ladies' Kennel Association specials as to whether a separate entrance and exit and also sitting room for the convenience of lady exhibitors are provided. Would that 'male men' were half as well looked after as the members of the Ladies' Kennel Association are by their courteous honorary secretary. We have in our mind more than one show where the treatment meted even to members of the press has been very little better than if we had been pickpockets. Thank goodness, however, such shows are few and far between, for so enjoyable are the majority we attend that we have long ceased to look on 'doing' a first class show as a hardship." The following anecdote will be interesting to coursers. The same journal says: "'Vindex,' in writing a short obituary notice on Tom Wilkinson, whose sudden death we recorded last week, pays the following tribute to a predecessor of Wilkinson's, whose brilliant feats with the leash are still well remembered by members of the old school: 'Tom Raper, the prince of all slippers, was a splendid man on his legs, but he would not stand the horsemen's pace; they had to take his. Nor would he attempt to slip at a hare that he could not get fairly well behind. But she had to come very awkwardly if he could not reach her, for he was a marvelous man at carrying his dogs round. And what a judge of distance! He gave a most remarkable illustration of that upon one occasion at Altcar, and, at the same time, a wonderful exposition of his own skill. He was approaching a drain with his dogs straining, and he saw that if he slipped inside the jump the slip would be too short. On the other hand, if he flew the drain, by the time he again got his dogs steadied together for the spurt which precedes the delivery, the slip was going to be too long. There was still a way out of the difficulty for Raper, though probably for no other man. He went fast at the drain, and as all three were in mid air the pin was drawn, the dogs landing together with the leash falling from their necks.'"

A meeting of the executive committee of the Canadian Kennel Club will be held at the Queen's Hotel, Toronto, 8 P. M., Wednesday, Aug. 7, to receive nominations for officers of the club for the ensuing year and to transact other business that may be brought up.

The R. I. State Fair Association requests specialty clubs to notify the Association at as early a date as possible of any specials offered by them, so that notice of the same can be duly published.

Referring to the Peterborough show the *Stock-Keeper* says: "The fair sex patronizes this outing in numbers, but many of them were so horsey in attire and masculine in cut of hair, voice and deportment, that we should be sorry to refer to them as members of the weaker sex—but mighty huntresses before the Lord they no doubt are." Evidently the *Stock-Keeper* is afraid of the new woman.

The *Kennel Gazette* (Eng.) has the following: "A mad dog in Wilmington, Del., bit a man on his wooden leg, leaving its teeth in the artificial limb. The aid to locomotion was unscrewed for dispatch to the Pasteur Institute."

Mr. H. W. Lacy has delayed his westward journey for a few days, owing to a happy incident which occurred last Thursday. His father, brother and sisters arrived from England on that day by one of the fast ocean steamers. They intend to remain here permanently. Mr. Lacy, with his brother, called in FOREST AND STREAM office on Friday, both looking happy over a reunion after so many years of separation. Mr. Lacy earnestly assured us that his brother is not a dog fancier, but he probably has the fancy latent, and it will assert itself in good time.

The celebrated Scottish terrier champion Alister was killed in a row with his two sons, Kildee and Kilarth. The latter was so severely injured that he was humanely destroyed.

Spratts Patent, New York, announce the reorganization of their boarding kennel. S. Berry, Brooklyn, offers broken setter. Kugler & Fox, Kensington, Ohio, offer English setter dog. A. E. Drake, Georgetown, N. Y., offers beagle. R. W. Humphrey, Warsaw, N. Y., asks for bids on fifteen or more breeds of registered dogs, etc.

Mr. C. E. Buckle, manager of the Charlottesville Field Trial Kennel, was in New York last week.

The New York *Sun* says that "It appears that canned horse meat is really to come on the market. It is said to be sweetish and not so good as dog, but it is not nasty." It looks as if man's best friend is menaced by a new danger, if he is once recognized as *delicatessen*.

In a letter under date of July 13, Mr. J. T. Mayfield, Bicknell, Ind., writes us that he intended to start for Manitoba on the 15th inst. He also mentioned that Mr. J. M. Freeman was just recovering from a long spell of dangerous illness. We regret his illness and wish him a speedy recovery. Mr. Mayfield reports quail more abundant about Bicknell this year then ever.

The entries for the Northwestern Field Trials Club's champion stake close on Aug. 1. Entry fee, $10; starters, $15. The club will give the owner of the first prize winner an engrossed diploma, setting forth that such winner has won the title of field trial champion. Dogs which have won a first or second prize in any field trial are eligible. This stake will be run after the trials of the Manitoba Field Trials Club are concluded. The rules of the Continental Field Trials Club will govern, excepting that in respect to heats they must be at least one hour long. First prize, silver trophy (presented by the club's patron, A. P. Heywood-Lonsdale, Esq., England) and 40 per cent. of the total amount received for entry and starters' fees; second and third prizes, 30 and 20 per cent. respectively of same. For blanks and information address Mr. Thos. Johnson, Winnipeg, Man.

National Beagle Club of America.

NEW YORK, July 19.—A regular quarterly meeting of the National Beagle Club of America will be held at the rooms of the A. K. C., 59 Liberty street, Tuesday, July 30, at 3:30 P. M. GEORGE W. ROGERS, Sec'y.

Yachting.

VALKYRIE III. was docked early this week, and will sail for New York on July 24.

Zeruah.

THE yacht here illustrated was designed by T. E. Ferris, draftsman for A. Cary Smith, for George E. Curtis, and has just been completed by Rice Bros., at Boothbay, Me. She sailed her first race on July 4, when just off the ways, winning easily.

The yacht is intended for cruising and not for racing, but the designer has availed himself of the latest ideas, though carrying out the overhangs to but a moderate length. The dimensions of the yacht are:

Length over all	43ft. 3in.
l.w.l.	29ft. 9in.
Beam	12ft. 7in.
Freeboard—lowest	2ft. 4in.
Draft	7ft. 3in.

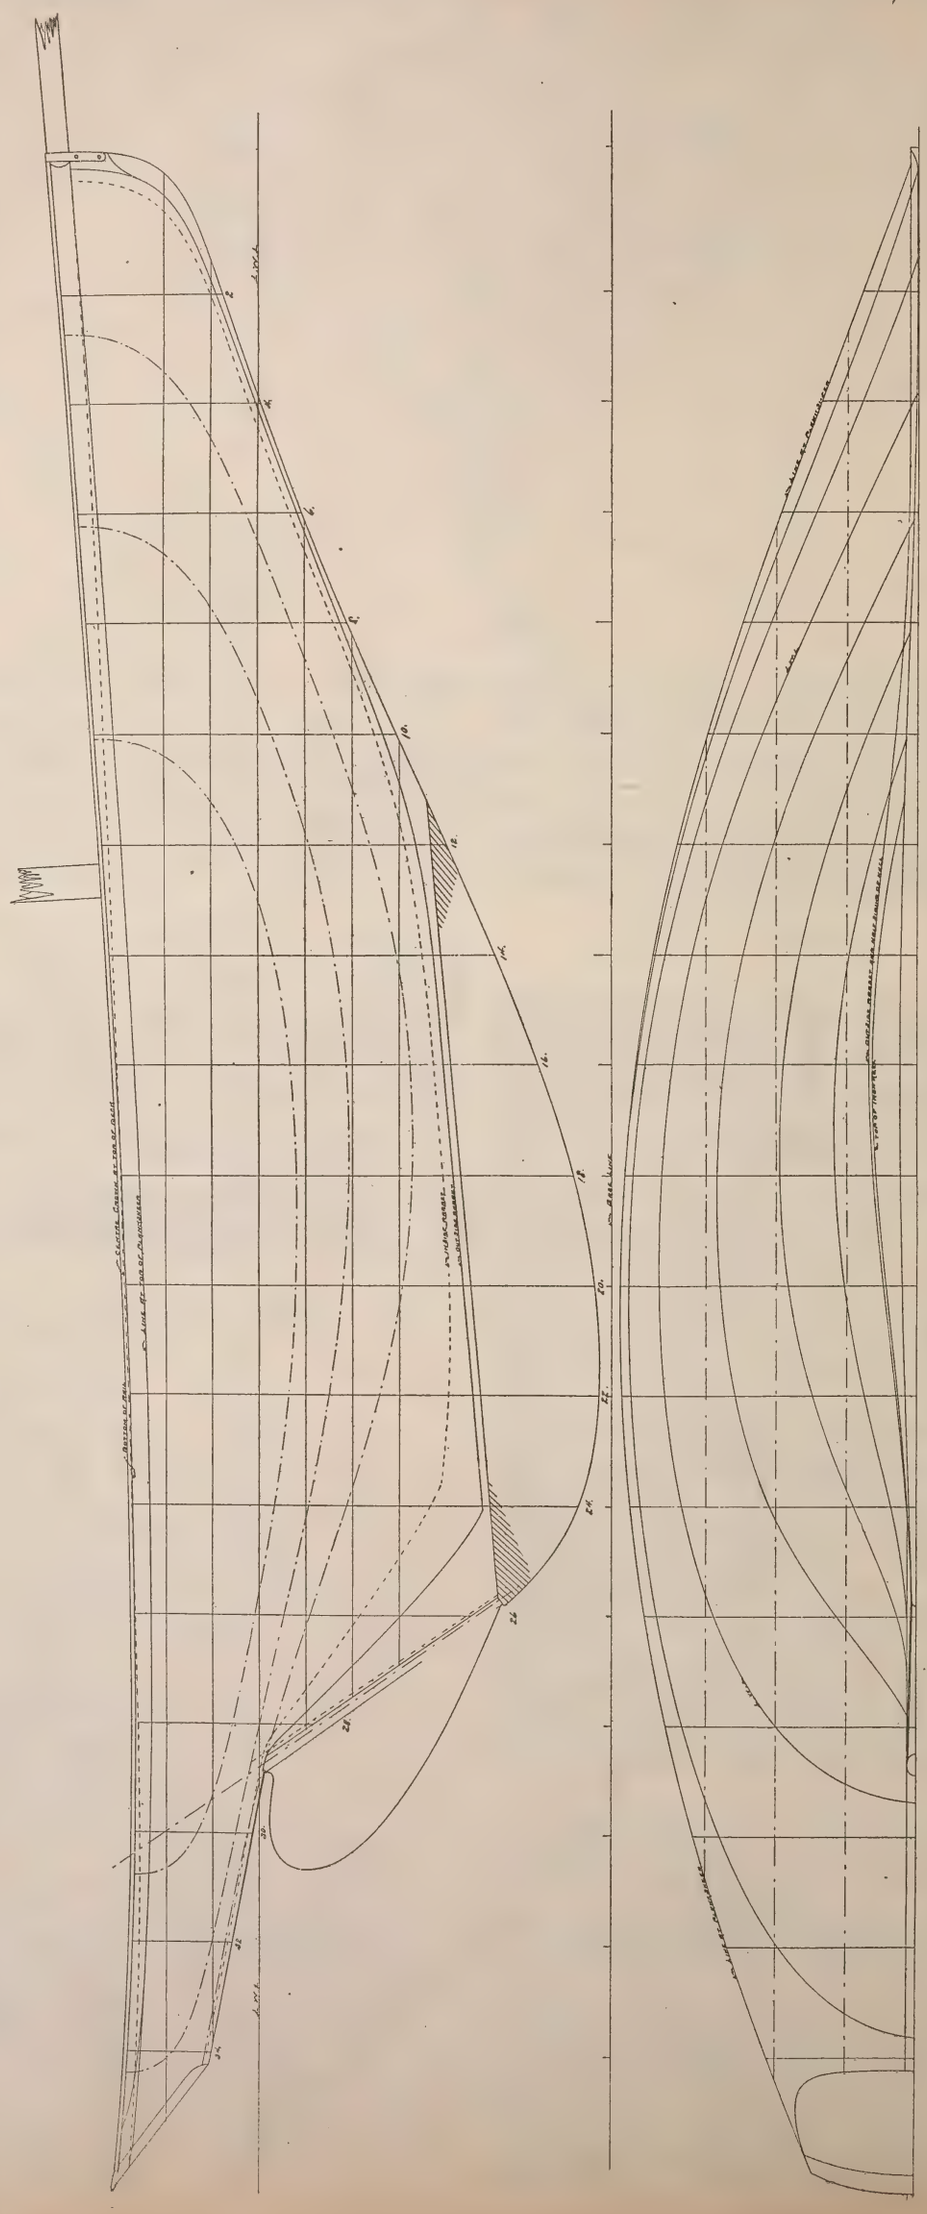
The specifications and drawings call for a very thorough construction, the keel of white oak in one piece, sided as per drawing and moulded 6in.; stem of white oak, natural crook, sided 4½in. down to waterline, and tapered to increase to siding of keel; sternpost, white oak, sided 4½in. at tuck and 2½in. at heel, moulded as per drawing and dovetailed into keel; deadwoods, white oak, sided to correspond with keel, etc.

The keelson is of white oak, in one piece, 4×6in., gained down ¾in. over floors; frames, of white oak, double, sawn, spaced 14in., sided 2¼in., moulded 2½in. at heels and 1¾in. at heads, the timbers to lap not less than 18in., with ¼in. bolt in each butt; extra frames, if necessary, to be fitted and securely bolted for the chainplates. The floors to be of natural crook white oak, sided 2½in. and moulded 3¼in. over heel, the arms extending about 15in. up the frames. The rudderstock to be of white oak, 4½in. diameter at head and 2½in. at heel, backing of yellow pine tapering to 1in. at after edge. Keel of cast iron, about 11,500lbs.; keel bolts, 1⅛in. diameter, iron, twelve in all. Clamps of clear selected yellow pine in one length, 1¼×6in. for middle third of length, tapering to 1¼×4in. at ends. Sheif of clear selected yellow pine, 2×3in. Bilge clamps same size as main clamps and two on each side. Beams of white oak; main beams moulded and sided as per dimensions on drawings; other beams, one on each frame, sided 1¾in., moulded 2¼in. Mast partners, oak, 2¼in. thick and 20in. wide, secured to beams by four hackmatack knees, sided 2¼in. Partner beams to have four wrought iron hanging knees 1⅛×¾in. in throat with twelve arms tapered to 1⅛×⅜in. at ends, similar knees to be located as per drawing. Partners to be fastened to mast by iron hanging knees. Plank-sheer of white oak, 1¼in. thick and 5in. wide. Bulwark of ⅞in. white oak in one length, tapered in depth as per drawings and capped by white oak rail 1×2in. Planking of yellow pine (rift) in single lengths, 1in. thick worked to ⅞in. at ends, lower strakes not more than 9in. wide and upper strakes not more than 4in. wide. Deck planks of clear selected white pine, laid with centerline 1¼×2in. seams payed after caulking with Jeffries marine glue. Side pieces of trunk, white oak, 3×2¼in., with deck beams dovetailed in. Sides of trunk of white pine 1⅛in. thick, carlins white oak, spaced about 14in., sided 1⅛in., moulded 1⅛in., roof of worked white pine ¾in. thick, seams payed with Jeffries marine glue. Water-tight cockpit with scuppers, companion, doors, cockpit rail, etc., mahogany. Fastening, iron nails and bolts, to be galvanized, all other iron work to be galvanized. The yacht to be fitted complete with spars, sails, rigging, gear, anchor, etc.

Defender and Vigilant.

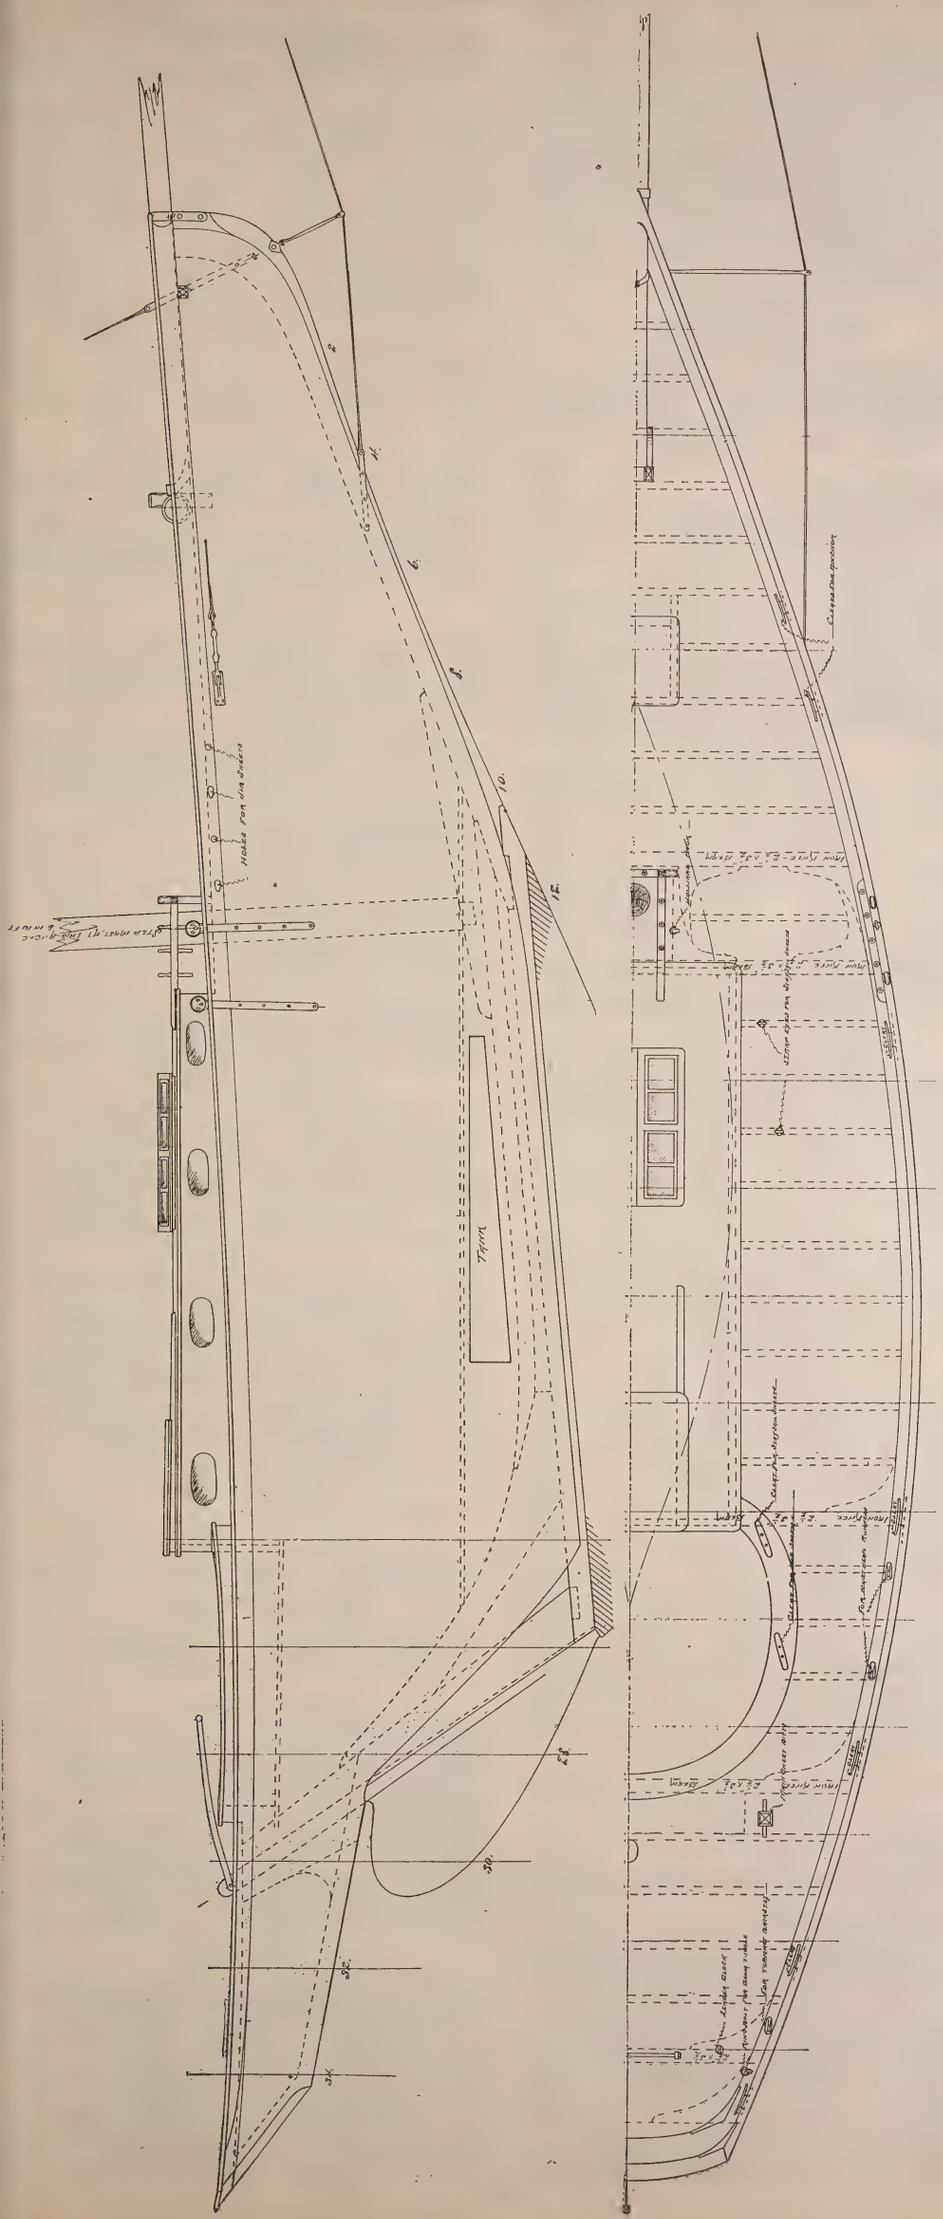
THE new candidate for international honors has at last had two open and official trials over timed courses, and whatever may be thought of the first, the second can only be considered an unqualified success. Both races were suited under summer conditions, light wind and smooth water, clubtopsails being carried from start to finish—such weather as most Cup races are sailed in. In the first race Defender's gain over Vigilant was far less than was anticipated, but in the second she made a very different showing, beating the centerboard boat by over 9min.

How much faster Vigilant is to-day than in 1893 and 1894 no one can say, but considering the nature of the changes made in her rig and ballast, and the time in which these two races were sailed, it is safe to assume that she is decidedly faster. In the first race the times do injustice to Defender, as she lost several minutes by overstanding the mark. In the second race any possible allowances are due to Vigilant; she had much the worse luck in the light wind on the second leg; and in the first race she was well washed by the attendant fleet.



Neither boat is measured, but it is probable that 1½ minutes will fully cover the allowance from Defender to Vigilant under their present canvas. A conservative revision of the elapsed times for the two days would put the allowance at 1m. 30s., and on the first day would be 4m. for Defender's loss in overstanding, so that the official figures of 2m. 45s. elapsed time would read 1m. 15 corrected plus 4m., or a gain of 5m. 15s. for Defender in 30 miles. From this a small allowance should be made for the bad washing which Vigilant received on the way home. The figures of Monday's race, 9m. 16s. elapsed, would be 7m. 47s. corrected. How much Vigilant lost through ill luck on the second leg and the washing of the steamers it is hard to say in cold figures, nor is it of much practical moment, as the following boat in such a race always suffers in the same way. We should say that on their merits Defender outsailed Vigilant about 5m. corrected time on the first day and 6m. on the second.

What is of far more importance than such figures is the performance of the new boat. She is quite as good to windward, quite as able and much easier through the water than the old one, and apparently a great improvement in every way.



To all practical purposes Defender and Vigilant started in their first race as two new yachts, with little advantage on either side from previous trials and working up. Vigilant is in hull precisely the same as in 1893 and '94, except that her inside ballast, probably 20 tons, has been recast and bolted under her old lead keel. This work was done very thoroughly by Mr. Lewis G. Nixon, at the Crescent shipyard, Elizabethport, N. J., under the superintendence of Mr. H. C. Wintringham. The added lead begins a few feet abaft the end of the old lead keel, the old and new lead being well rounded away on the fore end. It extends to within about 6ft. of the after end of the old lead keel, stopping short at that point. Its greatest depth is 15in., but this comes forward of the yacht's greatest draft, so the extreme draft is increased but 5in., or say 13ft. 6 to 9in., the exact trim and waterline not being known at present.

The original lead keel was only held by bolts through the Tobin bronze plate keel and the frames; in order to carry the new lead safely and to make the old work even stronger, Mr. Nixon ran the bolts, some seventy in all, of 1¼in. Tobin bronze, through both keels and up to specially forged hangers of L shape, each with a long vertical arm riveted fast to the floor plates, and a short horizontal arm through which the bolt passed, being set up with a nut and washer. In some cases, abreast the centerboard trunk, these hangers were made to go over the floor plates, with a bolt through each end of the hanger. The work was difficult and tedious; the interior of the yacht was cleared of everything and the cabin floors taken up; the keel plate was drilled with a twist drill about 12ft. long, worked from the cabin; then a ship auger of the same length was run through the lead keel. The new keel was cast ashore in sections, jacked in place on the dry dock and the bolts driven and set up, after which it was necessary to run in hot lead along the joining of the old and new keels, to fill the space left by the rounding of the lower corners of the old keel. The old and new lead was carefully dressed off and coppered.

While all that was possible was done to shorten the long straight keel and give greater speed in turning by cutting away the fore end and in a less degree the after end, the improvement in this direction was not great. After sailing about for a week Vigilant returned to New York from Newport and on July 17 was docked at the Erie Basin,

ZERUAH—CRUISING CUTTER DESIGNED BY T. E. FERRIS FOR GEO. E. CURTIS.—1895.

ZERUAH—DETAILS OF CONSTRUCTION.

where the after section of the new lead, about 6ft. long, was removed and replaced by an oak chock of the same shape, it being found that the yacht was by the stern.

The lowering of so much lead by 3 to 4ft. should materially improve the yacht's stability. The displacement would be increased by the new bulk below about 1½ tons or possibly more, the yacht thus floating about ½in. higher than with the lead inside. Against this, however, is the weight of the forged steel hangers and the keel bolts, so that the waterline length will be little affected by the change. As the yacht has not been measured, it is impossible to say whether her waterline will be longer or shorter than in previous years, but the new sails and spars are likely to lengthen it a little.

So many changes have been made in sails and spars that only those on board during a race know just which are being used, the same being true of Defender. With four mainsails of different cuts and dimensions, and half a dozen booms each, and with a new spar or sail tried almost every day, there is no possibility of any one outside of each boat knowing the exact sail area in any race.

In hull and rig Vigilant has been put in excellent condition; but, so far as practice is concerned, she is a new boat in the hands of a new skipper and crew. Capt. Barr, Mate Miller and their Scandinavian crew have been busy all the spring in making changes, handling ballast, shipping and unshipping spars, bending and unbending sails, and they have thus far had little or no opportunity for drill, or for the captain to get the hang of the boat in racing trim. In this respect they are hardly as well off as the Yankee crew of Defender; though Capt. Haff has had no opportunity to study the boat under way, the crew has at least had some thorough drilling on board of Colonia.

The two yachts being alike plated with a non-corrosive metal, their surfaces are equal, there is none of that inequality which exists between a new wooden yacht, just off the ways and with a raw bottom and swelled seams, and an older wooden boat, with bottom soaked and well filled with paint and all seams scraped smooth.

Defender is still hardly finished, but in deck fittings and rig she is complete and ready for racing. Both had absolutely new sails, the mainsails made by Herreshoffs; Vigilant's headsails were also new, made by Sawyer.

Thus in condition of bottom, in spars and sails, in preparation on the part of skippers and crews, the two yachts were far more evenly matched than is usually the case between a brand new craft and one two seasons old. How they compare in measurement is yet a question, and may be for some time unless the regatta committee shall enforce the provisions of Rule IV. of the Racing Rules, which forbid the entry of an unmeasured yacht. It is considered very "foxy" just now to conceal the measurements of the new boat from the challenger, although from the hundreds of photos which will be taken the measurements of the sail plan can be very closely determined, quite as closely as is necessary, if in fact such knowledge will be of any use to Mr. Watson or Lord Dunraven. In the meanwhile, the results of many races may be unknown for weeks. To the eye, the sail plan of Defender as seen on Saturday was not larger than Vigilant's, the latter having her larger mainsail and new boom. The headsails were smaller and the hoist larger, but as the two stood side by side the upper ends of the topsail yards seen from the upper deck of a big steamer looked of the same height.

The general estimate is that Defender will allow Vigilant about two minutes in 30 miles, but this is too much. Assuming that Vigilant measures the same as in the Cup races of 1893, and she cannot well measure less (97ft. racing length), and that Defender has a waterline of 90ft. and a sail area of 12,100 sq. ft., both very liberal allowances, then Defender would measure 100ft. racing length. On these extreme figures the allowance for 30 nautical miles would be but 1m. 24s.; so it is probable that Defender will finally allow less than a minute to Vigilant.

The first race, postponed from July 10, was finally set for July 20, the courses being off Sandy Hook, starting from the Sandy Hook or the Scotland Lightship, as the wind served. The Syndicate Defense Fleet made its first appearance in the vicinity of New York on the morning of July 18 in an imposing procession, first the big new ocean tug Luckenback, successor to the committee boat of many hard fought races ten years since. Then came the humble and homely but useful Hattie Palmer, fast to the tug's hawser. Astern of her consort came the new defender of the America's Cup, followed at a respectful distance by the poor Colonia, the tail end being a small naphtha launch belonging to Mr. Iselin. The fleet, all on one towline, swept into New Rochelle Harbor and the yachts and Hattie anchored off Mr. Iselin's home. All day Thursday and Friday the crew were busy with new sails, spars and gear, working hard in spite of the hot weather.

On Friday afternoon Vigilant sailed from Bay Ridge to the Horseshoe and anchored for the night. The Defense Fleet started on the same afternoon for Bay Ridge, Defender in tow of the Luckenback and Colonia in tow of the Hattie Palmer, all anchoring off Bay Ridge.

Saturday morning was clear and warm, but with a haze down the bay and little wind. A large fleet of yachts, tugs and small craft started down for the Hook, the New York Y. C. having the iron steamboat Cepheus for its members. The regatta committee was on board the flagship Sylvia with Com. Brown and the Cup committee. The start was set for 11 A. M., first a preparatory whistle, then after ten minutes a second whistle to start, with two minutes in which to cross. The two races were special club events, open to single-stick yachts of the largest class, which would include Vigilant, Defender, Colonia, Navahoe, Volunteer and Jubilee. Though both of the Boston boats have just been refitted for racing neither was present, nor are they likely to figure in the class this year. Colonia was left at her moorings off Bay Ridge, and Navahoe is not in commission. Only Defender and Vigilant were on hand, with new club topsails aloft and baby jiptopsails in stops on the stays, each swinging a cross-cut Herreshoff mainsail of the kind which has been so generally condemned abroad on Niagara and Isolde For new sails they sat as well as could be expected, the club topsail yard on Defender showing considerable round. The shortening of Vigilant's topmast and bowsprit 4ft. each last year on the Clyde, and the lengthening of her boom this year, have changed her to the eye and lessened the expected difference in appearance between her and Defender. The latter, however, has her mast further forward, and though her bowsprit looks long, the fore overhang is shorter than in Vigilant and the head triangle shorter on the base. In spite of the greater hoist of Defender the topsail yards are nearly of a height, her topmast being apparently shorter.

The wind was light from the south, but came in stronger about 11 A. M., the two yachts then working about through the large fleet which surrounded the Scotland Lightship. The letter B of the code was flying, denoting a windward and leeward course, and at 11:15 the three code signals from the triatic stay of the flagship told that it would be S. by E, the distance being 15 nautical miles. At 11:20 the preparatory signal was given, and at 11:30 the start.

To all intents and purposes the yachts disregarded the 2m. interval and made for a one-gun start, Defender crossing the line on starboard tack at 11:30:25, and Vigilant, also on starboard tack and a little further to windward, at 11:30:50, or but 25s. astern. Baby jibtopsails were broken out and sheeted home at once. Defender was hardly well clear of the line before she swung about on port tack, heading inshore, going about rapidly and steadily, unlike the older Herreshoff boats. The two were standing in opposite directions and under the same conditions. At 11:35 Vigilant went on port tack, Defender instantly staying offshore. While Vigilant moved sluggishly and uncertainly in stays, the keel boat went about quite as quickly as could be desired, gaining seconds with every tack. When they crossed Defender was well ahead of Vigilant, though only some 6m. had gone since the start. After passing under Defender's stern Vigilant found the new boat about again right on top of her, and went on starboard tack, offshore. Defender stood on for a minute until she was in a good position, and then tacked again to windward of Vigilant, on her starboard bow.

They now stood on together a half hour, under the same conditions, giving every opportunity for comparison. There was little to choose between them in sit of sails, the canvas being pretty good on each for a first trial. The wind was but moderate for club topsails, the many small craft outside the Hook, though only under working topsails, were having a very easy time of it. It is very doubtful whether the baby jibtopsails were helping them; at any rate, after they both came on port tack about 12:18, Defender took hers in and began to do better.

She had all along been gaining on Vigilant, pointing and holding on quite as well as the centerboard boat and footing faster until she was probably four minutes ahead before the end of the first hour. Then Vigilant began to pick up, and in a short time had cut down this lead very materially. When Defender went on starboard tack at 12:26, Vigilant was so close under her, that after standing on a few lengths Defender again went about on the other's weather to stop her. At 12:42 Vigilant took in her jibtopsail, which might as well have come in half an hour sooner. The water was perfectly smooth off the lightship, and even out here, well offshore, there was no sea; but the light lop was evidently hurting Vigilant, and she was now falling astern. The wind had freshened a little, but both carried their topsails easily, though now heeling at times to a very picturesque angle. There was a light haze over the sea, but the sky was clear and the sun shining, the heat being intense in spite of the breeze. The club tugboat was lying by the mark, a float with a red ball, and the flagship and other vessels were also near by, so that the turning point could be distinguished at quite a distance. At 1:10 Defender made an unnecessary tack inshore, Vigilant, about one-half mile astern, holding her course, as it proved, with excellent judgment. Defender stood on for over 4m., and then came about again for the mark, now clearly visible and on her lee bow, so that she was obliged to run down on it until, from being well out on the weather beam of Vigilant, she had drawn the latter directly into her wake and not far distant. Defender luffed about the mark at 1:34:30, followed by Vigilant at 1:36:34. The times

show that Defender covered the 15 miles in 2h. 4m. 5s. and Vigilant in 2h. 5m. 44s., a gain for Defender of but 1m. 39s.

The over standing, an error which it is hard to understand under the conditions, cost her possibly 4m., not more, as she came very fast after easing sheets for the mark, so that at best she beat Vigilant about 5m. in the 15 miles to windward.

It was generally expected that the strong rivalry known to exist between the Yankee and Scandinavian crews would bring out some lively exhibitions of sail handling, but such was not the case in this race. The wind was now to the west of south, and Defender started to set her balloon jibtopsail, her spinaker boom lying on deck. She had been clear of the mark for 4m. before the jibtopsail was broken out, and another 4m. passed before the spinaker was bellying up in the air, the boom rearing, though braced well forward. Vigilant had left the mark 6m. astern before her ballooner was drawing, and another 3m. passed before the spinaker was broken out.

They went home, as the times showed, at a 12-knot speed, the gain and loss being so little that it was a question whether Defender or Vigilant was doing the better work. On the part of the latter it must be said that she sailed home in the wash of the whole fleet, steamers big and little, while Defender sailed in clear water. This trouble is very hard to remedy, but it is a great injustice to the following boat, possibly well within her allowance, but robbed of most valuable seconds or even minutes through the selfishness or carelessness of the attendant fleet. The finish was timed from the steam yacht Emblа, the flagship reaching the line just as Defender crossed, but not in time to anchor. The times were:

Defender	2 49 05
Vigilant	2 52 15

The official summary was:

	Start.	Finish.	Elapsed.
Defender	11 30 25	2 49 05	3 18 40
Vigilant	11 30 50	2 52 15	3 21 25

Defender thus leads Vigilant by 2m. 45s., the corrected time being unknown, but it seems probable that Defender will win by over a minute at least. The race was sailed in remarkably fast time, the average being for the whole course 9 knots, for the windward half 7.5 knots and for the run in 12 knots. Defender's gain of 1m. 6s. on the run in is very small, and a part of it may be attributed to the washing of Vigilant by the fleet.

After the race Vigilant stood in for the Horseshoe, while Defender sailed up the Bay for New York, being finally taken in tow near the Narrows and going to City Island. On board of her were Messrs. Iselin, Morgan, Leeds, Woodbury Kane and Newberry Thorne. Capt. Haff sailed her, sometimes with the forward wheel and sometimes with the after one, and Capt. Terry was forward, looking after the headsails. On board of Vigilant were E. A. Willard, George A. Cormack, Edmund Fish and Wm. Nye, with Capt. Barr.

Sunday was one of the hot days of the season, close and sultry, and with a furious thunderstorm and high wind after sunset. Monday morning was overcast, the sun showing through the clouds and the atmosphere being dull and hazy, while the wind was light from S.W. Defender started down early in tow of a tug from Bay Ridge, while Vigilant came out of the Horseshoe a little after her rival had passed out by the Hook. The Sylvia and a large attendant fleet of steam yachts, tugs and a few steamboats were at the Scotland Lightship by 11 A. M., the sea being perfectly smooth and the sky clear, with the sun now shining down with a 90° fervor. The wind was blowing about 10 miles per hour from W.S.W., but shifting at times more to the westward, back and forth all day. The signals were soon set for a triangular course, and then the courses were sent up, S.E. ½ E.—W.S.W.—N. ½ E., each 10 nautical miles, making a free reach on the first leg, a beat on the second and a close reach on the third. There were many vessels about the line, but they cleared away a little when the preparatory gun was fired at 11:15, the two yachts working about through the fleet with large clubtopsails aloft. Each had a fine mainsail and in fact good canvas throughout; all of Defender's sails were of the new Herreshoff cut, even the clubtopsail; the forestaysail being cut high along the foot, rather a small sail. Vigilant swung a clubtopsail of the ordinary cut. The new boat has practicable no bulwark, possibly 3in., but on the deck about half-way from the middle line on each side is run a batten raised several inches above the deck, offering a foot hold or hand hold for the crew. Defender stood across to the westward on starboard tack, just to the north of the line, Vigilant a short distance in her wake; when less than a minute was left, Defender, breaking out a balloon jibtopsail, swung off for the line and crossed Vigilant's bows, being timed at 11:25:30; Vigilant at once broke out her ballooner and followed, being timed at 11:26:01. Shortly after crossing Vigilant sent up a protest flag.

Defender's balloon jibtopsail was rather a small sail, by no means as large as that of Vigilant, nor was it sheeted in so far. They ran very evenly for nearly 15 minutes and then both set spinakers to starboard, Vigilant spilling hers into the jibtopsail in the usual American fashion. Defender, on the other hand, kept her forestaysail set, the spinaker spilling into it, while the jibtopsail hung almost dead from the stay. Steering further to the east Vigilant ran up on Defender, and at noon was almost even with the other's lee beam.

Defender had hauled down her staysail and spilled the wind into the jibtopsail, but just after noon she took in her spinaker, the wind drawing too far ahead, Vigilant taking in hers while both set staysails. For the first half hour the gain had been on Vigilant's part, but shortly after the spinakers were taken in Defender began to draw ahead perceptibly, and at the end of the first hour, with the breeze still very light and the sea perfectly smooth, she had a decided lead. The first mark was now plainly visible, jibs were sent up in stops, and a little later the two were timed as they luffed around the mark;

	Elapsed.
Defender	1 31 31
Vigilant	1 33 07

In the free reach of 10 miles, in a light air and smooth water, Defender had made 1m. 36s. on Vigilant.

They trimmed down for a close reach, both on starboard tack and carrying larger jibtopsails than on Saturday. From the start Defender began to leave the older boat, pointing and fetching high and footing faster; in the light swell she lifted until a long, narrow streak of daylight could be seen where her forefoot would have been if she had had one, but with all her motion was much steadier and easier than Vigilant's, the bow throwing less water. The wind was unsteady in direction and very light at times on this leg, Vigilant getting rather less of it than Defender, and at one time almost becalmed. The wind heading a little, the pair made their first tack at 1:32, standing in for the shore above Long Branch, Defender still gaining. They came about together again at 1:58, Vigilant tacking immediately after Defender, though too far away to be in the least affected by her. At 2:19 Defender, now half a mile ahead, made a short hitch of but 3m. on port tack, and then came about for a long tack to the southward, which brought her below the second mark. At 2:43 she made her last tack, Vigilant following at 2:45, having made one leg less on the windward work. The times at the second mark were:

	Elapsed.
Defender	2 50 11
Vigilant	2 57 50

Defender had gained in the beat of ten miles, by fair sailing, 5m. 32s.

The last leg was a reach on port tack under the same sail as the windward work, Defender still increasing her gain; there was more wind under the land and the distance, rather more than 10 miles if the courses were accurately logged, was run off in 6m under the hour. The finish was timed:

	Elapsed.
Defender	3 45 00
Vigilant	3 54 48

Defender gained 2m. 9s., making her total gain 9m. 17s.

After the race Defender towed to New Rochelle. On board of Defender all day was Mrs. Iselin and Messrs. N. G. Herreshoff, W. K. Vanderbilt and E. D. Morgan.

A New "One Design" Class.

Editor Forest and Stream:

In the spring of 1894 a number of enthusiastic yachtsmen of Neenah, Wis., decided to form a cruising and racing club wherein the races should actually demonstrate the skill of the amateur skipper rather than offer a prize for outbuilding and racing under unequal conditions.

After considerable research a typical single-handed cruiser was planned and the work of designing put in the hands of J. W. Hepburn, of Toledo. The resulting boats (seven in number) are cat yawls, 21ft. over all, 15ft. 9in. l. w. l., 5ft. 6in. beam, 9in. draft without board, mainsail 176 square feet, mizen 74 square feet, spinaker 112 square feet. The design is a combination of "Dilemma" of Herreshoff and the "Scarecrow" of Stephens and proves a thorough single-hander, light draft, and when provided with air cans unsinkable.

Twice around a triangular course of one and one-third miles to a leg was chosen as the club course and a flying start with time taken from the firing of the second gun gives a snap to the start, while the short and sharp races which follow are of decided interest to the spectators and crews. Each yacht being a counterpart of the other, skill alone decides the race, and so closely matched are the yachts that 100yds. at the close is the extreme distance between the winner and the last of the seven boats.

As cruisers the boats are thoroughly satisfactory, easy to handle and with mainsail reefed and mizen down, safe in any storm. For added safety each boat is required to carry an anchor and sufficient life preservers while cruising. A roomy cockpit 4½×9 gives ample sleeping room, which, with the sail cover as a tent, puts the cruiser beyond the reach of discomfort. Large lockers provide a place for all necessary equipment for crew of four.

While boats of the above description constitute the permanent Nodaway Class, the club does not restrict itself to this class alone, but from time to time intends to adopt new and improved designs for similar classes. The second class already chosen by our committee is a sloop rig, Minnetonka model, short stern, extreme overhang bow; dimensions: 30ft. 6in. over all, 22ft. l. w. l., 8ft. 4in. beam, 9in. draft without board.

This last model (which was designed by Joseph Dingle, of St Paul) has proved exceedingly fast, and all the efforts of the club will be bent toward securing several boats of this identical model until such time as something decidedly better appears in the yachting centers, at which time we will again progress. Of course, the second class is in no sense a single-hander, but in all other respects has all the qualifications of the Nodaway Class.

Our sailing ground, Lake Winnebago, 200 square miles in area, gives us the best of opportunity for the display of the sport we most enjoy, viz, amateur yachting. S.

NEENAH, Wis., July 2.

Eastern Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Wednesday, July 17.

THE annual regatta of the Eastern Y. C. was sailed on July 17, the twenty-fifth anniversary of the organization of the club. The entries in the larger classes were very poor, but the 30-footers sailed a spirited and exciting race. Mr. Forbes was ready to start Volunteer, but Gen. Paine declined to race Jubilee, so there were no large single-stickers. The starters were:

FIRST CLASS—SCHOONERS.

	Sailing Length.
Mayflower, W. A. Gardner	89.06
Marguerite, H. W. Lamb	83.74
Mon Reve, E. P. Baugh, Jr.	69.97

SIXTH CLASS—CUTTERS.

Tomahawk, G. H. Perry	
Gorilla, O. B. Roberts	

SEVENTH CLASS.

Memory, W. N. Murray	33.46
Handsel, J. R. Hooper	31.74
Salmon, N. E. C. Eustis	33.18
Anoatok, George Owens, Jr.	32.44
Harbinger, O. F. Bache	32.71
Ashumet, C. H. Jones	35.13

The regatta committee laid out a new course, a triangle of 5-mile sides, starting off Marblehead Rock instead of Half-Way Rock, two marks being placed 5 miles S.W. by S.¾S. and S.E. by S.; the 30-footers sailing one round and the other classes two, or 15 and 30 miles. A calm, foggy morning was followed by a light easterly breeze, the start being made at 11:15. The yachts sailed first to the S.W. mark. The two 40-footers were stopped at the end of the first round. The full times were:

FIRST CLASS—SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Marguerite	11 20 04	5 58 15	6 38 15	6 34 46
Mayflower	11 21 15	6 01 10	6 41 10	6 41 10
Mon Reve	11 19 05	6 32 17	7 13 12	6 59 07

SIXTH CLASS—SCHOONERS.

Tomahawk	11 31 48	3 29 32	3 59 32	3 59 08
Gorilla	11 33 11	. . . .	. . . .	. . . .

SEVENTH CLASS—SCHOONERS.

Memory	11 42 00	2 55 36	3 17 36	3 14 19
Handsel	11 39 24	2 59 12	3 21 21	3 15 24
Salmon	11 39 05	2 58 52	3 20 52	3 17 11
Anoatok	11 38 26	3 00 52	3 22 52	3 18 04
Harbinger	11 38 39	3 17 43	3 39 43	3 35 21
Ashumet	11 38 44	3 16 31	3 38 31	3 37 18
Tomboy	11 48 53	Withdrew.		

Memory, Salmon and Ashumet came round the Cape for the race. The winners were: Marguerite, class prize and Puritan cup; Tomahawk; Memory first and Handsel second. The club house was open all day, many visitors being present, and a ball was given in the evening, the fleet in the harbor being illuminated.

The Atlantic Larchmont Cruise.

THE proposed race off New London on July 16 was reluctantly abandoned on account of rain and bad weather, and on July 17 the cruise was resumed, a start being made at 10:30 for Shelter Island, by way of Cornfield Light. The wind was light and fluky, making an uninteresting race. The times were:

SCHOONERS—CLASS A, 80FT. AND OVER.

	Start.	Finish.	Elapsed.	Corrected.
Ramona	11 10 00	6 22 29	7 12 29	7 12 29
Sachem	11 10 00	6 06 46	6 56 46	6 50 17

Verena	10 45 00	Did not finish.		
Choctaw	10 43 41	6 15 59	7 33 18	7 28 10
Harriet	10 41 09	6 19 36	7 38 27	7 28 19
Awa	10 44 29	6 08 14	7 24 45	7 21 46
Iola	10 45 00	6 26 00	7 41 00	7 21 46
Wenona	10 45 00	6 28 53	7 43 53	7 21 46

CLASS 5—35 TO 40FT.

Kathleen	10 45 00	6 19 40	7 34 40	7 27 21
Tigress	10 45 00	6 18 09	7 33 09	7 33 09
Norota	10 41 33	5 23 45	6 42 12	6 41 54
Senorita	10 45 00	6 25 53	7 40 53	7 31 54

CLASS 6—35FT. AND UNDER.

Infanta	10 43 33	6 20 38	7 36 58	7 32 18
Gunbilde	10 43 00	6 27 23	7 44 23	7 44 23
Almira	10 42 15	5 57 10	7 14 55	6 58 39

The winners were: Schooners—Class A, Emerald; Class B, Amorita; Class C, Loyal. Cutters—Class 2, Katrina; Class 3, Eclipse; Class 4, flush deck, Gossoon; Class 4, trunk cabin, Penguin; Class 5, Norota; Class 6, Almira.

The fleet lay at anchor in Deering's Harbor on Thursday and Friday, formally disbanding on Friday afternoon, as the yachtsmen were all desirous of being in New York for the race of Saturday.

Beverly Y. C.

BUZZARD'S BAY.

Saturday, July 13.

The 222d race, 2d open sweepstake, was sailed at West Falmouth on July 13.

It was blowing a fresh one to two reef southwester at start, but a very severe squall soon struck in and lasted till small classes had finished, when it subsided, and the larger boats finished in a single reef breeze.

Course for special class, triangular 17½ miles; for others to windward and back, 2d class 11 miles; 3d class 6 miles, others 4 miles.

An unfortunate affair happened in special class, the stake boat on starting line was placed too near, and Salmon in starting struck a rock, breaking all her centerboard gear so that the board could not be got up off the wind and hurting her seriously. She protested and the result in the class is in doubt till the regatta committee can meet and decide.

Salmon was sailed by Mr. Burton, owner of Onawa. She went off like a racer and did very well to windward, getting a long lead on Ashumet. When the squall struck in they made the mistake of not shortening the sail, Ashumet gained, but Salmon had a good lead at windward mark; off the wind, her centerboard drawing 2ft. more than in its normal condition when down killed her and Ashumet took the lead.

In the second class Bernice did nobly, and Doris in third class confirmed the reputation she earned July 4.

In the fourth class Ghuzz also struck her centerboard at the starting line, but she did well, and was sailing faster than any other boat on the finish. Grilse, as usual, with her old crew, led the way, finishing the 2 miles dead to windward and back in a very heavy sea in 49m. 11s., crossing the line at a phenomenal speed, though hardly as fast as Ghuzz. Howard made the same course in 50m. 43s., very good time for a catboat under 17ft. w.l.

Dawdle sprung mast and broke tiller. Imp, Gilt Edge, Silence and Laurel were drowned out. P D Q sprung a leak and gave up.

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Ashumet, C. H. Jones, B. Y. C.	34.03	3 10 15	3 04 02
Salmon, W. E. C. Eustis, B. Y. C.	33.07	3 14 44	3 13 15
Little Peter, W. G. Cotton, B. Y. C.	28.10	3 23 10	3 09 07

SECOND CLASS SLOOPS.

Flirt, W. L. Sheare, Jr., B. Y. C.	23.08	2 46 53	2 32 07

THIRD CLASS CATS.

Doris, J. Parkinson, B. Y. C.	21.01	1 12 45	1 02 44
Colymbus, Alfred Winsor, B. Y. C.	21.06	1 16 01	1 06 20
Melro, D. L. Whittemore, B. Y. C.	20.03	1 17 54	1 07 10
Gilt Edge, D. L. Whittemore, B. Y. C.	21.10	Withdrew.	

FOURTH CLASS SLOOPS.

Grilse, W. E. C. Eustis, B. Y. C.	19.02	0 49 11	0 41 23
Ghuzz, Lawrence Brooks, B. Y. C.	17.11	0 53 42	0 45 05
Silence, J. Crane, Jr., B. Y. C.		Withdrew.	

FOURTH CLASS CATS.

Howard, O. A. Miller, B. Y. C.	18.00	0 50 43	0 42 09
Dawdle, R. S. Hardy, B. Y. C.	17.06	0 59 22	0 50 26
Coquette, W. W. Phinney, Mon. Beach		1 03 12	. . . .
Cinch, H. Parker, B. Y. C.		1 07 12	. . . .
Tyrolene		1 07 39	. . . .

FIFTH CLASS SLOOPS

Raccoon, J. L. Stackpole, Jr., B. Y. C.	13.05	1 05 35	0 53 15
Laurel, H. & F. Burgess, B. Y. C.	14.00	Withdrew.	
P D Q, R. W. Emmons, B. Y. C.		Withdrew.	

FIFTH CLASS CATS.

Vif, Ralph Winsor, B. Y. C.	14.04	1 01 38	0 55 11
Imp, Geo. L. Dabney, B. Y. C.	14.05	Withdrew.	

Winners of prizes: Second class cats, Bernice; second class sloops, Flirt; third class cats, Doris; fourth class sloops, Grilse; fourth class cats, Howard first, Dawdle second; fifth class sloops, Raccoon; fifth class cats, Vif.

Larchmont Y. C.

ON BOARD FLAGSHIP RAMONA, Shelter Island, July 18.—The officers of the Larchmont Y. C. have decided upon holding a racing week at Larchmont during July, 1896, and have selected for the purpose the week beginning July 18 and ending July 25, both inclusive.

The proposed programme includes a schooner race on one of the days, a sloop race on another, open regattas for all classes on both Saturdays and special races on other days.

On each evening special entertainments will be given at the club house, among which provision has already been made for a smoker, a ball, an exhibition by Professor Hermann (a member of the club) and a concert.

The racing week will be a new feature in American yachting, and is not intended to take the place of the established club fixtures, which will be held as usual.

The following is the racing programme of the Larchmont Y. C., so far as at present determined upon.

Saturday, June 20—Spring regatta.
Saturday, July 4—Annual regatta.

LARCHMONT RACING WEEK.

Saturday, July 18—Open regatta.
Monday, July 20—Special racing.
Tuesday, July 21—Schooner race.
Wednesday, July 22—Special events.
Thursday, July 23—Sloop race.
Friday, July 24—Special events.
Saturday, July 25.—Open regatta.

Saturday, Sept. 5—Special race.
Monday, Sept. 7 (Labor Day)—Fall regatta.
Saturday, Sept. 12—Larchmont cup for schooners.

The programme for the racing week is subject to change as to arrangement and details, and other races will be given in addition to those enumerated above, as occasion shall require.

JOHN F. LOVEJOY, Chairman Regatta Committee.

YACHTING NEWS NOTES.

The yachtsmen and canoeists of Syracuse, N. Y., have recently organized a club for the encouragement of sailing on Onondaga Lake, near the city, the name being the Onontaha Boat Club, from an old Indian form of Onondaga. The officers are: Pres., Severe Dorion; Vice-pres., Herbert Peck; Com., W. J. Henley; Sec., B. J. Henley; Treas., S. H. Jacobson; Coxswain, C. H. Wood. Messrs. Severe Dorion, Herbert Peck, John Hand, W. J. Henley and R. Thurmwachter are the building committee, and a handsome and commodious club house is projected.

The Racine Yacht and Boat Works, of Racine Junction, Wis., is now turning out all classes of yachts and boats, from the cheaper livery rowboats up to racing and cruising craft of large size, both sail and steam. Their new catalogue contains illustrations of the yachts, canoes, boats and launches built by them, both in stock and to order. The company is prepared to estimate on any sort of craft, and has special facilities for doing good work at moderate prices.

The 1895 edition of Kiley's "Yachtsman's Guide and Nautical Calendar" is quite as indispensable to the yachtsman, whether afloat or ashore, as the previous editions. The excellent charts and the great amount of reliable and useful information on many different subjects make it an adequate substitute for a whole library of books; the thing to pick up in a hurry on a yacht, large or small. Yachtsmen ashore who wish to follow the published reports of races will find it equally serviceable. It is published by M. J. Kiley, Boston, Mass.

Rifle Range and Gallery.

Bisley Rifle Meeting.

BISLEY CAMP, England, July 8.—The Camp opens to-day and shooting commences to-morrow, continuing till July 20th.

The revolver competitions keep open all the time, concluding on the afternoon of July 20th, when the Whitehead Revolver Challenge Cup is to be shot for. This is a cup shot for 12 shots at 20yds. and 12 shots at 50yds. by teams of 8 each, consisting of volunteer team, regular team, civilian team and navy team.

The best shots at the usual Bisley revolver competitions are in the civilian team, but as the competition is at stationary targets (presumably to give the soldiers a chance) their superiority does not show much in this competition. The probable members of the civilian team are: Walter Winans (Capt. of team), W. Joynt, Lord Cairns, Dr. Bretton, Mr. Andrews and Mr. Rand (if he returns from the States in time). The rest of the teams are uncertain.

The revolver competitions are about the same as last year except the Smith & Wesson is not given. The weather seems settled for fair.

Rifle at New Orleans.

THE New Orleans *Times-Democrat*, of July 14, gives the following interesting account of a double team match between members of the American Athletic Club and the Young Men's Gymnastic Club:

"An interesting event was the friendly contest on Friday night, 12th inst., between the American Athletic and Y. M. G. C. Rifle Clubs, each shooting two teams of six men to a team. It came off at the Y. M. G. C. range, and the appended score discloses the winners:

"Americans—J. E. Staub 286, J. W. Smith 247, William Geneste 295, D. Barthelmy 292, H. Boehm 276, J. Uner 263; total 1,664.

"E. J. McGivney 271, T. P. Selby 283, R. H. Lytle 264, W. F. Sadlier 236, J. Scott 215, W. F. Fontaine 273; total 1,542; grand total 3,206.

"Y. M. G. C.—E. Dusse 282, T. C. Hills 312, F. Bierhorst 305, A. D. Hofeline 265, A. P. Barba 274, T. G. S. Thele 234; total 1,672.

"B. G. Hagstette 293, R. Hartmann 292, W. A. Briant 304, E. Hoehn, Jr., 310, A. J. Forest 288, James T. Baltar 279; total 1,766; grand total 3,438."

Cincinnati Riflemen.

CINCINNATI, O., July 14.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., strictly off-hand, 3lb. trigger pull, rifles under 10lbs. weight, at the standard target, 7-ring black:

Payne	9	10	9	9	8	8	7	7	7	7—81
	10	6	6	7	6	7	6	7	7	9—71
	9	5	6	9	8	9	8	7	8	8—75
	6	10	8	9	5	3	7	6	10	9—73
Weinheimer	5	10	7	7	9	7	7	6	6	9—73
	8	7	7	8	8	6	8	5	8	6—71

Walter Winans at Bisley.

BISLEY, England, July 20.—(*Special cable to Forest and Stream*). In the rifle and revolver tournament which was brought to a successful close here this afternoon, Mr. Walter Winans has about cleared the deck of first prizes in the revolver competitions. Eleven first prizes and one second out of 12 competitions speaks for itself. His record is as follows:

Twenty yards targets:
Military revolvers:
Series I.—Sliding target, won first prize.
Series II.—Disappearing target, won first prize.
Series III.—Quick-firing, won first prize.
Series IV.—Limited entries, did not compete.
Target Revolvers:
Series I.—Sliding target, won first prize.
Series II.—Disappearing target, won first prize.
Series III.—Quick-firing, won first prize.
Series IV.—Limited entries, did not compete.
Fifty yards targets:
Military revolvers:
Series V.—Won first prize.
Target revolvers:
Series VI.—Won second prize.

Mr. Winans's other first prizes were for the highest aggregate with military revolvers and with target revolvers, and also the grand revolver aggregate. The eleventh first prize was won in an extra event.

Pacific Slope Rifle Notes.

SAN FRANCISCO, Cal., July 14.—Scores at Sheel Mound Range to-day were:

Columbia Pistol and Rifle Club: Monthly club medal shoot, rifle, 200yds., no re-entry, champion class—Dr. L. O. Rodgers 84, D. W. McLaughlin 81, L. Barrere 64.

First class—P. Bohr 79, A. Gehret 76, Capt. Klein 62.
Second class—H. R. Crane 72, J. E. Gorman 72, A. Kennedy 65.
Pistol, 50yds., no re-entry:
Champion class—C. M. Daiss 92.
First class—J. E. Gorman 85, Dr. Rodgers 85.
Second class—L. Barrere 81, A. B. Dorrell 83, Crane 69, Unfred 66, Roos 55, Zimmerman 56.
All comers' pistol, 50yds., re-entry: Dr. L. O. Rodgers 94, C. M. Daiss 94, J. E. Gorman 93, A. B. Dorrell 86.
All comers' rifle, re-entry, 200yds: Dr. L. O. Rodgers 84, D. W. McLaughlin 83, A. Gehret 69.

ROEEL.

Who found the Sights?

MR. W. DUTCHER, of Paterson, N. J., writes us a follows, under date of July 19: "I was rather unfortunate at the National Schuetzenfest, as during the shoot I lost a box of sights belonging to my rifle. After the day's work, and after cleaning my rifle on July 7, I must have mislaid them, as they are not in my case. They were in a U. M. C. primier box with a yellow label on it, and consisted of a Vernier windguage set with a pinhead, spirit level and aperture sight, along with some screws for set triggers which were wrapped in paper and placed in the box. I did not miss them until this afternoon, when I was looking over my case. Will you please mention in your next issue that the finder will be rewarded on their return to me."

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 3.—RUTHERFORD, N. J.—Boiling Springs Gun Club, shoot for benefit cyclone sufferers. All invited. W. H. Huick, Sec'y.

Aug. 7.—PLAINFIELD, N. J.—Seventh monthly tournament of the New Jersey Trap-Shooters' League, under the auspices of the Climax Gun Club. League contest at 2 P. M.

Aug. 7-8.—BINGHAMTON, N. Y.—Tournament of the Binghamton Gun Club; targets.

Aug. 8-10.—ROME, N. Y.—Tournament of the Rome Gun Club; targets. W. P. Rayland, Sec'y.

Aug. 9-10.—NEW ORLEANS, La.—Tournament of the Inter-state Association, under the auspices of the Louisiana Gun Club; $200 added money.

Aug. 15.—WHITE PLAINS, N. Y.—All-day shoot of the White Plains Gun Club; live birds and targets. Chas. H. Banks, Sec'y.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

Aug. 27-29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 28-29.—FREDERICK, Md.—Two days' tournament of the Frederick Gun Club, at targets.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Sept. 2.—MARION, N. J.—Annual tournament of the Endeavor Gun Club; targets.

Sept. 2-3.—NEWARK, N. J.—Tournament of the South Side Gun Club; targets New Jersey Trap Shooters' League contest at 2 P. M. on the second day. W. R. Hobart, Sec'y.

Sept. 4-5.—UTICA, N. Y.—Two days tournament; live birds and targets.

Sept. 4-5.—SHEPHERDSTOWN, W. Va.—Morgan's Grove Fair Association's tournament, under the management of the Interstate Association

Sept. (second week).—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Sept —.—ROCHESTER, N. Y.—Fourth annual tournament of the Rochester Rod and Gun Club; three days of the week following the Clover tournament

Sept. 10-13.—DETROIT, Mich.—The Des-Chree Shos-Ka annual tournament, under the management of Jack Parker.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Oct. 23-24.—ELIZABETH, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Oct. 23-25.—ATLANTA, Ga.—Annual tournament of the Clarke Hardware Company; targets; $500 added money.

1896.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the management of Texas Field; $2,500 added.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week).—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Just as we were going to press last week we received a postal card from Jack Parker, asking us to claim, on behalf of his Des-Chree-Shos-Ka shoot, the dates of Sept. 10-13. We found time to get the notice a place in fixtures, but were unable to call attention to the dates in a proper manner. For the same reason we were also unable to call attention to the change of dates for the Utica, N. Y., two days' shoot. Sept. 4 and 5 are the dates now claimed, in place of Sept. 2 and 3 originally fixed upon. Another change of dates to be recorded this week are those for the Frederick, Md., Gun Club's tournament. The dates now decided upon are Aug. 28, 29. The reason for the latter change is the clashing of the previous dates with those of the Pennsylvania State shoot.

Mr. H. Brown, one of the best shots in the Binghamton, N. Y., Gun Club, writes under date of July 17 as follows: "In reply to personal letters, the Binghamton Gun Club has the assurance of the attendance of enough trap-shooters (including the 8 or 10 home shooters who will go right through the programme) to enable it to hold a good big shoot. The club has therefore decided to hold a two days' shoot on August 7, 8. A new set of Clover traps will be used during the tournament. Programmes follow later."

"U. M. C." Thomas looked in at this office on Monday afternoon last Thomas invariably chooses our busiest days for a call, but one can't get mad with "U. M. C." On Monday he was full of the Macon Interstate, from which he had just returned, and which he classed as one of the most successful ever held by the Association. Speaking of the New Orleans shoot, Thomas said it was sure to be a good one, adding that the Louisiana boys say that the breeze from the water keeps things cool and pleasant at their grounds.

The U. M. C. Company and the Winchester Repeating Arms Company have placed on the market rifle and revolver cartridges loaded with an American smokeless rifle powder, manufactured at Oakland, N. J., by the American E. C. Powder Company. From the satisfaction which these cartridges have given during the past few months, it looks as if there was going to be as big a revolution in rifle and revolver powders as there was a few years back in powders for shotguns.

Sportsmen of Perth Amboy, N. J., are moving in the right direction. They have organized a gun club under the title of the Central Gun Club. Its officers are: Pres., Spencer Dayton; Vice-Pres., James M. Glenn; Sec., H. J. Mason; Treas., Herbert Dayton. Directors, Samuel Van Horn, Wm. Dayton, Wm. Hartmann. Finance Committee, George Eggert, Jas. L. Tooker, Jr., Samuel Hornsby. The initial shoot took place on Saturday afternoon last, July 20.

Is the English bluerock pigeon really as hard to hit as they say it is? Every American who has shot pigeons at Hurlingham or at the Gun Club is asked that time and again. For answer he can point to some statistics taken from the London *Field* of July 6, which appear elsewhere. It will be noticed that the percentage of birds killed at the Gun Club during the International week was only 74¾—the same percentage as last year.

The Boiling Springs Gun Club, of Rutherford, N. J., will hold an all-day shoot on Saturday, Aug. 3. The entire proceeds of the shoot will be donated to the fund now being raised to aid the sufferers at Cherry Hill, N. J., who lost relatives and property in the disastrous cyclone that completely annihilated that little town on the afternoon of July 13.

The Clarke Hardware Company, of Atlanta, Ga., announces that it will hold its annual three-days' tournament on Oct. 23-25. The company will add $600 to the purses. The attractions at Atlanta at that time should be additional incentive to trap-shooters to attend this tournament.

According to late dispatches from Aix-les-Bains, Fred Hoey is still giving a good account of himself. As Hoey is about as good an amateur pigeon shot as any in the United States, Americans can get a good line through his work as to the quality of the birds furnished in Europe.

This is an actual fact: Miss W. talking to the wife of a well-known frequenter of trap tournaments, "What does your husband shoot at this time of the year, Mrs. B.?" Mrs. B., "Only clay pigeons." Miss W. (hesitatingly), "I don't believe I've ever eaten any of them; have you?"

The Home City Gun Club, of Springfield, O., has arranged a series of monthly "amateur shoots." All professionals are barred. The first of these monthly shoots takes place July 30, when a good turnout is expected.

Louis Schortemeier had a picnic at the 21 yards mark in the New York German Gun Club's shoot on July 17. Dr. Hudson under the club's rules conceded "Schorty" nine yards and gave him a good race too.

Messrs. Wiebusch & Hilger, 94-96 Chambers street, New York city, and the Hazard Powder Co., 44-48 Cedar street, New York city, are the two most recent additions to the ranks of the Interstate Association.

A notice is given elsewhere of the programme of the Interstate Association's tournament at New Orleans, August 9, 10, the tournament being held under the auspices of the Louisiana Gun Club.

The White Plains (N. Y.) Gun Club, will hold its monthly shoot on Aug. 15 at its grounds, Oakley avenue. Shooting commences at 9 A. M. The shoot will be at bluerocks and live birds.

W. P. Rayland ("Rags"), secretary of the Rome, N. Y., Gun Club, announces that that club will hold a three-days' tournament on Aug. 8-10.

EDWARD BANKS.

Endeavor Gun Club.

JERSEY CITY, N. J., July 20.—The Endeavor Gun Club held its monthly prize shoot this afternoon at the club's grounds, Marion, N. J. The attendance was good, considering the extremely hot weather. The scores made in the first shoot, which is shot at 25 targets, unknown angles, were as follows:

Collins	1111111111111101111100111—22
Corson	1111111111101010111111100—20
Dustin	0111001111111110111101011—19
Frey	0111110111101101010010111—16
Strader	1111100010111011100111110—17
Piercy, Sr.	1111101111110101111101111—21
Fletcher	1001001011110100111101110—15
Ingram	1001101111001010100111111—16
Hassinger	1111010101011111111111110—19
C von Lengerke	1111110111101101111011111—21
Sloane	0011100000111101010110101—13

Among the other sweeps shot this afternoon was the following at 20 targets, unknown angles:

Collins	01110111100010111111—14	Dustin	11111011101111111110—17
Strader	01111111010111111111—17	Shaefer	11001010011110111100—12
Piercy, Sr.	10111010111100001001—11	Ingram	11111111111001101001—15
Corson	11111110110110110101—16	Polhemus	11101001111101111111—16
Folson	00001101111100011001—10	Wanda	01110110100011111111—14
Hassinger	11100111010111111110—15	Piercy, Jr.	11100010011001101101—11
Stone	11111111100101111101—16	Fletcher	11110110101100111111—15
C v Leng'ke	10111110101101111011—15		J. A. CREVELING.

Michigan City Gun Club.

MICHIGAN CITY, Miss., July 16.—An interesting team race was shot on our club grounds on Thursday last for a side wager—Brewer and Tray vs. McCarley and Hardaway. The match was at 25 singles per man. The targets were thrown at unknown angles and low, and the day was also dark, which made the shooting very hard. Scores:

Tway	0111111111111111100111111—22
Brewer	0000010011001111110101110—13—35
Hardaway	1110111011001010111111101—18
McCarley	1111011101101111111101—20—38

The winners were immediately challenged to another match. The scores:

Tway	1011110101111111011111111—22
Brewer	1101110111101000011011110—17—39
Hardaway	0111101101011110111011011—18
McCarley	1110011101101110111010111—18—36

This makes the matches a tie; a third and deciding match will be shot soon.

SECRETARY.

Central Gun Club of Perth Amboy.

PERTH AMBOY, N. J., July 20.—The recently organized Central Gun Club of this place held its initial shoot this afternoon. The club shoot was at 10 live birds, $3 entrance. The scores this afternoon were:

H Jones	2122112121—10	George Eggert	1111111010— 8
H Dayton	2111111011— 9	H M Brace	0110111112— 8
J van Brackle	1111102211— 9	S Dayton	0121020201— 6
Wm Dayton	1122020222— 8	James Glenn	0112200011— 6
Wm Hartmann	1212110110— 8		

These shoots are for four prizes, which will be distributed at the end of each year. To become entitled to any one of these prizes, a member must take part in eight of the shoots. The four highest totals will receive the prizes. The first and third prizes will be of the same value; the second and fourth also being equal.

H. J. M., Sec'y.

The Schmelzer Midsummer Tournament.

KANSAS CITY, Mo., July 19.—The second annual midsummer tournament of the Schmelzer Arms Co. was brought to a close to-day at 4:45. A. Pugh fired the last gun. The tournament was held at Fairmount Park, which is located on the Air Line Railroad about eight miles from this city. It can be reached by rail, trains running out there about every forty-five minutes. The park is a summer resort, beautifully laid out, having settees, swings, dancing pavilion, an elegant bathing beach, a lake with boats and boat house, a bear pit and a crystal maze, while at night an opera company gives performances in a large pavilion reserved for that purpose. Meals could be had on the grounds at all hours, and through the courtesy of J. A. R. Elliott arrangements were made whereby those who desired could also obtain sleeping accommodations at the grounds. The shooting grounds were located at the east end of the park, inside the bicycle track. Three sets of five bluerock traps, with North's electric pulls, were used. The traps were set in a straight line, about 30ft. separating each set from the other. At the score awnings had been erected the entire length to protect the shooters from the sun and rain. The traps faced north and the targets were thrown moderately fast. The screens that protected the trappers were the highest we have ever seen, and for that reason the targets had to be thrown well up. The background was not good; in fact, it was rather a difficult one. To the left of the score was a high grand stand, that interfered with the view of the targets going that way; while just beyond the park fence, directly ahead, stood several large trees that made it rather difficult to judge targets thrown that way. To the right of the traps the ground rose abruptly; this being covered with trees and a large confield, it was rather against the shooter obtaining a good view of targets thrown in that direction. At this shoot there was no blackboard, and only one copy of the scores was taken. This made it a little difficult for the newspaper men to get the scores, but they should not mind so trifling a matter. In the rear of the score a number of tents were set up where the shooters could while away the time when not shooting, but they were not the coolest place on the grounds by any means, especially on Tuesday and Wednesday, when the thermometer registered 100 in the shade. On Thursday morning it rained for several hours; this cooled the atmosphere somewhat, although in the afternoon it got very hot again, while a thunderstorm was brewing and several heavy showers fell. That night a terrible wind and rain storm struck this vicinity; several of the tents were blown down, one of which was the ammunition tent and a great many shells got wet, a number of which were worthless. By morning it had ceased raining, and the air was delightfully cool and pleasant; but when the shooters arrived on the grounds they presented a rather dilapidated appearance, and the mud was several inches deep. The attendance, while not so large as was expected, was good and held up wonderfully well until the last day, when there was a marked falling off in the number of entries; 79 was the largest number taking part in any event. This is quite a creditable showing when one considers that a man had to shoot over 90 per cent. to win anything. This was an amateur shoot, but if all the experts in the country had participated the company could not have been any hotter. All events were shot under the walk-around system of known traps and angles, and these Western shooters seem to have them gauged about right; no matter whether it was a 15 or a 50-bird race one had to break straight to get in for first. Several shooters broke 100 straight during the tournament, and unless one could shoot a 95 per cent. gait there was little chance to win anything, as all ties had to be shot off, and when an ordinary shooter happened to scratch into first place he was invariably shot out. This caused a great deal of dissatisfaction among these shooters. No one was permitted to win more than one first prize on any day, nor more than two during the tournament. When a shooter won a first prize the remainder of that day he never made any effort to go straight, as to do so would shoot him out. Several shooters openly boasted of having missed their last bird intentionally.

Jack Parker managed the shoot. Like all shoots under his supervision, everything was kept running smoothly; not only did he look after the traps, but he also made up sweeps and handled the cash in these events. There are a number of tournament managers in the country, but they must all doff their hats to Jack, for he is the prince of them all. Jack only increased his friends by the number of acquaintances that he made. Ed. Hickman also contributed in no small way to keep the shoot running. He acted as squad hustler on one set of traps, and he generally had his squads up when they were wanted. The local shooters are not target shots and really care little for the sport. Their game is live pigeon shooting, and for this reason only a few local men took part in the shoot; but the non-resident shooters were there in force, Kansas especially being well represented. Among those whom your correspondent met during the shoot were the following: J. J. Cornett, Linneus, Mo.; Ted Ackerman, Stanton, Neb.; T. R. Kinmouth, Joplin, Mo.; W. H. Skinner, Chicago, Ill.; J. W. Barre, Louisiana, Mo.; Lou. Erhardt, Atchison, Kan; W. E. Morgan, A. Dixon, W. G. Sergeant, C. W. Greene, Joplin, Mo.; J. T. Buker, Rockford, Ill.; Fred. Gilbert, Spirit Lake, Ia.; Charley Budd, Des Moines, Ia.; H. T. Leeman, Galena, Kan.; John Georgeson, Kelly, Ia.; Billy Allen, Hutchinson, Kan.; Andy Thomas, Chicago, Ill.; J. M. Hershey, Osage, Kan.; C. H. Blackburn, Olathe, Kan.; M. B. Horton, Kansas City, O. Osgood, Cleveland, O.; J. R. Wilmot, Lexington, Mo.; Ben. O. Bush, Kalamazoo, Mich.; A. Fulton, Kendena, Kan.; H. M. Davis ("Menefee"), Richmond, Mo.; J. W. Sexton, Leavenworth, Kan.; M. F. McDonald ("Greene"). Richmond, Mo.; F. L. Stanley, Kansas City, Mo.; C. Calhoun, W. W. McIlhany, Weir City, Kan.; W. M. Grover, Roodhouse, Ill.; Nathan Williams, Kelly, Ia.; G. Essig, Plattsburg, Mo.; J. Batchelor, St. Joseph, Mo.; T. Clyde, Lincoln, Neb.; C. F. Reust, Frankfort, Kan.; C. E. McGee, Easton, Kan.; L. G. Clarke, Carrolton, Mo.; —— Keller, Leavenworth, Kan.; C. D. Linderman, Adams, Neb.; J. P. Simmons, Louisburg, Neb.; J. J. Van Wyck, Kansas City, Kan.; J. L. Horn, Galena, Kan.; Geo. P. Christianson, Randall, Ia.; C. W. Mason, Richmond, Mo.; S. Deweese, Wamego, Kan.; A. E. Pugh, Kansas City, Kan.; M. Rabkin, Kansas City, Kan.; G. W. Goff, Leavenworth, Kan.; G. W. Herron, Kansas City, Kan.; F. H. McElroy, Leavenworth, Kan.; George Stevenson, Thornt Thomas, A. H. Barlow, Waterville, Kan.; L. Scott, Scheffield, Mo.; George McQueene, C. M. Spencer, F. E. Lovel, Carrolton, Mo.; J. S. Rooney, Kansas City, Kan.; Geo. W. Jenkins, Wamego, Kan.; W. G. Snodgrass, Frankford, Kan.; Chester Dixon, E. D. Porter, Dr. R. B. Tyler, Tim Molloy, John Craigan, Joplin, Mo.; J. W. Carney, Galena, Kan.; Elwood Thornton, Carterville, Mo.; C. J. Liler, Aurora, Mo; Armour Robinson, Leavenworth, Kan; F. M. Soward, Kansas City, Kan.; W. S. Ferguson, Atchison, Kan; Joe Lecompte, Willow Springs, Mo.; Arch Hollenbeck, West Plains, Mo.; Jay Shuert, Willow Springs, Mo.; W. H. Allen, Pleasant Hill, Mo.; W. S. Allen, Raymore, Mo.; A. E. Hood, Rockford, Ills.; T. H. Cohran, Pleasant Hill, Mo.; W. D. Bush, Fort Madison, Ia.; Christ. Gottlieb, Kansas City, Mo.

The scores and the winners of the different events are as given below:

First Day.

No. 1, 15 targets, entrance 40 cents, 60 entries: Herron 12, Miles 7, Ackerman 12, Georgeson 14, Christianson 12, Gilbert 15, N. Williams 13, Goff 9, Wisig 11, Cosby 14, Bruce 11, McGee 11, Laidlow 8, Stevenson 13, Barlow 9, T. Thomas 12, McKinney 12, W. D. Bush 18, Erhardt 13, Calhoun 10, McIlhany 13, Sexton 15, Green 14, Menefee 7, McElroy 9. Ruest 15, Sergeant 10, Liles 14, C. W. Green 2, Dixon 11, Clark 11, Spencer 11, McQueen 12, Essig 11, Keller 13, Mason 11. Barre 11, Norton 9, Gottlieb 14, Rooney 12. Frenkas 10, McWhorter 9, Osgood 15, Radikin 12, Snodgrass 14, Horton 14, Leeman 12, Howe 15, Kinmouth 13, W. E. Morgan 8, W. A. Williams 8, Hollenback 10. Shuert 9, Lecompt 5, R. P. Barre 9, Hershey 14, Clyde 12, Fulton 10, W. Allen 11, Batchelor 13.

Osgood, Horn, Ruest, Sexton and Gilbert tied for first prize—a Quackenbush rifle. Gilbert won on the shoot-off, breaking 15 straight. Georgeson shot out the 14 men and won second prize—a pair of rubber boots. Kinmouth did the same to the 13 men and got third prize—a fishing rod.

No. 2, 25 targets, 66 entries: Herron 21, Miles 13, Ackerman 21, Georgeson 25, Christianson 18, Gilbert 21, N. Williams 21, Bruns 15, Goff 21, Wing 16, Cosby 23, Bruce 15, McGee 20, Laidlow 13, Stevenson 17, Barlow 23, T. Thomas 17, McKinney 20. Erhardt 19, Calhoun 22, McIlhany 25, Sexton 24, Green 21, Menefee 19, McElroy 18. Reust 21, Sergeant 23, Liles 32, C. W. Green 11, Dixon 18, Clark 25. Spencer 15, McQueen 21, Essig 15, Keller 22, Mason 14, Barre 23, Gottlieb 23, Rooney 16, Frenkas 22, McWhorter 13, Linderman 22, Radikin 20, Snodgrass 20, Horton 17, Leeman 25, Horn 20, Kinmouth 23, Morgan 19, Stanley 16, Clyde 20, Hollenback 15, Shuert 15, W. D. Bush 23, Lecompt 14, Barse 14, Osgood 24, Fulton 20, W. Allen 10, Baker 24, Henry 21, Batchelor 23, Hershey 22, Allen 17, L. C. Smith 23, Norton 23.

Georgeson, McIlhany, Leeman and Clark all went straight; on the shoot-off Clark beat them out, winning the Spencer gun. Sexton, Osgood and Buker scored 24, and Buker had to break 15 more straight to win second—a sole leather gun case. Nine men scored 23, and W. D. Bush managed to beat out the other men in the tie, capturing the sweater, which was third prize.

No. 3, 25 targets, 79 entries: Herron 20, Miles 18, Ackerman 22, Georgeson 22, Christianson 20, Gilbert 24, W. Williams 18, Bruns 20, Goff 20, Wing 19, Cosby 21, McGee 19, Lardlow 9, Stevenson 12, Barlow 18, T. Thomas 18, W. D. Bush 21, Clark 22, Erhardt 21, Calhoun 23, McIlhany 22, Sexton 25, Green 23, Menefee 18, McElroy 19, Reust 25, Sargeant 23, Liles 19, C. W. Green 21, Dixon 19, Mason 11, Spencer 22, McQueen 17, Essig 19, Keller 18, Rooney 14, Barse 18, Norton 21, Gottlieb 18, McWhorter 14, Frenkas 21, Horton 20, Adams 19, Horn 21, Kinmouth 20, Morgan 24, Stanley 15, Hollenback 12, Shuert 10, Lecompe 12, Linderman 21, B. O. Bush w., Sparrow 12, Scott 19, Hershey w., Radikin 22, Clyde 19, Osgood 24, Rickmer 22, L. C. Smith 22, Barre 23

Snodgrass 22, Fulton 19, Lincoln 14, Livingston 21, Blackburn 15, Stevenson 15, Elay 15, Dillon w., Batchelor w., Simmons 12, Brown 14, D. Elliott 23, W. B. Thomas 23, Liley 10, Deweese 17, Buker 21, Henry 19, Strand 9.

Sexton and Reust were the only ones to break straight, and in the shoot-off Sexton won first prize—a Parker hammerless gun. Gilbert, Morgan and Osgood scored 24; Gilbert was the last man in, and took second prize—a quarter can of Wood powder. Seven men scored 23, but only three, Green, Barre and Partle, contested for the possession of the sweater, which was third prize; Barre got this.

No. 4, 25 targets, 72 entries: Herron 23, Miller 13, Ackerman 23, Georgenson 25, Christianson 25, Gilbert 25, W. Williams 19, Bruns 18, Goff 19, Wing 17, Cosby 23, McGee 18, Laidlow 12, Stevenson 21, Barlow 20, T. Thomas 13, W. D. Bush 25, Clark 20, Erhardt 22, Calhoun 23, McIlhany 23, Sexton 24, Green 21, Menefee 21, McElroy 22, Reust 23, Sergeant 23, Liles 22, C. W. Green 15, Dixon 20, Mason 16, Spencer 19, McQueen 16, Essig 15, Smith 23, Rooney 24, Barre 23, Norton 23, Gottlieb 22, McWhorter 16, Frenkas 18, Horton 23, Stevenson 18, Horn 22, Kinmouth w., Morgan 19, Hollenbeck 12, W. B. Thomas 21, Lecompte 14, Stanley 16, Linderman 22, Buker 25, Henry 24, Shuert 13, Osgood 23, Rickmer 24, Clyde 23, Radikin 22, Batchelor 19, Scott 22, Lincoln 18, Fulton 18, B. O. Bush 23, Adams 19, Blackburn 18, Hershey 21, Liley 18, Sparrow 17, Snodgrass 19, Livingston 20, Reber 15, Strand 21.

Georgenson, Christianson, Gilbert, W. D. Bush and Bucker each broke 25, and Georgenson had to break 19 out of 20 to shoot the others out. He became the possessor of first prize—a Baker hammerless gun. Sexton, Rooney, Rickmer and Henry broke 24. Henry broke ten more straight and took second prize—a split bamboo rod. Clyde took third prize—a pair of canvas leggings, as the rest of those who scored 23 would not shoot off the tie.

No. 5, 20 targets, 54 entries: Herron 11, B. O. Bush w, Ackerman 17, Georgenson 17, Christian 14, Gilbert 17, N. Williams 16, Bruns 15, Radikin 15, Osgood 18, Cosby 18, McGee 14, Laidlow 12, Stevenson 17, Barlow 17, T. Thomas 11, Ely 15, Clyde 19, Erhardt 19, Calhoun 18, McIlhany 19, Sexton 19, Green 19, Menefee 18, McElroy 14, Reust 19, Sergeant 16, Liler 18, C. W. Green 10, Dixon 17, Mason 16, Spencer 15, Pugh 15. Essig 15. Snodgrass 17, Barre 19, Gottlieb 19, Frenkas 15, Horton 20, Rickmer 19, Morgan 15, Hollenbeck 13, Stuart 12, L. C. Smith 19, Linderman 18, Lecompte 14, McQueen 14, Clark 17, Norton 19, Rooney 15, Leeman w, Horn 18, Hershey 16, Wing 12.

Horton was the only one to go straight and took the $15, which was first prize. Eleven scored 19. McIlhany shot them all out and walked off with the $5, second prize; Menefee won third—a rack of shot.

In addition to the above there were seven sweepstake events shot on the third set of traps, five 10-target races and two at 15 targets. In these events nearly all different systems were tried, some were known angles, some unknown angles, some reversed angles, and some were unknown traps, one man up. The entries in these events ranged from 26 to 33, four moneys in each event, all of which was pretty well cut up.

Second Day.

No. 6, 15 targets, 48 entries: Osgood 14, Gilbert 14, Christianson 13, Georgenson 15, Bruns 6, Sworard 12, Erhardt 13, Calhoun 12, McIlhany 14, Sexton 13, Green 13, Menefee 10, Essig 12, Rees 6, W. D. Bush 12, Mason 13, Foster 9, Miles 8, George Stevenson 9, Cosby 12, Lecompt 9, W. P. Smith 9, Barlow 13, Jones 12, Clark 14, Norton w, Gottlieb w, McWhorter 8, Barre w, McQueen 10, Spencer 12, Ruest 13, N. Williams 10, Harkins 14, Stewart 11, Jenkins 11, Malloy 9, Sergeant 13, Morgan 9, C. W. Green 2, A. Dixon 11, Thornton 10, C. Dixon 14, Buker 14, Henry 15, Hollebeck 9, Shuert 2, Freeman 12.

Georgenson and Henry were the only ones to score straight. On the shoot-off Georgenson won the 25lbs. of Hazard Smokeless powder. The second prize, 12½lbs. of the same powder, was won by Buker, who shot out the other fourteen. Sexton had to break 19 straight before he disposed of Mason, Sergeant, Christianson, Ruest, Erhardt and Barlow, and won third. 6¼lbs. of powder.

No. 7, 25 targets, 71 entries: Osgood 24, Gilbert 23, Christianson 23, Georgenson 22, Bruns 13, Sward 20, Molloy 20, Sergeant 19, Morgan 17, C. W. Green 16, A. Dixon 20, Thornton 24, Horton 24, Rees 8, W. D. Bush 23, Mason 18, Foster 19, Miller 12, Essig 19, Spencer 23, Harkins 22, Reust 25, Jenkins 19, Stewart 15, Barre 24, Norton 15, Gottlieb 17, McWhorter 17, Snodgrass 18, Liler 25, Barlow 19, Clark 22, N. Williams 23, Stanley 17, Ted 22, Linderman 24, Erhardt 24, Calhoun 24, McIlhany 23, Sexton 25, Green 21, Menefee 22, Clyde 20, Ely 16, W. P. Smith 20, Jones 18, Kinmouth 24, Rickmer 24, Laidlow 16, Stevenson 24, Cosby 21, Lecompte 15, B. O. Bush 12, McQueen 19, C. Dixon 16, Buker 22, Henry 21, Hollenbeck 13, Shuert 17, L. C. Smith w, Horn 23, Robinson 17, Coppinger 7, Wick 14, J. H. Williams 7, Ferguson 16, Cohron 13, Allen 22, Thomas 14, Blackburn 17, D. Elliott 21.

Reust, Sexton and Liler got 25 each, and then Liler broke 5 more, enough to win first prize—an L. C. Smith hammerless gun. Rickmer, Stevenson, Calhoun, Osgood, Thornton, Barre, Linderman, Erhardt and Horton were in for second on 24; Horton scored 9 out of 10, which was too many for the others in his class, and thereby won the gun case. W. D. Bush did the same thing for those who had tied him on 23, and he now sports a new shooting blouse.

No. 8, 20 targets, 60 entries: Osgood 20, Gilbert 19, Christianson 16, Georgenson 20, Bruns 10, Sergeant 18, Molloy 15, Soward 12, Laidlow 14, C. W. Green 14, A. Dixon 13, Thornton 19, Erhardt 19, Calhoun 20, McIlhany 20, Sexton 19, Green 17, Menefee 19, Essig 12, Barlow 12, Hawkins 17, Reust 13, Jenkins 13, Barre 18, Norton 17, Gottlieb 16, McWhorter 10, Clark 17, McQueen 15, Spencer 12, Snodgrass 15, Ted 17, J. H. Williams 7, Kinmouth 10, Ferguson 13, Stewart 10, Wick 14, Coppenger 6, Robinson 15, Horn 16, Rickmer 15, Cosby 15, Leeman 5, Horton 19, Mason 15, W. D. Bush 8, Rees 7, Miles 6, C. Dixon 14, Buker 20, Henry 13, Shuert 9, Hollebeck 12, Lecompte 14, Morgan 11, Stevenson 18, Allen 16, Cohoff 12, Cosby 11.

Osgood, Georgenson, McIlhany, Buker and Calhoun all broke 20 straight. The first prize was a duck boat, and to win it Calhoun had to break 25 more straight, as Buker evidently wanted it as badly as he did, Buker scoring only one less than Calhoun, or 44 out of 45. Six men tied for second prize, a pair of oars; 5 straight was enough to win them and Gilbert got them. Barre won third prize—a folding boat seat—by scoring 10 straight, which neither Clyde, Henry nor Stevenson could equal.

No. 9, 45 targets, 3 targets released at once, 26 entries: Stone 16, Buker 22, Osgood 21, Soward 26, Pease 28, Linderman 25, Smith 22, Gilbert 28, McIlhany 29, Reust 25, Jenkins w, Robinson w., Gottlieb 24, McWhorter 7w., Laidlow 10, Rickmer 21, D. Elliott 7w., B. O. Bush 27, Hickman 24, Clyde 7w., L. C. Smith 23, Calhoun w, Jones 15, Thornton 4w.

McIlhany, with 20, won first prize, a Winchester gun, best quality; Pease with 28 took second, a gun case; and B O. Bush with 27 got third, a sweater.

No. 10, 25 targets, 66 entries: Erhardt 21, Calhoun 24, McIlhany 23, Sexton 24, Green 22, Menefee 24, Horn 24, Robinson 23, B. O. Bush 24, Snodgrass 22, Sergeant 20, Morgan 19, Ely 21, A. Dixon 22, Thornton 22, Lecompte 17, Hollenbeck 21, Shuert 14, Henry 24, Buker 24, C. Dixon 21, Clark 24, Spencer 17, McQueen 20, Bruns 12, Mason 21, Soward 25, Horton 25, Harkins 20, Essig w., B. O. Bush 22, Stewart 20, Osgood 23, Loomis 20, Clyde 24, W. D. Bush 20, Ted 21, Leeman 20, Cosby 22, Linderman 24, Herman 13, Miles 11, Jenkins 17, McWhorter 15, Ferguson 16, Stevenson 17, Rickmer 19, Barlow T. Thomas 17, J. W. Williams 19, Reust 24, Blackburn 19, Peebles 8, Stevenson 24, Christianson 23, Gilbert 23, Norton 20, Gottlieb 22, Georgenson 22, Barre 25, Meeker 14, Hershey 24, Lamb 17, Laidlow 14, Pease 18, Mike 7.

Barre, Soward and Horton tied on 25, and then Horton broke 5 more straight and added to his possessions the Lefever hammerless gun, which was first prize. Eleven scored 24, and Linderman had to break 39 out of 40 to win second prize—one-quarter can of wood powder. Gilbert broke 34 out of 25 before he disposed of Robinson, Christianson and Osgood, who were in the tie with him for third prize—a hunting coat.

Fairmount Park event, 25 targets, open to all, 55 entries: Georgenson 23, Gilbert 23, Jenkins 20, Lecompte 17, Clarke 10w, McQueen 21, Norton 24, Blackburn 19, Lamb 18, N. Williams 10, Bruns 7, Essig 16, Spencer 17, Marshall 17, C. Dixon 23, Shuert 11, Horton 22, Osgood 23, Erhardt 6w, Calhoun 22, McIlhany 22, Sexton 24, Green 22, Menefee 19, Sergeant 24, Hollenbeck 19, Kinmouth 20, Reust 23, McWhorter 17, Ted 21, Cosby 23, Laidlow 11, Gottlieb 21, J. Stevenson 4w, Ferguson 14, Miles 16, Thornton 18, Liles 22, Soward 25, Stewart 21, Barre 23, Haskins 20, Robinson 16, G. Stevenson 23, Barlow 22, T. Thomas 16, Rickmer 21, Mike 12, Budd 22, Leeman 5w, Horn 25, J. A. R. Elliott 23, Parker 25, Snodgrass 9, Hickmer 21.

The prizes in this event consisted of three clocks. Soward, Horn and Parker went straight, and in the shoot-off Parker had to break 28 out of 30 before he disposed of Horn; Soward went out on the first string of 10. Sergeant had to break 15 straight to beat out Norton and Sexton, who were tied with him.

Four sweeps were shot to-day, one 10-target and three 15-target events. The entries in these were from 26 to 37. In the fourth event, a 15-bird event, with 37 entries, Bud won first alone, he being the only one to go straight; Gilbert was the only one to score 14, and took second.

Third Day.

No. 11, 15 targets, 43 entries: Bruns 11, C. Dixon 13, Cosby 12, Soward 10, A. Dixon 15, Dr. Brown 11, Norton 12, Miles 12, Horton 14, Frenkas 12, Clark 14, Georgenson 12, Liles 12, Henry 11, McQueen 11, Spencer 13, Leeman 8, Sergeant 13, Snodgrass 13, Gilbert 13, Gregg 11, Hershey 14, Gottlieb 12, L. C. Smith 14, Barre 14, Rickmers 10, Reust 13, W. H. Allen 5, W. S. Allen 8, Rice 10, G. Stevenson 15, Shuert 8, Calhoun 15, McIlhany 15, Ell 13, Sexton 14, T. Thomas 6, W. D. Bush 12, Buker 14, Osgood 13, B. O. Bush 15, Hollenbeck 11, Lecompte 9.

Stevenson shot out all the others who went straight, and took first—25lbs. of DuPont Smokeless. Horton outshot all those who scored 14, and got second—12½lbs. of the same powder. Osgood did the same thing for the 13s, thereby winning 6¼lbs. of the above-named powder.

No. 12, 25 targets, 38 entries: Bruns 17, Cosby 23, Snodgrass 22, C. Dixon 23, A. Dixon 21, Dr. Brown 17, Miles 16, Horton 21, Frenkas 20, Barre 23, Osgood 25, Clark 25, Norton 20, Henry 23, Sergeant 22, Leeman 21, Liler 20, Georgenson 25, Gottlieb 18, Gilbert 22, L. C. Smith 21, Spencer 21, McQueen 16, Gregg 16, Calhoun 24, McIlhany 24, Sexton 25, Rickmers 22, Reust 25, W. H. Allen 16, W. S. Allen 18, Rice 21, Stevenson 21, T. Thomas 19, W. D. Bush 22, Buker 23, Hollenbeck 23, Lecompte 19.

Osgood, Clark, Georgenson, Sexton and Reust all tied for first. Reust shot them all out and won the Burgess gun. McIlhany took the shell case—second prize. Buker won third.

No. 13, 25 targets, 60 entries: Bruns 18, Dr. Brown 16, Reust 7w, Norton 14w, Frenkas 24, Soward 21, McIlhany 24, Shuert 15, Rickmers 21, W. S. Allen 17, Hollenbeck 19, Rice 18, Rooney 20, Erhardt 18, Williams 14, Horn 6w, G. Stevenson 23, Cosby 22, Gregg 19, W. B. Thomas 20, Georgenson 20, B. O. Bush 22, Clark 21, Sexton 10w, Lecompte 19, Smith 16, W. H. Allen 21, Ratikin 23, Gilbert 21, Wing 16, Joe Smith 15, Smart 10, Miller 19, Hart 14, Calhoun 17w, Spencer 18, Parsons 18, Snodgrass 23, Deweese 14, Hoger 17, Dickinson 11, Buker 22, McCurdy 19, Crisp 20, Horton 23, Henry 22, Gottlieb 23, L. C. Smith 25, Bruland 8, Barre 24, McQueen 20, Thomas 14, Peck 18, Eager 18, Mike 11, Arende 19. Essig 19, Osgood 25, Sergeant 17, Hinckey 20.

L. C. Smith and Osgood were the only ones to go straight, and Osgood beat Smith on the shoot-off and took the Hollenbeck hammerless gun. Barre shot Frenkas out and won the shell case; Horton won third—a shooting vest.

No. 14, 50 targets, 31 entries: Buker 50, Cosley 42, Miles 30, Mallen 40, Dr. Brown 39, Rice 40, Gregg 45, B. O. Bush 41, Parsons 28, Peck 42, Hallenbeck 40, Sergeant 43, Horton 44, Calhoun 47, McIlhany 45. Gilbert 47, Georgeson 42, Eager 37, Reust 48, Arends 40, Le Compt 38, W. H. Allen 41, Rooney 37, Eberhart 46, Horn 14w., Henshaw 30, Mike 17, Hart 38, Pugh 10w., Sexton 13w., Lillie 36.

Buker won first prize—a buggy—on a straight score of 50; Reust won second prize—a Quackenbush Junior Rifle; Gilbert won third—a fishing rod.

Only three sweeps were shot to-day, one 10 and two 15-target events, averaging about 25 entries each. So much time was consumed in shooting the world's championship contest that No. 15 event had to go over to the next day.

THE CHAMPIONSHIP TROPHY.

This was the most important event of the tournament and 31 shooters entered the contest. The conditions were 150 targets per man, entrance price of targets, reversed angles; that is, the shooter when at No. 1 trap will get a bird from No. 5; at No. 2, a bird from No. 4; at No. 3, a bird from that trap; at No. 4, one from No. 2, and at No. 5, one from No. 1.

The trophy is subject to a challenge and must be defended every 60 days if challenged. Anyone desiring to challenge the holder of the trophy must deposit $50 with Mr. James A. Whitfield, sporting editor of the Kansas City *Star*, who will notify the holder of the trophy to prepare himself to defend the same within the limit of the above specified time. The $50 goes to the winner of the contest. The holder of the trophy has the right to name the ground where said contest shall take place, and anyone to become the permanent possessor of the trophy must successfully defend it three times consecutively.

The contest was a great one from start to finish. When each shooter had shot his first string of 25, Buker led, having scored 24, while at the end of the 50th round Henry had taken the lead, having scored 46, 23 in each string of 25. When 75 birds had been shot by each contestant, Calhoun had the lead, having 67 breaks to his credit.

The end of the race found Sexton ahead, he having finished strongly, scoring 47 out of his last 50, and winning the trophy with the fine score of 90. Henry was second with 87, Jack Parker third. Only twenty-one men shot through, the others withdrawing when they saw they had no chance to win. Osgood had a chance for a possible 89, he having scored 64 out of 75, but as this could not win, he did not shoot his last string of 25, having a very sore cheek where his gun was punishing him. The others who did not finish were Leeman 50 out of 75, Brown 42 out of 75, Horn 55 out of 75, Erhardt 54 out of 75, N. Williams 46 out of 75, Liler 65 out of 85, Stevenson 55 out of 75, Sergeant 55 out of 75, Clark 25 out of 40, Andy Thomas 31 out of 50. The contest began at 1 o'clock and lasted until after 7. Several heavy showers passed over the ground during this time, while the wind also blew very strongly at times. Scores in this match were as follows:

Fourth Day.

No. 15, team race, 4-men teams, 25 targets per man:

No. 1:		No. 4:	
Erhart	23	O Hook	14
Reust	22	W H Allen	22
Clark	24	W J Allen	19
Sexton	20—89	Cohron	7—62
No. 2:		No. 5:	
Rickmers	24	Kenmuth	22
Norton	20	Sergeant	21
Horton	24	Hamilton	18
Gottlieb	21—89	A Dixon	22—83
No. 3:		No. 6:	
Georgenson	24	Cosby	22
Gilbert	24	L C Smith	25
Osgood	24	Bradford	24
Buker	23—95	Barre	24—95

No. 16, 15 targets, 42 entries: Bruce 9, Cosby 11, Erhardt 14, A. Dixon 12, Sergeant 14, Reust 15, Corhan 8, Snodgrass 14, Clark 14, Norton 13, Gottlieb 12, C. J. Schmelzer 12, Gregg 12, Rice 12, G. Stevenson 12, Horton 15, Rickmers 13, Osgood 13, Georgenson 15, Gilbert 13, W. D. Bush 12, Stanley 7, Barre 14, Fessender 4, Essig 11, McWhorter 9, McClure 12, Buker 14, Hamilton 11. Henry 11, Sexton 15, Grove'r, L. C. Smith 15, Thornton 15, Miles 9, Laidlow 9, B. O. Bush 15, W. H. Allen 14, W. S. Allen 9, Hook 9, C. W. Green 12, Gray 8.

Thornton, Sexton, Georgenson, Horton, Reust, Bush and L. C. Smith all scored straight. In the shoot-off, L. C. Smith broke 10 more straight and took first prize—B. I. C. loader complete. Buker shot out the 14s and won second, breaking 15 straight—a quarter keg of wood powder. Gilbert shot out the 13s and got a quarter keg of Hazard powder.

No. 17, 20 targets, 42 entries: Bruce 12, Cosby 15, Erhardt 13, A. Dixon 17, Sergeant 17, Reust 18, Gottlieb 16, Norton 12, Miles 13, McClure 11, McWhorter 14, Essig 15, Rickmers 20, Osgood 20, White 17, L. C. Smith 18, Thornton 15, Sexton 20, Gregg 18, Stevenson 8, Horton 19, Rice 18, Grover 12, Snodgrass 18, Georgenson 19, Fessander 6, Gilbert 20, W. B. Bush 14, Stanley 16, Barre 19, Hamilton 16, Clark 20, Henry 20, Schmelzer 16, Buker 20, B. O. Bush 18, Laidlow 11, W. H. Allen 19, W. S. Allen 15, Calhoun 11, Hook 15, C. W. Green 11.

Buker, Sexton, Osgood, Henry, Rickmers, Clark and Gilbert scored straight. Buker broke 21 more straight and took first—a Marlin rifle. Horton got second—a leather rifle cover. B. O. Bush shot out the 18s and took the sweater, which was third prize.

No. 18, team contest, 4 men to a team, 25 targets per man:

No. 1.		No. 4.	
Erhart	24	Kenmuth	24
Reust	25	Sergeant	18
Clark	23	Hamilton	22
Sexton	25—97	A. Dixon	21—85
No. 2.		No. 5.	
Rickmers	23	Barre	24
Norton	22	Cosby	22
Horton	22	S. C. Smith	24
Gottlieb	20—87	Bridgeport	18—88
No. 3.		No. 6.	
Hickman	18	Miles	20
B. O. Bush	20	McWhorter	13
Henry	24	W. H. Allen	24
Pugh	25—87	C. Hook	20—77
No. 7.			
Georgenson	20	Osgood	25
Gilbert	24	Buker	23—92

No. 1 team won first prize—5 of North's bluerock expert traps; team No. 7 won second prize—1,000 bluerock targets; team No. 5 won 200 load nitro shells—third prize.

No. 19, 20 targets, 40 entries: Cosby 20, A. Dixon 16, Sergeant w., Erhardt w., Reust 20, Horton 19, Gottlieb 19, Norton 18, Grove 14, Georgenson 17, Gilbert 19. Essig 12, Stanley 12, McWhorton 14, Miles 15, Barre w., Fessenden 3, Buker 19. Sexton 19, Henry 19, Smelzer 16, Gregg 15, Rise w., Laidlow 10, B. O. Buse 19, Rickmers 19, W. H. Allen 16 W. S. Allen 16, Hook 12, W. C. Green 12, Stevenson 18, Gray 12, McClure 16, Kinmuth 17, Harron 15, White 17, Hamilton 19, Thornton 16, Clark 18, Osgood 20.

Cosby won first—a corduroy hunting suit. Gilbert won second—a corduroy hunting coat. W. H. Allen won third—a canvas hunting coat.

No. 20, Schmelzer medal contest, 25 targets: G. Stevenson 22, White 19, Pugh 24, Mike w, Sexton w, W. S. Allen 20, Gregg 21, Kinmouth 24, Clark 22, Hamilton 21, Grover 16, W. H. Allen 20, Laidlow 17, Erhardt 23, B. O. Bush 22, Hook 20, Miles 21, Barre 23, Buker 25, Henry 25, Schmelzer 16, Gottlieb 19, Norton 24, Osgood 25, Georgenson 24, Gilbert 25, McWhorter 20, Cosby 21, Rickmers 20, A. Dixon 20, Sergeant 22, Reust 24, Horton 21.

Osgood, Buker, Henry and Gilbert tied for the medal on 25, and after Buker and Osgood were shot out, Gilbert fixed it with Henry that he should win; each broke 20 straight and then they shot at five more. Henry was to miss his last one, but Gilbert let his last one get away and so they again tied; they shot five more, but Henry never tried to hit any more. Gilbert shot out the 24 and won second. Erhardt bought Barre's interest in the shoot, which was third prize.

NOTES OF THE SHOOT.

Buker broke 99 out of 100 on the first day.

On Tuesday Sexton only missed three birds in the programme event and only eight birds in all sweepstakes and ties, shooting at 246. The sweepstake events were unknown angles, reversed traps, and unknown traps, one man up.

The Joplin delegation was the largest from any one place. The next annual shoot of the Owl Association will be held at Joplin next May, and the Joplin boys say this will be the banner shoot of the association. They will add at least $1,000 in cash to the purses.

The Kansas shooters are agitating the subject of holding a live-bird tournament in October, at which the live-pigeon championship of the State is to be settled. The Weir City Gun Club will donate a trophy to cost not less than $100. The contest will take place in October at Weir City. W. W. McIlhany is the moving spirit in the matter.

Batchelor was the only black powder fiend at this shoot.

T. H. Cohran, a colored shooter from Pleasant Hill, Mo , participated in the shoot.

Mr. Morgan, from Joplin, was taken quite sick on Wednesday and had to return home.

"Jim" Elliott had two Winchester guns on the grounds. These guns were in great demand when the Winchester event was shot; nearly half the contestants used them in this event.

Charlie Budd won the biggest pot during the shoot in one of the sweeps which had thirty-three entries; he broke 15 straight; this paid $16 50.

"Jack" Parker won first prize in the Fairmont Park event—a very fine clock.

The E. C. Powder squad, consisting of Erhardt, Calhoun, McIlhany, Sexton, Green and Menefee, broke 114 out of 120.

"Airy-Lou-Hardt" was a sight to behold; he wore a maroon-colored shooting blouse on the front of which was painted E. C., while on the back was the representation of a shattered target. The inscription read "Empire broken with E. C." He wore a high campaign hat of gray color, over which were painted empire targets and E. C. labels. The hat had been tossed up and a whole squad had taken a shot at it. The result was that it was perforated with shot. In the holes he had stuck a lot of feathers and across the bridge of his nose he had stuck an E. C. label. Altogether he looked "very much Indian." Lou was strictly out for sport.

Chester Dixon was the youngest shooter present.

In the shoot for the buggy, a 50-bird race, Buker, the first man up, didn't do a thing but smash 'em all. After that at least a dozen men withdrew from the shoot. Some suddenly discovered that they had the headache; others had sore shoulders, while some were out of shells. A gun crank can always find an excuse to suit the occasion.

Although Osgood's gun had kicked all the skin off his face, over which he wore a bunion plaster, he ran a hundred straight on the last day.

The following number of targets were thrown each day: Tuesday, 12,370; Wednesday, 11,500; Thursday, 12,750; Friday, 6,630, making a grand total of 43,250 targets thrown during the tournament.

PAUL R. LITZKE.

The San Antonio Mid-Winter Shoot.

CHICAGO, Ill., July 20.—Word is at hand from Messrs. Guessaz and George, who were among the able Texas contingent who struck the Northern trap circuit this summer, that Texas is going to do something herself this winter in the way of big attractions to the shooting craft. Mr. Guessaz, in a letter to Mr. Noel Money, of New York, furnishes the last word on the subject in one sentence:

"Look out for San Antonio Mid-winter tournament, Jan. 10, 11 and 12, $2,500 added."

Mr. Money says that he surely will go South to this shoot, and so I think will a great many other Northern shooters. Through the columns of FOREST AND STREAM the latter have become acquainted with this strange old city of the Southwest and know the manner of men inhabiting it, and of late increasing numbers of sportsmen from the North have been availing themselves of the delights of the finest winter climate of the United States, so that each winter there is quite a Northern colony at San Antonio. When to the full tale of the pleasures of a trip to this queen city of the Southwest there shall be added the inducements of a full-fledged modern trap tournament, conducted on the broad-gauged and open-handed Texas lines, it is only a certainty that the winter visitors to old Santone will be increased by scores. With the known ability for hustling and the absolute genius for entertaining which the men behind this enterprise possess, the first Santone mid-winter can only be one thing—an unmitigated, blooming, red-hot success. Bear this in mind when the blizzards begin.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

CHICAGO TRAPS.

Match for Boys.

CHICAGO, Ill., July 20.—A match at live birds, for boys under 15 years of age, is in contemplation, the conditions of which are thus given by Mr. C. H. Bisson, of this city, whose son, Master Alfred Bisson, is well known as a boy shooter with rifle or shotgun:

"A match for the junior live bird championship of America (boys under 15 years of age) will take place at Watson's Park Aug. 3, 1895. The entrance will be $5, or more if not enough contestants are on the grounds to make it an object for the winner. The match will be at 15 live birds, American rules (except 10-gauges barred). When the holder of the badge is over 15 years of age he will have to turn it over to the secretary of the Illinois State Sportsmen's Association, and will also have to execute a bond in the sum of $50 to guarantee the production of the badge at the next contest. The emblem is a beautiful bronze, gold and oxidized silver badge presented by C. H. Bisson, of Chicago, for his boy's entrance in the match. The emblem has two American flags crossed, surmounted by a spread eagle; the body of the badge has a pigeon on the wing surrounded by the motto. Any boy challenging for the emblem after any general match will have to deposit the sum of $50 with the secretary of the Illinois State Sportsmen's Association, and the holder will have to cover said amount within ten days or forfeit the medal."

The match is to be shot Aug. 3 if all goes well. Among boys under 15 who are eligible and who it is hoped will be present are Master Chas. Burr, of Coldwater, Mich.; Masters Guy McDonald, Weinhardt and Burnham all of Chicago, and Master Clarence Long, of Lafayette, Ind.

E. HOUGH.

The Interstate at Macon.

MACON, Ga., July 18.—The Macon Gun Club can congratulate itself on having given a very pleasant and successful shoot, if the expressions from their visitors can be accepted as genuine, and it was very gratifying to the members of the club to have such assurances. The attendance both yesterday and to-day was not up to expectations of the Macon Gun Club, as the weather was intensely hot, and a number from nearby points would not brave the heat. What was lacking in attendance, however, was made up for by the enthusiasm of the shooters on hand, both local and visiting. Despite the heat, they kept up a steady bang, bang, from 9:30 A. M. until too dark to see a target.

The grounds are located in Central City Park, and can be reached in five minutes by electric cars which left the hotel at short intervals all day long. The traps were set up across the baseball diamond, and Manager Shaner's big tent being spread just in front of the grand stand. The grounds are inclosed by an 8ft. whitewashed board fence, which, being fully 200yds. in front of traps, makes an excellent background for low flying targets, while above the fence, except on right-quarterers, there was almost clear sky. The right-quartering targets especially from traps Nos. 4 and 5, were holy terrors, as the background in this direction was a grove of tall pine trees, and many bright anticipations of a straight were blasted when a target took that flight above the fence line. As one enthusiastic shooter said when he smashed this target, "I lost sight of it entirely, but pulled with the 'eye of faith.'"

Manager Shaner kept everything moving like a well-oiled piece of machinery, and his cheery "Get ready, gentlemen, for the next event. Hurry up, boys! You old 'noisy' (Baker) are always delaying the game," was largely in evidence.

Among the visitors were "U. M. C." Thomas, of New York; Irby Bennett, of Memphis; Thos. Callender and G. W. Gooch, of Nashville; D. M. Porterfield, of Chattanooga; W. E. Post, Geo. W. Swan and G. H. Peterman, of Charleston, S. C.; Dr. E. J. Keiffer, John Rocker, J. F. Ulmer, H. Woeltgen, J. Reideman and C. A. La Motte, of Savannah; J. W. Hightower, of Americus, and others whose names at present cannot be recalled. The members of the Macon Gun Club did all they could to make it pleasant for their visitors, and the unanimous verdict of all was, "We've had a jolly good time, boys." Hon. B. W. Sperry, president; F. C. Etheridge, secretary, and Jas. L. Baker, captain, were indefatigable in their efforts to make everything go smoothly, and with the excellent management of Mr. Shaner there was not a hitch or delay. The Georgia Peach Carnival, an exhibit of fruits and melons grown in the State of Georgia, was quite interesting to the visitors, and was a great show of luscious ripeness and sweetness. The scores follow:

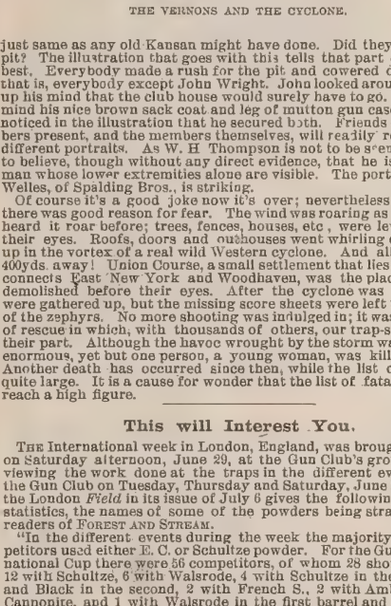
F. M. D.

Magazine Traps.

WITH the growth of the gun clubs, the majority of which are organized for the purpose of target or "clay pigeon" shooting, we have increased efforts on the part of inventors to supersede the present style of trapping targets. The object is to do away with the trapper boy and his vagaries by putting on the market a magazine trap that can be set, loaded, directed and pulled by one man, who is located at or behind the firing lines. Within the past two months we have had our attention called to two such devices.

In FOREST AND STREAM of June 8 our correspondent at the Grand Rapids, Mich., tournament tells of a magazine trap which was satisfactorily exhibited and operated on the grounds during that tournament. This trap was the invention of Mr. A. H. Davis, a local printer. In regard to this trap our correspondent remarks: "The features of the trap are that it uses any make of targets, and is set and loaded at one motion by hydraulic pressure, pipes leading from one pump to as many traps as desired, enabling one man to operate five traps as rapidly as the pump-handle can be worked. Also, the angle changing device is such that even the operator cannot tell what the flight will be without seeing the traps."



Another magazine trap has been patented (June 4, 1895) by Arthur M. Jenkins, of Norristown, Pa. Of Mr. Jenkins's trap we have heard nothing as to its working powers, only having received a notice of the granting of the patent.

Whether magazine traps can be made strong enough to withstand the constant jar of throwing 800 targets per day, an ordinary day's work for a single trap at a tournament, is a question upon which authorities are divided. For our part, unless we had decided proof after an exhaustive trial that such was the case, we would prefer the trapper boy with all his "ornariness." He is sure, even if he is cussed. But with a good, solid and sure magazine trap, the possibilities for increased practice by small knots of sportsmen, together with a correspondingly increased consumption of targets, shells, powders, wads and shot, are unlimited.

The Vernons and the Cyclone.

THE members of the Vernon Rod and Gun Club of Brooklyn, N. Y., have their grounds at Enfield Street, near Liberty Avenue, that city. The general instructions to intending visitors are: "Take the Kings County Elevated Railroad and keep your seat until you're put off. Then you're there." On Saturday afternoon, June 15, the members who were indulging in practice about 4:30 thought for a few minutes that they might be in the Grasshopper State, not knowing quite where they were at.

At the hour mentioned a squad was doing its best to make pieces out of whole bluerocks. How well they shot, and what their averages were, it is impossible to relate here, for reasons given hereafter. Dick Phister was at No. 2 and broke his target—at least, he says so—and as Dick generally manages to break targets, and as he nearly always tells the truth, there seems no reason to doubt him. Anyway after he had fired, he looked to see what he'd done and saw a "whole lot of things in the air." Others saw them too. They also saw a mass of dark clouds rolling along close to the ground, and the "lots of things in the air" were going along with it. For a minute they looked at the revolving mass of clouds that apparently threatened to engulf them. "Cyclone!" shouted one. "Cyclone it is, b'gosh," shouted another. They could hear the wind roaring and, without joking, they all admit that they were scared. To Dr. Littlefield, we believe, belongs the honor of showing the greatest presence of mind. "To the pit," cried he,

THE VERNONS AND THE CYCLONE.

just same as any old Kansan might have done. Did they take to the pit? The illustration that goes with this tells that part of the story best. Everybody made a rush for the pit and cowered down in it,—that is, everybody except John Wright. John looked around and made up his mind that the club house would surely have to go. He called to mind his nice brown sack coat and leg of mutton gun case. It will be noticed in the illustration that he secured both. Friends of the members present, and the members themselves, will readily recognize the different portraits. As W. H Thompson is not to be seen, we are led to believe, though without any direct evidence, that he is the gentleman whose lower extremities alone are visible. The portrait of H. S. Welles, of Spalding Bros., is striking.

Of course it's a good joke now it's over; nevertheless at the time there was good reason for fear. The wind was roaring as they'd never heard it roar before; trees, fences, houses, etc., were leveled before their eyes. Roofs, doors and outhouses went whirling off, gathered up in the vortex of a real wild Western cyclone. And all this scarce 400yds. away! Union Course, a small settlement that lies between and connects East New York and Woodhaven, was the place which was demolished before their eyes. After the cyclone was passed, hats were gathered up, but the missing score sheets were left to the mercy of the zephyrs. No more shooting was indulged in; it was now a work of rescue in which, with thousands of others, our trap-shooters took their part. Although the havoc wrought by the storm was something enormous, yet but one person, a young woman, was killed outright. Another death has occurred since then, while the list of injured is quite large. It is a cause for wonder that the list of fatalities did not reach a high figure.

This will Interest You.

THE International week in London, England, was brought to a close on Saturday afternoon, June 29, at the Gun Club's grounds. In reviewing the work done at the traps in the different events shot at the Gun Club on Tuesday, Thursday and Saturday, June 25, 27 and 29, the London *Field* in its issue of July 6 gives the following interesting statistics, the names of some of the powders being strange to many readers of FOREST AND STREAM.

"In the different events during the week the majority of the competitors used either E. C. or Schultze powder. For the Gun Club International Cup there were 56 competitors, of whom 28 shot with E. C., 12 with Schultze, 6 with Walsrode, 4 with Schultze in the first barrel and Black in the second, 2 with French S., 2 with Amberite, 1 with Cannonite, and 1 with Walsrode in the first barrel and Cannonite in the second. As was the case last year, the E. C. powder is credited with the largest amount won in prizes during the week, viz, £1450; Schultze coming next with £1261. Amount won by Cannonite, £365; Schultze and Black, £200; E. C. and French J., £136; Walsrode, £90; French S., £35, and Amberite, £30. Appended in tabular form is a summary of the results obtained by the various kinds of powders or their combinations in the 13 advertised events last week:

Powders, 1895.	Birds shot at.	Killed.	Per cent.
E.C	1183	887	75
Schultze	626	472	75½
Walsrode	209	154	73¾
Schultze and black	133	93	75⅛
French S	81	61	75¼
Cannonite	70	62	71⅛
Amberite	41	29	70¾
Walsrode and black	37	25	67½
French J	27	17	63
E. C. and French J	17	14	82⅛
E. C. and black	7	3	43
Total	2430	1817	

"The percentage of birds killed throughout the week was the same as last year, viz.: 74¾. The principal prize-winners are as follows (inclusive of the value of cups and gun): Lord Ashburton, C., £290; Mr. Moncorge, E.C., £261; Mr. Verdavainne, E.C., £260; Mr. R. B. Heygate, S., £230; Mr. Harold Barker, E.C., £225; Count de Montesquiou, S., £210; M. Jean de Montes, E.C., £200; Sir G. H. Leith Buchanan, S., Bk., £200."

Flying Bullets Photographed.

THE June number of *Sports Afield* contains an article on photography that is well worth reading. Believing that it will prove of interest to riflemen and shotgun devotees, scissors and paste pot have been called into requisition, the result being as follows:

"The marvelous rapidity of the dry plates of the present time is best shown by the results obtained in experimenting with the photography of flying projectiles It is quite obvious that no ordinary mechanical means will suffice to make an exposure short enough to fix clearly the image of a rifle ball just fired from a gun and traveling at the rate of nearly 2,000ft. a second. In the ten-thousandth part of a second such a projectile will move about 32in., so that an exposure of even that brief length would result in only a long, indistinct line. Even an exposure of the inconceivably short duration of only a millionth part of a second would still give an image blurred at both ends. As no such exposure can possibly be obtained by mechanical means, the electric spark has been employed. The camera is set up in a dark room with the shutter open and the plate exposed. In its passage through this room, the projectile closes an electric circuit and produces an electric spark of sufficient intensity to illuminate the ball and project its image upon the plate. Yet, although this spark lasts for less than the millionth of a second, it is only the first one-tenth of even this time that does the work, the rest of the illumination being almost without result.

"But in this manner many interesting and valuable results have been obtained. A charge of shot, in its swift passage through the air, shows the manner in which the pellets scatter and lag behind, how the wad follows after, and the currents of air that are set in motion—for the time during which the image is impressed on the plate is so short that even the waves of air, like the waves in water, are photographed. The passage of a rifle ball through a pane of glass shows distinctly the waves and currents set in motion as well as the mass of shattered glass that the bullet carries along with it for 15in. after leaving the pane. These experiments are intensely interesting to both photographers and riflemen, and the results are more valuable, doubtless, to the latter than the former, as affording basis for study of the action of bullets in their passage through the air."

Belfast Gun Club.

BELFAST, Me., July 17.—The Belfast Gun Club held its second annual tournament yesterday and to-day at Belfast, Me. Although the attendance was much smaller than was expected, the club came out in good shape financially, and everybody expressed themselves as being more than satisfied with the management. About 11,000 birds were thrown during the two days. Among those present were Dr. C. G. Weld, Capt. E. B. Wadsworth, O. R. Dickey, W. Rogers and Chas. Bradbury, Boston, Mass.; Wm. G. Percy, Marblehead; Geo E. Thompson, A. S. Merrill and Thomas Jones, Bath, Me.; G. R. Hunnewell, Auburn, Me.; H. S. Milliken, Portland, Me.; Dr. C. O. Rowe, Richmond, Me.; G. D. Libby, W. S. Whitmore, F. W. Harrington, Gardiner, Me., and Mr. Prebble, Waterville.

The first day was very fine and many spectators were present. The second day was foggy and rather unpleasant in the morning, but before noon it cleared away just enough to make the best kind of a day for shooting. As fine a dinner as could be asked for was served each day by caterers Lewis & York. On the evening of the first day Buckboard called at the Crosby Inn, where the visitors were stopping, and took all for a free ride to the common, where the Belfast band gave them one of their excellent concerts. After listening to the music the visitors were carried to the Elm City Club rooms, where a collation was served.

The scores made each day were as follows:

First Day.

In this event all ties were shot off. Prizes went to the following shooters: First, Dickey; second, Rodgers; third, Yarp; fourth, Thompson; fifth, Healey; sixth, Coombs; seventh, Perry; eighth, Waterman; ninth, Whitmore; tenth, Chenery

CHAS. R. COOMBS, Sec'y.

New Jersey Trap-Shooters' League.

THE sixth contest of the 1895 series of team races promoted by the New Jersey Trap-Shooters' League took place on Thursday of this week (July 25). The scores made on that date will appear in the next issue of FOREST AND STREAM, being too late for the present number.

This series of team races excites a lot of interest every year in local circles, and the fight for first place always grows very warm. Statistics of the first five shoots are as follows:

	Feb.	March.	April.	May.	June.	Broke.	Shot at.	Per cent.
Maplewood	106	103	114	104	98	525	625	84
South Side	100	106	101	109	103	519	625	83
Union	101	105	102	100	...	406	500	81.6
Boiling Springs	106	...	98	96	95	395	500	79
Climax	86	95	104	98	106	489	625	78.2
Elizabeth	89	90	109	103	74	465	625	74.4
Endeavor	71	96	88	100	94	449	625	71.8
Riverside	..	101	85	68	...	254	375	67.7
Union Hill	43	67	72	...	86	268	500	53.6

The principal individual averages made to date are given below:

	Feb.	March.	April.	May.	June.	Shot at.	Broke.	Per cent.
W Sigler	22	24	24	..	..	75	70	93.3
F Van Dyke	23	24	25	19	22	125	113	90.4
A L Ivins	..	22	23	..	..	50	45	90
W N Drake	22	21	25	24	20	125	112	89.6
N Apgar	21	22	23	23	23	125	111	88.8

In all instances the best five scores count at the end of the series. Maplewood now leads by 6 targets, but there are yet four more contests, so that the South Sides and Unions may be depended upon to give them "heap trouble." Boiling Springs, if it could get its men together, would make a big bid for premier honors even at this late date. The team totals as a whole are not high, but it must be remembered that these scores are shot at unknown angles and that it is often very hard to make up a team. Union Hill is a club that is new to target shooting; hence its improved totals from month to month should be considered encouraging.

The individual averages are specially interesting to all members of the nine clubs that form the league.

"Uncle Billy" Sigler, the veteran member of the Union G. C., of Springfield, leads with a percentage of 93.3 for 75 shot at. Ferd Van Dyke is second with 90.4 for five completed innings. A. L. Ivins, of the Riversides, is third with a total of 45 out of 50, although Drake's 112 out of 125, and Apgar's 111 out 125, should really take precedence. A glance at the list will tell the status of each man prior to the contest on Thursday.

A noticeable feature is the rarity with which straights have been made. At Boiling Springs in February, 23 was high with 40 men shooting. At the shoot at Springfield in March, with the same number of entries, Van Dyke and Sigler were high with 24; at Maplewood in April, 45 shooters took part, Van Dyke and Drake making 25; six scored 24 and six 23. The Elizabeth shoot in May again saw eight teams of five men enter for the League contest. Of this number Asa Whitehead was the only one to make a straight; Drake and Miller second, 24 each; Creveling, Collins and McAlpin totaling 23 each. At the Endeavor's shoot at Marion, in June, the targets were thrown extra hard and low, the light also being very poor. The highest score was made by Major Breintnall, who broke 24; of the remaining 39 shooters Apgar alone broke 23; eight others broke 22. These scores show what the conditions were.

New York German Gun Club.

NEW YORK, July 17.—The New York German Gun Club held its monthly shoot at Dexter Park, L. I., this afternoon. Seventeen members competed for the three medals. The result of the club contest is given below:

L H Schortemeier (21)	11211222—8	121 —3	12—2
Dr Hudson (30)	11111122—8	212 —3	10—1
Schlicht (25)	12210121—7	2112—4	
Frazer (30)	12011221—7	2110—3	
A Busch (25)	01112221—7	0 —0	
Bandau (21)	12121201—7	0 —0	
Boesemecker (25)	01112111—7	0 —0	
P Garms, Sr (21)	21211020—6		
B Konig (21)	10121120—6		
Wellbrock (30)	20201111—6		
Le Moult (21)	11110•11—6		
Aug Schmitt (30)	••322101—5		
F Sauter (30)	20122100—5		
Thamforde (30)	•12•2102—5		
P Garms, Jr	0•121201—5		
Edwards (30)	00010202—3		
Kronsberg (21)	00102020—3		

Schortemeier beat Dr. Hudson out after a prolonged struggle, the former taking the first medal, Dr. Hudson winning the second medal. Schlicht took third medal after tieing with four others. The shoot off for third medal was miss and out.

Four three-bird sweeps were also decided. Schorty killing 11 out of his 12 birds, making his record for the day 24 out of 25. Scores of the sweeps were as follows:

Busch	112—3	211—3	110—3	010—1
LeMoult	011—2	110—2	101—2	111—3
Sauter	110—2	111—3	100—1	
Schmitt	233—3	211—3	110—2	211—3
Kronsberg	220—2	231—3	200—1	002—1
Hudson	211—3	211—3		
Wellbrock	223—3	210—2	111—3

Boesemecker	110—2	120—2		
P. Garms, Jr.	110—2	211—3	111—3	
Hayes	121—3			
Schlicht	231—3	210—2	002—1	212—3

New Orleans's Interstate.

THE journey of Elmer Shaner and the Interstate Association's *impedimenta* do not stop short of the Gulf Coast this season. New Orleans and the Louisiana Gun Club will have a chance on Aug. 9-10 of seeing and entertaining both the above articles, including Shaner's crimson felt hat.

On those dates, unseasonable as it may seem—a tournament in the extreme South during the height of the summer—there will be a two days' tournament given at New Orleans by the Interstate Association under the auspices of the Louisiana Gun Club, one of the leading organizations of sportsmen in the South. Regarding the probability of hot weather, the Louisiana shooters asked for the above dates, and they ought to know whether the weather is likely to be suitable or not. As an attraction for shooters the club adds $200 in cash. The Interstate's handicap governs all the programme events, of which there are ten each day—nine 15-target events and one 20-target event, a total of 155 targets per day. The Louisiana Gun Club promises a good time and a genuine Southern welcome to all its guests.

Binghamton Gun Club.

BINGHAMTON, N. Y., July 18.—Fourteen 10-target events, unknown angles, $1.50 entrance, were shot this afternoon by members of the Binghamton Gun Club. The scores were low on account of the high wind; the table following tells the tale:

Waldron	8	7	6	7	8	7	10	9	8	8	..	..	..	..
Adams	8	8	4	8	7	8	6	8	8	8	8	8	8	7

The Garfields Visit Elgin.

ELGIN, Ill., July 15.—The Garfield Gun Club, of Chicago, made us a visit on Saturday, and together we enjoyed a very delightful afternoon. Our boys being a little out of practice, and the Garfields bringing a very strong team, made the full team shoot (13 men on a side) rather one-sided—553 to 500; but when six of the Elgins met six of the Garfields a closer contest developed, the Garfields winning by one target—135 to 134—with their first team, while the Elgin second team won by 117 to 113. O. von Lengerke, who is a member of both clubs, shot with the Chicago boys in the first race and with Elgin in the second. It will be noticed he shot stronger for the Elgins.

After the matches were finished the Garfield boys wished to show us how to shoot with the traps pulled in reverse order—a game we had never tried before. The result proved the Elgins to be apt pupils, as the combined score of their first eleven men was 71, while the Garfield eleven (two having taken an early train for home) could only account for 70.

We are now looking forward with pleasure to the time when we will be able to accept their invitation to visit them in Chicago, and hope to keep them moving to beat us. They are a jolly lot of gentlemen, and, win or lose, we are sure of a good time.

The following are the scores made:

No. 1, 10 singles, unknown angles: Kelley 6, Mott 7, Doe 7, A. Kleinman 10, Nish 9, J. J. Smith 9, Mead 9, Tefft 9, West 5, Young 10, Adams 10, Von Lengerke 8, Middleton 5, Bowers 8, Tilden 5, Richards 6, Webster 6, S. Palmer 10, Weatherill 7, Hicks 9, Lasher 8, Patterson 9, Freeman 8, W. Palmer 5, Brown 7.

No. 2, same: Kelley 9, Mott 9, Doe 10, Kleinman 10, Nish 7, Smith 10, Mead 9, Tefft 10, West 6, Young 7, Adams 9, Von Lengerke 10, Middleton 7, Bowers 7, Tilden 8, Richards 7, Webster 7, S. Palmer 7, Weatherill 6, Hicks 6, Lasher 10, Patterson 9, Freeman 9, W. Palmer 8, Cheesman 4, Brown 9.

No. 3, team race, 13 men to a team, 50 bluerocks per man, unknown angles:

Star Sweeps in England.

"STAR" sweepstakes are not uncommon in this country, still there are plenty of shooters who will understand them better when they read the extract given below, which is taken from the London *Field* of June 15. As will be seen, the sport "came high" to the majority, while Lord H. Vane Tempest won in the neighborhood of $1,300 on an investment of about $90. The event was shot on June 8, at the Gun Club, Notting Hill, London.

"The Manchester £1 handicap sweepstakes, with a £25 cup or specie added, secured the largest field of shooters of the season, the number being twenty-five. Three 'lives' in all were allowed, the amount paid for each 'life' being regulated according to the round in which the miss occurred; £1 was charged for each round, so that if a competitor missed in the sixth round he would have to subscribe £6 to the pool for the privilege of re-entering. These events can hardly be termed popular, and they are decidedly of a too expensive character to be often repeated. To-day many of the members subscribed over £30 to the pool, and then failed to obtain a prize. In the opening round no fewer than ten misses were recorded; but, with one exception, the competitors embraced the opportunity of 'starring.' By degrees the field was reduced, and at the end of the seventeenth round the contest had resolved itself into a match between Lord Vane Tempest and Lord Rosslyn; but the former had the advantage with one miss to his opponent's two. Continuing, a protracted struggle ensued, but Lord Tempest, shooting in capital form, never gave his adversary a chance, and at the end of the twenty-sixth round he was declared the winner, his total score registering 24 kills out of 26. In addition to the cup, Lord Tempest was awarded the stakes, amounting to £27 5. As will be seen from the returns, Lord Tempest made a run of 13 kills ere missing, and then his 14th pigeon, from No. 1 trap, hit fatally, with difficulty cleared the boundary. The following are the amounts subscribed to the pool by the leading shooters: Lord Vane Tempest £38, Lord Rosslyn £38, Mr. Oakeley £26, Mr. Wood £42. Mr. Leslie £35. The full score showed 163 kills and 60 misses, the contest occupying about three hours and a half."

Manchester £1 handicap sweepstakes, with a £25 cup or specie added, 25 subs.:

Greenville, Miss.

THE third annual tournament of the Greenville Gun Club was held July 4. The following members participated in the shoot: J. D. Van Meter, W. M. Keller, George B. Alexander, J. H. Leavenworth, Hon. Leroy Percy, Greenville, Miss.; C. W. Hope, Wayside, Miss.; E. L. Sharkey, Refuge, Miss.

Green Clay, Jr., of Kentucky, now of Gladstone, Miss., won the handsome gold medal given by the club for the highest average. No other State produces such men, the personification of generosity and kindness, the tried and true friend, ever ready to lend a helping hand. J. D. Van Meter (Kentucky) was not up to his usual good form, but he and his "pump" will always be near the top; a true sportsman, not in for the money, but for the fun. Charles W. Tway, proprietor and manager of the Union Breeding and Training Kennels, of Michigan City, Miss., won the gold medal given by Jake Scott in the fifth and sixth events. Tway is a great shot, but oh, how quiet! Come again, Tway. George B. Alexander, two years ago one of the best shots in the South, cannot explain why he cannot hit "them;" he expects to practice up for the next shoot, and we look for a great score. W. M. Keller, the genial sport of the club, a good average shot, but with a big side bet you will see him up to the top notch. Wallace Arnold, jeweler, finds more money in his business than in shooting, but lent his full share to the pleasure of the shoot. J. B. Connely came to see the fun, and of course couldn't resist trying his hand, but his "pu" wouldn't work, and he quit before he made a "st

MESSRS. Hope and Evins, the Wayside crackerjacks, were shooting in good steady form; Hope winning second average at 87 per cent. They are capable of even 98 per cent. on special occasions. True friends, and the best kind of wheel horses for a tournament. Mr. Hope promises another big shoot at his home (Wayside, Mississippi), and the feeders as usual will be on hand. Hon. Leroy Percy was too busy electioneering, and did not appear on the grounds until the 6th event, but was strictly in it, and also in several of the following events. E. L Sharkey, of Refuge, Mississippi, scored up near the top; but the boys made it so warm for him that he went away leaving his shooting paraphernalia on the grounds. J. B. Hebron, candidate for sheriff (now elected), showed up with good scores in the 7th and 8th events. Messrs. Bradfield and Pinkston, representatives of the Vicksburg Gun Club, shot in good form, but not up to their usual standard. They are true sportsmen and we hope to see them with us often. Alex. Smith, of Greenville, Mississippi, doesn't think there is much fun in breaking clay birds; but put him in the field and he is sure to down his bird. J. H. Leavenworth was in it, but not for the money; out of form and promises to do better, which we believe. "Coovert," leading photographer of Greenville, was on hand as usual and made a picture of all the shooters, and of course each shooter must and will have at least one. O. A. Lawson, of Greenville, Mississippi, won the Washington County medal given by Theo. Phol for the best score made in event 4. Lynne Hyner was so busy talking up his special shells that he really didn't have time to break "them" all. R. H. McHie, secretary and treasurer, was kept busy all day, and a more capable and genial manager could not be found in the State.

The scores made were as follows:

CHAS. E. FOREHAND, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

GRAY LING, Michigan.—The admirable grayling picture which was printed with Mr. Mitchell's paper is one of the illustrations in the *Brief*. We cannot supply it in any other form.

B. W., Milton, Mo.—1. Have some brass shells which I cleaned with vinegar. Will that injure the shooting or the powder? 2. What time do the ducks generally start south for the winter? Ans. 1. No. 2. The early comers will reach you in September.

C. B. W., Huntington, N. Y.—Kindly inform me through your columns if it is legal to shoot a dog chasing rabbits or deer out of season on one's property? Ans. The law expressly provides that dogs chasing deer out of season may be killed by any person. As to dogs chasing rabbits out of season and trespassing, we know of no law which would justify any one in killing them. Dogs are now considered property in most States, and to kill them without legal warrant might subject the offender to a suit for damages.

E. C. H., New York City.—To decide a bet, will you kindly inform me the maximum distance a Marlin rifle (.38cal.) will carry? Ans. The Marlin Company manufacture two .38cal. rifles, viz., the .38-40 and the .38-55. The latter of course would have the greatest range. The question of distance that various rifle bullets carry has never been determined, and in fact there would be very little practical use for tests in that direction. Riflemen, as a rule, are only interested in the performance of their guns at distances up to 200 or 300yds. As a rough guess, we should say that either of the cartridges mentioned would carry a mile.

E. G. S., Manchester, N. Y.—1. Is the .44-40 used in the new repeating rifles a safe cartridge to use when hunting where there are moose and bear? 2. Why is it not a proper way to test a rifle by putting it into a vise? The manufacturers say that this is not a fair test. 3. Can hunters cut timber on State lands in this State with which to make log camps, and can the same hunters come back to these camps year after year and claim them? 4. Are there State lands around Cranberry Lake; if not, what route should be taken to reach these lands and where are they? Ans. 1. Yes. 2. Because no rifle will shoot accurately from a fixed rest. If you wish to test for accuracy use a sliding rest. 3. No, no one is permitted to erect any kind of a fixed structure on State land unless they have purchased a lease of the land through the Forestry Commission. Canvas tents only are allowed. 4. We presume there are State lands in the neighborhood of Cranberry Lake. Write the Forestry Commission, Albany.

PUBLISHER'S DEPARTMENT.

Winners of the Great St. Leger.

MR. J. W. BOUTON, the well-known bookseller, of No. 8 West Twenty-eighth street, this city, has a set of rare portraits of the winners of the Great St. Leger Stakes at Doncaster, from 1815 to 1842, inclusive. They were painted by Herring and engraved by C. Hunt, colored by hand. There is a complete set of twenty-eight plates, including Filho da Puta, 1815; The Duchess, 1816; Ebor, 1817; Reveller, 1818; Antonio, 1819; St. Patrick, 1820; Jack Spigot, 1821; Theodore, 1822; Barefoot, 1823; Jerry, 1824; Memnon, 1825; Tarrara, 1826; Matilda, 1827; The Colonel, 1828; Rowton, 1829; Birmingham, 1830; Chorister, 1831; Margrave, 1832; Rockingham, 1833; Touchstone, 1834; The Queen of Trumps, 1835; Elis, 1836; Mango, 1837; Don John, 1838; Charles XII., 1839; Launcelot, 1840; Satirist, 1841; Blue Bonnet, 1842.

JAMES F. EDGE, president of the Asbury Park Gun Club, writes Messrs. G. W. Cole & Co. that the members of his club use "Three in One" compound for their guns, and recommend it to all other sportsmen as a rust preventive, cleaner and lubricator.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

WHY DID

The Knoxville Gun Club, the Dupont Co., the Inter-State Association, the Grand Rapids Gun Club, Louis Erhardt & Co., J. F. Schmeizer & Sons Arms Co., the Ohio State League, the New York State Association, the Arkansas State Association, and hundreds of other Clubs and Associations all use Blue Rock Targets, Expert Traps, and North's Electric Pulls at their tournaments?

WHY DID a few other Clubs that used other targets, traps and electric pulls (with wire pulls on the side) wish they had used Blue Rock Targets, Expert Traps, and North's Electric Pulls?

Because they are the only Targets, Traps, and Electric Pulls that give Entire Satisfaction.

will float on the water. The finish cannot be broken. Those who have used them will have no others. Send four cents for samples and prices and pamphlet containing our awards of prices for last season and cash prizes for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.
Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.
All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.
If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

THE NATCHAUG SILK CO., Willimantic, Conn.
Or, 213-215 Fifth Avenue, Chicago.

"Outside the Danger Line."

Mr. Wilmot Townsend's new drawing, "Outside the Danger Line," depicts a flock of broadbills alighting; and the study of action will readily be recognized by observing gunners as true to the life. The scene is on a calm day, when, with nothing to alarm them the ducks have concluded to rest a while far from shore. Reproduced by the artotype process, the plate being 16×21in. Edition limited to 100. Price is $3.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 3, 1895.

VOL. XLV.—No. 5. No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page vii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE SILLY SEASON WAR.

THE dispatches which have come from Jackson's Hole and vicinity within the past week have consisted of accounts of the massacre by the Bannocks of great numbers of white people, followed on the succeeding day by denials of these reports. As yet no one pretends to know anything about what has happened in Jackson's Hole, except that some Indians have been killed for attempting to escape after their arrest for violation of the game laws. This is the silly season and the dull season as well, and the newspapers appear to be willing to print whatever matter the imaginative reporter chooses to put on the wires. One thing, however, seems clear, and that is that the Indians are not disposed to be aggressive, and it is altogether probable that before long they will return to their reservations and the world will forget that there has been an "Indian war."

Among the extraordinary things printed about this trouble perhaps the most remarkable is an interview with Senator DuBois given in the papers of Tuesday last. Mr. DuBois is quoted as saying that the white men are entirely right in killing the Indians, for the Bannocks are the laziest and most shiftless Indians that there are. Senator DuBois may be quite right about this, but his proposition should have a more general application. No doubt the world would get on better if all the lazy and shiftless people in Washington, New York, Boise City and other places in this country were killed; but to kill people for being lazy and shiftless would certainly be an infraction of the present laws, and such a course can hardly be pursued until some general amendment of statutes shall have been made in all the States. Senator DuBois is perhaps the youngest member of the United States Senate, and we know him to be an able man. It is a good thing for the country when a young man such as he takes the lead in a matter of this kind. By all means let us have the necessary amendments of the law, and provide some method for determining who the lazy and shiftless people are and for then promptly removing them from the face of the earth.

The deep-seated indignation which burns in the breast of the settlers at Jackson's Hole is gratifying evidence of the progress which the game protective idea is making in the West. To read these despatches one would scarcely think that it is only a year or two since this was the great ground for hunting elk for their hides, and for running down spring-poor elk on grain-fed horses for the purpose of capturing them and selling them to owners of game preserves in the East. It is satisfactory to learn that the dwellers in this part of Wyoming have experienced a change of heart, but they should not be satisfied simply with observing the game laws themselves and killing the Indians who do not. They should also do missionary work on parties of Eastern hunters who may visit their country. The despatches in the newspapers say that the party of Princeton students, over whose supposed capture or massacre such a wail went up a few days since, had intended, except for the news of the Bannock "uprising," to stop in the mountains near Jackson's Hole and spend three or four weeks hunting.

This hunting would have been in clear violation of the statutes of Wyoming in the case made and provided, and if it had not been for the difficulty with the Bannocks, the Princeton party might have hunted and broken the game laws, and then the outraged citizens of Jackson's Hole would no doubt have killed a few of them. On the whole the loss of the Bannocks is less to be deplored than would have been the death of a number of members of one of our principal institutions of learning. What is the Bannocks' loss is science's gain.

NORTH DAKOTA NON-RESIDENTS.

WE are advised by the Secretary of State of North Dakota that the Supreme Court has held that the new game code did not go into effect on July 1, and will not be in force until December of this year. This is the law which includes the requirement of a shooting license for non-resident sportsmen; and by the ruling of the court such a license will not be demanded during the season of 1895.

This changes the situation for scores and hundreds of shooters who will go to the North Dakota prairie chicken and wildfowl grounds. The local sportsmen had declared that they intended to enforce the license law rigorously. If they will maintain their good resolutions and expend their energies in compelling compliance with the restrictions of the old law they may yet secure practically the advantages of the new measure. The law of 1887 now in force limits to twenty-five the number of prairie chickens lawfully killed in one day or had in possession at one time, and entirely forbids the export of game from the State. These restrictions have not prevented the shipment of tons of game to the markets of Chicago, St. Louis, New York and Boston, nor the taking home of other tons of game by sportsmen.

What North Dakota requires is not so much a law taxing non-residents $25, as enforcement of this very wise and sufficient law limiting killing and forbidding shipment.

MAN AND BRUTE.

IN the mass of information which has come to us concerning the Japanese since that wonderful nation engaged in its recent war with China, and so drew upon itself the critical scrutiny of the whole civilized world, there was a special and voluminous description of their kindness and consideration toward all the lower animals. While the war evoked general surprise at the prowess and scientific knowledge of this wonderful people, inquiry into their domestic life brought forth the fact that they are enlightened to a degree well up to a modern standpoint; and—measured by the standard of the most enlightened nations—in civil life are kind and courteous, instead of being in the depths of barbarism, as by many people was commonly supposed. That a nation until recently so isolated from the higher civilization has inculcated such just and kind usage in its treatment of the lower animals should not be without its lesson to us.

Statutory laws prohibiting cruelty are at best but a mitigation of the evil. They are a preventive only of the grosser and more public forms of cruelty; they put a stop to cruelty only when the cause for action has legal proof, but they do not lead to that kind and considerate treatment which should be bestowed on all the lower animals for the humane reasons that they are inferior, dependent and defenseless, aside from the main reason that man owes it to his own nobility to treat humanely the creatures which were created by the same Supreme Being who created him.

There are many societies for the prevention of cruelty to animals in this country, and it goes without saying that they do a needful and beneficent work. But a better work yet would be to thoroughly instil humane sentiments as a matter of regular education during all the years of youth. Many boys are cruel from thoughtlessness, and not infrequently from ignorance. Without having had any prior teaching, boys can have no knowledge that to rob a bird's nest, or tie a tin can to a dog's tail, is cruelty, for the minds of boys are immature. If there is but a spirit of adventure or novel excitement in their acts, they discern not their cruelty.

A humane man is rarely an unpleasant one, and rarely indeed is he a criminal. Out of 7,000 boys, says the *Oregonian*, carefully taught kindness to animals in a public school in London, not one has ever been charged with a criminal offense in any court; and after I introduced the teaching of kindness to animals into my schools, said an eminent French master (De Sailly), "I found the children not only kinder to animals, but kinder to each other, and I am convinced that kindness to animals is the beginning of moral perfection."

There is no doubt that acts of cruelty to the lower animals may become habitual, and so harden the hearts of people that they will be cruel to each other. There is, moreover, no doubt but what kindly acts to the lower animals develop amiability and benevolence of disposition in man. The commencement should be in early youth. The ill treatment of dogs or other animals should never be countenanced as an amusement. Our treatment of our dumb animals should be an example of the highest humanity. No country should be ahead of us in these matters, for it is within the compass of all to be kind.

DEFENDER AND CHALLENGER.

THE two important events of last week were the actual trial of Defender in a race and the sailing of Valkyrie III. for New York. The trial of Defender, which up to the time of writing includes three light weather races with Vigilant, is in a large measure satisfactory, in that it has shown her to possess many good qualities, and apparently no serious defects; but it has by no means shown that great gain in speed over Vigilant which has been confidently predicted by some. That she is faster than her allowance is quite plain, but how much faster she may finally prove, five, ten or fifteen minutes, no one can say positively. The time records of her performance here and Valkyrie's on the Clyde show nothing of the least value.

The cruise of the New York Y. C. now under way, with the additional races at Newport, should result in some eight or ten races between Defender and Vigilant, with possibly Volunteer and Jubilee at times, both boats presumably improving with the continued racing, while their relative merits should be very truthfully disclosed. Defender has yet to be tried under a larger sail plan, which may or may not improve her. Her only tests thus far have been in light winds and smooth water, but there is every reason to believe that she will be particularly fast and easy in rough water.

The new challenger, now well on her way toward New York, is largely an untried boat, her four races serving, if reports be true, to show certain defects as well as to prove her speed under light weather conditions. With a fair passage, she should have at least three weeks for preparation, in which time, aided by past experience, much may be done to refit her properly after the ocean voyage and put her into proper trim.

The unfavorable reports concerning her amount to very little thus far; they may or may not be true, and if true the defects may be capable of remedy; at least, it would be very unsafe to rely on these alleged faults of the challenger for the retention of the Cup. The two dangerous points about her are that she has an excess of both beam and sail area over the American boats, with as low lead and almost as easy a form, and that she is evidently very fast in light weather. The conditions this year are quite different from those of previous Cup races, and much more favorable than ever before for the challenger.

THE THOUSAND ISLANDS PARK.

THERE is a project to make the St. Lawrence River, from Cape Vincent to Ogdensburg on the American side, and from Kingston to Prescott on the Canadian side, an international park, to be known as the Thousand Islands International Park. The plan contemplates uniform fishing laws to govern the territory under both flags, and other provisions intended to add to the amenities of summer life in that charming country.

The scheme will be discussed at the annual meeting of the Anglers' Association of St. Lawrence, which will be held in Clayton next Wednesday, Aug. 7. A delegation of Canadians will probably be there. Later, the New York Senate committee, which will leave New York Aug. 15, will confer with Hon. W. M. Wakeham, who has been chosen to represent the Minister of Marine and Fisheries.

A great run of striped bass is reported from the New Jersey coast. It is not so long ago that the fishermen there were complaining that the pound nets had forever ruined the bass fishing. The pounds are still in operation, and the bass fishing of 1895 is declared to be the best for ten years. These are facts worthy of record. No one knows it all yet about the sea coast fisheries

The Sportsman Tourist.

LOST IN THE SWAMPS.—I.

It may have been to initiate me by easy stages into the mysteries of swamp lore that Barnes decided to drop down into Arkansas by John-boat. We took the river at Poplar Bluff, and in a few hours entered a wilderness which has changed but little since the first creole trappers ascended the Black, two centuries ago. This was my first trip into the cypress country, and I soon realized that such bits of woodcraft as had been acquired in the northern hills would be of slight service in the swamps.

Barnes himself was a stranger to this part of the country, though quite at home in the White River brakes for which we were heading; so, beyond knowing that we were in a current which would finally bring us up somewhere, we were lost almost from the start and enjoyed it thoroughly. Deliver us from a country that has all been measured and plotted, and sprinkled with names. There is nothing quite so delightful as swinging round the bend of an unknown river. Is it to be a rapid or a flock of teal? Every sense that you brought with you is on the alert and you soon find need for several new ones.

From this point of view the Black is a generous stream, for it is nothing but crooks and curves. Sometimes we would paddle a mile, steer round a bend, paddle back another mile, and then reach an isthmus over which we could toss a stone to our starting place.

For two or three days we enjoyed following the eagles and herons around these crooked courses, shooting squirrels and waterfowl with the .22, camping under a lean-to when it rained or under the stars when all was fair. But bye and bye this sort of thing grew monotonous. Instead of rapids to exhilarate us we found the current provokingly slow. Nothing more exciting happened than an occasional fracas with the razor backs, or a ram-bang-teeter on a sawyer. The John-boat was clumsy as a raft—its name, by the way, is swamp vernacular for a sort of punt, built for paddling, out of 1¾in. plank, and costing about four hours' deliberate use of saw and hammer. It was the only craft we could buy at Poplar Bluff. Under such conditions 600lbs. paddling is too much like work. We began to wonder where we were, how long it would take to get to some place else, why deer sign was so scarce, what we would do for breadstuffs if those appetites held out, and—well, you have been there—we began to grumble. This way of getting lost was altogether too tame.

In the last eighty or ninety miles we passed but two cabins and a sawmill. We met a few natives at these places, some of whom could not *Englisch sprechen*, while others could, but were too tired. Nobody knew how far it was to any place, nor cared, nor comprehended why we should. Finally we discovered a man who sang out promptly in answer to our hail: "One hundred and one miles from Poplar Bluff by Government survey."

"What is the nearest railroad station?"

"Moark."

"How far is it from Poplar Bluff by rail?"

"Twenty miles."

"Is the river any crookeder below?"

"Can't be wuss, and I reckon it's no better."

"Then if we keep on at this rate we ought to reach Des Arc in time for Christmas."

He eyed the John-boat critically, and thought the matter over with solemn deliberation.

"Well, I'll bet on Santy Claus."

"How far is it to Moark?"

"Three miles."

"Have you got a team?"

"Got a span of muels."

That settled it. One of us had an appointment with a bear down on Whirl Creek, and was afraid it might get tired waiting for him; so we took the train at Moark.

Late that night we put up at the hotel in Bald Knob. A band of local minstrels was serenading the neighborhood, and we got abed to the tune of "Jesse James":

"His wife, she was a lady;
His children, they were brave,"

and I have forgotten the rest of it, save that a stolid Governor failed to appreciate the romantic interest of the situation, and—

"He hired Robert Fo-ard,
The dirty little coward,
To la-ay Jesse Ja-ames in his gra-a-a-ave."

At daybreak we were bolting a hastily-served meal. We had planned to spend a few days reconnoitering the swamps at the junction of the White and Little Red, or thereabouts, and then make a knapsack tramp to the Bayou des Arc, sending our outfit ahead by wagon.

Barnes thought that some friends of his in the lower part of town might care to go with us for a little hunt in the overflows, so visited them. Early as it was the families were astir. We learned that Green and George and Uncle Dan were camped at the Twin Sisters, a pair of small lakes about fifteen miles distant. Another fellow, who shall be nameless, informed us that he was just hitching up to carry the boys some supplies, and that there was plenty of room in his wagon for our outfit; so we could walk on ahead, hunting as we went, and he would soon be on our trail with the grub. Surely here was a streak of luck. We could easily make fifteen miles of good and level footing by noon. Our coats were tossed into the wagon, and with no encumbrances but our rifles and ammunition we strode into the forest and soon were alone with that best of all good company, our blessed selves.

Never had I enjoyed a long, swinging, business-like stride as I did that forenoon, after the leg-cramping paddle of the past week. I would give money for a chance to try it over again right now. There was new life in the autumn air. It seemed that one could never tire in such a magnificent wilderness of oaks, with the level ground so free of brush and carpeted with freshly fallen leaves. Barnes felt the charming invigoration too, and suggested that instead of taking a short cut we might better follow an old trail, which was more roundabout, but which would be easy for me to find and keep if ever I had occasion to go back to town alone. We did so.

The trail gradually led off to the east more than we had expected. It was noon when we reached the overflow. Of course I had to fool around a good deal in such novel surroundings, and equally of course the surroundings became more tangled, twisted and contorted the further we penetrated into the overflow. But there was so much to see, to investigate, to ask questions about; and anyhow what was the use in hurrying? If we didn't reach the Sisters till evening our appetites would be all the better for it. Yes, there could be no doubt about those appetites. Now and then we would find some persimmons away back there in the Ozark bottoms.

But countless wild porkers had been out after the swamp fruit earlier in the day and had not left much of it. By the way, I don't like wild hogs a little bit. An old razor-back sow is the only animal, excepting a razor-back boar, that ever approached me with belligerent intentions, unprovoked, and the only one before which I ever lost my dignity. I have sundry personal grievances against several individuals of this species, which rankle every time they are recalled, and—I just don't like wild hogs. But here was a revelation. These cane-fed hogs had something on them besides bristles and warts. They were plump and sleek, and made a fellow think of sugar-cured hams, which, come to think of it, are not bad eating.

IN THE SWAMP.
Amateur photo by Horace Kephart.

We found Whirl Creek, and it reminded me that my last drink was taken from a puddle in the uplands some hours before. There wasn't the ghost of a current in Whirl Creek (miasma, chills, microbes), but the water was clear, and a fellow has to drink sometimes. Here the footing was decidedly bad. After a man stumbles over a root two or three times and has a .45cal. 10lb. repeater hit him a few whacks on the back of his head, thoughts will arise in spite of early training. Did I say a 10lb. gun? It should have been 11lbs., or possibly twelve, for the magazine was full, and every one of those cartridges weighed more at this time in the afternoon than the Winchester catalogue said it did. I must call my friend Hooper's attention to this matter. Also, the next time I start out for nowhere in a flannel shirt, with a 13lb. gun, I will have a pair of epaulettes sewed on and stuffed with 3in. of cotton.

Soon we came among the cypress knees—not the little knobs that stick up on the banks of the Black River in old Missouri, but great big fellows, tall as a man sometimes. They are interesting, indeed puzzling, but are not good to eat.

At last the Twin Sisters! How surprised those fellows would be to see us stalking in upon them, laughing, unconcerned, just as if we hadn't tramped twenty-five miles since daybreak on an empty stomach! We quickened our pace. I wiped the sweat off a very red face, cocked back my hat and tried to look jaunty. We skirted the shore of Upper Twin, followed down the outlet, took a short cut through a nasty bit of switch cane, strode straight forward to the place where our party must have made camp, and—

They weren't there!

"Homeless, ragged and tan'd,
Under the changeful sky,
Who so free in the land,
Who so contented as I?"

That is the best song that ever was sung—after supper.

We went from place to place hallooing and finding nothing.

Were you ever in the heart of a primitive wilderness, and did you ever yell at the top of your voice just to try the effect? Did you listen to the echoes rolling away, did you feel the shiver that ran through the forest as though something holy had been disturbed, and were you abashed by that solemn, rebuking silence—that vast silence, I can express it in no other way—which returned to shame your puny insolence with its calm majesty?

After making the circuit of those lakes and finding no trace of a camp, nor so much as a human footprint, Barnes looked a little grave. It was about four o'clock in the afternoon, and we had been walking steadily since sunrise. My shoulders and neck were raw from carrying the heavy gun, and I wondered if Barnes was getting hungry. He turned to me presently and asked: "Well, are you game to walk back to the Knob to-night?"

"Ye-e-s, if I've got to. But we ought to meet that fellow with the wagon somewhere on the back track."

"That fellow has gone back on us."

"What do you mean?"

"I mean that he let us get a good start, and then changed his mind."

"Oh, no: he wouldn't play us such a dirty trick. Besides, the hunters were depending on him to bring them their own supplies."

"Then they'll soon get tired of depending. These people are like Indians, so far as depending on them to do anything is concerned; it's all a matter of how they happen to feel five minutes later. They mean it all right enough; it's just their way. But you needn't look for our friend with the wagon to-night. If he hadn't heard of a dogfight, or something else, he would have made a bee line for the Sisters while we were swinging off toward the Hurricane, and would have been here an hour before us."

"Humph, well, here's a pretty fix. Aren't there any houses within a few miles of us?"

"None; unless they've been built since I was last here."

"How far is it to the Knob by a short cut?"

"About fifteen miles."

"Twenty-five and fifteen make forty, for the day's ramble. Can you find the way by night?"

"Yes: after the moon rises."

"It doesn't rise till midnight."

"Just so. We must mog along and get out of the overflow before dark. Better take a drink, for you may not see water again till morning."

We moved on. In half an hour Barnes remarked that he was not sure of his bearings.

"I've spent three years in this neighborhood," he said, "and you may think it strange that I don't know quite where we are; but now I want to teach you something about this kind of country. Do you notice anything peculiar about these trees?"

THE JOHN-BOAT.
Amateur photo by Horace Kephart.

"Yes, that's the biggest persimmon tree I ever saw. It must be nearly a hundred feet high and straight as a mast."

"Is that all you see?"

"Well, I'd like to see a 'simmon, but I don't."

"Anything uncommon about the trunk?"

"Yes, there isn't a limb for 60ft. I always thought that persimmons were smallish trees that branched out freely."

"All the trees grow tall here and branch out only at the top. The woods are so dense that the sunlight can scarcely get in, except around the water fronts, so the lower

branches soon drop off. Now take a look around you and use your eyes again."

"The trunks all have moss on them and it seems to stop at the same height on every tree."

"Exactly the same height; you couldn't measure it closer with a surveyor's outfit. That's the water level of the last spring overflow, 12ft. from the ground. And now you can see how a man might have tramped over every foot of this ground for years and yet get lost on it after the next overflow. Every spring the backwater comes in here 10 or 15ft. deep and washes out all of the down-logs and other landmarks, replacing them with something else and changing the whole appearance of things. There is little individuality to the standing trees, as you have noticed."

"Then the only way to keep from losing yourself in this part of the world is to stay in a boat?"

"That depends upon the time of year. During the overflow this low land is covered with water for miles in every direction, and there are innumerable creeks and bayous. The trees are so thick that you cannot see a hundred yards anywhere. There is a log jam to be rounded every here and there; and the water is all dead or backing water; and if there's any current, it's as likely to be running up hill as down. Just come here in a dug-out during the overflow and see where you get to."

"Is there any worse place to get lost in than a cypress swamp?"

"Well, wait till you strike blue cane, and then judge for yourself."

"Say, partner, how would a tenderloin steak strike you—the whole beef, I mean, with 'taters and gravy?"

"See here, you don't seem to think of anything but that tummy of yours. You needn't fret. If we need supper by-and-bye we can shoot a pig—there goes a whole family of them."

My gun was up, but he restrained me.

"Don't do that yet. It's considered bad manners down here, and has been known to get nice people into trouble. But if we don't strike a trail pretty soon, and a fat little shoat should run up and bite you, why I'll look the other way."

We plunged into a brake of switch cane, which tangled up our feet, cut us in the face, and seemed never-ending. Then it was over a bog, winding in and about, slipping, stubbing our toes, avoiding water holes only to sink in mire. Enormous tupelos grew here, with hollow butts big enough to shelter us and room to spare. But what a dismal place to camp in, with the miasma, wolves and creeping things! How ghastly, too, those cypress knees would look by firelight—like headless ghosts rising from their dank graves. Darkness always hovers over the swamps, but it was falling now, and the long, exposed roots looked like twisted pythons, while the ugly knots and excrescences on the huge trunks above them, the gnarled and tortured limbs, grew in the shadows to be things of evil.

"We must cross this creek if we want to reach the upland; here's a coon-bridge," exclaimed Barnes.

It was ticklish business crossing that slippery log, but we got over. Then there was more cane, and finally the firm upland with its honest oaks and gums.

One member of the expedition was nearly tuckered out and he was about to demand a halt, when lo! we stumbled into a clearing.

Could we believe our eyes? Yes, there stood a cabin in the unobstructed rays of a 5 o'clock sun; and in front of the cabin was a man; and he was alive and looked as if he could cook; and surely there was meat in the cabin, with bread and fixin's.

I rushed up to that swamp angel and nearly fell upon his neck. He was my long-lost brother, who would cook us a meal, and every cent I had was his. Even the imperturbable Barnes smiled a neighborly smile and greeted the nonplussed pioneer with frank cordiality.

HORACE KEPHART.

ST. LOUIS.

NORTHWARD TO THE FAR WEST.—V.

[*Continued from page 69.*]

WE were loath to say adieu to the old friends and the new ones we had made, but the day came, and once more to the northward we were speeding. At Northport we boarded the Lytton, and received so hearty a welcome from the crew that it seemed like being at home. The month we had been in the States had made quite a change in the Columbia River, and the water was now getting so low that the rapids were much harder to run and to ascend. One of the worst places we had to make before we reached Robson was only gotten over by the process known as "lining up." A huge post, called a "dead man," had been sunk in the bank, and a long steel hawser was made fast to it. Spliced to the steel rope was a strong manilla hawser, and on the end of this was a log float or buoy. As the steamer got into the lower part of the rapids this floating log was picked up and the line hauled on board. This line was then taken to the capstan, which was worked by a donkey engine, and a strain was put on it. We then worked our way up into the rapid, and every inch gained was held by the strain on the hawser. We were in the pilot house and watching the struggle between the forces of nature, chained and free. The mighty current came sweeping down against our craft, thrusting her back with a force that her engines could not equal, and she stood and quivered with the efforts of the machery to drive her forward. The trees on the bank stood still, the dashing, flashing waves seem to come more quickly as the exhaust from the steam pipes takes on deeper tones as the engineer "gives it to her." The capstan dogs clink merrily as more slack comes in and the hawser whips out of the water with a snap. Slower and still deeper in tone comes the roar of the steam, and she moves up a little. A tree, which we had in line with another, moves just a little, and hurrah! we gain a trifle. Faster the donkey engine works, and the great wheel at our stern churns the water into whiter foam as we forge slowly ahead. Now we move perceptibly and the trees seem to drop slowly astern. But, no; wilder yet seem the rushing waters, and again we stand, straining, quivering and groaning in the fierceness of the struggle. The captain, who is at the wheel, puts his foot against a spoke, lets go and spits on his hands.

"How much steam have they got on below?" he asks.

"Ninety and raising, sir," replied the mate; "but I think she's gaining."

Over goes the wheel, as the captain tries to take advantage of a cross current that sets it around the point and makes a back swirl. With the help of this the Lytton slowly gains and quicker come the puffs from the exhaust, and soon we leave the standing trees, and the capstan whirls rapidly as the slack comes in and up we go. Another experience has been ours, and we enjoyed it too.

Just before evening we arrived at Robson, and here we again left the Lytton, as we intended to hunt near by.

Robson is not much of a place. It has a station, a hotel and a section house. It is the Columbia end of the Canadian Pacific's short branch that runs to Nelson up the Kootenay River, and is the point that those coming to fish the river start from.

It had been our understanding that there was fine deer shooting near by and we intended to stay a few days.

The hotel is run by a Frenchman, Louis by name, and is not such a bad place as one would imagine for a situation that is shut in from the outside world part of the year. Terms $2 per day. Some of the finest October weather that we ever saw set in now, and of course, as usual, we mortals are never satisfied—we wanted a storm. The morning after reaching Robson we made the acquaintance of Jerry McBride, a merry son of the Emerald Isle, a local rancher, hunter and guide; and he agreed to take the writer up to Deer Park in his boat and hunt for a week for $3 per day and found; but Jerry could not go until Wednesday, and that gave us two days to kill time in.

It was pretty cold and rather late for fishing (Oct. 8), but as the sun shone so brightly we—the hotel man, the station agent and a miner, with the writer—decided we could catch some fish. So we got out two speeders (railway velocipedes) and started up the Kootenay River, which flows into the Columbia just below Robson.

KOOTENAY INDIAN CAMP.

Amateur photo by F. F. Frisbie.

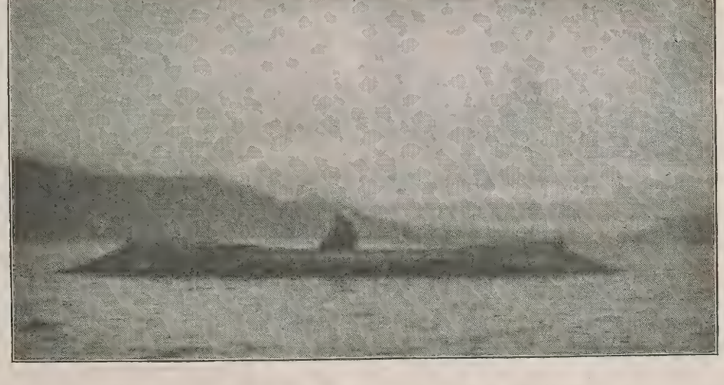
There are really two Kootenay rivers, though it is one water. To explain: The upper Kootenay River rises way up in the Rockies, east of the Columbia, and flows southerly down into the United States, through sections of Montana and Idaho. It then turns north, back into sections of British Columbia, and some way north of the boundary forms Kootenay Lake, which in turn empties its waters through a river also called the Kootenay, which flows into the Columbia.

The short stretch of river between the lake and the Columbia is noted the world over for its fishing. This is said advisedly, as parties go there from Europe as well as from the far eastern United States to fish. The Canadian Pacific has made great efforts to advertise this fishing, and also to take care of the people who are attracted by it; but one who goes there now should take his supplies from Revelstoke or go to Nelson to outfit, and take tents and full outfits with him. There are some log houses at points along the river, but they are not kept in condition.

The fishing is the best from the middle of July until the middle of September, provided the high water has subsided by the middle of July. This year (1894) it had not.

Trout, and plenty of them of large size, are taken. It is a stream that will be practically inexhaustible, owing to its location, size, and the volume of water that it carries.

Our outfit on the speeders, two on each, we went bowling along at a great gait. Louis and I led the way, and the boys behind said our wind must be good. It was a fine ride, as the scenery is grand. The railroad track runs above the river 200 or 300ft. and through mountains that run back to peaks 7,000 and 8,000ft. high.



We only went up to the first falls and took our speeders off the track. It was a nearly perpendicular descent to the roaring, rushing river 300ft. below us, and one of the wildest scenes imaginable. The lower Kootenay plunges down to the Columbia, through a chasm in these mountains, in a series of rapids and falls. There are no bushes or trees near the margin of the river, nothing but huge boulders and immense rocks, like great houses, whose sides rise vertically from the foaming water below.

Deep, dark pools are formed by immense boulders in the rapid current, and foam-crested falls plunge downward into boiling cauldrons of glistening water. No stream could be more charming from an angler's standpoint, or more beautiful in its wild grandeur to an artist or the true lover of nature.

Scrambling down to the water, we were soon whipping the stream with the fly or dropping the more seductive "g"-hopper into the foaming waters.

It was too late and the trout would not rise well. The squawfish (local), or what is known as whitefish in some parts of the West, would bite, but not freely. Louis had an experience at the falls. He managed to hook a small trout, and was drawing it in when a monster trout made a rush for the little fellow and seized it. Louis kept on pulling, and landed the big fellow, which weighed at the hotel a little over 12lbs. We gave in. Louis was too much for us, and as the whole outfit did not have his luck we mounted the speeders for home.

By hard wrestling we managed to get together grub enough, from the hotel and the section boss, to take us into camp for a week. There is no store nearer Robson than Nelson, and only two trains a week, so we were in luck to get anything, as the season was over and Louis had got down to hard pan in the hotel.

KLOOTCHMAN (SQUAW) WATCHING FOR DEER.

Amateur photo by F. F. Frisbie.

Mr. Thomas, the C. P. agent, very kindly loaned us a tent, so we were fixed. On time Tuesday afternoon Jerry appeared with his little boat, and loading in our supplies and a few personal effects, we started for his ranch, five miles up the river, from which place we intended getting a good early start the next day.

We found Jerry's shack, as he called it, a very good log house of three rooms and we were much pleased to find it very neat and tidy, as it promised well for Jerry in camp. I was alone and had some misgivings in regard to what kind of a companion Jerry would prove, but a sight of the tidy ranch reassured me. Jerry got his camp outfit ready and we turned in early and were up betimes the next morning.

Our little craft was a flat-bottomed skiff, or, as we called them in boyhood days in New Jersey, a bateau. She was sharp of bow, square of stern, flat bottom and straight sides, and was just large enough to carry ourselves and duffle comfortably. Jerry had a square sail for her, which was too large, and deliver me from a square sail anyway, especially one rigged as Jerry had his. However Jerry placed his main reliance on an ash breeze and expected to pull the sixteen miles or more, up and down. But we found a nice breeze up the river and hoisted the old rag, and much to Jerry's joy we managed to sail the

whole distance in three hours and a half. We reached Deer Park before twelve o'clock, but Jerry decided to go above a mile or more and camp near some Indian graves, thinking, no doubt, the ghosts of the braves would bring us luck. A nice sandy beach, in a little cove behind a point, that ran out a little way into the lake, was chosen for our landing-place, but we had to pack the outfit about three hundred yards up the shore, to get into the timber and where the grass grew.

The whole shore was strewn with driftwood, left by the great spring floods, and there was plenty of fine boards and slabs that had come down all the way from Revelstoke.

We pitched our tents 'neath the shade of some huge pines, and before night had as cosy a camp as one would wish. Lots of "mountain feathers" made a fine bed and a table was constructed out of driftwood plank, and we had all the comforts of home.

Supper time came and when I went to fry the bacon the frying-pan was called for. "Be jabbers!" said Jerry, "would ye mind, I can't find it." "Did you put it in the box with the other camp outfit?" "I thought I did, but if I did it went overboard when the squall struck us beyant, just before we reefed down." "Well, Jerry, here's a pretty 'how de do.' We can't keep house in camp without a fry-pan."

"Right you are," said Jerry, "unless we bile everything."

"Can't do it, my boy; you must have forgotten it, and I'll tell you what we will do. We will stop the Lytton to-night and get one."

This Jerry did not like, as the crew would give him the "big laugh," he said, "as he might as well have left his head." However, Yankee ingenuity and Irish wit got up a fair supper, and as the time came for the boat to pass up, Jerry went out in his skiff and I built a fire on the point, and we stopped the steamer and borrowed a frying-pan. When we next saw Capt. Gore, he laughed long and loud and said, "You chaps take the cake. First you forget a fry-pan, and then stop a steamboat to borrow one." But "everything goes in the West," and every one is ready to lend a helping hand. We spent a delightful week in our camp.

The days were warm enough to be pleasant, the nights just cool with a little frost. The moon was in its glory and shone from a cloudless sky—but alas! there is always something missing—the deer were not plenty. The continued fine weather had melted the snow off of the high mountains back of us, and the deer had run back where it was impossible for us to hunt them. A few straggling bucks and does stayed near the lake, but the herd that ought to be there was not there. The country we were in is of the roughest description, and there is only a short distance up and down the lake, known as Deer Park, where there is any pleasure in hunting. If deer are killed very far back from the lake it is impossible to get them, as they have to be packed out on your back.

But when the snow drives the deer down for the winter, which is generally in October, there are large numbers right at the water's edge. In the summer also the deer frequent the numerous licks and Jerry gets his meat at Deer Park. The game law don't count when a rancher wants fresh meat. Ruffed grouse or partridge are quite plenty—they are sometimes called pheasants in the West—and across the lake on the high mountains are flocks of blue or mountain grouse. We had some sport shooting the heads off of the ruffed grouse, as they were not wild and we could pot them with our rifles. We hunted and explored the country and visited the Indian graves just above camp, making a snap shot at them. Right across from our camp on the other side of the lake was a great curiosity, a natural bridge. It must be 500 or 600ft. across and over 300ft. high, great pines grow up under it and do not touch its rocky arch. It spans a great gulch or chasm in the mountain's side and shows plainly from the passing steamer's deck or from the opposite shore.

Jerry had never hunted on the bridge side, so we took one day over there and he swore he never would go again, for the mountains were like house sides and the brush and timber paralyzed him. He got up in one place where he could climb no further, and it was so steep he was afraid to go back, and as he expressed it, "The sweat rolled down me back before I got out o' that."

We found goat signs on these mountains, but no goats were visible. Jerry said he found the "father of all deer licks" and the deer were still using it. "But, bedad," said Jerry, "I would not pack a deer out of that place if I never tasted mowicth again." We got into a genuine bear swamp also that day, but did not see any bear. From the highest point reached a beautiful view was spread out before us; the lake with its blue foam-crested waves lay at our feet; to the north it stretched away into the distance until it seemed to end at the base of the high mountains back of Fire Valley, while to the south the mountains closed in and cut off our view only a few miles away.

We could look across to our little camp and the low mountains back of it, still on, to the great Slocan range and the high peaks of the Purcell Range. The country looked open and as if we could easily travel over it, but distance lent enchantment in this case.

Deer Park lay before us and its open park-like glades and clumps of trees seemed as if designed by the hand of man.

"Well," remarked Jerry, "it looks mighty fine and smooth, but be the powers it breaks me heart to climb over it."

We sat upon the rough rocks and basked in the bright October sun, gazing our fill upon the wonderful landscape before us.

> "He who has climbed in the rare atmosphere,
> By giddy roads, up to this lofty height,
> And paused upon the pass, awed by the sight,
> Looks forth in wonder, shadowed by fear."

"Right you are," said Jerry, "I was afraid when I got up there in the cañon and could not climb further, and was afraid I would fall down if I tried to get down."

The next day, feeling a little lazy and not wanting to climb too far, we took the boat and Jerry pulled up the lake toward a point where we had seen signs of a camp-fire. The morning was cool and bright, and our little boat danced merrily over the water. We found the camp-fire was at an A tent, and we got out to investigate. One of the queer-shaped canoes of this region lay turned upside down on the sand and several huge bundles of dried "dog salmon" lay near by. At the tent lay a dead porcupine and, wonder of wonders, a wash-boiler!

"What in the world do they do with a boiler, Jerry?"

"Oh, they wash their clothes in it," said he.

"But I thought Indians here were the same as elsewhere—dirty and not inclined to keep clean?"

"Well," said Jerry, "the Kootenay Indians hereabout want to be all same as white men; a great many of them are good Catholics and say grace before they eat, and are for Indians comparatively clean."

They are a "little off" on their diet, however, as white men would not relish dog salmon taken and cured as Indians cure them. A fancy photograph from a cigarette package also lay near the tent; that settled it, Lo was getting civilized very fast.

We photographed the camp and then started up the lake. When we got around the point we saw another canoe out in the lake with a single occupant lying silently on the glassy surface of the unruffled water. "But that's the klootchman waiting for the buck to hound a deer into the water," said Jerry. "That's what they are up to; they have come down from the narrows with a load of dog salmon and now they are after mowitch. "Mowwitch" is Chinook for deer, and is used almost universally in British Columbia.

Jerry pulled up near enough to hail the silent canoeist and we found it was a squaw. She was bundled up in her blanket, with a rope tied about her waist and a knife stuck in it. The klootchman was not very talkative, and eyed us rather suspiciously; but we managed to find out that her buck was up in the timber with the dogs trying to run a deer into the lake, and she sat there in the cold, patiently awaiting what might turn up. Her paddle lay across her lap, ready for instant use should a deer take water near by. We managed to get a snap shot of her, and as we rowed away we could see her still sitting motionless until we got too far to distinguish her form.

A week in camp when everything is pleasant soon passes, and as the Lytton would be due to go up the day following, we decided to go down to Robson. We were loath to leave our pleasant camp, but the deer were too few and far between to tempt us to remain longer, and excepting birds there was no other game. As a pleasant place to camp, a rough country away from civilization, and a fair hunting ground for deer late in the fall, Deer Park is a good place to go to; but there are so many more places accessible and where there is more game, that for the hunting alone it cannot be recommended. But it is worth a visit if one wishes to see all the country.

The following morning saw us up betimes. The wind had veered and was blowing down stream. By the time we were ready to start and had the boat all loaded the white caps were rolling out in the lake and the wind was howling, sending sand from the beach over us in showers.

"Shall we try it?" said Jerry.

"Let's reef her down and see what we can do," was the reply; "if we can get round rocky point below, without getting too much in the trough, we can make it." So we took a big reef in our square sail and managed to get out from the lee of the sand point, and then did we fly? Well, we seemed to be going with wings, but alas! we had to keep out into the lake if we could hope to make the point, and this brought us into the trough of the sea, which was now quite a respectable one, as the wind had a clear sweep for about fifteen miles. Jerry sat forward and held on to the halyards, ready to let the old sail come down on the run, and I held the steering oar. Our little craft plunged along like a race horse, but being so short, she would ride but one wave and when she would go over the crest of one she would take a sheer and it required careful watching to prevent her broaching to and shipping a wave. It was not long before a big roller caught under her out rigger and splash came a pail full of water aboard. Jerry shook his head and said, "I guess we can't make it." "All right," I replied, "we will turn into the next little bay." So we did, and beaching our boat, laid by for a lull in the wind. We tried to kill time by shooting at a mark, eating a lunch, and fixing our sail, but as the wind still continued to blow Jerry said he would prefer to stay until evening and then pull down. This did not suit me, as I did not want to sit cramped up in a boat for five or six hours and there was no certainty of the wind going down with the sun.

Jerry got nervous and concluded to take a run back into the hills. Cautioning him not to be gone over two hours I sat down in the sun in the lee of the boat and got out a book. About one o'clock the wind seemed to lull and blow more steadily and I began to look anxiously for Jerry.

It was only a short time before he came down the hillside, and I told him to hurry up and eat his lunch, if he wanted it, as I proposed to get out of there.

"But, man," said Jerry, "will ye mind those white caps out there, and beyant down by the rocky point there is big sea."

"Can't help it, Jerry, I don't propose to stay here to-night; so pull her off," and off she went. We made better weather than we had in the morning, as the wind came steadily and not in fierce gusts, and the only nasty place we found was at the rocky promontory, where we had to keep out or be dashed against the perpendicular precipice which rose from the water's edge. It was not child's play steering the boat, but it served to keep one's blood circulating, and the cold wind was chilling. We "boomed" along in great shape, and when I ran her nose on the beach in front of Jerry's shack, and looking at my watch announced the time as two hours and a half, Jerry said, "That beats the record from Deer Park, and I won't forget ye and this sail for many a day." The Lytton came in on time, and getting our traps aboard we once more turn our faces northward. The evening was fine, though cool, and the moon, though waning, was not much past the full, and her light was sufficient to make the objects of any magnitude on the shore plainly discernible. I stood on the deck as we passed our late camp and mentally said adieu and took a last look at the great natural bridge opposite, the top of which was bathed in a halo of silvery light, while the gulch beneath showed dark and somber, looking more terrible and dangerous than in the full light of day.

It was about daylight when we reached Nakusp, and we were in the river before I got on deck. I then repaired to the pilot house and amused myself by watching the flocks of ducks, which were much more plenty than when we went down, having come from the north. A great trip would be to charter a small steamer and with a pleasant party sail about the Columbia at this season, shooting ducks, geese and deer. There is a little steamer owned by a man at the hot springs below Revelstoke with whom such arrangements can be made.

The sail up the river was really finer than the sail down, as now we were approaching the high mountains, and they seemed to grow in magnitude as we steamed on. The snow also became heavier as we sailed north, and the rugged peaks of the Selkirks and the Gold range were white with their fleecy mantles and stood out plainly in strong contrast to the dark firs below.

As we neared "the Wigwam" the glacier-covered sides of Mount Bigbee, with its sharp peak, came into view, and we could see how changed was its face since the snow came.

We were also treated to some novel experiences in river navigation, as the water was getting very low, and where there had been deep water the month before were now sand and rocks. We got into one place that showed the ability of our pilot to handle a river boat. It was a very rapid whirlpool kind of a place and the foaming, roaring river dashed against a precipitous rock which rose right out of the water; a deep notch or hollow in the rocky wall let the water swirl in, forming an eddy. It was all the Lytton could do to hold her own against the fierce current, and when the captain rang to stop her just as we were opposite the hollow, it looked to one not posted as if some one had made a mistake. The steamer began to go sternward and the wheel was sent spinning until hard over. We could then see the stern swing into the hollow, and just as it seemed as though we would crash into the rock the bell was rung "go ahead" full speed, and we could feel the boat tremble as her engines started full power. For a moment we stood still and then she began to gain, and shooting out from the rock across the current, we were soon out of the "nastiest place on the river," as another pilot who was in the wheel house said, with the remark that he would not try that for $100.

We were not up the river yet, and soon after this struck a bar, where we tried three times to get over, but could not do it. We had to back out, turn about and try another channel. Here, after an hour's hard work and getting out a line, "to hold her nose ag'in' the current," we got up. Such is river navigation on the Columbia in low water. Revelstoke was reached on time. Once more to the westward we are bound and once more are we taken by storm by the magnificent scenery. F. F. Frisbie.

[TO BE CONTINUED.]

IN CAMP ON LAKE MICHIGAN'S SHORE.

Here we are, four of us, camping on the beach. As I am writing I listen to the boom, boom of the surf as it rolls upon the shore. We have been here just one month; some of the party preceded us and have been in camp six weeks. We have a very pleasant place, upon an elevation of some twenty-five feet from the water, and at a distance from the shore line of some fifty yards. Our tents are placed between two hills, the one nearest the lake clothed with a dense growth of small timber, which effectually breaks the wind from south to west. On the northwest we are a little more exposed, but upon the whole we are pretty well protected from storms. On Thursday we had a violent thunderstorm, accompanied by a downpour of rain. Our small boat, which was drawn up on the shore, was half full of water. We came out dry owing to having good tents over our heads. The larger one has a fly, the smaller is waterproof; our tents are 9×9ft. and 12×14ft. We do most of our cooking outdoors during the fine weather. We have a three-burner gasoline stove, which we use in case of disagreeable weather, but we have been compelled to use it only twice since we came out.

A cooler, finer retreat is hard to find. There have been but two sultry days since we came; the nights are cool; no mosquitoes, gnats or black flies to pester one. Although somewhat isolated from society (the nearest habitation being two miles and the nearest post office three and a half miles), we feel perfectly at home. We receive our mail twice a week, which keeps us posted as to the doings of the outer world. The most welcome visitor is the Forest and Stream, which reaches us on Monday morning. The article written by "Jacobstaff" was very interesting to our men folks, and the question was asked why more from the pens of men of experience in woodcraft was not to be found in the columns of Forest and Stream, and they hoped to hear further from "Jacobstaff's" pen.

This is an ideal day after the storm. The air is so clear we can see for miles out in the lake; hitherto we have had a great deal of smoke in the atmosphere, which has made it somewhat unpleasant. To-day is by far the finest day we have had.

I have just been watching a fleet of fishing boats going to their nets. The sea was running very high at the time they went out. It is amusing to see them bob up and down. With the aid of a marine glass I can see them out in the lake almost opposite our camp, some six miles from shore. In lifting their nets they take in sail, so that we can distinguish as to when they lift their nets. Some days we see a good many vessels sail and steam. One day we saw seven schooners in close proximity to one another beating up to windward. It put us in mind of a regatta. Two lines of steamers pass and repass this place during the day, also steam pleasure yachts. Men, women and children are to be seen walking the beach at times, but the greatest novelty while we were here was three parties on bicycles; the men hurrying along as if they were in the service of the War Department and on some important errand; we all thought that by the time they made the trip some of the hurry would be taken out of them. It is rather a rough course to run a bicycle on, this the shore of Lake Michigan, with logs and driftwood to encounter every few yards, and besides the sand is soft and yielding, which must make it hard wheeling.

Our camp at present is in what would be termed the sandhills of this lake shore region. They are composed of sand washed up by storms from the bed of the lake, said by our State geologists to be from sandstone rock underlying the lake waters. Some of these hills attain the altitude of 200ft. above the lake; some are less in height; some are bare, with the exception of a bunch of grass or vines in the form of a crater hollowed out by the violent winds that blow at times over this coast. Others are clothed from bottom to top with timber of various kinds, from white and red cedar to hard maple. Within sight of where I am now writing there is red oak of from 3 to 3½ft. in diameter, also hard maple 2½ft. and beech 18 to 20in. The hills run back as far as half a mile

from the shore, which shows that the same action which formed the front hills nearest the lake must have thrown up those half a mile inland at some distant period. What countless ages of time must have elapsed since the formation of the rock and the growth of the timber as it appears to-day. It is a wonder how vegetation and trees can grow to such perfection upon such light drifting sand. During the long drought of six weeks the natural supposition would be that everything in the shape of vegetation would dry up; but, upon investigation, after digging down six inches from the surface, the sand is found as moist as if a recent rain had fallen. Owing to the absence of heavy dews this seems hard to account for.

Yesterday it was blowing a gale from the northwest and a big sea was running, washing away the shore and driftwood at a great rate. Vessels were under reefed canvas making for their harbors. This was the heaviest blow since we came here. To-day the sea has been down and the beach is as smooth as a pavement. A few gulls are hovering about, once in a while dashing down upon some luckless fish. A part of our company have gone home and it seems lonesome without them. In a short time we will fold our tents and go homeward also.

Owing to the stormy weather the boys have caught no fish. They had a shot at some snipe, but owing to the shot being coarse they failed to bag any (so they say). Saw a nice flock of ducks pass this evening; the boys said they were mallards. Squirrels are reported coming north, which our boys regard as a pleasing outlook for game. The woods near us are full of oak and beechnut, so they think the squirrel hunt very favorable in the near future. We heard an old partridge drumming yesterday, also this morning. CLARABEL.

SHE GOES ALONG.

I.—Our Day Out.

FREY'S POND, Michigan, situated among the hills of Newaygo county and distant from our home some ten miles, is perhaps the most natural trout water of this section. It is fed by springs innumerable. Cold, clear, sparkling, they hurry down the hillsides and bubble from beneath the giant pines and hemlocks. Getting an early start one June morning we were there, my wife and I, while the gray mists of early dawn were still upon the waters.

It had been a drive long to be remembered—a morning beautiful in promise of a glorious day; every roadside thicket was joyous in songs of praise; robin, thrush, bluebird and all the songsters of nature's choir rejoicing in the return of the season of house-building, designed to be the happiest of all seasons.

It was our "day out." We were intent upon the capture of any and all fish that should come our way. But "alas for human hopes," on our arrival at the pond we made the discovery that our fly-book containing lures from cow-dung to professor and our whole stock of hooks were left at home. Of course, my wife remembered laying it on the side-board, so we wouldn't forget it; it was still there; and we were as she observed in a "beautiful mess" with a nice lunch. Rods, lines, reels and bait, and trout breaking the water into glistening circles right before us—we had not a solitary hook!

"Well," I ask as I see her untying Mollie, "what are you going to do about it?"

"Do? You get in here and I'm going to find a fish hook if there is one in this country."

I obey. We drive homeward nearly three miles; and meeting a "barefoot kid" we inquire if he is possessed of the article we need. He answers "Yep, got two of em, good big uns." We borrow them, and as we are now in sight of French Lake my wife suggests that we try the bass, as the hooks were truly "good big uns," too large for trout. We find a boat, and tying Mollie in the shade of some dwarf-pines, we arrange the hooks in a gang, and in response to her command I am in pursuit of a meadow frog for bait. A desperate chase finally secures two fine specimens of the *Rana Pillustris* and we are ready.

After a few trial casts I find she needs but little coaching, and we are soon skirting the lilypads that fringe the shore. We are sure they are here, and I caution her to cast close against each grassy bog. She is using more line now, and improving in making the back cast, and drops the bait gently beside a half-sunken log, and is bringing it in with the jerky motion of the live article. As she lifts the tip for another cast there is a big ker-splash, the water flies in both our faces, and while we wonder just what has happened the line goes out with a whizz—and she is excitedly telling me to "Pull out! I've got a regular whale." I shove the craft over into deep water and cautioning her to keep the little finger on the spring, watch the circus. The old fellow fights for all he is worth. Twice he rises full length above the water, vainly trying, like the Irishman, to "let go;" but the big hooks have him, and she soon brings him into the net. On the pocket scales he registers 5½lbs. We agree that he is big enough to eat.

Our day resulted in fourteen strikes, seven of which were landed. Total weight, 15¾lbs., rough dressed.

This day afforded us an opportunity to study the oft-repeated question of how bass take bait. The sky was clear and water simply transparent. Watching the bait while paddling I saw several strike, and each after the same pattern. As the bait would touch the water and was drawn toward the boat one would rush from hiding and darting ahead of the bait would turn and take it "head on" always. This fact has aided me in arranging gangs for heavy bait-casting, and may be taken for what it is worth.

We return home in time for my wife proudly to exhibit "her catch" to admiring friends, generously giving me credit for forgetting the fly-book. Bless her! The advent of two youngsters has made her outing days few and far between, still we do go occasionally; and she knows the holding grounds in all our adjacent lakes. It helps to keep the roses on her cheeks; and to others and others' wives we add—"Go thou and do likewise."

J. H. BRAYMAN.

II.—In Camp with a Friday Hoodoo.

When the "Kickers" started on their camping trip in 1894 there was concealed in some part of the outfit a large, able-bodied and very active Hoodoo.

To begin with, my wife has a strongly rooted objection to beginning any undertaking on Friday; and that proverbially unlucky day had been decided on to start for camp. As first kicker-in-chief of the party, she came near breaking up the whole scheme on that account, and at one stage of the game flatly refused to go on that day. If the others of the party wanted to tempt Providence well and good, they could go if they wanted to; but she most emphatically would not. It took the combined eloquence of the rest of the crowd to overcome her scruples. She finally gave in, however, and went with us under protest, predicting all sorts of dire calamity in consequence. Somebody would get drowned, maybe all of us, the fish would not bite or it would rain all the time, etc. As the sequel proved none of these things happened. No one was drowned, though I did fall in two or three times, but that is an annual occurrence and is taken as a matter of course. It scarcely rained at all, and the fish did bite once in a while, though candor compels me to add the fishing that year was way below the average.

A series of accidents did befall, however, that made converts of the scoffers and we are now all firm believers in the Friday superstition. We had scarcely gotten in camp when our ill luck, largely aided by the aforesaid Hoodoo, got in its deadly work. First came the hurricane that nearly wrecked the camp, an account of which was given in a former article. Then came the theft of our ham, our large beautiful ham, the pride and glory of the Kickers; it was no common razor-back ham, by any means; but a great big aristocratic "Beechnut" ham, sent by our commissary department from St. Louis. This we had had boiled in the highest style of the art by our "chef;" and as evening drew near, all bristling with cloves, it was borne in honor to the dining tent, followed by the entire strength of the party in procession, and there left to cool off during the night. We had planned to make an early start in the morning to a distant part of the lake and remain all day, and the ham was to be the *piece de resistance* of our midday lunch and breakfast and supper as well. Along about 3.30 A. M., George, who fills the post of alarm clock in ordinary to the party, got up to arouse the camp to action, likewise to slake an ever-present thirst. In pursuit of this intention he repaired to the dining tent, raised the flap and there a sight met his gaze that produced a blood-curdling yell. This quickly brought us all in fear and trembling to our tent flaps to learn the cause of his wild alarm. There stood George swinging his hands in despair; and all he could say in response to our anxious inquiries was: "The ham is gone! the ham is gone!" Alas! it was too true, our ham was indeed gone; nothing remained but the empty dish with its imprint in grease of that symphony in pork. I think I felt sorrier on George's account than my own; for, poor fellow, he has such a grand hunger at all times, and cold boiled ham is his pet weakness. All through the remainder of the trip George would every once in a while heave a prodigious sigh and bemoan the fact that he had not sat up with that ham all night.

The next misfortune befell George himself. In ordering our season's supply of tackle, he had included for himself one of Abbey & Imbrie's finest productions in the way of reels, and felt justly proud of it. One day he rowed to the little store near the hotel on the lake for some trifle, and left his tackle in the boat. He was not gone two minutes, but in that time some thief abstracted that reel, together with a fine new silk line that was on it.

The next loss was of the fly-book, filled from cover to cover with "dreams in feathers," as our poet put it, and a dozen or two of new leaders, etc., as well. Whether it fell overboard, or its cunning contents induced some fish to take it all at once, we will never know; but it disappeared very mysteriously one bright Sunday morning while George and I were busily engaged in marketing for our Sunday dinner of frogs' legs. Some people were mean enough to suggest that we dropped it while breaking the Sabbath in pursuit of the elusive batrachian, and that it served us right. But we indignantly deny that, for on discovering our loss we searched every inch of that frog pasture most thoroughly.

Then came the loss of our supply of smoking tobacco, which was the most serious of them all; for it was every ounce of our favorite brand within fifty miles of camp. We very foolishly had it all in one large tin box, and unwisely took it in the boat with us one day, knowing all the time, too, that a dark cloud of disaster lowered above us. We were partly selfish, too, for we were keeping it for our individual use and making Phil smoke out of a package of inferior goods; but then he couldn't tell the difference anyhow. It happened this way. George was having a dispute with a very whale of a fish, and I in my solicitude was rendering such assistance as I could, standing by with the landing net and offering from time to time really valuable suggestions. In the excitement somebody kicked the tobacco box and of course it went overboard, and then there was weeping and wailing and gnashing of teeth. George blames me for that; but I don't believe it. They always blame me for such things anyhow on principle. George in his despair forgot all about his fish, and let it get away from him—the biggest bass in the lake, and the one we intended taking the Natchaug prize with.

After losing our ham we lived on fish for a while, but finally drew lots to see who would row to town, ten or twelve miles, and buy another one. I was always lucky and got the prize, and started out on the hottest day of the trip. George generously offered to go with me and did, but put in the whole of that twenty-five mile trip holding on to a trolling line. Said his back was not feeling very strong that day. He weighed about 200 when he started, but increased to a ton before we got back.

This ham, though not to be compared to the first one, was pretty good and we determined to guard it carefully. In consequence of his known affection for pig meat, George was deemed the most fitted for this duty, and we appointed him guardian without a dissenting voice. He took it to bed with him every night and I think used it for a pillow. It generally shrunk some before morning. Toward the close of its career, when George's appetite had in a measure become satiated he, became careless and grossly betraying his trust he left it in the dining tent one night. Need I add that that ham bone was missing in the morning?

These are but a few of our misfortunes. Those of minor consideration were too numerous to mention. Toward the last few days of our outing George always said his prayers before getting into a boat; and as for Phil he wouldn't get into a boat at all, but did his fishing from the shore. Who the Jonah was we have not yet found out; but when we do we intend to kill him. My wife has never ceased to say, "I told you so," and I think she is secretly glad that her predictions that Friday would prove an unlucky day came true. W. R. HALL.

OMAHA, Nebraska.

ANOTHER PARK IN IDAHO.

MR. D. D. BANTA'S "Outing in Island Park," published in FOREST AND STREAM of Jan. 26, prompts me to pen these lines. After reading his story I felt as though I had got to "speak right out loud in meeting" or burst. Like him, I have been charmed by Idaho's wild grandeur. I, too, have seen Teton Peak, away in the distance, gleaming in the clear sky.

In the spring of 1892 I rented my farm, and it was my intention to take my family in a covered wagon and spend the summer camping in northern Iowa and southern Minnesota. I sent to St. Louis for a camping outfit, and, not wishing to start on the road until the grass was good, in the meantime went to Idaho with the view of taking some desert land in the Squaw Creek Valley in Oneida county.

I got to Soda Springs in the night, and not knowing that I could get accommodations at the Squaw Creek Station—a place that is now called Bancroft, and at which place I intended to take up land—I stayed over night at Soda Springs, sixteen miles below Bancroft.

The next morning, June 3, I looked out of the window at the foot of the bed, and the snow was falling thick and fast. I went to the office and every one was hugging the stove, and if ever I was blue in my life it was just then. There I was, a stranger in a strange land, looking for a farm up in the Rocky Mountains; and when, as I thought, people ought to have been hoeing potatoes I was being most beautifully snowed in, and I was seized with that uncomfortable feeling that "catches a man under the fifth rib, as it were," when he begins to dream that he has been "sucked in." However, a good warm breakfast and a pair of rubbers that I bought at a store bolstered up my spirits somewhat; and about 10 o'clock A. M., when a freight train came along, I jumped aboard and was soon in Bancroft. When the train moved on I found the station, and I was glad; for if I had had the same success in finding the station that I had in finding the "town," I would only have found myself, alas! alone in the sage brush.

I stepped into the station and met Mr. Brainard, the irrigation company's agent, who soon invited me over to his house. I supposed we were taking the shortest cut across lots, but Mr. Brainard said we were walking down Main street, and as we went along dodging the sage brush he said that "right over there was to be a hotel, and right along here business blocks, probably on both sides, and over there is to be a park. This corner lot here is to be reserved for a bank, while all around over there are to be residences." *Eheu! eheu!* (I borrow the word *Eheu* from "O. O. S." I don't know what it means and I don't care. It is a sort of a wild yell that I like.) *Eheu! eheu!*

We entered the house and his amiable wife made me feel at home, and after a while I let a slight word drop as to our prevailing snowstorm. "Oh," said he, "this will not amount to anything; it is breaking away now; by noon there will not be a flake of snow on the ground." And sure enough there was not. The sun was shining bright and warm, and illumined the mountains green and grand in the clear June sky, and my feelings went up, up, up. And both being sportsmen we soon felt like old friends.

This valley runs nearly north and south, and if I remember rightly is forty miles long; it is about eight miles wide, and terminates about eight miles north of Bancroft. Several streams coming in from the mountains at the head of the valley form the Portneuf River, and right here is a little Mormon settlement called Chesterfield. The Portneuf follows the northwestern side of the valley for six miles and then turns west into the mountains, and finally empties into the Snake River. All along the river before it leaves the valley there are numerous little ponds and marshes, and I was pleased to learn that some geese and thousands of ducks and curlew used these waters for a breeding place, and that the Portneuf was an excellent trout stream.

The next day Mr. Brainard took me in his buggy and started for Chesterfield to let me see what irrigation would do. We had gone but a short way from the station when I saw a gray streak of something going through the sage brush.

"Hold on," said I, "look! look!"

"That's a jack-rabbit," said B—. "Let drive at it."

I was carrying a shotgun across my lap, and bringing it to shoulder I sent a charge after the flying rabbit. The shot struck ahead of it, and it circled back toward the buggy. The other barrel sent its heels into the air. Mr. B— asked me if I had ever seen one before, and I told him that fourteen years before I had lived in the Republican River Valley in southwestern Nebraska, and had shot lots of them; but it had been so long since I had seen one that it looked as large as a dog. "Whoa," said B—, "there is another one." And I pulled out of the buggy and was sneaking along in the sage brush, when something happened that I was not looking for at all, for just ahead of me and all around me there arose with a booming of wings a flock of sage hens, and as I saw their heads and their long necks and large gray bodies above the sage brush, it took my breath, and while Mr. B— was yelling to me to "shoot! shoot!" I never raised the gun. I went back to the buggy expecting that Mr. B— would think me the most blisterable sort of a tenderfoot, and so I explained to him that not thinking about sage grouse, and expecting to jump the rabbit at every step and then to have those grouse make such a blamed racket and shake the bushes all around, I did not know whether I was going to be torn to pieces or just swallowed whole.

The grouse lighted on the side of a ridge, and going there I carefully worked in among the sage brush, and as the birds took wing a few at a time, I stood still and admired them as they sailed. They had been running and were now getting up at long range, so I let drive with both barrels and got one.

Soon we came to Chesterfield, which comprises perhaps six houses scattered along the north end of the valley. Here we saw large fields of alfalfa and wheat and oats, and all looking well in spite of the late snowstorm. When we came to the west side of the valley we followed the stream to where it turned into the mountains, and that was a ride to make a sportsman happy.

All along to the north were low hills, back of which were higher ones, and so on until we saw mountain ranges and peaks standing out against the sky. On the east is a range that terminates at Soda Springs. A mile or two to the west of this terminus begins a range of the Wasatch, which stretches away to the southwest. The Bear River, coming up from Utah, runs through this pass, and closely hugging the Wasatch turns around its head to the west and rushes back to Utah and the Great Salt Lake. On the west were high mountains that form the eastern boundary of the Bannock and Shoshone Indian Reservation.

As soon as we left the settlement we were at once in the midst of wild life. Ducks were constantly quacking. Some would take wing to get a better view of those that were intruding on their homes, while many would sit in the shallow water, their sides turned to the warm sun, and preen their wings and look unconcerned and lazy enough as we passed by at close range. Sickle-billed curlew were unceasingly poising or circling above us, calling out their name in clear and unmistakable notes, while others hurried back and forth along the waterways, giving cries of alarm and warning to their sitting mates. I knew it was not in season to shoot, but wishing to take home a curlew, I walked a few rods from the team and shot one. As the report rolled away it fetched wild, dreamy life into noisy activity, for from stream and pond and marsh there arose flock after flock of ducks and curlew and other water birds, all hurrying here and there in noisy confusion to see what the matter was and that everything was all right at the nesting place. Far up and directly overhead a curlew poised, repeating its name in shrill notes. "All right, you will do." And up went the gun and down came the curlew, down, down, as straight as a rock let out of the sky, and barely missing my head struck the ground at my feet.

Now and then a blue heron would rise and fly heavily away. A startled rabbit would run a few feet, sit up and watch us out of sight. Frequently a covey of sage grouse was disturbed, and either flew away or squatted in fancied security; or rising to the top of the bushes with great flapping of wings would drop back to the ground again, and that too at times within the length of a fish pole. A swirl or splash in the narrow stream would take my attention for a moment, and I felt that I could live every summer in that dreamy valley, in the midst of this wild life. All those sounds was music to me. Something congenial with my nature had rubbed up against me and I had no wish to throw off the charm. So after spending the "Glorious Fourth" in Harvard, Neb., the next Wednesday night found me with my family in Bancroft, and the next day I camped with my wife, my two boys of 11 and 12 years, and my little girl of 2 years.

We did not "go in light," but had a good quantity of bedding and clothing of all kinds. Two folding cots, a folding table, a small two-jet gasoline stove with adjustable oven, three folding camp chairs, a couple of hammocks, and a provision box. Our tent was 12×16ft., of 10oz. ducking. And if I were to say that we also took a carpet some sportsmen no doubt would derisively grin, but we had one just the same, and let me say that the carpet never once gave me the least trouble during our trip, but was as pleasing to live with in the tent as 3in. of ash-like dust or 6in. of brush would have been. It was easily put down with long steels nails. The bedding in use was kept on the cots during the day. And with the boxes at the back end of the tent, a cot on each side next to the boxes, the table in one corner at the front end, there was room for a band, a dance and a fair-sized audience.

By this time the young sage grouse were large enough to shoot, and I never have eaten tame fowls that were sweeter or nicer in any way. Sage grouse should be drawn immediately after being shot. If treated in this way they will not have any of the sage flavor, unless killed during the winter, when they live to a great extent on the sage leaves. They are handsome birds, a head and shoulders larger than the prairie chicken. They are not as gaudy as some birds, but the time will come when they will be considered next to the wild turkey as a noble game bird. They nest and rear their young in the valleys, where the grass gives them better protection from the wolves and birds of prey, and where they will be near to water. When the young birds can fly nicely the old bird often takes them up into the mountain cañons where it is cooler. Here they will stay in the thickets until the latter part of the day, when they will come down to the valley again to feed and drink along the streams. When the young are being reared the male birds gather in flocks and stay up in the foothill or a short way up in the mountains the most of the time. The males weigh from 4 to 8lbs., a very few of the latter, and few that do not weigh more than the former figure. I shot but a few grown birds, as the young are better eating, and I did not shoot birds to throw away.

I weighed but one; that one I got out of a flock of about twenty-five males. I was hunting up a cañon and started the birds out of a quaking asp thicket. They flew over the ridge, and I knew they would drop into some thicket on the other side.

Wishing to weigh one I went over into the next draw and sent the dog around a thicket. He said they were not there, so I went down to another thicket, and there he found the trail. The bushes were 15ft. high, and I worked into them very carefully, for I knew that if I got one at all it would be by just a jerk and a shot.

I had gone in about a rod, when two rods ahead up went the grouse, and I let fly, not taking any particular aim, for all I could see was heads, wings, brush and tails in wild commotion as though a whirlwind had struck the grove; and I think that no Aroostook Mountain moose ever made more of a rumpus in getting away from something it did not like. After the splinters had stopped flying and things had settled back to natural quietness I heard a rustling down ahead of me and picked up a common sized bird that weighed just 5lbs.

The service berries begin to ripen during the fore part of August in the valleys, and come on later further up the cañons, where it is cooler and the bushes more shaded. The berries are sweet, juicy and pulpy and have a blue bloom. They are very much in size and appearance to what I remember the New England bill berries to be. The grouse as well as bears are very fond of these berries, and the hunter can be sure of finding his birds around these bushes at feeding time, especially if there is water near.

Sage grouse may not be quite as quick to get up and get under headway as game birds of smaller size, but they are quick enough to suit me, and lie fully as well to the dog as pinnated grouse. And that reminds me of an incident that happened over on the east side of the valley.

Mr. Brainard and I were hunting in the foothills without a dog. We flushed a covey of sage grouse that scattered in all directions. One lighted in a small patch of grass at the mouth of the draw. We went to the place, keeping close watch to see that the bird did not fly, and walked back and forth until we had covered the whole patch of grass, which was from ankle to knee high. Then Mr. Brainard told me to stand where I was and he would put the bird up for me to shoot. The patch was not over four rods across, and my friend worked every foot of it, and felt sure that he must have seen the bird if it was there. Then saying it must be there, and he would go all over the ground again. I was standing with my mouth open, and gun in position ready to belch forth fire and thunder the instant the bird sprang to wing. Mr. Brainard would give it up, then get sort of half-mad and go at it again. Finally mopping the sweat from his face, he said it was too much of a puzzle for him, and he would look no more for that bird, if it was the last one in Idaho. "But," said he, "I will fire my gun and see what effect that will have." Bang! not a feather stirred. Bang! nothing moved but the echo along the cañon side. Just then Mr. Brainard's eyes fell at my feet and his mouth commenced to spread out. "Why, man," said he, "no wonder the bird don't fly with a big calf like you standing on its back; look!" I was surely enough standing with my left foot partly on its back and partly on its right wing, its head was up half-way to my knee, and if that bird made a movement during all that time I did not notice it, and if it had not been badly injured it would have gone back to the hills with its life.

One of the scenes of this trip most distinctly impressed on my mind is Teton Peak, and it happened in this way: My son Gillman and myself went up into the mountains for a day's ramble. I carried a rifle and field glass, he a shotgun and bottle of water. We rode with a wood team for a few miles below Bancroft, and then up a cañon into the mountains for two miles, where the woodchoppers were getting out telegraph poles to send to Pocatello. Here we left the shotgun and lunch and struck out for the top of the mountain. For some time we followed a park where the grass in places was hip high and with pine woods on each side. We could have spent the whole day in that park, but "away up yonder" was the bare summit ridge, and I wanted to sit on those rocks and see what things looked like over on the other side. So coming to a ridge that seemed to run to the summit, we began to climb upward. But we found that we could not reach the summit by this ridge, and about 11 o'clock we stopped to take our bearings, a drink of water and some of the wobble out of our legs. We saw that by going down the side of the ridge and on to another ridge we could reach the top. We were hot and thirsty, but that little sip of water in the bottle was precious, and we agreed not to touch it until we had reached the other ridge. The side of the ridge that we were on was quite steep, with a little greasewood and now and then a tangle of some kind of vine. I started first and we would just let go and catch on to the first thing that we could cling to, then look to each other to see if any harm had been done. I kept just one shoot ahead of the boy, for I began to think he might break his neck. Of course we made motions along with our feet, but it had but little effect as to regulating the speed. Before we had gotten half-way down, and as I was catching on to some greasewood, and my son making a sort of somersault into the tangle that I had just let go from, I heard a grunt and a sound that was very much like what I used to hear when I would pepper the doves in father's barn window when a boy. And right there, with the sweat trickling into my boots, on the side of that sun-parched ridge, and gasping in the noonday heat, I turned cold—or I think I did.

"For heaven's sake, boy, is it broke?"

"Smashed to pieces."

"Look quick; can't you save a litte?"

"Not a drop."

For a moment I stood enjoying the fix we were in.

"Is your neck broken?"

"No, sir."

"Any of your ribs?"

"No, sir. Don't you wish we had taken a drink before we started down?"

"Yes; but come on, we must get to the bottom of this ridge, and we can get a drink when we get back to the team."

When we reached the valley we decided to try to get to the summit, and after a hard climb we reached the top of the ridge and sat down on a rock to rest. Eighty rods above us was the boulder-capped summit, but we thought it best to go no further. We were hot, weak and suffering with thirst. What good did it do us to look across the pine tops to the snow-filled cañon a mile away; and so we turned our attention to the grand view below us.

There were narrow parks, green with rank grass, and flanked on either side with pine forests. Long slopes, with more or less grass and clumps of pines. Bare ridges, with now and then a solitary pine standing like a signal sentinel over the desolation of rocks, and solemn forests beneath; or like a green monument to the naked forms on yonder slope, the stark trunks of which stand gaunt in the pitiless sun, or weakening lean on each other's necks to bewail their fate for a time before falling to earth and decay. But over across the valley, ten miles away, I see a white speck and objects moving, and adjusting the glass I see it is a tent and men at work on the irrigating ditch. To the southeast I see the Bear River, where it sinks into its cañon and goes dashing around the head of the Wasatch. Through the gap is Soda Springs, and now I sweep the mountain tops. Back of the first range on the east of the valley I see another, and beyond these I catch glimpses of a still more distant range, and yet further on I see the crown of some monarch rising from a range that is hid from view. But what is this?

"Gillman, do you see a white cloud over in the northeast?"

"No sir, I don't see anything white at all."

No, it is not a cloud. That white object away in the dim distance, away across that rugged stretch of one hundred miles of mountain range and mountain peaks, without one dark spot on its snow-white face, without one nick in its regular lines, rising like a huge tent, like a phantom pyramid away and far above everything outlined against the horizon, is Grand Teton.

Lowering the glass and looking hard I could barely see a misty form, and all of old Teton that was not covered with snow was below the horizon. It is near the Snake River, over in the Jackson Hole country.

On our way back to the team, my son picked a piece of gum from a pine tree and said it chewed pretty fair, and thinking that to chew some might allay my thirst I stepped into the cool shade of a pine tree that was three feet through and cutting a piece of gum commenced to work it up in my mouth; but the stuff just slid right on to the sides of my mouth and stuck there, and the more I rubbed my tongue around the tighter it stuck. I began to get desperate and pulled a handful of fine dry grass. I put it in my mouth, thinking the gum would stick to it and make a rough surface so that I would have some "foothold" to work on. Well, the gum did an excellent job of sticking to the grass, but did not let up at all on its first hold, and the inside of my mouth was surely very unpleasant to line with, while around the outside was a sad mixture of gum, grass and mustache. And what is more, as I stood there bent over in the shade of those far-reaching boughs with my hat off, and my hands on my knees, wagging my jaws and wolloping my tongue around the ragged edge of my mouth, my son just leaned up against the tree and laughed. I finally began to claw the gum with my finger nails in about the same way that a cat does when it has a bone in its throat, and got the most of it out, but it was a number of days before I got rid of the last of it and the nasty taste. I do not relate this to show any great sagacity on my part, but to warn fellow ramblers, no matter how desperate they may be, to keep shy of pine gum.

When we came in sight of the team I heard a snicker behind me, and knowing what it meant, without turning my head I said, "See here, boy, if you say anything about gum I'll send you home on the first train."

The men had the wagon nearly loaded, and as I leaned my rifle against a tree, I said, "Men, for the love of humanity, give us a drink of water."

"I am sorry, friend, but we can't do it, there is not a drop left in the keg."

We took our lunch, and crawling under some bushes we choked it down dry, glum and gloomy.

It was about sundown when we reached our tent and water.

Ever since when I think of that summer's trip, one of the first things to come up before my vision is old Teton, and I have thought that under the conditions that prevailed it might be that an image of Teton was sort of dried on to the retina of my eye.

When I began these lines I thought only of writing about those few miles of sun-kissed stream in the northwestern part of the Squaw Creek Valley, but I have wandered far, and hope that no reader will be bored.

I killed no great amount of game. I shot two blacktail deer and kept the table supplied with grouse, ducks and fish.

I camped for a few weeks on the west shore of Bear Lake, under the shadow of the frowning heights of the Wasatch. Mr. Brainard and family and Mr. J. N. Hayden camped with us at this place for a time.

Mr. Hayden and Mr. Hiram Schovile, who lives on the shore of the lake, and myself went over into the Hams Fork Valley in Wyoming, on a hunt. We shot only what game we could use, but my bosom swells now when I think of the days that I spent with these genial companions among the wild life in that wild country.

On Sept. 15 I was camped at Soda Springs, Idaho, and as the date of our railroad tickets was about to expire, and as we could not get an extension of time with sorrow we packed our camping outfit and went to Bancroft before starting on our homeward journey.

On arriving at Bancroft we put some bedding on the floor of the unfinished hotel and slept some, rolled more, and listened a good deal to the wolves that went howling and galloping along "Main street." While Mr. Brainard was at Bear Lake the wolves took every last chicken that he had. The next day we left for home, and here I am, July 4, 1895, hedged in on my 160 acres, with but little to gratify my love for wild life, excepting one lone prairie chicken and her little brood, and one covey of quails. I don't feel good—and if I seek relief by giving a war whoop or the laugh and hollow of the loon, or send off a fair-sized wolf howl on the night air, then I catch it from my wife, who is afraid the neighbors will think me crazy—but I know I am not. When I have finished the evening chores I usually sit on the kitchen steps, where I can look toward the lakes and forests that I know to be in Minnesota, and I can see the stars grow bright as they come out over the New England hills, and I draw a long breath as my mind wanders where my feet used to during my boyhood days. And I watch the last gleam of twilight as it follows the sunken sun, and wonder if the deer on the mountain tops in Washington are coming out to feed, and my heart goes out to the rolling plains and wooded hills and rugged mountains of the whole Northwest.

MOUNT TOM.

Central New York Waters.

ITHACA, N. Y.—A party of Ithacans were at Union Springs on Cayuga Lake July 25, and caught 300 perch. Some exceedingly fine bass and pickerel are being taken from the lake at that point, along with some very nice specimens of lake trout.

The recent removal of Protector Henry C. Carr, after a long term of satisfactory service, has aroused a storm of indignation among sportsmen and G. A. R. members. At the reunion of the Third Artillery of Auburn in this city on the 25th, resolutions were passed denouncing in vigorous terms Mr. Carr's removal, and the attention of those high in State administrative councils was called to the injustice lavished upon an old soldier, a courageous officer and a justly esteemed citizen. The resolutions asked for his reinstatement.

The fine Italian hand of the politician, with the quid of patronage rolled daintily under his tongue, is easily discernible in Henry Carr's removal. He has proved a capable officer—one who never hesitated to run up against the despoiler of the game and fish interests, regardless of his size or the caliber of his gun.

Since Mr. Carr's removal illegal fishing is daily becoming more open and notorious. Seines are said to have been hauled in the neighborhood of Union Springs and at other favorable points in open and loud-voiced defiance of law. Let the merry dance of politics proceed!

M. CHILL.

Natural History.

CHICAGO AND THE WEST.

The Chase of the Fantail Deer.

CHICAGO, Ill., July 18.—The fantail or flagtail deer question reached a very interesting point in the columns of FOREST AND STREAM when the matter was taken up editorially (in the issue of July 6) in connection with Capt. Kendall's statement of his actual experience with the animal in question. Naturally, however, any new testimony on either side, if we may say there are "sides," will be welcome to both sides, and I think I have something to add. The following letter is from the man who first started me to writing about this elusive beast, and who now is tarrying in Chicago. He says:

"I have just read Capt. Kendall's article in FOREST AND STREAM of June 29 in regard to fantail or, as he calls them, 'flagtail' deer in the Southwest. I wish to say that the captain's description of the 'flagtail' tallies exactly with the 'fantail' deer of the Black Hills of Dakota and Wyoming. I have seen quite a number of deer of this kind in the hills, and in every instance found them very small. Roughly speaking, they would average about one-half the size of antelope. That is, a fantail buck is about one-half as large as an antelope buck, does of the two species corresponding the same way. In the hills they range high up, mostly around the heads of cañons where the general nature of the country is what is called 'park,' that is, open woods and open glades like a park; but the deer are always 'jumped' from the thickets of quaking asp and underbrush that fill the cañon heads starting in this 'park country.' I have seen both the bucks and does, and could have killed them in several instances, but never did, because there were plenty of blacktail and whitetail in the same part of the country, and a fantail always looks too dainty and pretty to kill, anyhow.

"The blacktail of this section range in the open or sage plains to the west of the fantail ranges, and while the whitetail deer range in the same section with the 'fans,' they are lower down, being nearly invariably jumped from the thickets of willow, quaking asp and wild rose of the lower river bottoms. The 'fans' are never found in company with the common whitetail, and I never saw or heard of a 'fan' being seen down in the valleys. They seem to prefer the roughest, highest country below the snow line, and to stay there.

"They will sneak and dodge among the boulders and brush, just as the Captain says they do in the Southwest. They are a hard deer to start into a run, permitting a close inspection of the living animal, and they seem to be almost devoid of fear of human beings. I have walked up to within a few feet of them before they ran, and then they didn't seem to be in much of a hurry about going. One thing I noticed which the Captain seems to have overlooked; that is, the fantail is very daintily formed, the legs being very much thinner and more fragile looking in proportion to the size of the deer than is the case with the whitetail. This feature is noticeable in the whole form of the animal. You are impressed with the idea of fragile daintiness in build at once. Another point is the shape of the horns, which follow the general appearance of the whitetail, except that they are flattened or more of a knife-blade shape up and down, instead of round, like the whitetail's. The spikes, too, are not so pronounced as in the whitetail, and the 'flat' characteristic is very noticeable along toward the point of the horn.

"While in Indiana last week I visited Mrs. Ansley, whose son was with me in the Black Hills in '90, and I borrowed a pair of fantail horns which the boy Robert found on Inyan Kara Mountain, Wyoming. These horns are the pair Mr. Hough mentioned as being 'in sight,' and I brought them up for him to photograph if he cared to. They are rather larger than the ordinary fantail antlers, but they are a very fair representative pair. They have been exposed to the weather and the points are somewhat broken, but they will show what a 'fantail' carries on his head. The distance across this skull between the eyes is 2½in. From the base of the horn to the cavity of the eye is 1¼in. The horns stand 2in. apart where the 'burr' is, at the base, or where they loosen when shed. From the 'burr' to the tip they measure just 8in., and the tips are 8½in. apart. The left horn has four points or spikes and the other is one point 'shy' of this number. The left horn is 1in. wide up and down at a point 3in. from the tip, but it is only ⅝in. thick crossways and measures 2½in. around at the same point. The right antler is about the same. Both horns are round at the base, but only measure 2in. there.

"This set of horns I know to be a pair of "fantail" horns, meaning horns that were worn by the so-called fantail deer of the Black Hills. Now, as to the species and whether the fantail and the common whitetail are modifications of the same deer, I am not enough of a naturalist to say. As far as I know they are not; they have a smaller size, a larger tail in proportion to the body, are far lighter and daintier in build, range higher on the mountains and have less fear of men. They 'sneak' instead of running, and love the dense thickets of the cañon heads. The main feature of difference, however, is in the horns, a photo of which Mr. Hough will probably present to FOREST AND STREAM ere the waning of the moon. This constitutes about all I can remember in regard to them just now. "EL COMANCHO."

"El Comancho" kindly brought the set of antlers he mentions, and to-day I had a photograph made for a cut in FOREST AND STREAM. It was necessary to show the relative size as well as the mere outline of these horns, so I got a specimen of whitetail head (only partially finished in mounting, but of fair type) and also a mounted antelope head, to act as measuring units for the eye. The above two heads and the "fantail" horns I hung on nails, all on the same perpendicular board, and the cut so shows them, a foot rule being included to further aid the eye.

It will be noticed how very small the "fantail" horns are, yet how daintily and exquisitely shaped. They look babylike, yet evidently they are from an adult specimen. As "El Comancho" says, the horns look like the horns of larger deer in a general way, but if one glances a second time at them I think he will discover in the outstanding look and breadth across the top very much more like the blacktail type of antler than like the whitetail, in which latter there is so often more of a curving in and dropping down in front, distinct from the tree-like formation frequent in the blacktail. But let the picture speak for itself, and let FOREST AND STREAM have the credit of being the first and only newspaper to publish even so much in actual illustration of the so-called "fantail" deer. "El Comancho" and I have sent out quest for something still better and more tangible in shape of evidence, and though this may be long in coming, I am of the belief that if FOREST AND STREAM should ever really want a fantail badly enough to send for it, Messrs. "El Comancho," Hofer and Hough could just about go out and get it (though maybe not a "pine nut bear.")

Going on the presumption that there are two beliefs or "sides" to this pretty little study in natural history, let us hark back a little. If my memory serves me, time was when scientists pooh-poohed the idea of the existence of the fantail or flagtail deer, but set the stories of them down to romance or falsehood or loose observation (yet what better observers did one ever know than the old hunters?) Yet in face of continued stories of the sort and of growing facilities in the journalism of natural history—which must have value even with the literature of

WHITETAIL.
ANTLELOPE.
FANTAIL.

natural history—let us say that scientists became willing to say that some one was only mistaken, not insincere. Even science could not overlook the value of evidence such as the reports from Texas, New Mexico, Wyoming and Montana made in regard to the existence of some such animal—or rather, some such animals. The positive testimony of men like old Bill Hamilton, who had actually seen the animals after which (before his time) the Fantail Hills of Montana were named (and the name exists there to-day), could not fail to be worth much against the negative testimony of even a great many intelligent and scientific men, who had never seen any such animals because they had never been where the animals were (and because the old hunters were eating deer, not preserving them as specimens). Add to these old tales the positive testimony of Capt. Kendall and "El Comancho" as to existence, habitat and habits, and add still to this our picture of the fantail horns shown herewith, and our friends, the scientists, surely must abandon the former position of general denial. Now comes science and says, "The fantail is not a distinct species. You must prove that it is a species."

At this stage of the argument, we are, as FOREST AND STREAM suggests, all arrived at a place where each side may withdraw with victory. We differ as to the "dum" and "dee," but we unite on the "tweedle." For my part, and let me say for the part of "El Comancho" and those who hold with us, we do not care whether it is species or not; we only say it is fantail and I think we prove it. To my mind and to that of the average Western hunter, there will always be fixed the permanent differences between the grizzly, silver tip, cinnamon and black bears. Yet I know this is scientific folly, and believe science to be also right in saying that there are only two species of bear in this country, the grizzly and the black. This latter is my Sunday belief. During weekdays I let in the silver tip and cinnamon, with a leaning to some more.

But let us take up the question where our friends the scientists and our friend FOREST AND STREAM sets it down, and meet the other side on its own chosen ground, that is, on the assertion that separate species is not proven for the fantail. Even on this statement I believe we shall make it logically interesting for the other side, and perhaps put it on the defensive in turn. I don't know what constitutes species. Neither does Science, nor anybody else. There are no sharp division fences in nature, and continually individuals occur which do not classify. Science cannot tell just where a new species began, nor when a new species is going to begin. There is no scientific determination of the instant of such value in individual type, of food conditions and of genera environment, as will insure the begetting of continuous or specific type from that time on. Scienc does not know when the blacktail's tail turned black c when the whitetail's tail turned white. It can't sa which turned first or why. It can't say why the blacktail holds to its range and the whitetail to its own. It can't say whether or not the tail of the mule deer would grow white if it were transferred for 1,000 years to the pine forests of the East. In short, when science stands under the bugbear flag of "species," it is under a banner extremely hard to defend, and no one knows this better than science herself. Let us have no awe of the word Species. It is as loose and as inexact as the word Fantail! Let us not try to define species absolutely, for no one can do that.

But our friends choose the definition that species is something which will reproduce itself continuously in its typical form. They say that the fantail is not shown to do this. In reply we say that it is by no means shown not to do this, but that, to the contrary, there are very good reasons for believing that it does do this. Now the question is, which side must take the burden of proof? Surely it should not be the one which has the stronger natural position. Let us see whose position seems logically the stronger.

We have shown (I think) that the fantail does exist in certain numbers in some localities, yet that it could leave these localities if it liked. It is true, we have not shown that whitetail deer do not also frequent the same section of country, and hence we leave open the argument that there may be dwarf specimens of whitetail deer. But upon the other hand, if scientists assert that they are dwarfs (and they are either dwarfs or a distinct species) we have the right to ask why the fantail deer is not heard of in all parts of the entire range of the whitetail deer? As a matter of fact, the fantail is heard of (so far as I know) only over country which is much more nearly to be called the blacktail range. I never heard of a fantail deer in the flat pine country of Wisconsin or Michigan, much less of numbers of them in a restricted section there. It is not claimed for the smaller deer of the south of Florida, nor for the little deer of Mexico. The hunters do not tangle up over this. They say the fantail is "different."

Now then, Science will admit that there may be a smaller species of deer than the whitetail, because such species are known in other countries. Science cannot say that such a species cannot exist in the environment furnished by this continent. Very well. Science, FOREST AND STREAM, "El Comancho" and I are all ignorant about it. We don't know. We don't find fantails in Wisconsin and we do find them in Wyoming. What are we to believe? Are they dwarfs or a species? Were they dwarfed there or bred there? Generations ago the hunters found them there—named mountains after them. Why do they still remain? Were they dwarfed there all these generations or did they select individuals of their size and breed there? All around them are big whitetail (and also blacktail) deer. Why did not the conditions apply to them and dwarf them or make their tails longer also? Were these "fantail" deer dwarfed there or bred there? Of course science cannot say the latter. Which side, then, has the stronger presumptive case in the face of the evidence actually produced? Which side must take the corner of defense? Upon which side devolves the duty of going out and securing a pair of live fantail deer and making the (always questionable) experiment of reproduction of specific type in captivity, the peanuts of the park for the browse of the mountains? Until science asks us to bring in a pair of dodos and a pair of Labrador ducks before declaring on their species, I do not think she should call it our duty to get this pair of fantails. I submit we have done much, if not enough, to show them alive, distinct, wild, generation after generation, on the same country, and not on other country, where, under the hypothesis of science, they should have appeared in phenomenon. To the plain people like myself, who believe in William Tell and cinnamon bears, the chase of the fantail has brought us so near in sight of a species good enough for plain folk that I am already studying what to call it. As I look at the dainty set of antlers before me—so small I can cover all the skull bone in my hand—I am inclined to call it *Cervus comanchiensis fantailii, Ltd.* There is no monopoly in the country when it comes to discovering and naming new species, and about all we are shy on this one is a new watermark on the frontal bone, or something of that sort. By all means let us register the fantail deer along with the hornsnake—both of which, I do not hesitate to say, will eventually find their way into the office of FOREST AND STREAM, whether in the humility of non-species, just as nature made 'em, or in the pride of recognition by science, which has long tried to saw off the products of nature into artificial sections, beyond whose lines no self-respecting creature should step. Only they do.

About the "pine-nut" bear I am not so sanguine, for science will ask me to prove species, which I can't do, any more than I can on the dodo, because there are so few dodos. If science would allow me to say there is such a thing as a cinnamon bear, I would cheer up and hold out for the "pine-nut" bear. As it is, all I can do is to submit that the evidence of one man who sees the rare occurrence of a murder is worth more than that of the two hundred millions who did not see it. I submit that so old and trustworthy a hunter as Bill Hamilton, for instance, would know a wolverine if he saw it. In his "pine-nut" bear he would recognize merely a different sort of bear, not a specific sort of bear, just as he would call the cinna-

mon bear by a different name from the grizzly. Now, nobody but nature knows just why the "pine-nut" bear, whatever it was, grew different from other bears. The fur trade knows such things as "silk bear," meaning a very soft, silky individual sort of fur. "Silk robes" of the buffalo were also known, though very rare and valuable. What made them grow so? Nobody knows. (I have heard it denied that there ever was such a thing as a "silk" buffalo robe, because the denier had never seen one.) Until we have pried closer into the secrets of nature's workshop we have no right to claim exactness for the conventions, the artificialities, which (for sake only of our own convenience) we adopt and put in use. The continual wonder and glory of nature is that she always has depths and ultimates beyond which man cannot see, and always has phenomena which man cannot weigh nor measure with any standards of his own contriving. In life everything is relative, not absolute. For my part, I wish all the titles were off the mountain peaks, that all the rivers were unlettered, all the lakes unnamed, all the railroads off the earth, and all the guns back in the elements again. If that were so, what a pretty, pretty place this would be then, wouldn't it, with all the *Cervidæ* unclassified and all the *Ursidæ* unnamed? Then a fellow could make himself an uncalendared year, and do nothing but sit around and play, on an unregistered guitar, an unprinted love song to his uncultured sweetheart. That would be nice. I remember such a song, one which a maiden aunt of mine used to sing when I was a child. It said, very fervidly:

> "I'll chase the antelope over the plain,
> And the tiger's cub I'll bind with a chain,
> And the wild gazelle with the silvery feet
> I'll give to thee for a playmate sweet!"

But I desist, lest I be asked to produce a species of gazelle with silver feet, which methinks were more difficult to do than to find a fantail deer or a pine-nut bear.

Later, July 19.—When I wrote the above, I had not seen this week's FOREST AND STREAM, but oddly enough, about the first thing I saw on opening the paper was the published offer of $100 for a pair of live fantails. I thought Science would be doing something of that kind before long, and here we are! It is not likely that the $100 will change hands, for the same would not cover very much of an undertaking in catching wild animals, unless one happened to be on their range at the season of the birth of the young. Moreover, the offer excludes what is probably the most certain part of the country for such a quest, namely, the mountains of New Mexico.

But I have something odd still to add. This morning Dr. L. W. Cock, late of Texas, but now of Chicago, was in my office, and fell to examining "El Comancho's" fantail antlers. At that time he had not seen the FOREST AND STREAM editorial, and I had not seen this week's paper—with the comment of Mr. Arthur Erwin Brown on the Chisos Mountains. Dr. Cock said, "There are lots of these fantails down in the Chisos Mountains. I have heard some of my friends speak of them. They do not wave the tail as the whitetail does, but whip it or 'fan' it more. There is no doubt they are a distinct species." Then I showed him Capt. Kendall's article.

Now, it happens that Dr. Cock is the very man who has been trying to persuade me that I should go with him this coming winter down into New Mexico after my long lost big bear. It further happens that Dr. Cock is the inventor of a scientific application of certain gases by which decomposition can be arrested in organic tissues. He can treat fresh meat, or even fruit, so that it won't spoil in even a hot climate. He has laughingly assured me that if we get our bear, his skin and even his whole carcass, if wished, shall be brought out safe, for we should take one of those scientific smoke houses along with us. Now, I don't suppose the $100 fantail offer is of much use to us if we go to New Mexico, but I don't mind saying that if Dr. Cock and I were forced to do it (though we should have to change our trip from one side of New Mexico to the other), we could not only get a (dead) fantail, but lay it down, hide, horns and tallow, everything but the viscera, whole and unchanged, in the FOREST AND STREAM office. I am willing to bet my job against the FOREST AND STREAM plant—which is certainly offering odds enough to show I am in earnest—that we can do this. All of which, to a great many minds of unbelievers in fantail deer, will no doubt seem further and incontrovertible proof that I have gone stark, staring mad, not only on one but more than one subject! But I believe in William Tell and cinnamon bears; and I reflect that Science got her start in business by learning things she didn't know at first.

Gives it up on Snake Legs.

But while I am desperately committed on the fantail question, and while I wish the $100 offer applied to a specimen of the horn snake, I am going to give it all up about the snakes that have legs—just as I am afraid I shall have to concede the pine-nut bear. Below I offer a letter received from Mr. Geo. A. Boardman, of Calais, Me., which will explain the "legs" on Dr. Taylor's blue racer snake which was sent to FOREST AND STREAM. It says:

"I have been a reader of FOREST AND STREAM from its commencement, and Mr. Hallock promised to put me down as its first subscriber (I think he afterwards told me I was the second.) I have read every number, and find none of the writers that please me as well as some of those from the West. I will tell you what little I know and that is not much) about snakes. What is called sometimes feet of snakes are claspers, that only the males have, and they are used to hold the female. The horntail snake is common in Florida, and is often called 'bull snake.' It makes a queer noise, something like a bull, and grows quite large in Florida. I have seen them 5ft. long; they are said to be harmless, and make no use, as far as I could see, of the horn in the tail. I once set my dog at one; the dog would only go near and bark. The snake made a blowing noise, it sounded not much like a bull. I shot the snake, and brought it in to Mr. Brown Goode, who was collecting such things in Florida. It made no use of its horn tail to fight the dog.

"Several male fish have claspers. The basking shark has them so large and long they look like legs. One taken near here some years ago was mounted, and the claspers were fixed to look like legs, and it was advertised as a 'shark with legs.'"

While we are speaking of irregular and unaccepted and impossible things—which keep on happening—I cannot forbear to quote a sentence from a letter lately received from Mr. A. B. Frost, the well-known artist, whose pictures in and out of illustrated literature of the day have delighted so many. Mr. Frost writes from Convent, N. J., and says:

"We are short of horn snakes here, but I had a possum this summer that growled and snarled like a dog, and fought like one too, for that matter. All the other possums I have ever seen have been as silent as clams and hadn't a trace of fight in them." E. HOUGH.

A Curry of Snake.

"PUFF adder is out of sight" (Horace Kephart's old veteran said in last week's FOREST AND STREAM), which brings back to me one evening in '89 in the northwest provinces of India. B. and I were out pig-sticking, which is the colloquial term for hunting wild boar with spears from horseback. We moved camp in the early morning, sending all the servants and tents to a village about fifteen miles away, expecting to find camp pitched, hot baths, and one of the best of good dinners waiting for us in the evening, after our day's pig-sticking.

I remember we had capital sport, killing five good boars, and finishing the day about seven miles from the village where we had sent our camp. The heat was something awful. We had finished all the soda water that had been brought on one of the shikar elephants by the middle of the afternoon, and after killing our last boar, which led us a long gallop through a thorn jungle, we were both fearfully thirsty, but were afraid to drink any water from the native wells, as cholera was raging all through the district. Getting on some fresh horses, we galloped away to the village, with visions of iced bass, only to find that none of our servants had arrived and that the two bullock carts had broken down about six miles away.

We got some boiled milk from the head man of the village and lay down in the police bungalow which is always kept for English officers. Some of our native huntsmen had now come in, Brinjaris or Indian gypsies, fine big men who are very plucky at beating boar out of thick cover, and soon a most savory smell of cooking reached me in the bungalow. I asked them what they had and they said it was chicken curry.

It was 8 in the evening and B. and I had eaten hardly anything since 4 in the morning, and were too hungry to think much of the Brinjaris' dirtiness in cooking, so we had two helpings brought us from their pot on big leaves. It was the best chicken I ever ate, and we enjoyed it until suddenly B. stopped eating, his face became white, and he became most violently sick. Then yelling in most unparliamentary Hindustani, he said to the Brinjaris, "You sons of defiled mothers, do your chickens always have scales?"

I too had by that time found a large piece of scaly diamond-marked skin. But I must say the curry was good, though it was made up of a huge lizard and a very large snake!

The Brinjaris are rather ashamed of eating lizards, as the other natives will not do so, and these had therefore called their lizard chicken. Without any twinkle in my eye I can truthfully say that lizard curry is "out of sight." SOWAR.

The Scarcity of Small Birds.

CHARLESTOWN, N. H., July 24.—*Editor Forest and Stream:* Your correspondents from all over the Northern part of the country have been very well agreed in noting the scarcity of "bird life" this spring and summer, and I now wish to ask if any of them agree with me in noticing an apparent superabundance of insect life, as a natural consequence?

It seems to me that I do not remember a summer when small insects of various kinds have been more in evidence or more annoying. If I sit out on the doorstep in the evening I am continually disturbed by something crawling or creeping on my neck or in my hair, and if I go up to my room and light my lamp to read there are soon a host of moths and millers buzzing about the shade and dropping on to my papers. The ground under the big elms on the main street has been strewn with twigs from 4 to 8in. long, apparently cut off by some "borer," and the Boston papers have been full of the accounts of damages to the elms in the city and surrounding towns by various insects, such as the "trissock" and "gypsy" moths.

Now, I believe this to be the natural consequence of the destruction of the birds by the great snowstorms at the South last winter, but at all events it is a strong bit of evidence, if found to be of general occurrence, in favor of the crusade against "bird destruction" which FOREST AND STREAM has fought so gallantly for many years. I hope, if others of your contributors have noticed it and agree with me, that they will bear their testimony in favor of the proper protection to all our smaller "insect destroying" birds. As the summer wears on, I still note the scarcity which I spoke of two months ago, and even the familiar robin is like angels' visits, very "few and far between," and I cannot positively vouch for either an oriole or a bluebird in our street this summer, though the little "chipping" sparrows and their English cousins seem to be about as plenty as usual. VON W.

From Vermont.

Editor Forest and Stream:

Robins and bluebirds first made their appearance in this locality March 8, but the following week of snow and cold weather caused them to disappear suddenly and they have not returned in their usual numbers. There is a scarcity of song birds here this summer, excepting the northern mockingbird (the so-called catbird) and the brown thresher, both of these birds are seen and heard often.

The upland plover back on our hill farms are very plentiful. They raise two broods here in the season. The young of the first brood can now be seen like young turkeys running about our newly-mown meadows, while the old birds are sitting on their second clutch of eggs. Their nests are bowl shaped depressions in the top of a small knoll and lined with soft dry grasses.

The hot dry weather has made bass fishing poor. The fishermen, however, report that they see plenty of good-sized fish. STANSTEAD.

HIGHGATE, Vt., July 20.

Game Bag and Gun.

CHICAGO AND THE WEST.

The Game Laws in Illinois.

CHICAGO, Ill., July 27.—Warden Blow deserves credit for his successful raid on the notorious Kewanee freezer, long operated by H. Clay Merritt. A second warrant was sworn out the present week and a more thorough exploration of the Illinois cold storage fortress was made, resulting in the finding of great quantities of Illinois game. Yesterday a meeting of the directors of the Illinois State Sportsmen's Association was held, Messrs. R. B. Organ, Abner Price, C. S. Wilcox, L. M. Hamline and A. C. Patterson, Messrs. Baird and Booth for the law committee also appearing. Counsel will be chosen to prosecute the cases against Merritt, which are apt to be long and hotly contested, the defense being the old one that game legally obtained can be legally held and sold as wished. Warden Blow says he found the game concealed in twenty-five zinc vacuum tanks, each capable of holding over 200 mallard ducks. The tanks were found in a cellar under a shed. It is claimed 80,000 dozen quail were located, 500 dozen prairie chickens and a great many ducks. Blow claims he has proof that Merritt has received game out of season. In or out, look at the destruction of game in Illinois and west of Illinois! The members of the committee figure that on quail alone Merritt could legally be fined $15,000,000. That he will ever be fined at all is a question only to be determined after a long legal fight. This same fight has been on in the Illinois courts before, but has never been brought to actual decision. There are many good Supreme Court decisions in other States which are against the game dealers' defense of property right in game. The Illinois Association has never been in so good shape before to make this fight, never had so good fighting men or so good fighting position before as it has now. The question is further along now, and the lapse of years seems to leave the sportsmen's side stronger than it was in the past. Of course, the question will have to be fought out, else the cold storage houses will continue to despoil the entire Western country of game.

Backset to Sportsmen.

Mr. M. R. Bortree, president of the National Protective Association, received a disappointment yesterday, one which may be called a backset to the proper interests of sportsmen. Ever since February last he has been trying to force trial of his suit against the Union League Club of this city for serving illegal grouse at a banquet. After many continuances by defense the case came to trial yesterday. Justice Glennon dismissed it, saying he could find no law forbidding a man to eat illegal game at his own table, and that the club table was the same as a family table, not being a restaurant where the article was sold. From this remarkable decision Mr. Bortree, being for the people, of course had no appeal. It leaves things in a bad shape on this particular point. It is not doubted that these clubs are large purchasers of game, much of which is of the "early" sort. Mr. Bortree pointed out the Supreme Court decision holding that having the game in possession in close season was a violation of the law. But probably Justice of the Peace Glennon will hold the Supreme Court version of the law unconstitutional!

Bad State of Affairs in Iowa.

A meeting of the executive committee of the Inter-State Fish and Game Protective Association was held last week at Brown's Lake, Iowa, for the purpose of bettering the condition of protective affairs in that State. Judge Shaw, President, being absent, Vice-President J. W. Miles took the chair. Among those from abroad were U. S. Fish Commissioner, Hon. S. P. Bartlett, of Quincy, Ill.; Hon. G. W. Langford, State Fish and Game Warden of Illinois, of Havana; his deputy, Hon. Chas. Crouse, of Savanna, and Hon. Geo. E. Delavan, Fish Commissioner of Iowa, of Estherville. It was shown that Wisconsin has a good law and a warden with eighteen or twenty deputies with good salaries to enforce it—a car especially built and fitted up for transporting and distributing fish and an appropriation of $15,000 per year for this enterprise. Minnesota has a board of fish and game commissioners with executive agents all over the State to enforce their excellent laws upon this subject. They also have a car similar to that of Wisconsin and an annual appropriation of $10,000. Poor old poverty-stricken Iowa has one commissioner for its ninety-nine counties and no deputies or agents, no car, and nothing but a few old rusty milk cans in which to transport fish, and the sum of $3,000 appropriated with which to carry on this work.

It was finally resolved to refer the matter of preparing a bill and memorial to the general assembly, back to the executive committe, with power to act and to report at the next annual meeting of the association, the second Wednesday in October. It is the purpose of the executive committee to take up the work at once and to call to their aid the best talent of this and adjoining States. It is probable that a bill for a law similar to the Minnesota law, with some modifications, will be prepared and adopted.

Over the Range.

Mr. E. S. Morse, late of the firm of Edwards, Morse & Klein, some time a member of the Calumet Heights Club and a sportsman beloved by many friends, died within the present week and was buried Tuesday.

His Friend.

Lately the body of a suicide or of a murdered man was found in the woods near Niles Center, Mich. Beside his bones was found the skeleton of a dog, thought to be a spaniel. Probably his friend, and faithful.

Low Water North.

The rivers of Wisconsin are very low this year, and it is feared the marshes will not have all the water sportsmen could ask for their duck shooting. The Wolf and the Northern Fox are phenomenally low, the latter near Poygan Marsh being too low for rafting logs through the cut-offs, as is usually possible.

In Montana.

A letter from a friend in Montana says: "Bears are said to be very abundant east of the National Park this summer. The rivers are all very low. The trout fishing is extremely good."

Later.—And now comes word from Indian Agent Teter denying in toto the reports of any massacre at Jackson's Hole. It seems that weird and slightly woolly community is not to enjoy the final distinction of being wiped off the earth, as reported this morning. Reports to FOREST AND STREAM from men on the ground out there may be a trifle slower coming in, but they are apt to be more accurate. The lively Western correspondents should resight their repeating pencils.

Oregon Is Jealous.

The State of Oregon is evidently jealous of Idaho and Jackson's Hole. This time it is a question of the Indians breaking the fish laws of Oregon, and to-day's dispatches reek with gore—which is going to be shed if the Indians from the Warm Springs reservation come down and fish by the hatchery on the Clackamos River in spawning time. Protector McGuire has asked the Interior Department at Washington to issue orders restraining the Indians from fishing in close season.

It is exceedingly well to have natural close seasons enforced for fish and game. But it makes curious comment on all this Indian muss to reflect that in the old days, when the Indians were the only hunters and fishers, this country swarmed with game and fish. What with cold storage and game butchers, it is hard to see just where the Indian is going to learn much improvement, by example at least, on either the best or the worst of his old methods.

Out on the Yellowstone.

An interesting letter comes from "Billy" Hofer, from his home out on the Yellowstone. The story of steady decrease of the Park buffalo herd is sad, and very mournful is the last news of the soldier, private Alexander, who was lost in the snow-covered mountains at the time of the FOREST AND STREAM winter trip. Mr. Hofer says:

"I got home to Gardiner all right, and am very glad to be in God's country once more, away from the heat and smoke of the city.

"I learned that the soldier whom they were looking for when you and I were in the Lower Geyser Basin a year ago last winter was found this spring. His bones were found on the south side of the Gibbon, quite a way above where it flows into the Madison. His snowshoes were close by. He had gotten across the Madison some way, either above or below the mouth of the Gibbon; if below, he had to cross the latter stream too to get to where he was found. No one can tell what the poor fellow went through before he gave up. I think he mistook the Gibbon for the Nez Percé River, where the camp was he was making for. His bones were buried in the soldiers' graveyard at the Mammoth Hot Springs.

"There is very little snow in the mountains, and all the streams are quite low. We have had cool weather ever since I have been back. It snowed two days on the mountains, with a little here in Gardiner—quite a change from Chicago. Park travel is very light, but reports say very heavy travel coming later.

"I learn that quite a number of buffalo were killed on the west side of the Park this winter. There was so little snow that they could go and stay anywhere. I hear Dick Rock captured three calves this spring. Very few buffalo wintered in Hayden Valley this winter. Sorry the snow was not deep enough to keep them all in the Park."

At the Muscallonge Waters.

The season seems to have been fairly good at the muscallonge waters of Wisconsin, though of course we hear no longer of the great catches of earlier days. I learn of two fish, both over 40lbs., and one of 44lbs., sent down for mounting, and the latter is top weight so far as I can learn. C. J. Coon writes from Trout Lake to Mr. A. Hirth, of this city:

"The fishing has been good so far. F. S. Casey, No. 445 The Rookery, Chicago, in three and one-half days' fishing caught four muscallonge weighing 25lbs., 18lbs., 13lbs. and 10lbs. respectively, and thirty-four bass. E. A. Bacheldor, of the Lexington Hotel, in one week's fishing caught forty-three bass weighing from 2lbs. to 4½lbs. each, and four wall-eyed pike weighing 11½lbs. He also caught several muscallonge, all of which were under 10lbs. weight each."

Removed.

Mr. A. S. Comstock, maker of the now celebrated Protean tent, has removed from his old distributing quarters at Evanston suburb, and has engaged office and floor space at the Lind Block, northwest corner of Market and Randolph streets, Chicago. Here he will be nearer the business center of the city. He has a spacious loft for canvas work of his own, supplied with power, and will henceforth not only manufacture the Protean tent for himself in all its varieties and specialities, but will also make all other sorts of tents up to 40×60 in size, and also will manufacture boat sails, etc. Mr. Comstock has with him as superintendent Mr. Longley, one of the oldest and most skillful canvas workers of the trade. Some of the machines will be in place the coming week, and before long we shall see a nice little tent industry established, all of which began not so very long ago in a modest way with the idea of the ingenious Protean. Sportsmen will wish Mr. Comstock the success it is safe to predict.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Camping in Texas.

MARLIN, Tex., July 13.—*Editor Forest and Stream:* We beg to enclose you with this, a clipping from our local paper. The three, Messrs. H. G. Rush, D. S. Maffett and H. Louis, are samples of our young business men. They started on this overland outing about two weeks ago, well supplied with guns, ammunition, fishing tackle, and canvas folding boat. The negro cook and all-round man mentioned is a character and whole story in himself.

E. R. E.

Their record runs: Everything ran smooth and jolly with the exception of experiencing a heavy wind and rain storm which came upon us just as we were preparing to camp in the mountains near Sulphur River, 7 miles east of Lampasas; after about thirty minutes of high wind, thunder and lightning the rain ceased and we decided best to push on to Lampasas, which point was reached at 12 at night. Tired, hungry and sleepy we retired to peaceful slumber after a hasty supper. Our camp was spread in the park near the old site of the famous Park Hotel, which was recently destroyed by fire. From this point we pushed on to the Colorado River, which we found on a 14ft. rise. We were ferried across at the Little Breeches post office, where we recruited our commissary department and drove on to Cherokee Creek, about one mile distant from the river. At this point we have been camping three days. The sport is fine; our catch the first morning was 48 fish, consisting of speckled trout, brim, perch and bluecat. Our camp is delightfully located on the creek just between two fine fishing holes and about three quarters of a mile from the mouth. We have fish to feed to the dogs. How they do bite! They are the very gamest of their kind and make a reel fairly sing as they dart for the sheltering rocks. Our "coon," Genie, still holds honors for the largest catch, having landed a 2½-pound trout. We celebrated the glorious 4th of July in due form. At daybreak we fired a rattling salute from our pistols, guns and rifles; after breakfast a programme of singing, dancing and oratory was carried out before an audience of about half a dozen tow-headed mountain boys, to whom our outfit and especially our "coon" was a great curiosity, as there are no negroes here. We leave this afternoon for Sulphur Springs, about five miles west, where we anticipate more fine fishing, as the river is falling rapidly. By the way the boys are talking I think we will be out until September 1.

English Pheasants in the Catskills.

EVERYTHING points to good shooting here this fall. Ruffed grouse have hatched in large numbers and broods are seen daily.

I have reared and liberated quite a stock of English Mongolian pheasants, and they have survived the past winter well. Quite a number of broods of young have been seen in the mountains. One hen was killed on her nest by a miserable wretch, but he paid about $50 for his fun, and I think the rest will not be molested.

HAINES FALLS, N. Y., July 23.

A Change in New Jersey.

THE change in the system of game warden appointment in New Jersey seems to be working well if the record of prosecutions and convictions under it means anything. Under the old system—according to the report of the Fish and Game Protector—there were in one year twenty-nine prosecutions; under the new system during its first two months of operation there were forty prosecutions.

Here is the list:

Obadiah Smith and John Stephenfield, prosecuted by Warden Hendershott for netting fish; each sentenced to ten days in jail.

Joseph Hable and Charles Kennela, prosecuted by Warden Hunt for netting fish; nets destroyed and accused permitted to go under suspension of sentence on payment of costs.

Robert Browning, prosecuted by Warden Wise for taking bass out of season; ninety days in jail.

William Gregory, prosecuted by Warden Wise for taking bass out of season; sixty days in jail.

Jonathan Black, prosecuted by Warden Wise for taking bass out of season; sixty dollars and costs.

Charles Appleton and William Cobb, prosecuted by Warden Dare for taking sturgeon under size; fined ten dollars each and costs.

Adam Smith, Jr., prosecuted by Warden Hill for hounding rabbits; sentence suspended on payment of costs, accused having disposed of his dogs and surrendered his gun.

Henry Boice, prosecuted by Warden Schneider for robbing birds' nests, fined $120 and costs.

James Dunnigan and Alexander Moir, prosecuted by Fish and Game Protector Shriner for taking trout under size; fined each sixty dollars and the costs.

William Brown, Watson Penn, William Morse and Samuel Soper, prosecuted by Warden Clayton Robbins. Morse was fined $100 and costs; Soper was acquitted; the cases of the rest are still pending.

Charles Roth, prosecuted by Warden Tooker for shooting on Sunday; fined twenty dollars and costs.

Charles Wright, prosecuted by Warden Hilton for killing game out of season; fined twenty dollars and costs.

William Wilson and Thomas Vandergrift, prosecuted by Warden Wise for taking fish out of season; fined each fifteen dollars.

George Wean and William Tomer, prosecuted by Warden Dunham for netting fish; fined fifty dollars and costs each, in default of which they were sent to jail.

Clayton Wean, convicted also of netting fish, was allowed to go under a suspension of sentence, he having furnished evidence for the State.

Jacob Mead, prosecuted by Fish and Game Protector Shriner for shutting off water for the purpose of taking fish; fined fifty dollars and costs.

Malcolm Bell, William Hance, William Fennell, Joseph Parent and W. D. Hartshorn, prosecuted by Warden Wise for netting fish; fined twenty-five dollars and costs.

William M. Wells, prosecuted by Warden Wise for killing game out of season; fined forty dollars and costs.

Angelo Solandino, prosecuted by Fish and Game Protector Shriner for birdnesting; find forty dollars and costs.

D. W. Hoover and William Hoover, prosecuted by Warden Dunham for shutting off water for the purpose of taking fish; fined twenty-five dollars each and the costs.

Edward T. Boote, permitting the maintenance of an eel weir on the property leased by him for fishing purposes; prosecuted by Fish and Game Protector Shriner. Case still pending.

The Newton Gas Light Company, prosecuted by Warden Hendershott for polluting streams. Case still pending.

Richard Lore, prosecuted by Warden Dare for netting fish; fined $100 and costs.

Peter Daniel, prosecuted by Warden Dunham for shutting off water for the purpose of taking fish; fined twenty-five dollars and costs.

A Treasure for Tourists.

"HEALTH and Pleasure on America's Greatest Railroad," No 5 of the Four-Track Series for 1895, issued by the Passenger Department of the New York Central, from the press of the American Bank Note Co., surpasses in size and beauty any volume of like character ever published. No brief description can give an adequate idea of its excellence and utility. To summarize it in a few words, the book is a handsome volume of 504 royal octavo pages, with numerous maps and illustrations, beautifully bound in illuminated covers. The primary object of the book is to give useful information regarding the popular health and pleasure resorts of New York, New England and Canada, but it goes beyond this scope, and in a series of interesting chapters treats of the beauties of landscape and climate to be met with in California, Colorado, Utah, Yellowstone Park, Mexico, Japan and the Hawaiian Islands. The descriptive matter relating to the various features of interest in these localities is accompanied by over 300 illustrations, depicting the most beautiful scenery of the country. In addition to these features, epitomized tables of routes, fares, hotel rates, etc, etc., render the book invaluable to travelers and tourists. The maps are all new and up to date and cover the Adirondack Mountains, Thousand Islands, Lake Region of Central New York and all the prominent resorts.

Every one who intends to get out of the city for the summer should secure a copy of this book and study the 1,000 tours it describes before coming to a decision. George H. Daniels, General Passenger Agent of the New York Central, will send a copy to any address in the world upon receipt of ten 2-cent stamps.—*Adv.*

Sea and River Fishing.

CANADIAN ANGLING NOTES.

Editor Forest and Stream:

Messrs. R. R. McCormick and W. R. McCormick, of Florida, accompanied by their wives and a number of friends, have arrived here on their third annual visit to the Lake St. John country, and left for Roberval about a week ago. They intend to spend fully eight to ten weeks fishing and hunting here. The Messrs. McCormick are fond of extensive camping trips and expect to make one this summer to Lac Tschotagama, some distance up the Peribonca River. They have joined the Triton Fish and Game Club, and expect in September to have some first-class trout fishing and also some bear and caribou hunting there. There has been quite an accession of late to the membership of this club, and considerable improvements have been made upon the tract.

I have received of late quite a few inquiries from the United States in regard to July and early August fishing for trout. I know some ponds and several streams and rapids where fair fly-fishing can be had at this season, and numbers of lakes where large trout may be taken with bait. But while ouananiche fishing may be had all the summer through, it is seldom that the trout fly-fishing, even in northern Canada, can be really called first class in the month of July or during the first week or ten days of August. About the end of the second week of August the large red trout begin again to rise freely to the fly, and ten days later they may be captured pretty near to their spawning beds. In the third week of August the large trout of Lake Edward are often rising upon their spawning beds in the Jeannotte—the big lake's outlet—and I know that the same rule applies to the waters of the Triton tract.

For those who belong to none of the fishing clubs up this way and are anxious for trout fishing in August and September, I would strongly recommend "La Belle Riviere" and the lake of the same name, which are only about a day's journey from Roberval or the upper waters of the Ouiatchouaniche, from a day and a half to two days' journey back from the Roberval Hotel. If time permitted of it, there is of course much more variety, and equally good, if not better sport, in a camping and canoeing trip through a portion of the wild country north of Lake St. John, where the guides will point out, between the larger lakes or main streams, the ponds and rivers that hold the big trout, and the pools or rapids in which they may be most profitably sought. Of course, on all trips of this kind ouananiche fishing is also to be had, and the time is now approaching when this sport will be at its best up the Ashuapmouchouan, the Peribonca, in Lac á Jún, and at the Fifth Falls of the Mistassini.

E. T. D. CHAMBERS.

QUEBEC, July 26.

THE LEAP OF THE BASS.

LINDSAY, Ont., July 24.—*Editor Forest and Stream:* I have for long been a reader of your paper, but not until now have I felt impelled to put a word in; and it is this bass discussion that has stirred me up.

Some of your correspondents have been so unmercifully criticising an article written by Dr. Ellzey that I feel I must stand to the back of my professional brother.

It is a fact that the eye is easily deceived. Magicians take advantage of it, and probably we can well lay to that score the alleged weight of some big fish that are lost, and other stories, too. From what I have read of "Kingfisher's," he must be too old a hand to be carried away by excitement, but surely he will admit that a 5ft. leap is something very phenomenal for a bass. To me it is highly improbable. I can only understand it at all by thinking that the spring of the rod assisted to a large degree. I have talked the matter over with Mr. J. B. Knowlson, of this town, a veteran fisherman and a cool hand, with whom I have spent many days after bass and trout, and we agree that in our experience a 2ft. leap is about the outside limit. In the majority of cases they little more than clear the water, often not doing so, but come straight up, and as they find themselves out of water, throw themselves to one side or the other, making a half-moon shape. Still, I have frequently seen them jump straight upward, clearing the water, and apparently shake themselves, as "Old Sam" describes, but not their jaws; the anatomy of a bass's head and neck will not allow that.

I cannot attribute the jumping and shaking of a fish to wisdom on his part, but agree with the Doctor—the fish is thoroughly crazed; he thinks no more of what he is doing than does the runaway horse who kicks to pieces everything behind him. Does any one believe that the latter act is premeditated?

If the bass has such an amount of intelligence as "Old Sam" credits him with, why does he not go to the bottom, take a turn of the line around a stone or snag, and free himself at his leisure, laughing the while at the simple fisherman?

The "savigerous" shakings while in the air are simply frantic efforts made to regain his native element, which he left by mistake. They always remind me of the motions a man makes, when he slips on a piece of ice, in trying to regain his equilibrium.

I have done a great deal of fishing in our Canadian lakes and rivers, and in some of our rapids have had long fights with the small-mouth, where they had every chance to make big jumps. It may be our waters are too clear and cold, and the fish consequently half paralyzed, or perhaps they have not the vim of the Yankee bass; but I certainly never saw a three-foot leap.

Does not every fisherman lower his tip the moment he sees a fish leaving the water? Certainly not to a point where the rod is in line with the fish, but nearer a right angle with the line, keeping the strain up all the time. It turns his nose down to the water, and when he falls he can get no sudden jerk on the hook. I cannot back the Doctor up as to time. Some fish may not show for more than a tenth of a second; but any leap that clears the water by half a foot must take longer, in my opinion.

I like to see a man enthusiastic about any kind of fishing, but when I read what so many have to say about bass I wonder if they were ever on a good trout stream. I mean a good-sized creek that meanders through woods and fields, with open reaches and gravelly riffles and

overhanging grass-grown banks; that is where the truest art of fishing comes in. On a lake or river it is a matter of chance whose bait is taken; but on a stream the good fisherman gets the trout; the small boy is not in it.

The first time I was on the Nepigon River, over twenty-five years ago now, with my father, I was but a boy who had seldom thrown a fly. I struck quite as many fish as he did, though he was an expert fisherman; but he could save more than I then. That could not be. In stream fishing the man who best knows the ways, where they are most likely to be, how to get near them and what best to give them is the man who gets them.

I wonder how many fishermen take the trouble to examine the stomachs of fish in order to find out what they are feeding on at the time.

It is simply glorious to strike a good trout stream in the early morning or late in the day. It is a match between human intelligence and excessive wariness. You must be unseen and unheard. There can be no lying back in an easy chair to be rowed around a lake; no standing up and casting a fly all about you. No; you must as far as possible extinguish yourself and be an unseen instrument for placing your fly or bait at an exact spot in the proper manner. Slovenly work is of no avail; walk up to the most beautiful riffle and not a strike will you get; the good fisherman comes along later, and by going around and simply crawling up to near the edge, with nothing but his eyes showing, he will often pick out a dozen. Surely the quiet of the woods and fields has affected our stream fisherman, I so seldom read of him.

As Mr. Pusey's railroad, the Irondale, Bancroft and Ottawa, reached the height of land dividing these waters from those draining into the Ottawa River, a small party of us undertook to find out the truth about the trout we had heard so much of in the waters over the ridge. The region has hitherto been almost inaccessible and few have fished there. It is very wild, deer and bear are plentiful, pinnated grouse more numerous than probably in any other part of Ontario. We had but three days and it took us most of that time to find out where to fish. A small stream not far from where we camped fairly teemed with small trout. But the big ones in Clear Lake were harder to get at. After trying everything else with no success we fell back on the live minnow and then there was no trouble about it. We had no ice and could get none, so it was only on the last morning that we could cut loose as to numbers, and then it proved such hard work to get minnows that we made no great showing. But without exaggeration the number of trout was limited precisely by the minnows caught. I got eight that morning that averaged about 2lbs., and I had but seven minnows.

One of 3¾lbs. was caught, and without exception they were the most beautiful specimens I ever saw, not excepting the Nepigon trout. They were very bright in color and their flesh very red. Clear Lake is about a mile each way in extent, very deep and fed entirely by springs. There are several lakes in this region, all with trout in them, and in one or two the lake trout as well. They were not rising to anything and did not notice our flies, except on one occasion, a fly, Parmachene Belle, had been left on the leader as a side fly. A trout took the minnow, and while playing him another took the fly, but it was well under water.

I should not like your other correspondents to think I am too dogmatic in my remarks about the leaping of bass. I have simply written of things as they appear to me.

J. Simpson.

BLUEFISH, SALMON AND TROUT.

Boston, Mass., July 27.—The salt-water fishing along the New England coast is now at its height. At Buzzard's Bay the bluefish have been particularly savage this week, and as one Boston man expresses it, have bitten off everything they could put their teeth into. Complaint is made that they are running smaller than usual this season, but are very active and giving good sport. Dr. Maurice H. Richardson, of Boston, is fishing very steadily for them, and has had good luck. A. G. Weeks, Jr., is also doing well. L. D. Chapman, Dr. DeFries and Mr. Caliga, the artist, all of Boston, have gone to Nantucket on a bluefishing trip, and as reports say the fishing there is excellent just now, they will probably do well. A number of large tautog have been taken recently; the largest, weighing 10lbs., was captured by John Mason Little on the north shore, not far from Swampscott. Nahant is also yielding a good crop of tautog, and bluefish and striped bass are said to be coming in near Newburyport. Down near Hingham some good catches of smelt have been made. This is good news to the many Boston men who delight in taking these delicate little fellows. Dr. F. M. Johnson is very fond of this fishing, and is now getting ready for it. The Doctor made a phenomenal catch one or two seasons ago at Hingham, and hopes to parallel the feat this year.

The salmon fishermen who have been on their rivers during June and July are nearly all home again, and as a rule bring back very good reports of their luck for the season of '95. Mr. Louis Cabot, who has been fishing the Grand River, had fair fishing, but not quite up to last year. The Fitch party, consisting of E. C. Fitch, Mr. Edmands and Dr. Brown, are back again from Romaine with reports of very good fishing. Their largest capture was about 37lbs. The weather was exceptionally cold during part of their stay on the river, with heavy rain during some of the time that the best run of salmon was on. Dr. Brown of this party is the gentleman whom I mentioned in Forest and Stream at the time of their departure who has traveled so extensively, and saw such an odd exhibition of salmon fishing by the natives of Japan, while going around the world last winter. The Doctor will go into Maine this fall after moose, and will probably spend the coming winter in Mexico and South America.

Philip W. Moen and Geo. F. Blake, Jr., of Worcester, returned a short time ago from the Cascapedia. The party captured five salmon, the largest weighing 28lbs., and had good sea trout fishing. Mrs. Moen, who accompanied them, landed some good-sized trout.

The Matisquam Fishing Club, who have several nice salmon pools and a club house on the river of that name, the last river on the coast before reaching Labrador, have been having some fine fishing. A letter just received from Sinclair Kennedy, who is on the river in company with F. C. Hodges, states that they have done very well since their arrival. Between June 29 and July 6 the two gentlemen took twenty salmon and three grilse. This is certainly a score to be proud of, especially when one considers that one of the gentlemen (Mr. Kennedy) is now on his first trip. His experiences described in his letter in regard to the first two salmon he hooked and (of course) lost are both amusing and interesting. The disconsolate feeling caused by their loss was something awful, but by sticking to it he finally landed a good fish and thereby gained confidence enough to do his full share in making the good score I have mentioned. Three of his salmon were taken on the Fottler fly, a greenish fly made of parrots' feathers and tied by "Forrest" for John Fottler, of Boston. Mr. Hodges made a great catch last year on the Matisquam, one of the largest recorded anywhere for the season. The club house and fishing grounds are reached from Quebec by the steamer Otter to Matisquam.

The Bonny River country in New Brunswick is being well patronized this year, and "Mine Host Sullivan," the camp proprietor of that region, has had his hands full in looking after his many guests. W. W. Sias, a member of a Boston club who have a preserve near Willimantic, Conn., leaves next Tuesday for a ten days' stay at this New Brunswick resort; and Mr. and Mrs. Page, Miss Gertrude and Miss Grace Loud, and Mr. McLaughlin leave on Aug. 3. Later in August James M. Pearson and wife, of New York city, will go there for a thirty days' stay. Those who have returned are enthusiastic over the fishing, which has been very good in all the ponds and streams up to date.

M. G. Cochrane and W. S. Ames, of Boston, and H. A. Johnson, of Littleton, N. H., leave on Aug. 3 for a two weeks' stay at King and Bartlett. These gentlemen visited Tim Pond last year, but are anxious to try Spencer Stream and Big Spencer Lake, which accounts for the change.

Dr. George McAleer, of Worcester, Mass., with quite a party start on Tuesday next for the Megantic preserve. They will make their headquarters at the McAleer camp, and expect to be away about two weeks. Dr. Heber Bishop, of Boston, is expected to join them a few days later.

Fishing at Newfound Lake, N. H., for landlocked salmon and lake trout is said to have been good all this season. This is quite exceptional, as after the early fishing in the spring the big fellows have generally been hard to get. Deep-water trolling is the method employed and the most successful man I have heard of in regard to this year's sport is Geo. Fowler, of Bristol, N. H. Living near by, he knows every foot of the lake, which may account in a large measure for his good luck.

Dr. E. A. Carpenter, of Cambridge, Mass., writes me from Wolf Pond Camp, Spring Cove, N. Y., where he is spending the summer on the Vilas preserve, that deer are as plentiful there now as at any time during the past five years. He says his people go out on the lake only 600ft. from the house almost every evening to see the deer. On two occasions his young daughters have been frightened off the water by the close presence of the animals. Fishing parties constantly report meeting deer on the rivers, and bears are quite often seen. One of them, a large animal, was visible but a short distance from the house a few days ago. Many New England readers of Forest and Stream will be surprised that the Adirondacks can still furnish a record like this, as it is generally considered over here that game in that region is reduced to a minimum.

Hackle.

BOSTON ANGLERS.

Boston, July 26.—Mr. Charles E. Holt is back from his vacation in Maine, bringing a sunbrown that ought to last for several months. He speaks in the highest terms of the fishing, but it was generally salt-water fishing. He spent considerable time at Fort Popham, at the mouth of the Kennebec River, and nearly every day rock cod and cunners were taken in great abundance. Then there were the occasional real cod-fishing trips, one resulting in over 200lbs. of fish in one day.

Mr. Irving McLaughlin seems to have found an ideal place for fishing in New Brunswick. There are some trout lakes in that direction that he hopes to visit early in August, with a friend. They will take their wives along and make it a vacation trip, as well as one for fishing. More should be said about the location later.

George L. Wentworth and E. P. Parker, of Boston, have had a fine trip to the Rangeleys. They have enjoyed about all there is of trout fishing in that section. They tried Kennebago with good success. Mr. Wentworth is credited with over thirty trout of fair size, while Mr. Parker took thirty-five trout, including one weighing 4lbs.; an unusually large fish for Kennebago. They also mention seeing a number of deer.

The Follett party is back from the waters of the Inglewood Club. Mr. W. J. Follett says that seldom has a party enjoyed a fishing and outing trip more. The fishing was not all that could be wished, for the weather was foggy for a great many days out of the number in camp. Besides the water was high the most of the time. But a great many trout were taken; even more than enough for camp use; and with such luck the party is entirely satisfied. About the best catch of any was made by Mr. Follett and his brother, including 43 trout in one day, and not fishing many hours at that. The string weighed 30lbs. Mrs. Follett seemed to be the champion salmon fisher. She landed several in one day, but lost as many more. Mr. Follett was in the boat with her when she struck one elegant fish. Soon it came out of water nearly three feet, and Mr. Follett is sure that he saw it shake the hook out of its mouth. The party is as greatly charmed with the Inglewood preserve as ever. A good deal of restocking is being done, and Mr. Follett is sure that excellent salmon fishing is soon to be one of the attractions of the region.

About the happiest returning fisherman of the season is Mr. Rollin Jones, of Boston. His salmon trip was a most successful one, and well it may have been; for, as already mentioned, he has been the guest of Mr. D. H. Blanchard at his salmon river, the Northeast Branch of the St. Marguerite. He reached Mr. Blanchard's camps the day before his birthday, never having taken salmon, though having been a trout fisherman for years. The day of his arrival he was not particularly anxious to fish, but quietly watched the others fish—Mr. Blanchard and Mr. Richard O. Harding. They took one salmon, and Mr. Jones saw how it was done. In the evening, for some unaccountable reason, Mr. Blanchard asked Mr. Jones how old he was. At this point Mr. Jones felt that his secret must come out, and replied that if he lived till the next day he should be—well, no matter just how old; it would be his birthday. Mr. Blanchard at once allowed that Mr. Jones must take his first salmon on that day.

All hands were interested. Mr. Jones fished all day, and sure enough he did take his first salmon before night had fairly set in, though the powerful fish began to think that he would hold out till his captor was a day older at least. The salmon, leaping over the fly, was hooked foul, —outside the jaws. He made a most terrible fight. At last he was brought to the gaff, and when weighed touched the beam at 23½lbs., a pretty good birthday fish. Then and there Mr. Jones became a devoted salmon fisherman, and regards it as the king of rod and reel sport. After this they fished six days more, taking turns, one rod at a time. Eleven salmon were taken, in addition to the eight that had been taken, before Mr. Richard O. Harding left the river. Up to the time Mr. Jones left, the record of Mr. Blanchard's river this season had been 19 salmon, the entire string weighing 385½lbs. This is a most remarkable record and almost pays Mr. Blanchard for the labor he did toward restraining salmon netting several seasons ago, as the readers of the Forest and Stream will remember well. Another most remarkable feature was the size of the fish. The largest weighed 24lbs., with the smallest up to 14lbs., making the average—the most of the other fish being large—up to 20½lbs.

Mr. Jones regards Mr. Blanchard's river as the ideal salmon river of the Province. In the distance of four miles that Mr. Blanchard owns, there are seven excellent pools, where salmon must stop. Above Mr. Blanchard's preserve there are falls so steep and high that no salmon can go up over them, and hence the ascending fish all must stop there.

Mr. Jones owns a handsome camp on Lake Winnipisogee, New Hampshire, and immediately on his return from Mr. Blanchard's salmon river he went to his camp, where he has taken some very large lake trout. His season's fishing has been a most satisfactory one.

Mr. Edwin C. Stevens writes me under date of July 25 a glowing account of the fishing in the beautiful Lake Dunmore, Salisbury, Vt. At 6 A. M. the party, consisting of Mr. W. G. Cloyes, of Cambridge; Mr. John T. Cloyes, of Salisbury; Mr. Ed. A. Wilson, of Watertown, and Mr. Stevens himself, started. They fished till they had caught a beautiful string of 200 perch. In the afternoon Mr. Stevens with Mr. Wilson killed two large pickerel, one weighing 5lbs. and the other 2½lbs. The same day they also took a handsome large-mouth bass weighing between 2 and 3lbs. The 5-pound pickerel Mr. Stevens captured in front of the camp of the party, after an exciting "tussle" of fully twenty minutes. He at last came to the net just in front of the boat landing. Mr. Stevens further adds: "Our women folks are disgusted with me for keeping the ice chest so full of fish, but they scarcely realize how much I enjoy the taking of them. I shall show you pictures of the 200 perch, the lake and our camp, when I get back to Boston next week."

Special.

FOOD-FISH IMPOVERISHMENTS.

[A paper read before the American Fisheries Society, New York, June 12, 1895, by Dr. Bashrod W. James, member of the Pennsylvania Fish Protective Association.]

The time has come when the inhabitants of the United States must cease to look upon the lavishly generous gifts bestowed upon them by nature as limitless and therefore needless of special care or protection. Wastefulness has been overlooked without fear of inevitable retribution until the punishment is already upon us in more than one very perceptible quarter. To that which relates to the impoverishment of the food-fish supply I will devote the subject of this paper.

If we take the literal meaning of "food-fish," we must include every known animal product of the ocean, river or streamlet; for, if possible, some species which to our refined tastes are actually loathsome are more important in their multo-usefulness than are many of those which we favor particularly with the above-mentioned name, and which our fish commissions are endeavoring to protect.

A universal impoverishment in the fisheries is making itself felt from Point Barron all the way down the Pacific Coast, so that business in shipping is beginning to suffer. That once very important traffic in whalebone, whale oil, seal skins and walrus ivory has so far deteriorated as to ruin some of the coast trade; while, more sadly still, the natives of the Northern coasts and islands have been reduced to actual want through the wholesale destruction of the once plentiful supply of animal life so peculiarly fitted to meet their various needs. Without a natural supply of wool or cotton, those which they possess being obtained by trading, the fur seal furnished to them their most comfortable garments, and next to the pelt of the sea otter their most valuable trading staple. The seal also bestowed upon them the oil which actually was the only substitute for the milk, coffee, tea or chocolate without which we feel it would be almost impossible to enjoy our meals. The flesh rated second only to fresh fish, and so precious was it that not a particle was wasted. Now, with those vast herds very nearly depleted or frightened from their breeding grounds, what must become of those people who depended upon them for the necessities of existence?

So with the whale and walrus—greed of gain has so over-grasped until hundreds of the nation's wards must go hungry, houseless and scantily clothed simply because individuals or corporations have endeavored to sweep into their hands the whole supply in the short time while prices were good! Now, whaling vessels go and return unsuccessful; seals are already alarmingly scarce, and walruses are rarely seen at all, partly because they are extremely cautious and shy, but in greater part because their tusks excited the cupidity of traders to the procuring of all animals, whether mature and perfect in ivory or not. We are rather too far away to hear the cry of distress among the inhabitants of the Northwestern Islands, but commerce now discovers the grand mistake, perhaps too late. A slight expression of anxiety in San Francisco gives rise to a demand for the greater protection of the finer salmon fisheries which but a few years ago appeared to be inexhaustible. This fish being delicate and a very desirable table food, doubtless the laws will be soon more carefully and effectually enforced. But the fishes or other animal life and plants upon which the salmon feed must also be guarded from destructive depredation. Leaving the western shore of the continent, still another note of dismay is sounding from Maine to Florida! Salmon is rare in all our rivers. The great fishing banks of Maine and Massachusetts are failing; the lobsters are growing scarce and small, mackerel is almost gone from some quarters in which the "lookout" ha heretofore watched for the coming schools and sent th

joyous tidings in ringing tones to many an eagerly waiting fisherman! Herring catches in some localities are growing less and less; in some places the fishing smacks are laid high and dry because there is no longer special use for them. Some fishermen say that shad is getting scarce in some of our rivers; others assert that they, once so rarely flavored, are now at times tainted with coal oil and sewage or foul mud, and are consequently at times almost unsalable. And so the cry continues from shore to shore, while one of the most important industries of the country lies in jeopardy. Both the United States Fish Commission and the commissions of the several individual States have done nobly, so far as they have prerogatives, but there is still a vast amount of improvement to be made in fish protective legislation before we can feel assured of preventive measures concerning fishing in the public waterways all over the land. A very apparent defect is instituted by conflicting laws made for the control of streams which run through two or more States; whereas, if each State would consult with its neighboring ones before maturing its laws regarding rivers and streams and fishing therein, conjoint measures might be taken which would improve the local fisheries without injury to any one locality.

In my opinion alert watchfulness is requisite, not only during certain seasons, but at all times, if the product is ever to be elevated to its pristine quality and abundance. Common sense teaches that fish, as well as other animals, require a certain length of time to mature and become perfect for the food of man. It affirms also that when customers discover that they are obtaining an inferior article, particularly if at a high price, they will soon cease to purchase the commodity, giving its place to something else, thereby creating a market which by-and-by may repudiate fish as a fashionable staple for food.

One of the first and most important safeguards to the fisheries is the cleanliness of the rivers in which they are found. Chemical impurities as well as sewage should be kept out of fishing streams entirely, or at least as far as can be made practicable, and facilities would soon appear if so required by legislation. Some chemicals may not be poisonous, others are, and they are therefore unfit to be eaten or drunk by fishes intended for food, either for man or for other fishes. I think there might be a feasible arrangement made by which the water from dyeing establishments, mills, factories, etc., could be spread over an extent of ground through which it could percolate before reaching the stream, thus depositing the maximum of poisonous matter in the earth. Possibly the food worms of the fishes might be destroyed, but the localities devoted to these industries are sufficiently limited to allow a much greater extent of land uninjured.

The dangers of eating fishes which feed in streams polluted by sewage have not as yet been considered fully, but it is ably demonstrated that they are subject to very numerous parasites, some of which are not evil to mankind, while others are poisonous. More extensive and universal biological research, carried on upon strictly scientific principles, will soon make known the number and kind of dangerous parasites and the waters which they infest, when the fish afflicted by them should be pronounced unsalable, and if no other plan can succeed in preventing their distribution, fishing in streams in which they are found should be prohibited entirely.

That parasite growth is possible in fish suggests the question whether they may not be attacked by the bacteria of diphtheria, the microbes of typhoid or malarial diseases, and even the bacilli of Asiatic cholera from drinking the river water near large cities which deposit all or a greater part of the sewage therein; if that be the case, may they not impart such diseases to unsuspecting mankind using them for food? Many people, especially the poor, eat fish and eels that are caught in lower streams whose waters are so far influenced by tides that they back up a considerable distance, yet the ebb is not strong enough to carry away the débris which they take up and deposit along the shores. This rubbish holds pools of water in check until they become stagnant, and sometimes dead fish are found imprisoned among branches, weeds, old barrels, baskets, etc.

It stands to reason that any fish drinking the water or feeding in such places must become more or less subject to poisonous parasites, and thus become unwholesome for food; and if the flavors of coal oil, gas, tar and other impurities make themselves disagreeably apparent in the flesh, which is a well-known fact, the probability of far more dangerous matter seems to become an incontrovertible certainty. By partaking of this infected fish, cholera and other epidemic diseases may be started in the systems of a few persons, and the contamination would spread in every direction, afflicting even people who never touch food-fishes.

I think, under these conditions, each State should have laws compelling the clearing and lowering of the mouths of all rivers or creeks in which the waters lie stagnant and restricted by rubbish; that each State Commission should have a biologist who could make known the presence of dangerous parasites, and all who are interested in fishculture and protection should join in trying to discover whether there could not be some plan adopted to destroy them without endangering the life of the fish; that the food animalculæ should be as carefully protected as the fish themselves, and that all deleterious matter should be kept from them as far as possible. I believe all States, and especially those that have coast lines and bays, should so regulate the fishing seasons that the strong, mature and fertile fish may be allowed to reach the spawning places unmolested, or else that certain streams in every State shall be closed against fishermen every second year, thus giving them a whole season in which to spawn and multiply. While some are closed, others can be opened and so alternated that there will be no danger of exterminating the fine food supply. The reward in full-grown fishes of good quality would soon compensate for the sacrifice.

If these plans are not practicable then others must be adopted. Perhaps good results would follow if fishculture were made so universal that at the time of the running of the schools to the spawning grounds men were stationed at the mouth of or along every important river to catch the fish, obtain the eggs and hatch them artificially; then they could be deposited in fitting places after the season was over, and thus the danger of extinction would be over.

The present style of ocean pound-nets could be improved by making the meshes large enough to allow of many more fishes than can possibly get away now. Of course, the larger the fish the less danger there is of its being pounded to death by the others; therefore the mesh of the leader and pound-net should be so increased as to permit those of unmerchantable size to get free without injury to fins or scales. Fish weirs, or so-called eel weirs largely used in inland streams, especially the smaller ones, should be entirely abolished by law in every State as they are now in Pennsylvania; but if any State is unwilling or unable to procure such legislation, then all such arrangements should be legally constructed of such pliable material as to insure that the fish will not be so injured or bruised as by the present slat system. Would it not be practicable in such instances to produce screen of other material than wood, such as woven grass, canvas, or something which would not bruise the fish nor break the scales from them as they go through? If so, thousands of them would be saved from damage which often results in deformity or deterioration, if not in death.

I am possessed of a keen interest in food-fish culture and protection:

First—Because of their vast importance as the chief support of many thousands of inhabitants of this and other countries.

Second—That because through them may be promulgated disease, and the public health be jeopardized, because of the waters in which they abide becoming liable to contamination.

Third—Because of their great value as a staple commercial production of the country.

For these reasons I would earnestly urge fishermen and all those engaged in the trade to join with our American Fisheries Society in the endeavor to perpetuate the growth and quality of food-fishes, and to this end a little self-denial will be found very advantageous, not only to their personal business, but toward the ultimate protection and continuance of our great interests at stake in fish as a commercial element.

Therefore, let the mackerel banks alone for a year or two, and perhaps they will again be abundantly populated.

Do not try to take all the best fish from the sea and streams at one time because prices are temptingly high.

Let the lobsters have a few years in which to attain their normal growth and quality.

Do not so far overstock the market with herring and other food-fish that they will become a drug to the trade.

And let us hope that there may be some way by which we may obtain the right to protect the young herring which are now caught in the waters on our northeastern boundary and canned under the name of "sardines."

If it is possible to regulate the salable size of each variety of fish so that those below that size will not be caught, let each one conscientiously regard the law.

Undersized or imperfect commodities always tend to disqualify even the better grades of the same; therefore, from a selfish point of view alone every interested party should give earnest endeavor to favor any plan which points to improvement. Impoverishment has been the finale of nearly every production, and now the necessity calls upon the people and the entire government to provide ample legislation for the protection of all kinds of water animals, from the great walrus, whale, sea lion and seal of the Arctic and Pacific to the delicate brook and mountain fishes, all of which are valuable food for either human beings, other fish, water birds or lower animals.

Perhaps it is too much to expect the States which have not been subjected to a threatened insufficiency to join with us in our protective work at present. But this State and others which have taken up the important matter must make the propriety of their measures so prominent, and the attention to every detail in legislation so consistent, that the result will redound to their credit and provoke a spirit of emulation in those who to-day are inclined to disparage the great commercial and financial importance which we are convinced is attached to the numerous fishing interests of the United States.

The objects and successes of the several commissions should be understood by the general public as well as by those closely connected with the fishing business, and with their knowledge will probably be very valuable aids to the Commission, aroused in districts through which excellent streams pass. When they are convinced that unclean and unhealthy matter thrown into waters will probably produce disease-breeding fish, they will not place it there, and every individual effort will have a good influence upon others. My firm conviction is that even among the most careless people ignorance is far more to blame than intentional destructiveness.

Let the consumer and the man who obtains and supplies come together harmoniously on the common ground of mutual advantage to remedy the wasteful impoverishments to which I have referred, as well as other impoverishments.

ATLANTA EXPOSITION.

In a short talk with Mr. Ravenel, representative of the U. S. Fish Commission for the Atlanta Exposition, to open in September, we learn that the aquarium to form part of the exhibit is partly constructed, and the apparatus for circulation of water will be ready about the middle of August. Arrangements have been made with the Standard Oil Company for the transportation of sea water from Morehead City, North Carolina. The railroads have been very generous in offering free transportation, thus insuring a very good and at the same time economical exhibit.

The Fish Commission will show a hatchery, in which the eggs of the salmon, lake trout and whitefish will be hatched. The fry thus obtained, if thrifty, will be planted in suitable waters. There will be a full series of fishery apparatus, including implements of the most primitive to the modern forms at present in use. Thus will the methods employed by the Indians in the early history of this country be shown. Dredges, sounding machines, beamtrawls, townets, etc., will exhibit the modern engines of fishery and scientific research. One of the interesting exhibits will be that showing a systematic series of economic mollusks or shell-fish. The rate of growth on different kinds of bottom will be illustrated. Of this group the oyster is the most prominent. Crustaceans, sponges, and other subjects of fishery will also be exhibited.

The aquarium will be used in exhibiting the products of the fisheries of the South Atlantic and Gulf States, besides such fishes as are propagated and distributed by the U. S. Fish Commission.

Another very important feature will be a series of charts illustrating the fishes, distribution, apparatus used in capture, including boats, and other scenes connected with commercial fishing. Models of vessels from the first in use to the most modern craft will be shown. Many of the fine casts of fishes shown at Chicago will be on exhibition, and for this exhibit a large sixty-foot case is being constructed. Installation will commence about August 1, so that the exhibit will be ready by the time the exposition opens. B. A. Bean.

FISHING FOR A TIGER.

Editor Forest and Stream:

I inclose a translation from the French of a remarkable catfish story, all the way from India, which, I am free to remark, any one who chooses may believe it.

Truthful James.

New York, July 25.

Tiger fishing! Here is an astonishing tale reprinted in the Calcutta newspapers. It is well calculated to encourage anglers and to set hunters a-thinking. A fisherman started for the river accompanied by an old and faithful Shikari carrying a rifle for use in case of an encounter with unexpectedly big game, the country consisting principally of jungles. The fisherman, knowing that the Shikari was well able to defend himself if attacked, went on in advance toward the river, where after some time he captured a large fish, weighing at least 20lbs. Returning with this handsome prize and passing near a ravine, he saw an enormous tiger approaching, and before the brute perceived him concealed himself behind a pile of rocks In the excitement of the moment the fish, which he had not had time to detach from the hook, slipped from his hands and fell in full view of the tiger, who was about to pass it by unnoticed, when his attention was caught by the movements of the fish, upon which he sprang with a bound, seized it by the head and carried it off. The hook still held, and as soon as the tiger felt the resistance of the line and the slight pricking of the hook, he gave a shake of the head, which resulted in his harpooning himself by the lip.

At this critical moment the enraged animal perceived the crouching fisherman, who in despair began to "play" the cruel beast as though he had hooked a simple gudgeon, shaking the line gently; but though the tiger, not comprehending what had happened, stopped in amazement, the respite was not for long, and the ferocious beast would soon have devoured the unhappy fisherman had not the Shikari just then made an opportune appearance and laid low the king of the jungle by a well-aimed shot from his rifle.

NOTES FROM FISHING WATERS.

Correspondents are invited to send us notes of fish, fishermen, fishing conditions and fishing facts, so that they may reach this office on a Monday.

Newport, Vt., July 24.—Dr. A. S. Johnson, of Salem, Mass., who is spending the summer at Owl's Head Hotel, Lake Memphremagog, is making some fair catches of black bass. His catch yesterday amounted to 15 bass, weighing 27lbs. in all. J. L.

Crystal City, Beulah P. O., Mich.—D. Wallace, E. R. Young, J. S. Acklin, Drs. Evens and Acheble, and C. B. Kroh, all of Toledo, O., have been enjoying some excellent trout fishing during the last ten days. The fish are caught in Betsey and Platte rivers. Mr. Wallace brought in one string of 10, weighing 8½lbs. L. T. V. W.

Jackson, Mich., July 25.—The bass fishing hereabouts is very fine now. I took twenty one day last week in less than three hours' fishing, the aggregate weight being 42lbs. I caught them casting with frogs, running my boat alongside the pond lilies and casting into the shallow water in among the rushes. The sport was most exciting, the fish rising with a rush at the bait like trout at a fly.

F. N. Wood.

Lake Memphremagog, Vt.—Dr. A. H. Johnson, Salem, Mass., who is a guest at the Owl's Head Hotel, caught on the afternoon of July 25 six bass weighing 15lbs. S. E. Young, of Methun, Mass., caught this evening (July 26) a fine 'lunge weighing 12½lbs. John Ladjing, Manager.

Carteret, N. J., July 26.—Weakfishing at Sylvan Beach grounds on Staten Island Sound continues good. Boats with two fishermen bring in from 20 to 30 weakfish. Sylvan Beach is reached by stage from Carteret (C. R. R. of N. J.). C. A. Wehrly.

Greenwood Lake.—Some good catches were made at Greenwood Lake, Greenwood, N. Y., last week. Mr. Wilson K. Farrington, New York, on last Saturday caught one of the finest catches of the season—thirty black bass out of forty-five strikes. They weighed from one to about three pounds. He however had the advantage of the guidance of Mr. James Ryerson, who is the oldest guide on the lake. Frogs and helgramites are used for bait. The hotels are patronized to their full capacity. Mr. and Mrs. Oldham and Mr. James Watson and family are stopping at Mr. Ryerson's for a few weeks. Mrs. Oldham made an excellent catch of bass, in number about a dozen, one day last week. Nearly all the success is from still-fishing, the bass not rising to trolling or casting.

Forked River, N. J., July 29.—Capt. Geo. Hairing with a party of two New Yorkers (J. W. Beers and brother) caught on Saturday, July 27, 54 striped bass, and on Sunday, July 28, 19 striped bass and 50 weakfish, the bass weighing from 1 to 4lbs. B. E. Eno.

We Prefer Mosquitoes.

Ed Surprenant spent last Sunday on Dempsey Creek and brought home about 120 fine brook trout, says the Anaconda *Recorder*. Mr. Surprenant is an ardent apostle of Izaak Walton. When asked if he was not annoyed by mosquitoes he volunteered a bit of information that will be appreciated by anglers. He says that the mosquitoes never bother him, as he has a remedy to fix them. After catching his first fish he rubs his hands, neck and face thoroughly with it, and a coating of slime is left on the skin. This quickly dries, and if all the mosquitoes in creation were to light on you they could not bite through it. He says it is a very easy matter to wash the slime off when you are through fishing.

Fish Preserving in Montana.

Many of the Montana streams having been restocked with fish by the State authorities, the question as to the rights of riparian owners is being agitated there as it is elsewhere. The Helena *Independent* of July 15 says:

"One of the prominent attorneys of Missoula volunteers his opinion to the Silverite that fishermen have the right to fish in any of our public streams, notwithstanding notices against trespassing and fishing. The streams of this State are stocked with fish for the benefit of the people of the State and not private individuals, who own a few acres of land and labor under the delusion that they also own the river running through their land. In many parts of the State signs are displayed warning fishermen not to trespass on the land or fish in the stream, and these warnings have been obeyed by many simply because they were ignorant of the law and did not want to cause trouble. A fisherman has the right to fish in any public stream or river, and the owner of the land cannot stop him."

Anglers' Association of the St. Lawrence.

Alexandria Bay, N. Y.—The twelfth annual meeting of the Anglers' Association of the St. Lawrence River will be held at Clayton, N. Y., ten o'clock A. M., Wednesday, Aug. 7, 1895. There is business of importance to be transacted. W. H. Thompson, Secretary.

All About Block Signals.

"Block Signals on the New York Central," the latest addition to and No. 17 of the popular "Four-Track Series" of "America's Greatest Railroad," is from the press of the American Bank Note Company; contains 64 pages, narrow octavo, beautifully printed on coated paper and illustrated with graphic pictures of signal apparatus and its application to the traffic of a great railroad. The text is from the pen of a celebrated English expert on block signals, and the subject is treated in a way that cannot fail to interest the average traveler, as well as the technical engineer. It is believed that this, the latest of railway safety devices, has never before been so thoroughly and comprehensively described and illustrated as in this book.

A copy will be mailed to any address, free, post-paid, on receipt of three 2-cent stamps, by George H. Daniels, General Passenger Agent, Grand Central Station, New York.—*Adv.*

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17 to 20.—Rhode Island State Fair Association's third annual bench show, Narragansett Park, Providence, R. I.

Sept. 17 to 20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 17 to 20.—Montreal Kennel Association's show, Montreal, Can. Geo. K. Lanigan, Hon Sec'y-Treas.

Sept. 24 to 27.—New England Kennel Club's second annual terrier show, Boston, Mass. D. E. Loveland, Sec'y.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.

—. Morris, Man.—Northwestern Field Trials Club's Champion Stake. Thos. Johnson, Sec'y, Winnipeg.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wel's, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

English Setter Type.

New York.—*Editor Forest and Stream:* The letters on English setter type which have recently appeared in Forest and Stream over the signatures of "Cinna" and "Albert" are valuable and worthy of the attention of fanciers. To me it seems, however, that both are wide of the real standing of the matter. "Cinna" disposes of the whole matter of standard and type by judging by comparison, though before a comparison can be made there must have been some type agreed upon as a standard; otherwise, in determining what is type, it would rest on the personal preference of each individual, and there consequently would be as many as there are individuals who are interested in the matter. Comparison itself presupposes that there is some ideal standard of measurement; and two individuals when compared with each other are both subjected to a test, not only one against the other, but also by the approved standard, and the winner in a competition is the one which, compared with his competitors and with the standard, is nearest to filling its requirements. Comparing one dog with another would have no meaning if the judge did not have in mind some ideal figure of a dog of perfect form and quality as a measure of one dog's merits against another. "Cinna" can hardly blame the bench shows for any inferiority in the English setter, for, from any point of view, no breeder is obliged to breed to a bench show winner solely because he is a bench show winner. It is always for the breeder to determine what dogs he will breed from and what ones he will not. To assert that breeders have been governed by bench shows is at the same time to assert the ignorance or weakness of the breeders. However much we may attempt to disguise, conceal or ignore it, there are two distinct classes of English setter breeders, one of which breeds for the show bench with no thought of using the dogs for work, and the other class which has in mind the useful qualities of the dog first, with perhaps a remote consideration of his beauty.

"Albert" cites the judging at the New York show this year as an example of the disregard of type, for in writing of it he mentions that the ribbons were each given to dogs of different types. This I believe is true, but common fairness then prompts the question, Could the judge do otherwise? I think he could not. There were not two setters alike in the show. The judge, whatever type he had in mind, could not follow it, the dogs being a conglomeration of all types, long and short, high and low, thick and slender, with heads that varied in shape more than their bodies. To blame a judge for distributing prizes to dogs of different type, when there were no dogs of similiar type, is to blame him for that of which he is entirely innocent. No judge can follow consistently where there is no consistence as a starting point.

It is said that the breeders of America have shown great skill. In what way? When? Where? Nearly all the breeders have started with imported stock, or the descendants of imported parents, and in my opinion there has been a positive falling off in quality, a degeneration as it were, the breed of setters not being so good to-day as it was ten years ago. Breeders have drifted away more and more from type as they overlooked or disregarded it in their efforts to catch a flashy and fetching pedigree. The doings of a dog as made public by his record were paramount to the merit of the dog himself. As a fielder a dog might have an excellent record, while physically he might be a wreck, with no power of breeding good workers or lookers. On the other hand, a bench winner might have excellent physical qualities, and still be indolent, slothful, indifferent to game, and with no power of reproducing either dogs of good physique or workers. All these important considerations were left out of view in the efforts of breeders to build up their flashy pedigrees with a view to quick and profitable sales rather than the improvement of the setter. The result is that as type was never considered there is fully as much diversity of type as there possibly can be consistently with retaining character sufficient to distinguish the English setter, and this character is now more one of color than of type, for the color has remained and little else. It would not be difficult at any show to pick out an English setter which would serve admirably for a Gordon were his color black, or another which would serve equally well for an Irish setter were his color red, or for a pointer or greyhound were his coat clipped.

Many of our breeders began breeding as they might begin any other new venture. They merely bought a couple of dogs and began. If the venture proved a success, their judgment was rare and they were great breeders; if it proved a failure, the pedigree was a success and they sold the pedigree with the dogs attached.

Breeder.

Bloodhounds and Crime.

My attention having been drawn to several letters from your correspondents suggesting the formation of a club to keep and train bloodhounds to assist the police in tracking criminals, I should esteem it a favor if you would allow me to relate my experiences upon the subject.

Some years ago I was fired with an ambition to train a canine Sherlock Holmes, and for this purpose I worked with two young dogs (champion bred), each possessing the points and qualifications which have rendered this breed so famous.

I found that the dogs would readily follow the track of any one who had previously allowed them to scent their clothing, etc., but in cases where this was not done their tracking was faulty, and could not be relied upon.

Moreover, good results depended considerably upon the shortness of time which had elapsed since the trail was laid. Atmospheric conditions also played a most prominent part; a strong wind blowing up the track—*i. e.*, in the direction of the object chased—much dust, or the trail passing through running water, being detrimental to success.

It is a popular fallacy to suppose that the bloodhounds of the present day possess scenting powers superior to any other breed of dog. We must bear in mind that for generations the bloodhound has had little or no practical training, and any special gifts they might have originally possessed have not been allowed to develop.

Of one thing I am quite certain, and that is that if the trial does not lay in unfrequented districts, tracking with dogs would be entirely useless. Allow me to put an imaginary case. A murder, say, has been committed, and soon afterwards discovered. The dogs are sent for and brought from their kennels some miles away; in the meantime the ground for some considerable distance around the scene of the crime has been disturbed by spectators. Now I am of opinion that, unless the murderer had actually stepped into the blood of his victim, the dogs might nose around for miles without striking the actual trail; and in any case a brace of well-trained sporting dogs, worked by an experienced man, would do just as well.

I am not writing this in order to discourage any enthusiast in attempting a most praiseworthy experiment; in fact, it would be an act of presumption on my part to do so. Any movement tending to bring this noble breed before the public should, in my opinion, be encouraged.

In conclusion, I would suggest that, if a club be formed for this purpose, each member should—after proving to the district police that the dog is a trained worker—be exempt from payment of the usual license. A special badge and collar should also be provided free of charge to the owner of the dog.—*F. J. Hutton in Stock-Keeper.*

Guy of Warwick.

The English beagle, Guy of Warwick, owned by me, died July 21 at Paucet Lodge, Truco, Mass.

He was whelped on March 13, 1883, at the once famous kennel of Norman Elmore, Graabe, Conn. His sire was the celebrated thoroughbred Ringwood, and his dam was Roxy, one of a notable litter, and in markings and disposition very strongly resembled Ringwood. As a puppy he won first prize in a Massachusetts bench show (the only time he was ever entered), and has always been a pet and house dog, never having had any experience in the field.

He was a good traveler on land and sea, and the inseparable companion of his master, and his beauty and kindly nature won the admiration and friendship of all whom he met. He died of "old age," failing gradually within a week, and passed away as peacefully as a fading summer day, without a moan or a death struggle, in the presence of those who had tenderly cared for and now sincerely mourn him. His age (12 years and 4 months) seems quite remarkable for a beagle, and since he came into my hands, at the callow age of six weeks, I can remember nought but good of him, in fact, he was a canine Bayard, and his memory will be cherished as one of the gracious things, too few of which are to the fore in life's devious journey. In his grave rests a faithful friend—in the hearts of those who loved him a sweet memory, and in the home a void that cannot soon be filled!

Peace to thee, Guy, sincerely says thy loving master and friend, O. W. Rogers.

A Run with the Beagles.

Editor Forest and Stream:

With regard to our local beagle meets they proved a decided success. During the October moon we had many fair to excellent runs, some lasting long into the night. Of the moon which took its first quarter the first week of the following month the runs were even more successful, with the dogs in better running shape; the pack hunts were very gratifying evidently to both men and hounds. Our last meet was at the West Saugus School House, and although my former neighbor was absent with his hounds we managed to get together a seven-dog pack. The Wakefield contingent brought old Belle of Wakefield, in charge of A. S. Aborn, and Blue Belle (litter sister to Jean Val Jean), owned by Mr. Cooper. Saugus was represented by Bugle, F. Westwood, and Blackie by Mr. Burritt, the writer taking Bowman, Vick R. and Viola, of the Forrest Kennels.

The meet was called for 7 o'clock, but owing to one or two hitches it was 7:30 before I reached the school house, where I found the party. In a few minutes we were in the woods off Forest street, and with as wide a ranger as old Belle it didn't take long to find a trail, which, after some work, was duly followed to a start. All the dogs were in it, and such a merry burst that we had through the flat, up the hill, over the ledge down the other side away off to the right, fainter and fainter till they were lost to hearing, made us suspect something more than a cotton tail; but subsequent developments didn't warrant the suspicion, for after the dogs had been out of hearing some fifteen or twenty minutes we started to investigate and presently found they had got a check, but were all casting around. Presently old Belle tongued, and by a little maneuvering I managed to get them all up, when they soon had Mr. Bunny going again for dear life, right across where he started from, with a chorus at his back such as it is seldom one's good fortune to hear.

After such a sharp burst he either took refuge in the rocks or crossed the road, as the dogs lost him here. Some called them up and proceeded on to the poor farm, where after hitching the horse we let the dogs go again, and no sooner had they disappeared in the woods than there was music started, and in short order the rabbit was going up the hill as hard as his legs would carry him, with the merry pack in full cry, and going at a speed that was out of all question to follow.

As the pack goes along the hill we are treated to a splendid echo from across the road, where the rocks give back their cry and fill the whole meadow where we stand with entrancing music. To better hear both the pack and the echo I excuse myself on the ground that the horse may grow fidgetty and walk across the meadow in that direction where I get the full benefit of both pack and echo. Finding the horse all safe I return in time to assist in catching the dogs at their first check, it being now time to seek home, seeing we were all due at our respective occupations in good time on the following morning. After deciding on the place for the next meet, we parted company after one of the pleasantest evenings and some of the best running we had last season.

Comedy.

American Fox-Terrier Club.

Worcester, Mass., July 25.—*Editor Forest and Stream:* I beg to inclose you a copy of the "Rules, Standard and Stakes" of the American Fox-Terrier Club, and have inclosed also some matter in regard to same which I wish you would print.

On account of the rapid advance made in fox-terriers in America in the past two or three years, and the greater interest shown by breeders, it seemed necessary that the Fox-Terrier Club get out a comprehensive pamphlet describing the club, its standard, constitution and stakes.

The club stands, I think, first among the specialty clubs of America, not only on account of the number of members, but because of the interest taken and the money offered, not alone for its stakes, but for special prizes at the different shows.

That the club has been successful in improving the breed in America is easily shown from the fact that three or four years ago it was almost impossible for an American-bred terrier to win, while now it is almost impossible to import a terrier good enough to beat the American-bred, as for example August Belmont's "Victor II.," who for the past three years has won the grand challenge cup eight times; his colors being lowered only when "Cribbage" was imported, and even now is it only a matter of condition between the two. Imported "Dona" and "Dominica" have had to give way to Messrs. Rutherford's home-bred "Warren Captious;" and the latter owners' "Warren Safeguard," while not quite equal to "Victor II.," has sired the sensational puppy of the year, namely: "Warren Capture," who has carried all before her in the different stakes, puppy and open classes, through the spring show. In fact, at Boston, Mr. Mortimer thought her good enough to show against "Victor II." ere he selected the champion smooth to compete against the wire "Cribbage" for the challenge cup, which "Cribbage" was just able to win.

The past year some ten new members have joined the club, and from the value of the stakes given below for the year 1894, it will be seen that when one breeds a good terrier he can more than earn his salt. In fact, with Beverwyck King Pin and Beverwyck Royalist, Mr. Rathbone won over $450 in 1894.

The values of the several stakes of the American Fox-Terrier Club for 1894 were as follows: Grand Produce Stakes, $92; Apollo Stakes, $35; Yankee Stakes, $53.50; Stud Dog Stakes, $160; Tomboy Stakes, $35; Home-bred Puppy Stakes, $75; a total of $450.50.

In addition to these stakes Mr. Thayer offers $100 for the best puppy sired by his Starden's King, and Mr. Hunnewell has opened a Hill Hurst Produce Stake for the get of his stud dogs.

The club in the past year has offered in special cash prizes alone at the different shows as follows: Westminster Kennel Club show, $200; Hempstead Farm show, $300; Rhode Island State Fair show, $50; Boston Terrier show, $300; a total of $850.

All these special prizes are now offered for American-bred terriers alone, and it is easily seen that the good work done by the club in the past must continue, and with a membership headed by such breeders as Belmont, Rutherford, Thayer, Hunnewell and Rathbone the advance will be such that at no late date it is confidently hoped that a team may be sent to England of American-bred terriers that may hold their own against all comers.

The above cannot be brought to the close without noticing the advance made in wire-haired fox-terriers. Three years ago there was hardly one shown on the benches. At the Westminster Kennel Club Show in 1894, the Grand Challenge Cup, kennel prize, and the brace prize were all won by wire-haired terriers, which are now the property of Hill Hurst Kennels: Cribbage, Janet, Brittle and Pattern. Nor was it simply a flash in the pan, as since then the wire-hairs have increased until now a very good showing indeed is made, and it seems only a question of time before there are as many as their smooth brethren.

Great interest is taken in the coming terrier show to be held in Boston, and it is confidently hoped that an English judge can be obtained, who will decide the long-fought battle for supremacy between Cribbage and Victor II.

H. W. Smith.

POINTS AND FLUSHES.

If true, the following shows that man does not always improve the animals which he has in his care; if not true, it shows something else: "Specialists and doctors who take an interest in the progress of alcoholism, its injurious action on generation and the part it plays in degeneracy, will be glad to add another branch to their study in the shape of the falsification of dogs, says the New York *World*. For falsification of dogs exists in Paris and thrives, just as well as the imitators of Japan ware, old furniture and pictures of Corot, Teniers and Rubens. It was generally supposed that the animal reign had not yet been tampered with, so that most persons will be surprised that the French have recently discovered a method of producing tiny dogs, which, when offered for sale on the boulevards or in the Bois de Boulogne, fetch good prices on account of their rarity. Like all other callings, competition is about to cut down the profits of the originators of the idea and next summer visitors are promised any number of lilliputian dogs at an insignificant price. This is how the diminutive animal is produced: Snatched from its mother's breast when it is but a few hours old, it is put on an alcoholic diet instead of a lacteal diet. When it reaches a certain age alcohol under different form constitutes almost the sole diet of the animal. The young dogs do not die, but, what is far more important, they do not develop and appear to be wasting away continually. By coupling these products the lilliputian animal is obtained after two or three generations. What a terrible lesson for drunkards and absinthe consumers!"

The following may pass as a bit of interesting fiction or distorted fact: "A rat, a terrier and a small boy," says the Chicago *News*, "caused thousands of people to congregate on West Madison street, and it was not a real rat either. The rat, which was a most natural looking rubber affair, was connected with a long thin pipe and a bulb. Every time the boy squeezed the bulb the rat would leap forward in a most life-like manner and the ladies on the street would shriek with terror and gather up their skirts. Suddenly a sleek-looking rat-terrier sprang through the crowd and made for his mortal enemy. Down he pounced. The boy gave the bulb a jab and the rat leaped about 6ft. Again the dog made a spring. This time he caught the rat in his teeth and the pressure caused it to give out a most life-like squeak, which delighted the dog and audience alike. By this time the street was packed. Time after time the dog would shake the rat and put it down, only to see it leap again, to the wild delight of the crowd. For the first half hour it was mere play to the plucky little terrier, but after a while things began to grow monotonous. The dog lay down for a rest and the rat jumped over him. This was too much for canine flesh and blood to stand. He leaped up again, and now the contest kept up until the dog fell to the pavement from sheer exhaustion. Panting, and with eyes protruding, he made a few more ineffectual snaps at the rubber rat, then turned over on his side and laid his head on the pavement. His owner worked his way through the crowd, picked up his pet in his arms, uttered a few remarks and offered to lick the man who had killed his dog."

A very peculiar scene transpired recently in the rear of 231 First street S. The event was a funeral, but there was only one mourner among all the attendants. The undertaker was present, with his solemn black suit and white gloves; there was the dainty coffin, attended by the regulation quota of pall bearers, but what wailing was done was all by one, the chief mourner. The occupant of the little coffin was—a dog. It was a small poodle, which was for its natural life, nine years, a member of the family, and was classed under the family patronymic by the name of Nellie Burkham. It developed alarming symptoms shortly after supper, and a prominent physician was sent for post haste. He very promptly danced attendance, but he was evidently not cut out for a dog doctor, for shortly after he left the animal breathed its last. As soon as its mistress realized the truth, she burst into loud lamentations, which led the neighborhood to think another murder was on. Officer Tom Garvin rushed to the spot, but did not stay long when he found what the trouble was. But the inconsolable mistress had to have everything done in orthodox fashion, and would never consent to parting with her pet without some manifestation. She sent for an undertaker, and the body was soon lying in state. A grave was dug in the back yard, pall bearers were selected from some of the women in neighboring houses, and the funeral rites were celebrated in all due form.—*Sunday Times (Minneapolis)*.

An item in the daily press gives the sad information of the drowning of two valuable St. Bernards in the Passaic River at Newark, N. J., on July 23. They were owned by Mr. Thos. Preston. It was stated that the man who had charge of them permitted them to go into the water chained together. They swam well for a while, then became entangled in the chain, rolled over on their backs and drowned before they could be rescued. An unavailing effort was made to resuscitate them. The loss is most deplorable.

The following, clipped from an exchange, shows how inefficient is the method of disposing of vagrant dogs in Jersey City: "Thirteen half crazy dogs, without owners, were running around Jersey City, thirteen others were drowned yesterday morning in the Hackensack River by Dog Warden George Hill, and four murdered by boys who had come to see that official do execution upon a number of unfortunate brutes which had been captured by his assistants. Seventy dogs had been taken altogether, and Hill thought he would drown them in batches. He filled the cage with thirty of them for a first batch, and so terrified were they, and so strong, withal, when they found themselves going under water, that by a united effort they burst the cage and escaped. Thirty dogs were soon seen striking out for dear life toward the shore. The Society for the Prevention of Cruelty to Animals will probably take action in the premises."

The summer has crept on apace, and still there has been no announcement of the wonderful puppy, the "dead sure winner," which erstwhile was so plentiful. Have sportsmen grown more cautious with experience? or have sure winners become fewer? It is always more gleesome, at all events, to wait till the judges have announced their decisions before offering pæans.

Squatter—"Your dog has just killed one of my sheep." Wanderer—"He ain't my dawg." S.—"Why, confound you, I saw him last night with you at the station!" W.—"Yus, we was mates then, but the larst time he worried a sheep I says to him, 'Bob' sez I, 'if ever yer let yer hunger git the better of yer morals again, you an' me part company'—so yer see he's on his own hook now."—*Sydney Bulletin*.

A bewhiskered man who didn't look as prosperous as some of those behind him pushed himself to the front of the line in the City Comptroller's office yesterday and stood at the license window.

"Is this where they get wagon licenses?" he asked the clerk.

"Yes, this is the place; pay your money up stairs and bring the receipt down here," was the reply.

"Lem'me see. How much is a wagon license?" inquired the unprosperous man, as he fingered his pocket.

"It will cost you $3."

"No les'en that?"

"No, that's the price regulated by law."

"How much for an express license?"

"That will cost you $1.25."

"Well, I can't afford it. I'll run my old wagon in the shed and turn my hosses out to pasture. I ain't got enough money and can't borrow it."

"Well, I'm sorry—"

"Say, how much is a dog license?"

"One dollar."

"Well, gim'me one. That's all I can afford."—*Indianapolis Journal*.

Mr. James Mortimer, under date of July 29, writes us as follows: "The Westminster Kennel Club's twentieth annual dog show will be held at Madison Square Garden on Feb. 19, 20, 21 and 22, 1896, the last day being the anniversary of Washington's Birthday."

To those who intend to be present at the Manitoba field trials at Morris, it may be of value to mention that Morris is a short distance north of the boundary line, and can be reached from St. Paul by either the Northern Pacific or Great Northern Railroads. Those who are guests of a resident of the Province can get a permit for three days' shooting if they desire it. Non-residents are charged $25 for a shooting license.

The Muckross Kennels, Springfield, Vt., announce Irish setters at stud, broken dogs and puppies for sale.

Mr. Geo. H. Thomson writes us as follows: "I would be greatly obliged if you will state in the Forest and Stream that my address is now Room 22, 400 Chestnut st., Philadelphia, and that I will be glad to furnish any information relating to the Irish setter trials."

In a letter dated July 27, Mr. W. H. Dixon, Gloversville, N. Y., writes us of the death of Diavolo II. He says: "Diavolo II. about two weeks since attempted to kill a porcupine, getting his face, mouth and throat full of quills. A local veterinarian administered chloroform to remove them, and the dog never came out. Mr. Wooster, the owner, was away from home at the time. Diavolo II. was a very fine specimen of the rough-coated St. Bernard family, and Mr. Wooster had refused some very good offers for him."

Mr. G. G. Cleather, of the well-known and popular firm, Spratts Patent, arranged to leave for England on Wednesday of this week. His intention is to remain abroad several weeks. We hope that his trip will be pleasant and healthful.

The premium list of the Industrial Exhibition Association's bench show, Toronto, is now ready for distribution, and can be obtained of Mr. C. A. Stone, 82 King street. There are kennel prizes of $20 each for mastiffs and St. Bernards, and $15 for each of the other more important classes. The special prize list is quite liberal. Challenge classes have $15 and diploma, and $10 and diploma, and open classes have $15, $10 and $5, first, second and third, respectively, to $10, $5 and diploma; $10, $5, $2 and diploma; and $7, $3 and diploma, the latter for puppy and Canadian classes. American bred dogs are ones whelped in either Canada or the United States. There are four prizes offered which will be of special interest to exhibitors: $40 to the party or agent making the largest number of entries at the show from the States, and having same—not less than 20—in charge; $20 to Canadian exhibitors, same conditions; silver medal to the owner showing largest number; bronze medal to kennel on exhibition making the highest average win. The judges are Messrs. James Mortimer, Chas. H. Mason, John Davidson and J. F. Kirk. Entries close Aug. 28.

Mr. W. E. Warner, Manager of Mr. Gould's Kennel interests, in a very pleasant letter dated July 24 writes us that he has located at Union Point, Manitoba, and that chickens are plentiful. He predicts that the handlers will have their dogs in good form if the weather continues good. Mr. Warner has two pointers of which in particular he expects good things. The handlers whom he has met, who are preparing for the trials, he says, have "some winners," which is a good sign. He predicts that the forthcoming chicken trials will be of the best that the ancy has ever seen. While he touches but briefly and modestly on the doings of his dogs, it is plain that he has every confidence in them. Mr. Warner adds: "Armstrong is working hard, and what with training dogs and fighting mosquitoes he is kept very busy. I wish to speak of the kindness and courtesy extended to me by the Canadian customs officers and also of the kindness extended to me by the club members. I do not think any of the American boys will have any trouble with their dogs this year, if they comply with the law."

N. E. B. C. Meeting.

An executive committee meeting of the New England Beagle Club was held at Worcester, Mass., July 26, and called to order at 2:30 P. M., the following members present: H. A. Joslin, A. D. Fisk, Thomas Shallcross and W. S. Clark. President Joslin in the chair. Minutes of last meeting read and approved. Voted that the secretary be authorized to procure what stationery necessary, and also to have entry blanks for field trials printed at once. After a lengthy discussion in regard to judges for the field trials, it was unanimously voted that the terms of Mr. Arthur Parry, of Franklin Park, Mass., and Mr. Harry Tallman, of Green, R. I., be accepted, and they were elected.

W. S. Clark, Sec.-Treas.

"In the Adirondack Mountains."

Persons contemplating a visit to the Adirondack Mountains should by all means possess themselves of a copy of the delightful little book just issued by the New York Central, bearing the above title. It will not take long to read, for it contains only 64 pages, but every page bristles with information of just the practical kind one wants at such a time. You can take this book and in half an hour secure a good general idea of the Adirondack region—its grand divisions, characteristics of each, the location of the principal resorts and how to reach them.

Not the least valuable feature is a fine new relief map, printed in four colors, showing the correct location of all the principal mountains, lakes and streams; also all stage lines, wagon roads and carries, and on the back a complete list of hotels, cottages and camps—location, dates of opening and closing, rates, etc.

There is probably no other book published on the Adirondacks containing in such compact and readable shape so much useful information.

A copy will be sent free, postpaid, to any address in the world, on receipt of two 2-cent stamps, by George H. Daniels, General Passenger Agent, Grand Central Station, New York.—*Adv.*

Canoeing.

FIXTURES.

AUGUST.

9-23. A. C. A., 16th annual meeting, Bluff Point, Lake Champlain.

SEPTEMBER.

- Red Dragon fall regatta, Delaware River.

American Canoe Association Meet.

The sixteenth annual meet of the American Canoe Association, the fourth camp on Lake Champlain, will begin on Aug. 9, Friday of next week; the site being at Bluff Point, on the west shore of the Lake, four miles below Plattsburgh and about ten miles above the old camp at Willsborough Point. Arrangements have been made for the convenience of canoeists, the mess being under the supervision of Mr. O. D. Seavey, of the Hotel Champlain, which is about a mile north of the camp. A mess pavilion has been built on the camp ground. The usual arrangements have been made for the ladies' camp. The races will begin the 17th, the principal events taking place at the beginning of the last week. The programme is as follows:

Event No. 1. Paddling and sailing combined. Half mile alternately, total three miles; time limit, 1½ hours. Start to be made paddling.

Event No. 2. Paddling. Half mile straightaway.

Event No. 3. Sailing. Four and a half miles; time limit, 2 hours.

Events 1, 2 and 3 are record races.

Event No. 4. Trophy paddling. One mile straightaway.

Event No. 5. Trophy sailing. Nine miles; time limit, 3½ hours. See Rule 5.

Event No. 6. Dolphin sailing trophy. Seven and a half miles; time limit, 3 hours. The canoe winning first place in event No. 7 will not be allowed to compete in this event.

Event No. 7. Unlimited sailing, three classes. Six miles; time limit, 2½ hours. Starters in trophy sailing race to be selected from this race according to elapsed time.

Event No. 8. Club sailing, three classes. Four and a half miles; time limit, two hours. First three members of any club to count. A club to be represented must enter at least three men. All men entered must have become members of the club they represent before the first day of the 1895 meet.

The starters in Events 7 and 8 will be divided into three classes, as follows, viz.: Class A, all who have won an A. C. A. sailing prize; Class B, all others except novices. For definition of novice, see Event 11. Class C shall have an allowance of one minute a mile from Class A, and Class B an allowance of one-half minute a mile from Class A. The starting signals for Event 7 will be as follows: First signal—Five minutes before the race, preparatory for fleet to assemble. Second signal—Four minutes later, Class C prepare. Third signal—One minute later, Class C start and Class B prepare; A. C. A. flag will be hoisted. Fourth signal—Three minutes later, Class B start, and Class A prepare; A. C. A. flag will be hauled down. Fifth signal—Three minutes later, Class A starts; A. C. A. flag will be hoisted and left up. The above will apply to Event 8, except that the difference between third and fourth and fourth and fifth signals will be two and one-quarter minutes each.

Event No. 9. Limited sailing; 3 miles; time limit 1½ hours. Sail area limited to 100 square feet, and sliding seat prohibited.

Event No. 10.—Cruising-go-as-you-please. Contestants to start at any time during the day (date to be posted) for a point not over 10 miles from headquarters, carrying a necessary camp outfit—which shall include at least one tent, one camp bed (or cot), one pair heavy blankets, change of clothing, cooking utensils, supplies, etc. They shall make camp, prepare substantial supper and breakfast with at least one hot dish, besides liquids in each. The start for return shall be by signal, to be given at 5:30 the following morning. Everything used must be properly stowed and carried both ways. Sail or paddle or both may be used. The committee shall disqualify any contestant who shall violate the spirit of the regulations. Prizes will be given to the one who shall finish first, and to the one who shall exhibit the most practical cruising outfit, everything to be considered, provided he shall have finished the race.

Event No. 11.—Novice sailing. Three miles; time limit 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1894.

Event No. 12.—Unclassified sailing. Four and a half miles; time limit two hours.

Event No. 13—Novice combined paddling and sailing. Quarter of a mile alternately, total 1½ miles; time limit 50m. Start to be made paddling.

Event No. 14—Paddling. Open canoes not under 50lbs. weight. Half-mile straightaway, single blades.

Event No. 15—Tandem paddling. Half-mile straightaway; decked canoes, double blades.

Event No. 16—Tandem paddling. Half-mile straightaway; open canoes, single blades.

Event No. 17—Club four paddling; one-half mile straightaway.

Event No. 18—Paddling upset; one-eighth mile, usual conditions.

Event No. 19—Sailing upset and maneuvering. At signal throw paddle over astern and recover; second signal, canoe to be heeled over until top of mast touches the water; canoe to be righted and cross the finish line under sail.

Event No. 20—Hurry scurry; run, swim, paddle.

Event No. 21—Swimming; 200yds.

Event No. 22—War canoe; one mile.

The regatta committee reserve the right to amend the programme at any time, and also to cancel any event in which the entries are not in the opinion of the committee sufficiently numerous to warrant a race.

Com. Walter C. Witherbee will be in charge of the camp, with Messrs. M. V. Brokaw, H. R. Tilley and F. A. Nickerson.

Toronto C. C. Paddling Trophy.

The international paddling trophy of the Toronto C. C. will be raced for on Aug. 3, the conditions being as follows:

The trophy shall be raced for on Toronto Bay or on waters in the immediate vicinity, and is open for competition to any member in good standing of any recognized aquatic club or association or of the A. C. A., W. C. A. or B. C. A.

The trophy, known as the Toronto C. C. paddling trophy, shall be paddled for on a mile course straight away, in canoes of the following measurements: Length not more than 16ft., beam not under 28in. and not over 30in., by a minimum depth of 9in. Entries shall be made to the chairman of the regatta committee, Mr. T. P. Stewart, not later than one week before the day of the race.

W. C. A. Winnings.

At the W. C. A. meet at Ballast Island Commodore Cook won the Gardner cup; Nat Cook won the Longworth cup and O. A. Woodruff the W. C. A. trophy. The latter has rebuilt canoe Wood, and made her a new suit of sails. He was "laying for" the Western fin keels, but none of them were on hand to compete. There were 31 men at Ballast this year, no one from the West, except four from Chicago. The mess table was good this year, and the Ballast enthusiasts remain no less enthusiastic over the sailing and swimming attractions of the locality.

American Canoe Association.

Central Division: Harold D. Hardy and Rockwell P. Holden.

Yachting.

Considering the reticence of designers and owners in the matter of draft, the statement so frankly made by Mr. Iselin several months since that the new defender would draw nearly 19ft. was a rather remarkable admission. It now seems, however, that Mr. Iselin himself was mistaken, and that the true draft is nearer to 20ft. than 19; or more by three feet than any yacht ever floated. No wonder that the owners of Defender are not looking for races in Long Island Sound.

The exact nature of the protest made by Vigilant against Defender is as yet known only to the regatta committee and the parties directly interested, a copy of the protest having been sent by the committee to Mr. Iselin. It is claimed by the Vigilant people that she, being on the wind, had the right of way at the line, and that Defender, coming free, left Vigilant no option but to luff quickly, sacrificing her own position, or to cut down the new boat. There will doubtless be a deal of testimony before the matter is settled; and with the Loyal protest still on its hands the committee will have an enjoyable cruise.

Up to a few years since the possibility of a "90-ton Doris" was frequently discussed by the adherents of the narrow cutter, and many believed that such a boat could be built to win the America's Cup. With the abandonment of the old tonnage rule the matter was dropped, but we are reminded of it by looking at the Herreshoff defender. While wider by 6 or 7ft. than the imaginary "90 ton Doris," she is at the same time a narrow boat and even deeper than the extreme cutter would have been. Such a craft would have been impossible even three years ago for the same reason that prevented the construction of the imaginary cutter, that yachtsmen had not, until a recent day, given up all pretense of building a useful boat, even for racing. The most extreme of the old narrow cutters were within the maximum practicable limit of draft, 13ft., and far short of a draft which makes it compulsory to tow in and out of harbors and in all ordinary work, merely sailing over a few specially deep courses. Had such a boat as Defender come here even as late as 1890 she would have been condemned as a useless machine and unfit to race against the honest home boats. In the present advanced era of syndicate racing, when draft, cost and convenience are not considered for a moment, all of this goes for nothing and the fastest boat is necessarily the best.

While we have no love whatever for these great machines, and look upon them as a positive detriment to yachting, it is at the same time not a little gratifying to us that they have proved a point that we have long insisted on, and in which we have been opposed by many expert yachtsmen. While conceding the merits of the smaller cutters, Madge, Clara, and later Minerva, the majority of Americans who believe in the centerboard, among them skilled designers, have contended that the good points of a keel boat were limited to the smaller classes, not over 60ft. waterline, and that there was something about the centerboard which made it materially superior to the keel in the larger classes. The plain fact—that all of the larger keel boats, Genesta, Galatea, Thistle, Miranda and the American schooners, were limited, by the practical consideration already mentioned, to a draft of about 13ft.—was entirely ignored; and it has been repeatedly maintained that the keel could never be made to beat the centerboard in the larger classes.

Those who witnessed the second race between Defender and Vigilant, on July 22, know how the big keel boat, for the first time of adequate draft both for stability and lateral resistance, winded the centerboard, showing herself superior on every point of sailing. Defender has shown just what we have always believed, that with adequate draft the keel boat of 90ft. waterline can be made as fast compared with the centerboard as the keel boat of 30ft. In view of this proof, witnessed by hundreds, and of the records of Clara, Minerva, Kathleen, Gossoon, Wasp, Gloriana and Queen Mab against the best centerboard yachts that have yet been built, we have no further doubt that the keel can be made to beat the centerboard, deep or shoal, in any size or type of craft, provided the correct proportions are maintained.

By the time that the trial races are over, Defender will, in all probability, have so clearly demonstrated her superiority to Vigilant, and, if they face her, to Jubilee and Volunteer, as to leave no room for doubt that she is the best boat to defend the Cup, centerboard or keel; and to prove that she is really a fast vessel. Doubtless, in the event of her defeat by Valkyrie III., there would be some complaint that she was not a centerboard, but if she clearly shows that she is faster than any other American boat, this can amount to little.

Just now the centerboard advocate is on another tack; looking at Defender in the dock, he discovers with surprise that she is really a centerboard model, with about 6ft. depth of hull, or no more than the old death-traps of the Mohawk breed, but with a "fixed centerboard."

This far-fetched dodge is too transparent and will not work until some kind of inside ballast is discovered which will enable a yacht of 90ft. waterline and but 23ft. beam to carry 12,000ft. of sail on a draft of 6ft. in place of 20. The keel or fin of Defender, which is now alleged to be but a fixed centerboard, is about 50ft. long on its upper edge, over 20 on the lower, and 13ft. deep, being 3ft. through, with a weight of nearly 100 tons. The largest of the old centerboards, of oak instead of lead, was a triangle of possibly 30ft. base and 15ft. altitude; only 4in. thick and weighing less than a ton. It is ingenious, but it will not work; unless something better is discovered soon there will be no alternative but a reluctant and tardy admission that when speed is considered the centerboard is out of date entirely.

While it is a great satisfaction to see the superiority of the keel boat so fully demonstrated in all classes, we are strongly opposed to an absolute draft of over 13ft. in any pleasure vessel other than the largest steam yachts. This draft is all that is practicable for a sailing yacht of the largest size about the coast of Europe or the United States, all that can find safe and convenient anchorage in even the principal harbors and that can be docked at the yacht yards. It is more than is at all desirable in any yacht smaller than Yampa or Ramona, and more than is necessary with a wise and judicious use of the centerboard in a type of craft fitted for that useful appliance.

While we believe in the fullest liberty for experiment and investigation, we also believe that no good can come to yachting from the perpetuation of the monstrosities of the present day. To this end we should like to see the length for international racing reduced from 90 to 70ft., or to such a size as would admit of the fullest experiments in depth, provided the absolute draft did not exceed about 12ft. In the sizes above this a well designed deep centerboard, such as Lasca, Ariel, Emerald or Iroquois, is in every respect more practicable and desirable than a keel boat of 18 to 20ft. draft.

Frequent changes of sails and spars are no novelty in Cup races, and the American boats have always profited by a much larger outfit of duplicate sails and booms than their opponents; this year, however, is likely to see a still further extreme. It is quite possible that while the defender is limited to but one hull, he may make choice on the occasion of each race, of a different rig, according to the prospect of the weather. Some day, if the march of improvement continues, yachtsmen may hope to see the tenders Hattie Palmer and Aeronaut superseded by properly designed craft of great size and speed, such as we outlined some months since, fitted with all tools and appliances, including a powerful derrick. Without such a craft it would be a difficult matter to shift masts on the morning of a race, but it is quite probable that, in the event of any marked change in the weather, boom, mainsail, topmast and gaff will be changed even up to the last moment. Such a change of rig, even to the mast, was a common thing in the old sandbag days when Mr. Iselin was racing Mary Emma, but it has never yet been done, to our knowledge, in a decked yacht of large size.

In discussing the possibility of Vigilant defeating Defender in the trial races, the *Field* of July 13 speaks as follows: "Presumably Vigilant could not now be chosen, as the clause permitting one vessel to be substituted for another enjoins that the substitute must be of the same dimensions as the yacht originally named. Whether this applies to the Cup defender as well as to the challenger is not certain. Probably it would be claimed not to so apply, as the New York Y. C. has always had a free hand as far as choosing a defender goes up to within a few hours of the commencement of the races."

We have noticed in American papers frequent allusions such as this in the *Field* to some agreement permitting the substitution of another yacht than the original challenger, but we are unable to find any "clause" or any statement, written or verbal, that this will be permitted. The question cannot now arise this year, but the matter should be set straight before it becomes the general belief among yachtsmen that the New York Y. C. has in any way recognized such a change as possible.

Even Lord Dunraven's partiality for Newport as a racing ground cannot disguise the fact that the winds in summer and until late in the fall are most uncertain between Brenton's Reef, Block Island and Sow and Pigs, and the courses over which the Goelet cups have been sailed (or drifted) for during the past dozen years are bad in the extreme. The regatta committee of the New York Y. C. would confer a favor on yachtsmen and spectators alike if they would act within their discretion and lay out a sensible modern course, a triangle of 5 mile sides sailed twice, the race to be called if necessary at the end of the first round. A resail in the event of a calm is impossible, and such a fiasco as that of 1893 is most undesirable; the surest way of securing a decisive race for the important prizes of the year is to adopt what is now recognized as the best possible course.

The strongest if not the only argument against the "one gun" start is that it involves a serious danger of collision on the line. The fact is that this danger exists with the present large and very fast boats wherever the racing is at all keen, and it is but little greater with the "one gun" start than with a time start. When yachts are playing not for time, but for position, as is usually the case and was in that of Genesta and Puritan in 1885, and Vigilant and Defender last week, the start is practically from the gun, and there will certainly be some close work to get the best berth.

New York Y. C.

A meeting of the New York Y. C. was called for July 18, but was not held until the next day, owing to the absence of a quorum. The following resolutions were presented by Mr. S. Nicholson Kane on behalf of a special committee, being unanimously adopted:

New York Yacht Club, July 18, 1895.

The sudden death of Mr. Robert Center, which occured on April 17 of this year, caused much sorrow to the club.

Cheery and light-hearted, he was always one of the most charming of companions. Manly and straightforward, he was absolutely intolerant of all subterfuge and sham. In his friendship he was most loyal and sincere.

Mr. Center was, in the most conservative sense, a thorough all-round sportsman, but yachting was his favorite pastime, and in this he was, both theoretically and practically, easily in the first flight in his generation.

His name is woven into the history of the New York Yacht Club, and there will always be remembered as one of its most popular members, a valued leader in its councils, and as one who was as sound and true a yachtsman as ever touched a tiller.

Resolved, That these expressions be entered on the minutes and that a copy be sent to Mr. Center's mother.

S. Nicholson Kane,
E. D. Morgan,
J. V. S. Oddie,
Lloyd Phenix,
William E. Iselin.

The following members were elected to active membership: D. Morgan Hildreth, Jr., John F. Baudouine, Adam Mortimer Singer, Nicoll Ludlow, U. S. N., Oliver E. Cromwell, Robert Livington Gerry, J. A. Dougherty, U. S. N., Frederick M. Davies, Ashton Lemoine, S. W. Milbank, Houston Eldridge, U. S. N., Rand P. Crandall, U. S. N., N. R. Usher, U. S. N., Frank T. Moorhead, E. A. Morrison, Arthur Burtis, U. S. N., Arthur E White, George E. Baker, Henry Van Bergen, Moses L. Wood, U. S. N., Henry R. McLane, J. B. Ecclesine, Jr., Robert Sedgwick, John B. Duer, A. H. Alden, George de Forest Grant, Wynnn R. Sewell, Reginald Norman, R. F. Mulligan, U. S. N., and John A. Taylor.

To honorary membership—Rear Admiral B. Gherardi, U. S. N., Rear Admiral Henry Erben, U. S. N.

The Amenities of Journalism.

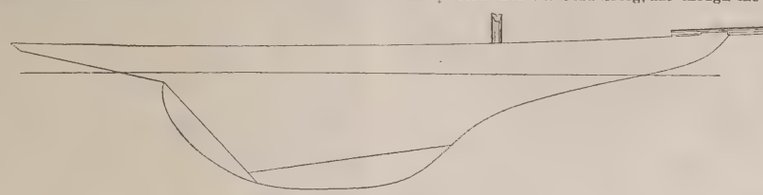
One of the many interesting side shows of the great three-day launching bee at Bristol was the affecting meeting, after a parting of some two years, of Mr. McV., the yachting editor of the Boston *Herald*, and Mr. S., the yachting editor of the Forest and Stream. The accompanying picture is the work of another newspaper man who was wandering by with hungry camera, and who, in default of a more shining mark, wasted a plate on this interesting scene. The background is the outer wall of the south shop, within which Defender was then preparing for her plunge; all of clear, A grade siding, "free from knots, shakes or sapwood" and closely laid, without a crack or a knothole through which the secrets of up-to-date designing might be extracted. The central figure is Capt. Haff, skipper in turn of Titania, Volunteer, Colonia, Vigilant and Defender—his modesty impelled him to duck his head as soon as he caught sight of the raised camera. The gentleman on the right, with his hands raised, is "The Boston *Herald* Man," and he is expressing, in that calm, urbane and courteous manner for which he is noted, his private opinion of the Forest and Stream in general and its yachting editor in particular. Modesty forbids us giving the full details of the interview; those who desire further particulars are respectfully referred to Capt. Haff.

AMENITIES OF JOURNALISM.

Sea Cliff Y. C.

HEMPSTEAD HARBOR—LONG ISLAND SOUND.

Saturday, July 20.



The annual regatta of the Sea Cliff Y. C., of Hempstead Harbor, was sailed on July 20 in a strong S.W. breeze, with 41 starters, of whom 39 finished, the courses being on the Sound. The times were:

	Length.	Elapsed.	Corrected.

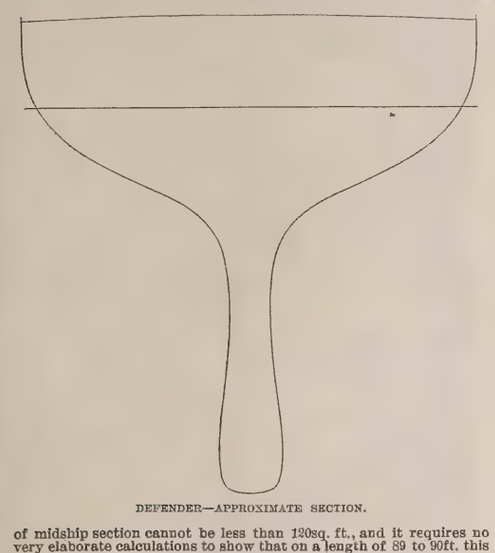
Leader, W. Dixon	15.00	3 15 00	3 01 24
CLASSES L AND M.			
Lurline, A. M. McKnight	25.06	2 31 35	2 31 35
Fairy, F. E. Towle	24.00	2 31 14	2 28 12
CLASS N.			
Terrapin, H. L. Curry	19.98	2 46 11	2 46 11
Chipple, H. R. Hatfield	17.59	3 01 15	2 54 21

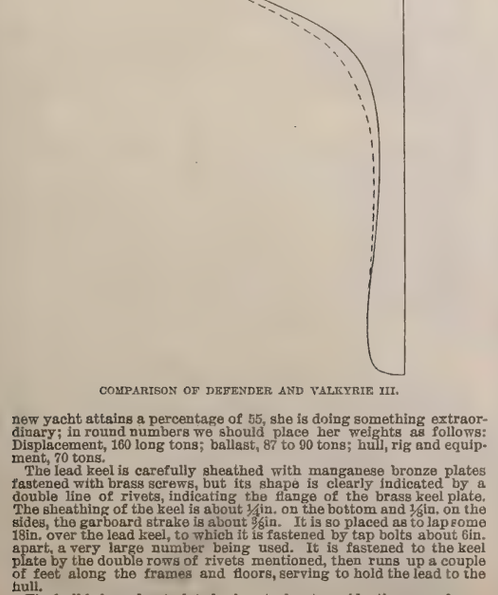
Penguin won in her class, in spite of a broken topmast; Iosco won in her class; Dragoon had a sail-over, but easily outsailed the Class B yachts, they having, previous to the start, refused to allow her to go up into the class. Vaquero won in the 21ft. class and the Little Question, nicknamed the "Cellar Door," went up a class and won. In Class H the result is still in doubt, as both Mary and Oconee will have to be remeasured, it being a matter of a few seconds between them. Kittie won in Class J, Coot in Class K, Fairy beat Lurline and Terrapin beat Chipple.



Defender.

Early on the morning of July 25 Defender left her moorings off New Rochelle in tow of the tug Atwood and accompanied by the Hattie Palmer and started for South Brooklyn, arriving at the Erie Basin at 8 o'clock, going into the east dock, where Valkyrie II. was docked in 1893. By 11:30 the dock had been pumped dry and the yacht was freely exposed to view. No attempts were made to bar visitors from the yard even though armed with cameras, and for the rest of the day the walls of the dock were lined with artists and photographers, both amateur and professional. Among the latter, C. E. Bolles, of Brooklyn, obtained a number of excellent views. A far better opportunity was offered for a careful inspection of the yacht than at the launching, as she stood up on the keelblocks, with only the spur shores from the sides of the dock and a shore under the stem and counter, and it was possible to view her from all directions, though at rather short range on the broadside. While exact measurement was impossible, it is plainly apparent that in all of the "exclusive" stories published this spring the yacht has been underestimated, and that she is a much larger and more powerful craft that the published details indicate.

DEFENDER—Approximate Sheer Plan.



Her beam is to all appearances not over 23ft., at least not more than an inch or so. Her draft, however, is very much more than 18 or even 19ft., certainly 19ft. 6in. as she is now trimmed. The report is current that her load line is now not over 89ft., but if trimmed to the exact limit of 90ft. she would draw just about 20ft., possibly a couple of inches under. The accompanying sketches were made by eye, the result of a number from various points of view, and while by no means adequate as the basis for exact calculations of the centers, they show very closely the sheer plan and midship section. The area

DEFENDER—APPROXIMATE SECTION.

of midship section cannot be less than 120sq. ft., and it requires no very elaborate calculations to show that on a length of 89 to 90ft. this area would give a displacement of at least 160 long tons, a figure greatly in excess of previous estimates. As Valkyrie II. proved, in a form of this kind it is possible to stow away a very large amount of displacement without giving to the eye the impression of a very full model; and in this case Mr. Herreshoff has probably taken all of 160 tons.

In the way of ratio of ballast to displacement something positively startling has been anticipated, in view of the use of aluminum. A modern steel schooner of 80 to 90ft. l.w.l., of compact form and well built, will carry from 40% to 45% of her displacement in lead; if the

COMPARISON OF DEFENDER AND VALKYRIE III.

new yacht attains a percentage of 55, she is doing something extraordinary; in round numbers we should place her weights as follows: Displacement, 160 long tons; ballast, 87 to 90 tons; hull, rig and equipment, 70 tons.

The lead keel is carefully sheathed with manganese bronze plates fastened with brass screws, but its shape is clearly indicated by a double line of rivets, indicating the flange of the brass keel plate. The sheathing of the keel is about ¼in. on the bottom and ⅛in. on the sides, the garboard strake is about ⅜in. It is so placed as to lap some 18in. over the lead keel, to which it is fastened by tap bolts about 6in. apart, a very large number being used. It is fastened to the keel plate by the double rows of rivets mentioned, then runs up a couple of feet along the frames and floors, serving to hold the lead to the hull.

The hull is in-and-out plated, nine strakes to a side, the seven lower ones being of manganese bronze and the two upper ones of aluminum. When docked, the seams in places showed signs of rust, and a caulker was set to work on them. The plating is smooth and the hull fair, both in the model as a whole and in the construction. Most of the sketches and designs previously published are wrong in showing the rudder as stopping at the top of the keel, it runs down until it forms a fair sweep with the keel line.

There is not the slightest suggestion of Colonia, Vigilant or Wasp in the sheer plan, but rather of Valkyrie II.; at least up to the fore end of the waterline. The stem above water is not particularly handsome, the upper part ending in an almost straight line just under the bowsprit that is unfair and ugly, almost a counterpart of the stemhead of the Hattie Palmer. It may be that a fitting sense of gratitude for the services of Vigilant's faithful "Mascot" has impelled Mr. Herreshoff to pay her such a compliment, but a fair sweep of the batten from waterline to stemhead would have greatly improved the appearance of Defender's bow, without in any way detracting from its good qualities. Now that it is completed, the stern shows up very much better than at the launching, and though the transom is rather flat, the whole effect of the counter is good. The sheer is very moderate and cleanly swept, in fact the yacht, both above and below water, will compare most favorably with the older Herreshoff craft. The waterline is of course full and convex, but by no means to the extreme of Vigilant, and the bow is much longer and finer. The impression as seen from the coping, up above the deck, is the same given by Valkyrie II. in the same position, there seems to be a long thin horn that will hardly support its own weight; but seen from below the whole bow is full and powerful, though without the barrel shape of Vigilant.

So far as we now know, the third Valkyrie is about 26ft. beam, and, as her photos show, has a fuller bilge than Defender and a strong flare to the side; that of Defender, as nearly as it can be estimated by the eye, being about 8in., or say 16in. less beam at the waterline than at the deck. It is hardly probable that Valkyrie III. is as much hollowed in the floors as Defender, but she probably draws nearer 20ft. than 19 and has about the same breadth of keel. Her lead is given in recent reports as 87 long tons, which is probably very near the true figure. The ratio of ballast to displacement should be something under 50 per cent., and her total displacement may be as high as 180 tons. The accompanying outline shows her probable section in comparison with that of Defender. With two such sections as these, he would be a bold man who would predict certain success for the American (the narrower) and failure for the British (the wider).

The best grounds for hope in success of the American yacht is not in any great and known superiority in dimensions, model, construction or actual performance up to date over her rival; but in the fact that one boat is in her home waters and the other 3,000 miles away; and that Defender is in the hands of men who cannot afford to be beaten.

While in the dock the bottom of the yacht was thoroughly polished with "steel wool," a new material, composed of very fine threads of steel. She was floated early on Friday morning, returning to New Rochelle, while Vigilant took her place in the dock on a new set of keel blocks arranged at the head of the dock, she also being polished off, floating on Saturday morning.

Defender is out every day on the Sound trying new spars and sails, Piepgrass having made a number of spars, while the Herreshoffs are making others. The new Wilson & Silsby mainsail was bent and tried on Saturday, but was immediately taken off, it was not satisfactory and will be recut.

Capt. Haff has been in very good health in spite of some sensational reports, but on Thursday, after seeing the yacht safely docked, he left her in charge of Capt. Terry and went to his home at Islip, going next day with Mrs. Haff to Rome, where his throat was examined by the doctor who had operated on it, and pronounced it in a very satisfactory condition; the captain returning home and re-joining the yacht on Sunday.

The New York Y. C. Cruise, 1895.

The annual cruise of the New York Y. C. began on Monday of this week and is now well under way, to continue, with the incidental races off Newport, for about two weeks. The official programmes are as follows:

The cruise will begin with a rendezvous off Glen Cove, Hempstead Harbor, on Monday, July 29. A meeting of captains will be held aboard the flagship Sylvia, after which a race will be started for prizes offered by Com. Brown; a cup for schooners and a cup for single-masted vessels and yawls.

This event will be open to yachts belonging to the club, in cruising trim. It will not be restricted to yachts intending to make the cruise. Preparatory signal, 1 o'clock P. M.

Starting signals. No. 1, preparatory.—A gun will be fired and the blue peter hoisted.

No. 2. Start for single-masted vessels and yawls.—Ten minutes later a second gun will be fired, the blue peter lowered and a red ball hoisted.

No. 3. Start for schooners (handicap time for single-masted vessels and yawls).—Five minutes later a third gun will be fired and a second red ball hoisted.

No. 4. Handicap time for schooners.—Five minutes later a fourth gun will be fired and both balls will drop.

Courses: Course 1.—Letter C. Start over a line between the committee boat and Matinicock Point buoy, around a mark ten miles east-northeast from the point of starting (leaving it to port); thence five miles west, around mark (leaving it to port), and finish over a line between the committee boat and a stakeboat one mile west from Eaton's Point Light; twenty-one miles.

Course 2.—Letter D. Start over a line between the committee boat and Matinicock Point buoy, around a mark one mile north of Lloyd's Point buoy (leaving it to port); around a mark one and three-quarter miles east by south from Great Captain's Island Light (leaving it to port), and finish over a line between the committee boat and a stakeboat one mile west from Eaton's Point Light; twenty-one miles.

Course 3.—Letter F. Start over a line between the committee boat and Matinicock Point buoy, around a mark one mile south by west from bell buoy on Green's Ledge, Norwalk Islands (leaving it to port); return five miles over the same course, around a mark (leaving it to port), and finish over a line between the committee boat and a stakeboat one mile west from Eaton's Point Light; twenty-one miles.

The marks will be floats displaying a red flag with white stripes.

A tug, which will be at the service of those wishing to join the squadron on the morning of July 29, will leave station No. 2, foot of East Twenty-sixth street, at half-past nine o'clock on that day. Courses in greater detail, with compass bearings, can be obtained on board the Sylvia.

After the finish the squadron will anchor over night in Huntington Bay, starting early Tuesday morning for New London, 63 miles. In the event of bad weather the squadron will lie over Tuesday night at Morris Cove, sailing to New London on Wednesday. If New London is reached on Tuesday the run of Wednesday will be to Newport, where the fleet will lie at anchor on Thursday, sailing for the Goelet Cups on Friday, Aug. 2. On Saturday the cruise will continue to Vineyard Haven, where the fleet will lie over Sunday, returning to Newport on Monday.

The distances for the races are: Glen Cove to Morris Cove.—From Matinicock Point Buoy to a stakeboat displaying large club signal, one-half mile south from Luddington Rock; 37 miles.

Glen Cove to New London.—From Matinicock Point Buoy to New London Light, leaving Bartlett's Reef L. S. on Port hand; 74 miles.

Morris Cove to New London.—From stakeboat off breakwater to New London Light, leaving Bartlett's Reef L. S. on port hand; 40 miles.

New London to Newport.—From Sarah's Ledge Buoy to the Dumplings, leaving Race Rock on port hand; 40 miles.

Newport to Vineyard Haven.—From Brenton's Reef L. S. to West Chop Buoy (red No. 2), leaving Vineyard Sound L. S. on port hand; 37 miles.

Vineyard Haven to Newport.—From West Chop Buoy to Brenton's Reef L. S., leaving Vineyard Sound Lightship on starboard hand; 37 miles.

By invitation of the commodore, the regatta committee will make the cruise on the Sylvia. Yachts entered for any racing event will display their numbers and private signals as directed in Rule 9, Section 3. They will show no other colors. Club rules will govern all races unless otherwise directed.

Crossing the line will be considered as an entry unless otherwise directed. The course will be signaled before the preparatory signal is made. Should a signal gun miss fire a prolonged blast of the whistle will be given. Numbers and extra copies of this circular can be obtained at the club house and on the Sylvia.

The runs will be made in cruising trim.—Anchors on the bow and at least one cable bent; cruising complement of boats carried (launches optional); cruising deck, cabin and galley fittings and fixtures in place; topsails extending above the truck and beyond the end of the gaff barred. Water can be taken into the tanks up to 8 A. M.

In each class there will be a prize for first if two or more start, and a prize for second if four or more start. Yachts alone in their classes will be grouped as directed in Rule IV., Section 4.

After the commodore has ordered the squadron under way the committee will establish the start lines, which, like the finish lines, will be between the Sylvia and the points indicated in courses.

STARTING SIGNALS.

No. 1. Preparatory.—A gun will be fired and the blue peter hoisted.

No. 2. Start for single-masted vessels and yawls.—Ten minutes later a second gun will be fired, the blue peter lowered and a red ball hoisted.

No. 3. Start for schooners (handicap time for single-masted vessels, etc.).—Five minutes later a third gun will be fired and a second red ball hoisted.

No. 4. Start for first class sloops (handicap time for schooners).—Five minutes later a fourth gun will be fired and a red ball will drop.

No. 5. Handicap time for first class sloops.—Two minutes later a fifth gun will be fired and the other red ball will drop.

The fleet captain will present a prize to the schooner winning the largest number of runs. The secretary will present a similar prize to the single-masted vessel winning the largest number of runs. The rear-commodore will present a prize to the vessel which crosses the finish line first the greatest number of times, irrespective of rig, size or time allowance.

For the fourteenth year, Mr. Ogden Goelet has offered two cups which will be sailed for at Newport on Aug. 2.

For schooners, a $1,000 cup; for single-masted vessels and yawls, a $500 cup. Open to yachts belonging to the club that have not hauled out to clean since the commencement of the cruise. Mr. Goelet reserves the privilege of inviting foreign yachts that may be in American waters to enter the race.

Start—10:30 A. M., off Brenton's Reef Lightship. Entries will be received at the club house, New York, up to 10 P. M. July 28, and on board the Sylvia to 8 A. M., Aug. 2. Sailing directions can be obtained on board the Sylvia and at station No. 6, Newport, R. I.

For the Goelet cups the steamer Gay Head of the New Bedford, Martha's Vineyard and Nantucket Steamboat Company, will leave the foot of Long Wharf at ten o'clock A. M. Members can obtain tickets from the superintendent, No. 67 Madison avenue, or Captain F. D. Sands, N. Y. Y. C., station No. 6, Newport.

On the day following the return of the squadron to Newport, cups offered by Captain J. R. Drexel, N. Y. Y. C., will be sailed for.

$200 cup for class 1 of schooners.
$200 cup for class 2 of schooners.
$200 cup for classes 3 and 4 of schooners.
$200 cup for class 5 of schooners.
$200 cup for class 1 of single-masted vessels and yawls.
$200 cup for class 2 of single-masted vessels and yawls.
$200 cup for classes 3, 4 and 5 of single-masted vessels and yawls.
$200 cup for class 6 of single-masted vessels and yawls.

Open to yachts belonging to the club, in cruising trim, and which have not hauled out to clean since the commencement of the cruise. Sailing directions will be issued at Newport.

A committee of Newport citizens is now at work on arrangements for a fete and illumination on one of the nights on which the fleet is at Newport.

The programme for the supplementary races is as follows:

Open to yachts of any regular organized club.

The racing to be in charge of the Regatta Committee of the New York Yacht Club.

First day—Schooners in racing trim.
Second day—Sloops, cutters and yawls in racing trim.
Third day—Schooners in racing trim.
Fourth day—Sloops, cutters and yawls in racing trim.
Any class may sail in cruising trim by unanimous consent.

SCHOONERS.

First Class, over 80ft. racing length—First prize; $300; second, $120.
Second Class, over 70ft. and under 80ft.—First prize, $250; second, $100.
Third Class, under 70ft.—First prize, $200; second, $80.

SLOOPS.

First Class, over 80ft. racing length—First prize, $400; second, $160.
Second Class, over 60ft. and under 80ft.—First prize, $200; second, $80.
Third Class, over 50ft. and under 60ft.—First prize, $150; second, $60.
Fourth Class, over 43ft. and under 50ft.—First prize, $100; second, $40.
Fifth Class, under 43ft.—First prize, $50; second, $20.

No second prize will be given in any class unless four or more start.

Yachts in Class 5 must be up to the requirements for representation in the New York Y. C.

The course will be an equilateral triangle formed by Brenton's Reef Lightship, Point Judith whistling buoy and an offshore mark (red and white flag or buoy) placed by the committee.

Compass bearings of marks, starting signals, etc., can be obtained from the committee the day previous to the races.

All classes of schooners and Classes 1 and 2 of sloops, etc., sail twice over the course, except by order of the committee.

Classes 3, 4 and 5 of sloops, etc., once over.

The same course will be used for each day's racing, except that the committee will start the yachts so as to make one leg as much as possible to windward.

The committee have power, if they consider it advisable, to stop any race at the end of the first round and award prizes.

The start will be from Brenton's Reef Lightship.

The racing rules and time allowance of the New York Y. C. will govern.

Entries can be addressed to the Regatta Committee, New York Y. C., Newport, R. I., and must be made by 6 o'clock on the day prior to the races.

On Monday morning a very large fleet of yachts was present off Glen Cove, most of them under way in a light westerly breeze. A meeting of captains was held aboard the Sylvia, at which the general programme of the cruise, as already published, was agreed to.

The race for the commodore's cups, including a third cup for Defender and Vigilant, to be sailed for without time allowance, was started at 1:45. The course was 21 miles, ending off Eaton's Point. The wind was S.W., light to moderate, and an exciting race resulted, the times being:

	Start.	Finish.	Elapsed.	Corrected.
CUTTERS—90ft. CLASS.				
Defender	1 47 24	4 42 56	2 55 32	. .. ..
Vigilant	1 47 22	4 44 43	2 57 21	. .. ..
CUTTERS—UNDER 90ft.				
Wasp	1 47 56	5 16 06	3 28 10	3 21 07
Queen Mab	1 46 34	5 11 26	3 24 52	3 23 35
Nilneola	1 49 36	5 25 59	3 36 23	3 28 43

Ventura	1 48 13	5 32 43	3 44 30	. .. ..
Awa	1 47 55	Disabled.		
Harriet	1 47 57	Not timed.		
SCHOONERS.				
Amorita	1 52 04	5 00 43	3 08 39	3 01 04
Emerald	1 53 03	4 57 25	3 04 22	3 03 02
Elsemarie	1 53 29	5 12 12	3 18 43	3 11 31
Lasca	1 50 48	5 02 36	3 11 48	3 11 48
Marguerite	1 55 00	5 13 06	3 18 06	3 14 25
Loyal	1 55 00	5 25 04	3 30 04	3 16 53
Neaera	1 55 00	5 28 33	3 33 33	3 16 59
Iroquois	1 53 24	5 14 42	3 21 18	3 17 04

Defender wins, but would barely have saved her time over Vigilant. On Tuesday the fleet sailed for New London. Volunteer and Jubilee will both joint at Newport.

Spruce IV.

Mr. J. A. Brand's new half-rater, Spruce IV., has sailed four or five races in England with very good success; we note that her l.w.l., as officially measured, is 15.78ft, which gives a sail area under the Y. R. A. rule of 189sq. ft. Under the Seawanhaka rule this will give her about 200sq. ft. of sail for the American races. There are likely to be at least seven or eight boats in the trial races which will be held by the Seawanhaka C. Y. C. at Oyster Bay at the end of August, and the contest promises to be very interesting. Mr. T. C. Zerega has made a most acceptable gift to the club in connection with these races in a very appropriate and graceful manner, as in the following letter:

Oliver E. Cromwell, Chairman Race Committee, Seawanhaka-Corinthian Y. C.

"Had Commodore Center been with us this season, we may be sur that he would have offered a prize to the competing helmsmen in our coming races of 15-footers, preparatory to the international contest. In memory of him, therefore, I beg to offer, through the committee, 'the Center Helmsman's Prize,' to be awarded to the amateur helmsman who in their judgment handles his boat in the most seamanlike manner from the preparatory signal of the first to the finish of the last trial race."

"Theodore C. Zerega."

The question of the size of spinaker has been settled by an agreement with Mr. Brand that the limit be forty per cent. of the measured sail area.

Indian Harbor Y. C.

GREENWICH—LONG ISLAND SOUND.

Saturday, July 27.

THE annual regatta of the Indian Harbor Y. C. on July 27 promised to be one of the largest of the Sound races, but the weather interfered so that only a few yachts finished. A big fleet was on hand in the morning, but there was no wind. At noon, however, a fresh breeze came in from S.W. and steadily increased until reefs were turned in when the race started at 12:45. It kept on blowing harder and harder, with a rising sea. The first mark was washed away and the committee boat had to take its place, and most of the yachts ran home. Feydeh lost her mast, and others came to grief. The cabin cat Mary was the smallest boat that made the course, all of her class giving up; she won first prize, but was not timed. The official times were:

SLOOPS AND CUTTERS—50FT. CLASS.

	Length.	Elapsed.	Corrected.
Daphne, C. T. Willis	55.2	2 33 50	2 33 50

Willie, Smith Brothers	19.6	Did not finish.
Chippie, H. R. Hatfield	17.50	Did not finish.

Minerva won a special prize for best elapsed time.

Beverly Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 20.

The 223d race, first open race of the season, was fixed for Marblehead, July 20, and 38 of the best boats on the bay were entered, but the race was spoiled by a calm, there being a sea like glass and the merest breath from the S. E.

The Regatta Committee wished to postpone the race, but all the owners wished to try, so short courses were given and the first gun was fired at 2:2430.

Salmon was then just outside the harbor, so Handsel waited for her, and they were sent off at 2:57. The special, first and second classes beat to Half-way Rock, then ran down to S. E. Breaker Buoy and home, 10 miles.

The others went to Martins Rock, beat out to Half-way Rock and ran home, 6½ miles. Bessie, Irene, Black Cloud, Nabob and Goat could not get down in time, and Mr. Burgess refused to start Clara, saying that a race could not be made.

Starbinger, Ida T. Beatrice and Tomboy started in first class; Rex, Marina, Ariel and Susie in second; Dorthy, Maia, Cirruna, Comet, Sally and Toyo in the knockabouts; Exit, Apukwa, Reaper, Gleaner and Raccoon in third class sloops; Koorali, Egeria, Arab and Magpie in third class cats, and seven boats in fourth class.

The time limit for knockabouts ran out at 5:10:30, third class at 5:15:30, and fourth at 5:19:30. About 5 o'clock several boats that had given up drifted in, and the fleet came slowly around the point with the little Bonita in the lead; she drifted wonderfully fast and crossed line at 5:18:25, saving the class by 1m. 5s.

Gleaner and Egeria led in third class, too late by 6m., while Maia had a long lead of the knockabouts, crossing at 5:46:52, but of course too late.

The first, second and special class time limits ran out at 6:08:30, 6:13:30 and 6:30, but at 6:40 Beatrice and Ida J. were in sight close to line, but not over it. The race will be resaited later.

FOURTH CLASS.

	Length.	Elapsed.	Corrected.
Bonita, C. O. Hood	15.01	2 34 55	2 17 39
Evadne, R. M. Benner	15.04	2 43 15	2 26 04
Alpine, C. J. Blethen	14.07	2 48 50	2 30 45
Circe, F. L. Pigeon	15.10	3 06 33	2 50 02
Carina, R. Boardman	18.00	3 06 52	2 52 57
Hera, P. Fowle	16.06	Withdrew.	
Pointer, C. P. Curtis	16.10	Withdrew.	

Bonita wins first and Evadne second prize.

Judge, W. Lloyd Jeffries.

In special class Salmon led at windward mark, but Handsel passed her off the wind.

YACHTING NEWS NOTES.

Colonia has been laid up at Tebo's, her crew being now all on board of Defender.

The Great South Bay Y. C. will hold its annual regatta on Aug. 10, off Sayville.

Neaera, steam yacht, Chas. Gould, was in collision on July 23 in Hell Gate with the sand schooner Only Son, the two being jammed by the tide. The yacht struck the schooner amidships, losing her own bowsprit and sinking the other vessel, which was towed into shoal water by tugboats. The captain and crew of the schooner, three in all, were picked up by the yacht's boat.

Nepenthe, cutter, arrived at New York on July 22 from New Orleans with her owners, George Agar and W. S. Dudley, aboard. The report that this yacht had recently been overhauled by a Spanish vessel and her owners imprisoned in Havana proves to be without foundation.

Eleanor, steam yacht, arrived at San Francisco from Honolulu on July 22, and has since sailed for Alaska. She will return to New York by way of Cape Horn.

A series of races has been arranged by the yachtsmen of Barnstable, Mass., for Aug. 12, 13 and 14, under the rules of the Cape Cod Y. C. There will be four classes—24 to 29ft., 20 to 24ft., 17 to 20ft., under 17ft., and a class for Mosquito boats, canoes, sharpies, etc., under 16ft. l.w.l. owned in Barnstable harbor. The races are open to all; entries may be made to V. D. Bacon, Barnstable, Mass.

The Lake Champlain Y. C. will sail its annual regatta on Aug. 6 over the club courses, off Burlington, Vt.

The steam yacht designed by Gardner & Cox and built at Roach's shipyard, Chester, Pa., for F. C. Dimmy, was launched on July 18, being christened Oneonta. She is 130ft. over all, 180ft. l.w.l., 18ft. beam and 6ft. draft. She will carry but one mast.

Valkyrie III.

On Saturday last, July 27, the third Valkyrie sailed from Gourock Bay for New York, being towed as far as Tory Island. Capt. Wm. Cranfield is in command, the skipper of Valkyrie II. in 1893, assisted by Capt. Sycamore; while Capt. Jas. Harrison, formerly of the Allan Line, will *go out* as navigator. The yacht is now rigged as a ketch, with a short mainmast and topmast and a mizenmast stepped forward of the rudder head. The racing tiller has been replaced by a wheel, as in Valkyrie II. on her return voyage. She will carry two large collapsible Berthon boats. With ordinary good luck she should be in New York by Aug. 15. All of her racing outfit will be shipped by steamer, the latest announcement being that a complete set of steel spars has been made, to be shipped for the American races, all of nickel-steel galvanized. The length of the boom is given as 125ft., a most absurd figure, but it is probable that she will swing a far bigger rig than ever before seen on a single mast, in excess of both Defender and Vigilant.

Now that Valkyrie III. and Defender have both been tried in actual races with Britannia and Vigilant, two old boats, yachtsmen and yachting writers are busy "drawing lines" and making absurd and misleading calculations as to how much Defender will beat Valkyrie III. in the Cup races. We have long since abandoned this useless pursuit, as we are convinced that the time records of a yacht in one country against a certain lot of boats are absolutely worthless as showing her probable performances against other boats in other waters. The whole record of international racing shows this, and we place no value whatever on the elaborate computations by which it is proved, through both Vigilant and Britannia, that Defender is 29m. 25s. faster than Valkyrie over the Sandy Hook courses, or, on the other hand, that Valkyrie is 14m. 19s. faster than Defender. It has already been proved to the satisfaction of all who witnessed the two races of Defender and Vigilant that the former is a success and a very fast boat in light weather and presumably heavy as well. That she is 10m., 12m. or 15m. faster than Vigilant in her 93, 94 or 95 form, is not yet proven, but is of little consequence. The main points are that the new boat, so far as can be seen and learned, handles well, is able, weatherly and very fast, capable of still further improvement, and has no marked defects.

Valkyrie III. has been tried at home in four races, of which we clip the following accounts from the London *Times*, from which the reader can draw his own conclusions as to her superiority to Britannia and Ailsa:

ROYAL NORTHERN YACHT CLUB REGATTA—JUNE 29.

The Clyde yacht racing season opened on Saturday with the regatta of the premier Scotch Club, and from a racing point of view the weather could not have been more unfavorable. It was calm and hazy in the early morning, but a southwest air sprang up later on. This was soon knocked down, however, by a heavy rainstorm, and from forenoon until late in the evening the yachts had nothing but partial puffs, baffling airs from every point of the compass and very frequent calms. The new Valkyrie opened her racing in a very remarkable way, and in all probability the last aspirant for America Cup honors is a wonderful vessel. There were too many Clyde flukes about to admit of its being said that the lead of six miles she held on the Britannia after having covered 33 miles of the course was all gained by sheer speed and merit; yet likely enough Valkyrie would be equal to repeating the performance under similar conditions of weather. The concluding part of the race was the most extraordinary portion of it, however, as over a stretch of five miles of water Valkyrie was so much a victim of Clyde flukes, calms and baffling airs that she finished the match only about a cable's length ahead of the Britannia, which won by time. The result naturally dimmed the luster of the Valkyrie's display earlier in the race, and, naturally, critics will be anxious to see Lord Dunraven's cutter have a really fair and reliable all-round trial before presuming to estimate how much better a boat she is than the Britannia. She had one little burst in a very eighty breeze, and considering the wonderful pile of canvas she carries she showed more stability than was generally expected, and the bow wave gave ample evidence of the high rate of speed she could attain when hard driven. It may be said that Valkyrie is an exceptionally weatherly boat, as in what little reliable trial there was she always pointed higher than Britannia and Ailsa, and she also is remarkably quick in stays. It was certainly a very unfavorable time to try a new boat in, but apart from the result her debut was distinctly satisfactory, and great things, indeed, may be looked for in the future. Valkyrie sailed with her steel boom, which, it may be said, is 1 ton 7cwt. lighter than the Oregon spar. Her mainsail is a perfect specimen of the sailmaker's art, and the jackyard topsail stood like a card. Britannia sailed consistently as usual, but was decidedly fortune's favorite on the day, while Ailsa was singularly unlucky in picking up the calm patches. In the best of the wind she stepped out well, and was the stiffest boat of the trio when the breeze laid on in the morning rain squall.

Match, open to all yachts of any rig exceeding 40-rating. First prize £75, second prize £25. Course, from Rothesay Bay round flagboats off Mount Stuart, Largs and Skelmorlie, and back to the starting line, twice round, and a distance from Rothesay to Largs and back. Yacht Racing Association rules and time allowances for a 50-mile course:

	Rating.
Valkyrie, cutter, Lord Dunraven	185
Britannia, cutter, the Prince of Wales	153
Ailsa, cutter, Mr. A. B. Walker	160

Valkyrie allowed Ailsa 2m. 59s. and Britannia 4m. 2s.

A gentle southerly breeze was drawing from the Clyde into Rothesay Bay when the start was made at 10:30, and all had jackyard topsails and jibtopsails set to work to the first mark. Ailsa was first to straighten across the line, and Britannia, also on starboard tack, came about 30s. later, the pair heading out of the bay, when Valkyrie, on port, crossed the wake of each and stood right in toward Craigmore. Ailsa drew away a little, having Britannia fine on the weather quarter, but the latter, finding Valkyrie coming out carrying a luffing offshore breeze, stood in, and Ailsa followed; but the new cutter well headed both on the first tack, and in turn Britannia, on tacking to starboard off Bogany Point, headed Ailsa, and probably would have crossed Valkyrie had the latter not winded under her lee bow. The last-named pair then went heading out in the Clyde on starboard tack, and Britannia for a time was forereaching fine. The latter tacked first, and Valkyrie came round with a high berth on her weather quarter, and both crossed well ahead of Ailsa, which had been unlucky enough to get into a baffling breeze. Valkyrie was outwinding Britannia palpably, and was an eighth of a mile ahead when she tacked off Ascog. Both found a nice breeze coming off the Bute shore, and Valkyrie's jibtopsail sheet was eased. A sharp squall of wind and rain was then struck into, and this Valkyrie took just before Britannia, while Ailsa was further out in the Clyde than either. Valkyrie's jibtopsail was pulled down, and the vessel had quite enough without it, but she reached away grandly, bursting out a cataract of bow wave and having lee rail buried. Britannia's decks were awash, but Ailsa was not bending so much as either, and, presumably, she had not a like weight of wind. The squall quickly passed over, and the vessels came out of it with drenched sails, which a blaze of sunshine soon dried, and the breeze fell off soft and patchy. Valkyrie went slipping away in quite inimitable style. She fetched Mount Stuart flagboat after a long starboard tack along the Bute shore, but both Britannia and Ailsa had a baffling spell before rounding. The difference of time at the end of four miles sail was:

Valkyrie	11 17 00	Ailsa	11 30 20
Britannia	11 24 55		

The westerly breeze was succeeded by an easterly chill, with which Valkyrie stole further away, Britannia and Aisla meanwhile having a spell of calm, and the last-named then got a flaw which drew her up the Clyde, while Valkyrie and Britannia were making a crawl towards the Cumbrae. It was a dreadfully tedious work getting across to Largs in the prevailing calms, but Valkyrie kept sailing away, and at last got a southerly chill from out of Fairile Sound, with which she reached to her mark. Britannia and Ailsa had kept close together, and the pair at last had a run to the Largs flagboat with spinakers, which was gybed round this:

Valkyrie	1 25 15	Ailsa	2 03 55
Britannia	2 00 00		

Valkyrie carried her spinaker nearly as far as Knock-hill, but the others had a westerly air more on the side, and eventually the pair had enough fairly to bend them, and both in consequence covered the ground faster than Valkyrie had done. The wind soon softened again, and after sailing free for six miles from Largs the Skelmorlie mark was luffed round thus:

Valkyrie	2 32 00	Ailsa	3 06 10
Britannia	3 03 10		

Valkyrie was off Toward Point when her opponents were rounding the Wemyss Bay flagboat, and the leader had fetched into Rothesay Bay with only one starboard tack down Clyde, while Britannia made two and Ailsa three before getting over to Toward. Valkyrie carried a steadier air up Rothesay Bay than Britannia and Ailsa, which had it baffling and patchy, and the leader had extended her lead at the end of the first round, which was timed thus:

Valkyrie	3 20 58	Ailsa	4 06 45
Britannia	3 57 08		

Valkyrie commenced the second round in soft southwest breeze, and gave a brilliant display of light weather speed in a close reach as far as Ascog Church, where she was headed off by a southerly draw and had to beat on to Mount Stuart. Both Britannia and Ailsa fetched further down than the leader, and had a trifle the better of the wind, which was, however, baffling. The flagboat was weathered thus:

Valkyrie	4 05 30	Ailsa	4 52 00
Britannia	4 42 25		

Valkyrie carried a light leading air across the frith to Largs and rounded that flagboat before Britannia had weathered the Mount Stuart mark, which meant a lead of five and a half miles. The timing at Largs was:

Valkyrie	4 39 00	Ailsa	5 27 00
Britannia	5 10 30		

Britannia carried a little better than the leader, the stern boats getting the first of a heavy rain burst, which did not, however, bring wind. Valkyrie kept steering away with a westerly air just abaft the beam, but Britannia got a southwest breeze after the rain and closed on the leader in regard to distance owing to Valkyrie losing the wind after rounding Skelmorlie mark. Ailsa was not lucky enough to get the same wind as Britannia, and after lying becalmed for upwards of an hour gave up. In the softest of westerly airs Valkyrie reached across the Clyde from the Skelmorlie shore toward the Cowal side, while Britannia had the breeze both freer and not so baffling, and Valkyrie was coming back to the Prince of Wales's cutter. By the time Valkyrie had struggled across to Toward Point she was not more than a mile and a half ahead, and Britannia, with big working jib pulled down and her largest flying jib filling finely, was continuing to close up. Valkyrie's lofty canvas was not picking up the flying chills with any effect, and she at last quite lost her way in the baffling flaws, while Britannia was being singularly favored on getting inside Toward Point. Valkyrie got a whiff of the draft Britannia was bringing up and set her spinaker, as did Brittannia, but both spinakers were soon in, Britannia's big jibtopsail continuing, however, to fill, yet no sign was made of shifting Valkyrie's small flying jib for a larger one. Both vessels gybed and gybed back again to the flaws, but at last a south west air fluttered out fighting flags, and Britannia had then reduced Valkyrie's erstwhile six miles lead to less than a cable's length. This chill lasted them to the mark, which was only about 300 yds. away, Valkyrie eventually crossing the line with a lead of 1min. 47sec., and Britannia scored a second victory by one of the greatest flukes on record. The times of arrival were:

Valkyrie	7 38 12	Britannia (winner)	7 39 59

Ailsa gave up.

MUDHOOK Y. C. REGATTA, JULY 3

It was hinted in the *Times* of Monday last in connection with the Valkyrie that it would be desirable to arrive at the result of a really fair all-round trial before presuming to estimate how much better boat she is than the Britannia. She was tried yesterday in a fine true-sailing breeze. She was found to be sadly wanting in regard to the prospective chance of capturing the America Cup. She could not carry her sail, but even when on a comparatively even keel going down the Clyde she was unable to attain as high a head of speed as her opponents. She pointed high by the wind, but in going between Skelmorlie and Ascog on the first round she had to be so lightly sailed that the jackyard topsail was never really full, so of course the vessel did not fore-reach. Coming up the Clyde, with the wind broad off, Valkyrie lay down in helpless style. When the drift of the breeze out of the Kyles of Bute was met in crossing the mouth of Rothesay Bay, off Innellan, some hard rushes of wind struck down the mountain sides, and Valkyrie lay over until she looked really dangerous. Something will have to be done to Valkyrie after yesterday's experience, or it would be sheer madness to send her to America, as she was fairly beaten by better boats. But little improvement is required in Ailsa to make her the best of the trio, and there are high hopes that the desired end will be attained. Britannia's sailing could hardly fail to raise the highest enthusiasm. She long ago gained a lifelong reputation, and the general Scotch public regard her simply as national property. There would have been no big cutter racing yesterday had not the club consented that the conditions as to amateur helmsmen would not be enforced. Ailsa and Britannia would both have started, but for intelligible reasons Valkyrie would not start unless professionally steered, and the fact led up to annulling the amateur helmsman rule in the big cutter match.

Match for yachts exceeding 40 rating; prize, the Muir challenge cup, value 100 guineas (presented by the late Mr. M. A. Muir), with a prize of £25 added by the club. Course—from Hunters' Quay, round flagboats off Skelmorlie, Ascog, and Kilcreggan and back to the starting line. Y. R. A. time allowance for a 50-mile course:

	Rating.
Valkyrie, cutter, Lord Dunraven	185
Ailsa, cutter, Mr. A. B. Walker	160
Britannia, cutter, the Prince of Wales	153

Valkyrie allowed Ailsa 2m. 59s. and Britannia 4m. 2s.

A fine off-shore breeze from the northwest gave smooth water in the firth and a plain sail over the long sides of the course. The three vessels set jackyard topsails, and at 10:30 Ailsa led through the line with a tearing head of speed on. Britannia was well placed by Carter on the weather side of the leader, and Valkyrie was some four lengths astern. Britannia, nearest the Kirn shore, was getting the best of the wind, and she reached past the weather beam of Ailsa off the pier, Valkyrie having come up under the lee of the pair, but she quickly dropped back. It was a plain, uneventful sail down in a smart, steady breeze, and Britannia kept the lead. Skelmorlie mark was luffed round at 11h. 6m. 30s. by the Britannia, and Ailsa was about 15s. astern, and Valkyrie 30s. Sheets came flat in as the Ascog mark could not be laid, but the starboard tack was held by Britannia and Ailsa in hope of the wind freeing, while Valkyrie made a short tack up the Clyde, and on coming round had both her opponents under the lee bow. The America Cup challenger was shaping badly, for although the wind was of not more than full jackyard topsail strength, she could not be sailed, the topsail never once being full. The pinching Valkyrie had to be given brought her head up for the mark, but Britannia and Ailsa had to make a short tack. Britannia rounded with half a dozen lengths' lead, and directly Ailsa had crossed Valkyrie the latter stayed and was just full again when she passed the mark. It was a reach across the mouth of Rothesay Bay, and Valkyrie lay down in startling fashion to rush off wind Clydeward. As they went up the Cowall shore the wind struck spitefully off, and all were giving a free display of weather bilge, Valkyrie lying so flat that the wind was shooting over her sails and she was churning up a sea from the lee quarter. Britannia and Ailsa were going on in quite stately style, comparatively, and Valkyrie's sorry show was painfully impressing the onlookers. The wind was carried right up to Kilcreggan with a pull being wanted at sheets, and the mark was stayed round thus:

Britannia	12 26 50	Valkyrie	12 28 35
Ailsa	12 27 45		

All stood down for the home mark on starboard tack, but it was a bare fetch, yet Britannia and Ailsa, which were sailed along, had only a short board to make for weathering distance. Valkyrie was lightly sailed for obvious reasons, and with a nip or two upon the wind, designedly succeeded in weathering the mark without staying, and the times of the first-round finish were:

Britannia	12 45 54	Valkyrie	12 48 54
Ailsa	12 47 07		

There was about the same strength of wind as when they went down the Clyde on the first round, and booms were again about half-way off the quarter off the Gantocks Beacon. Valkyrie's topsail was started lowering, while when the Ailsa was off Inverkip she made sail by hoisting jibtopsail and Britannia followed suit. Both closed on the leader and the timing when they luffed to the wind at Skelmorlie was as follows:

Britannia	1 18 33	Valkyrie	1 21 10
Ailsa	1 19 24		

Each made an unbroken close reach across to Ascog mark this time, and both Ailsa and Valkyrie fetched a trifle nearer the flagboat than Britannia, the times of passing being:

Britannia	1 41 40	Valkyrie	1 44 00
Ailsa	1 42 45		

It was not so puffy as on the first round, but the breeze kept true, and off Innellan Perch Valkyrie got up jib headed topsail. Britannia and Ailsa sailed a fine even race, but both were fairly reaching the aspirant for the America Cup, and she had lost ground when the Kilcreggan mark was stayed round. Hence they were able to make a clean lay for the home mark, and each fetched cleverly through, and Britannia crossed the line victorious in another memorable race. The times of finish were:

Britannia (winner)	2 56 42	Valkyrie	2 59 43
Ailsa	2 57 27		

MATCH BETWEEN VALKYRIE AND AILSA, JULY 5.

An arrangement for a trial race on friendly terms between Valkyrie and Britannia lapsed because Britannia had something faulty with her standing rigging to make good. Mr. Barclay Walker, with patriotic spirit, had the Ailsa sent on from Liverpool to the Clyde expressly to give the Valkyrie the informal trials which the Earl of Dunraven desired, and as Britannia was not available Ailsa at once took her place and a very instructive match resulted. The wind was light, southerly, when the start was made from the Iverna at 2:30, and the course agreed upon was from off the mouth of Holy Loch around the Skelmorlie bell buoy and back, a distance each way of about seven miles. It was about as dead a beat as could have been planned, and the match began with a board across the Clyde, the first tack being of 27m. duration. Ailsa had four lengths lead at the outset and she head-reached fast enough to double that distance in regard to the water sailed, yet Valkyrie's superior weatherly qualities more than outdid Ailsa's forereaching. The America Cup aspirant did not make a striking show until they beat down in a light wind to Wemyss Castle, where Valkyrie copied Ailsa by setting a jibtopsail.

The breeze was now lighter than at the start, and Valkyrie sailed so grandly that when she came round on starboard to stand toward Wemyss Bay, Ailsa had to tack under the lee bow. After one more board they were able to lay the Skelmorlie Buoy on the starboard tack and the times they weathered it were as follows: Valkyrie 3h. 36m. 59s., Ailsa 3h. 40m. 19s. Sheets were flared off for a run up the Clyde, and Valkyrie's crew very smartly got all headsail down and had the biggest bowsprit spinaker ever seen filling up the space. Valkyrie then raced away from Ailsa, and off Bulwood she had her running spinaker set and then went down wind in quite a magical way considering the softness of the wind. The race ended:

Valkyrie.....4 45 55 Ailsa.....5 00 50

Ailsa was raced by Jay for all she was worth, and for a second time Valkyrie thoroughly satisfied all identified with her in regard to her light weather speed. It may be said that it took a long time for her to warm up, but not a word can be said against what she did afterward, and no doubt she is the best light-weather racing yacht which has ever sailed in British waters. Her performance in the informal trial of yesterday will certainly have the effect of investing to-day's engagement with more interest than ever, and there was every prospect last night of her having a light-weather trial.

ROYAL CLYDE YACHT CLUB REGATTA—JULY 6.

Valkyrie sailed her last race on Saturday before she meets Defender next September in international rivalry. The wind was favorable for a good light-weather trial, and in sailing both to windward and leeward she thoroughly well satisfied all immediately concerned with her. There was never wind enough to lay Britannia over sufficiently to get her decks wet, but Valkyrie's scuppers were streaming many times. Still she was stiff enough and she went to windward in peerless style, but her best point was distinctly when she was sailing on an even keel dead down wind, and it is not likely any yacht has ever before run so fast in light weather. Valkyrie does not reach well compared to her weatherly and running abilities, but this shortcoming is when there is sufficient wind to set her wave-making, and no doubt she will skim along fast enough on a reach with the soft breezes which prevail in America during the Indian summer. The lead of 18m. 27s. which Valkyrie held at the finish of the 50 miles course was in a measure discounted owing to Britannia and Ailsa having a jockeying match throughout. Yet it may be said that Valkyrie once had a little spell of light wind near Kilcreggan, which the others did not experience. In her three light-weather trials Valkyrie has proved herself a phenomenally fast vessel, and she will leave this country with a hopeful prospect of winning the America Cup. Valkyrie has to a certainty not yet been seen at her best, and as she will leave for America in about ten days, there will be ample time to get the boat fit and ready for trial before the great contest. Since she sailed on Wednesday last Valkyrie has had more dead weight put in her, and she was sailing on Saturday on her designed waterline.

Match for yachts over 40-rating. First prize £75, second £35. Course, from Hunter's Quay to markboat off Skelmorlie, thence to markboat off Ascog, thence to markboat off Kilcreggan, and back to Hunter's Quay; twice round; distance, 50 miles:

	Rating.
Valkyrie, cutter, Lord Dunraven	185
Ailsa, cutter, Mr. A. Barclay Walker	160
Britannia, cutter, the Prince of Wales	153

Valkyrie allowed Ailsa 2m. 59s. and Britannia 4m. 2s.

The start was spoiled by a steam yacht, for which Ailsa had to stay quickly, and this caused Ailsa to swing round alongside Britannia, and on her striking the latter the Prince of Wales's cutter had a little of her bulwarks carried away. Both were then over the line and had to be recalled, and Valkyrie might have got away with a good lead. She eventually crossed with a lead of three lengths on the weather bow of Ailsa, while the latter had Britannia under the lee quarter. All had a short tack in toward the Kirn shore, and then on starboard headed across the Clyde in a nice breeze for jackyard topsails and flying jibs carried to windward. Valkyrie at once began to weather out on her opponents, and had a good lead at the end of the first board. They next stood in between Kirn Pier and Dunoon, and, on staying, Valkyrie was a quarter of a mile dead to windward of Ailsa, which had Britannia fairly in the toils. In the next inshore tack, Britannia was purposely kept under Ailsa's lee, and was kept going on so long that when she cast round Ailsa was unable to follow her opponent owing to her having the Gantock rocks in her road. Britannia being further to leeward was, however, able to clear them, and she thus slipped her opponent and made a long reach across the Clyde toward Ardgowan, while Ailsa went into Dunoon Bay. Valkyrie was pointing a much higher wind than either of her opponents and forereaching as fast; in fact, going to windward in quite inimitable style. Ailsa stood across after Britannia into Inverkip Bay, and only just headed the Prince of Wales's cutter; but in the next tack Britannia found Ailsa on the weather bow again, and the pair made a long board across toward Innellan, while Valkyrie was working her own way on and off from Wemyss Castle down to Skelmorlie. The southerly breeze kept true and steady, and for a time jibtopsails were down, but Valkyrie was standing up well and kept going to windward in faultless style. The times at which the Skelmorlie mark was weathered were:

Valkyrie.....11 43 00 Britannia.....11 49 30
Ailsa.....11 48 15

It was a broad reach across to the Ascog mark, and jibtopsails were carried. The times they gybed at the Ascog mark and came on a run for home were as follows:

Valkyrie.....12 02 10 Britannia.....12 09 10
Ailsa.....12 07 15

The wind was brought quarterly until they had cleared Toward Point, and jibtopsails and balloon staysails were carried. Before getting to Innellan beacon they were square before the wind and spinakers were set. Valkyrie was running wonderfully fast, and she was timed to be holding 3m. lead of Ailsa off Innellan. Ailsa here found Britannia bringing the wind down on her, and the latter had run up and was overlapping Ailsa off Dunoon. Valkyrie continued to go down wind very fast and she quite doubled her lead on Ailsa. Spinakers were carried close up to the Kilcreggan mark, which had to be made before the home mark, and Britannia, which had run up to leeward, got inside turn and had Ailsa under the lee when booms went over at the flagboat. A close reach then had to be made up to the home mark, and Valkyrie lay straight for it. Ailsa tacked out from under Britannia's lee, and both made a short board off and eventually overreached and came home with sheets just started. The times the line was weathered and the first round finished were as follows:

Valkyrie.....1 32 48 Ailsa.....1 46 06
Britannia.....1 44 52

With the southerly wind keeping steady they had another dead beat to the Skelmorlie mark, and Valkyrie again gave another grand display of her weatherly powers, and, on the other hand, Britannia and Ailsa were sailing a splendid match. Britannia was bent on keeping Ailsa under the lee, and the latter tried every move to escape the blanketing, and between Lunderston and Inverkip the pair made about ten rapid short tacks, but Britannia was equal to keeping weather-gauge. From Wemyss Castle down past Skelmorlie Britannia got a good lift along shore, and she made a clean jump away from Ailsa, and seemed to come up a little on Valkyrie. The last-named had, however, a very long lead, and the timing when the Skelmorlie flagboat was weathered follows:

Valkyrie.....2 40 00 Ailsa.....2 56 20
Britannia.....2 54 27

In the reach across to Ascog, Valkyrie lay over much more than Britannia, and she was only just holding her opponents, there being but 14m. 53s. between her and Britannia when they gybed at the flagboat. The wind was on the starboard quarter until they squared away off Toward to go up the Clyde to Kilcreggan, and Valkyrie again ran astoundingly fast gauged by Britannia, which, however, had Ailsa running in her wind. The Kilcreggan mark was gybed round, and they then had a close reach home. After going about a mile Valkyrie's jibtopsail was set, and she was then laying her mark. Ailsa tacked off shore and Britannia followed, and while Valkyrie again made a clean fetch the Britannia and Ailsa had far overstood and raced home with checked sheets. Valkyrie, which came in for a demonstration on arrival, finished 18m. 27s. ahead of Britannia, the latter beating Ailsa by 1m. 22s. After a splendid race from start to finish, the official times of arrival were:

Valkyrie (winner).....4 31 16 Ailsa.....4 51 05
Britannia (second prize)...4 49 43

According to corrected time, Valkyrie was winner by 14m. 25s. from Britannia.

That Valkyrie III. is a fast yacht, and in all respects a worthy competitor for the America's Cup, cannot be doubted in the face of the above record; but it is clearly impossible to say just how many minutes faster than Britannia she may be. While the lack of a competitor will make it difficult to work her up properly in America, she should show considerable improvement after such trials as will be made here under the larger rig. She will be docked as usual in the Erie Basin Drydock, where the bottom will be coated with an enamel paint in place of coppering. The *Field* comments as follows on the challenger and defender: "The sailing on the Clyde has in many ways given us surprises, and the greatest of them all was the display made by Valkyrie in the fine whole-sail breeze. It is said that such an exhibition is only what might reasonably have been expected from a vessel sparred and canvased for sailing mainly in light winds, and that Defender will behave exactly the same, that is, when she meets with more wind than s good for her. This, however, does not agree with the story w mentioned above, that Defender is so stiff that her sail spread is to be increased. However, whatever Valkyrie did in a fine match sailing breeze, there is no doubt that she is the fastest vessel we have in light breezes, and if such prevail on Sept. 14 she may do something to make us rejoice; still, it is not pleasant to think that her success in a smart blow is dependent on Defender being no better able to carry her canvas than Valkyrie can. The wonderful Britannia takes all breezes alike, and is always busy in a match—always doing something like that equally busy little craft Zinita. Britannia's latest victory over Ailsa was not so much a test of superior speed as it was of handiness, quickness in moving off in the puffs, and all-round good management.

"According to the latest reports from America Defender is so stiff that she is to have a longer main boom and a general increase to her sail spread. This scarcely agrees with one report of her trial, which said that on a slight increase of wind her lee decks were awash. Vigilant arrived at Bristol, R. I., on Tuesday, and is said to have been greatly improved in speed by the doctoring she underwent at New York during the spring. She was to have had a trial with Defender on Wednesday, but her sailing master would not start because he had no positive directions from Mr. Gould to do so. It was, however, expected that the trial would take place yesterday (Friday). If Vigilant has really improved, the result of the trial will not give as much of an insight into Defender's real character if the latter comes out the better boat; but at any rate we shall know that Valkyrie III. has a more difficult task before her than was expected. On the other hand, should Vigilant defeat Defender, it will be all the better for Valkyrie's chances, although there will be the question about the alleged improvement to Vigilant to consider. Presumably Vigilant could not now be chosen, as the clause permitting one vessel to be substituted for another enjoins that the substitute must be of the same dimensions as the yacht originally named. Whether this applies to the Cup defender as well as to the challenger is not certain. Probably it would be claimed not to so apply, as the New York Y. C. has always had a free hand as far as choosing a defender goes, up to within a few hours of the commencement of the race."

The *Yachting World* discusses the two yachts as follows:

"So far Valkyrie III. has started in three open races only, and a private spin with Ailsa, and those who are responsible for her are so well satisfied with what she has done that she will race no more until she meets Defender in American waters. This is as it should be, and the sooner she reaches New York and the oftener she is sailed there before the first match takes place the greater chance of success will she have.

"How great or how small this chance may be it is impossible to say. It is never wise to prophesy before an event, but it is at least permissible to calculate what the chances are. In Britannia we have a thoroughly reliable trial yacht, for not only did she meet Valkyrie II. many times, but she also met and unmistakably beat Vigilant last season. On the three occasions when Valkyrie III. competed with Britannia there were fortunately, for the sake of experiments, three different conditions of wind. The first day the wind was very light indeed, and the new vessel glided away from her rivals in a marvelous manner, but getting becalmed failed to secure the prize. The second time they met there was a strong breeze, which apparently was not to the challenger's liking, as she could not carry her enormous sails and heavy spars, and in addition to this her new canvas stretched so much as to be little better than bags. When they met again there was a nice whole-sail breeze, and over a 50-mile course Valkyrie beat Britannia about 19 minutes. When the friendly trial with Ailsa took place, there was a moderate breeze, and Valkyrie left her easily. Now the qualities displayed by Valkyrie on each occasion are, we believe, exactly what her designer, Mr. G. L. Watson, expected, and would appear just what are desirable for the task set her. Moderate breezes and smooth water are the usual conditions under which the contests for America's Cup take place, and to have any chance of winning it, there is no doubt a fine weather boat is a necessity. This the Americans have always known. We have found out by bitter experience.

"That Valkyrie is not as good a vessel as Britannia or Ailsa in a breeze may or may not be the case, but granting, for the sake of argument, that it is so, there is no reason that her chance of success in New York Bay is thereby jeopardized. Her rival, Defender, is not likely to be a hard-weather boat either, judging from the reports we hear, and should strong winds predominate the worst of the two will be beaten; but so far, and judging by Vigilant and Navahoe in comparison with Britannia, we have no reason for assuming that Valkyrie will be the worst. Apart from and in addition to Valkyrie III. being a faster vessel than her ill-fated sister was, she will have a great advantage in the fact that many of her crew have had previous experience of racing in American waters, and this we consider a matter of no small importance.

"As to Defender, we really know little or nothing, as the newspaper reports are so conflicting that no dependence can be placed on them, and in many cases they are evidently the outcome of imagination only. She has had some trials with Colonia, and is said to have beaten her ten minutes in ten miles in a steady whole-sail breeze. That means that over a 50-mile course she would beat Colonia fifty minutes, or say about eight miles, which, as she is not a steamer, and unless Colonia has strangely altered, must be sheer nonsense. Colonia and Vigilant were pretty well matched in 1893, so that Defender, according to this report, must be about three-quarters of an hour faster over a 50-mile course than Valkyrie II. was, and if this was the case Valkyrie III. need not cross the Atlantic, as nothing much short of a torpedo catcher would have a chance of keeping ahead of her.

"With such exaggerated reports it is impossible to form an opinion on the merits of Defender, but, knowing what fast vessels Mr. Herreshoff has produced, there is every reason to anticipate that she will be a considerable improvement on Vigilant, and that Valkyrie will have a tremendous task set her to win the Cup. As, however, Lord Dunraven's flyer has already proved, in weather to suit her, to be at least a quarter of a minute a mile faster than Britannia, she must have a better prospect of success than any of her predecessors ever had, and this is increased when it is remembered that she cannot be at her best until her canvas and gear are properly stretched. Believers in luck will note that this will be the seventh attempt we have made to win, and also that Valkyrie is the third vessel designed by Mr. Watson for the purpose.

"Luck of another sort is doubtless often an important factor in yacht racing, but we prefer to pin our hopes of bringing back the America's Cup to the fact that both designer and crew have gained much by experience, and while the first has learned what suits American waters, the latter have improved their knowledge of American winds. That the contests will be keen and exciting requires no prophet to foresee, and although (the wish, perhaps, being father to the thought) we think Valkyrie will prove to be the winner, we hope the best boat will win; and should Defender be successful in retaining the trophy, we shall not grudge her what must needs be a hard fought for and well-earned victory.

"Lord Dunraven, after consultation with Designer Watson, has decided to make some alterations in the boat. The principal of these was the addition of several tons of ballast, and the result, as shown by the fine victory at the Royal Clyde opening race on Saturday, was extremely satisfactory. Lord Dunraven's decision not to race the boat again was a great disappointment to the public, but if he is quite satisfied that his new challenger is the best boat, he is quite right not to hurry the preparations for the Cup races."

The *Yachtsman* says: "It was expected that the Cup challenger would, despite her big spars, be easily fit to beat either of her rivals, even in a strong wind, but she cannot carry her sail, and although given light weather during the Cup races she is undoubtedly the best boat to carry Lord Dunraven's colors that could be selected; still it is by no means certain that the cup races will be favored with such pet weather. Britannia, on the other hand, is certainly the most reliable boat of the lot, but we should be sorry to see her chosen as the British champion, for the simple reason that Defender is certain to be a faster light-weather boat, and the chances are decidedly in favor of light winds during the international races. It was, indeed, a sorry sight to see the big Valkyrie's first trial in what was, after all, only a moderate breeze, and there seems to be little doubt that some spar cutting will have to be done in her case before she can reasonably be expected to make even a fair bid for the America's Cup. Ailsa sailed remarkably well throughout, and it may be expected that the fame she has lost will soon come back to her."

Two to Fifteen Days' Pleasure Tours.

NO. 8 OF THE "4-TRACK SERIES."

THIS is a beautiful little book of sixty-four pages, narrow octavo, printed in two colors, issued by the Passenger Department of the New York Central, from the press of the Matthews-Northrup Co. Complete Art Printing Works, Buffalo, New York.

It describes a series of tours occupying from two to fifteen days, arranged for the purpose of meeting the wishes of all classes of travelers, including trips to the Thousand Islands, Montreal, Saratoga, Lake George, the Catskill Mountains, Niagara Falls, Chautauqua, Adirondack Mountains, Berkshire Hills, Richfield Springs and many other famous resorts. Information concerning these trips is given—distances, time, fares; connections and all other details—with much precision. It contains ten maps engraved expressly for this work, and is profusely illustrated with a large number of new and beautiful half tone engravings. A glance over the pages of this little book will convince you that the attractions of the New York Central are equalled only by their merit, and afford a choice which will suit every taste and every purse.

"Two to Fifteen Days' Pleasure Tours" will be sent free, post-paid, to any address in the world, on receipt of two 2-cent stamps, by George H. Daniels, General Passenger Agent, New York Central & Hudson River Railroad, Grand Central Station, New York.—*Adv.*

J. W. P.

The Bisley Rifle Meeting.

LONDON, England, July 13.—The first week's shooting ends to-day, the meeting finally closing on July 20. This first week is devoted chiefly to the sporting rifle competitions, the second to the military, but the revolver competitions keep on the whole fortnight.

The wind has been high and gusty, with much dust and no rain all the week. The want of rain is a record, as it has never been known to keep off so long at Bisley; most likely it will make up for it the coming week. Under these weather conditions the various smokeless powders have proved very unsatisfactory in the .303cal. rifles at long range. The shooting has been nothing near what the black powder in the larger calibers gives, and there are constant complaints of a wild shot and of bullets seeming to break up and not getting half way to the target One revolver shot at 20yds., had one shot with smokeless powder, which actually did not seem to have power enough to penetrate the card, but only half went through and then fell to the ground. Also there seems danger with it in the heat at present prevailing. A hunting double-barreled rifle was blown out, the striker of one barrel going through the shooter's hat brim and nearly striking a spectator who happened to be behind him. Another similar rifle has the action so strained that it is unsafe to use it any more in its present state.

At the revolver competitions only a few good scores have been made owing to the wind. Mr. Winans has two 41 scores, one in the military and one in the "any" revolver series for a disappearing target. The military score is the best on record and the "any" equals the best on record, made by himself and several others in former years. At the rapid firing he has a 39 for the "any" and a 38 for the military series both equaling his last year's best on record.

These are the only scores of any account in revolver shooting up to now.

Schellhas Makes Some Big Scores.

A DISPATCH to the St. Paul *Union-Journal*, from Winona, Minn., dated July 23, gives the following record of some big shooting done by Wm. Schellhas: "A phenomenally large score was made at Sharpshooters' Park on Saturday afternoon by William Schellhas in 40 successive shots, his record being 236 out of a possible 250 the first 10 shots, 237 the second 10, 233 the third 10, and 231 the fourth 10. The average was 234½ for 10 shots, while the best average made by A. J. Vandeusen in a similar successive four 10s has been 229½. Forty shots is, however, a number that is not frequently shot, 50 and 100 being the regular number, but this does not change the fact that the record made by Mr. Schellhas is phenomenal. Out of 40 shots 23 were 3in. centers. Mr. Schellhas had only one witness to the shooting, but in order that there should be no doubt as to what he has done, he has sworn out the detailed score before a notary public. Mr. Schellhas has heretofore borne a good reputation as a marksman, which the present achievement will enhance. On steady shooting, however, he is not yet the equal of Mr. Vandeusen."

Lancaster County Won the Second.

The second match of the championship series between marksmen of Lancaster and Chester counties, Pa., took place on July 18, at Engleside, Lancaster county. The Lancaster county team consisted of six men of the Lancaster Schuetzen Verein and six from the North End Rifle Club. The Chester county team was composed of only men, nearly all of whom were members of the Coatesville Rifle and Gun Club. Mr. D. B. Lefever, of Ephrata, Pa., a member of the Lancaster county team, sends us the following account of the match:

"Each marksman was allowed five sighting or trial shots, and ten shots in the match. The Chester county team was allowed an extra shot each for the first ten men, so that they could score 120 shots, the same as the Lancaster county team. The distance was 200yds., muzzle-rest shooting, standard American target, best out of a possible 100 points, any kind of rifle being allowed. The sport for the day began with the opening of the sighting or trial shots, each team getting down to hard work. During this period, which occupied the time till 12 o'clock noon, the weather was favorable for fair shooting. The twelve men of the Lancaster county team had aggregated 476 points out of a possible 600 points, or an average of 79⅓ per cent. The eleven men of the Chester county team aggregated 383 points out of a possible 550 points, or an average of nearly 69¾ per cent.

"After partaking of lunch on the grounds the regular match was begun at once and continued for three and one-half hours before it was finished, the Lancaster county team carrying off the honors. The members of the visiting team shot well from the beginning. The home team having lost the first match at Ephrata were not going to be defeated in this match, and shot cautiously and managed to keep ahead of the Chester county team from the beginning to the end, having to their credit 989 points out of a possible 1,200 points, an average of nearly 82¾ per cent. The Chester county team scored 945 points out of a possible 1,200 points, or an average of 78¾ per cent. The weather during this match was very unfavorable or still better scores would undoubtedly have been made. The scores in full were as follows:

Lancaster county.

C. H. Obrieter	9	9	7	8	9	10	10	7	8	10—87
O. E. Weber	5	10	9	9	8	8	9	10	9	10—87

Chester County.

S Fairlamb	8	7	10	9	6	9	9	7	9	9—83
C J Gilbert	10	7	8	8	8	8	10	8	10	9—86
W T Gordon	10	7	7	10	10	9	9	9	10	9—90
J Rodney	5	8	6	6	7	8	4	7	0	5—56
S Moore	9	10	9	7	8	8	9	10	8	10—88
J G Pugh	6	9	7	9	10	9	9	8	8	7—82
J Kendig	9	9	7	9	9	10	10	9	9	10—91
J M Entrekin	9	9	7	6	6	5	8	8	7	10—76
D Erwin	7	8	7	10	9	8	9	6	0	10—74
Geo W Brooks	10	6	7	8	10	7	6	8	0	9—71
E Patterson	5	8	6	5	6	5	7	8	7	5—62
R Strode	10	8	10	7	10	9	7	10	6	10—87—945

"The best shooting in the match was done by the Chester county boys. Mr. J. Kendig rolled up a score of 91 points. Prof. W. T. Gordon was a close second and had 90 points. Mr. S. Moore succeeded in making 88 points. The Lancaster county boys failed to score higher than 87 points, Messrs. Obreiter, Weber and Wenger having that number.

"After the intercounty match a three-shot sweepstake match a Massachusetts targets was arranged, 21 shooters participating. Th first money was won by Mr. Weber; second money, C. Wenger; third money, W. M. Carpenter. The scores were as follows:

Wenger	11	11	9—31	Wentzel	6	4 7—17
Brocks	10	8	8—26	Carpenter	11	8 11—30
Gordon	0	11	8—28	Lefever	8	12 10—30
Erwin	4	10	9—23	Weber	12	10 11—33
Gleim	11	8	8—27	Weist	11	12 8—31
Entrekin	10	10	11—31	Winters	12	11 8—31
Patterson	8	9	9—26	Franciscus	8	3 6—17
Obrieter	12	12	10—33	Jacob Baltz	0	2 5— 7
P Dommel	3	0	10—13	W P Cummings	12	6 8—26
Anderson	11	10	8—29	Biehl	12	3 10—25
Chas Reiling	7	8	6—21			

"The members of the Schuetzen Verein conducted the Chester county visitors and the members of the North End Club to the Golden Eagle Hotel after the shooting, where all enjoyed a very pleasant supper. The proprietor, Mr. J. F. Wolfer, is an active member of the Schuetzen Verein and also of the North End Rifle Club, and knew just what would satisfy the inner man of the hungry shooters, and had prepared such a meal as a king might have enjoyed. The North End boys left for home by way of the Lititz trolley line at 8 o'clock; the Chester county boys started for home by way of the Pennsylvania Railroad some time later. The day's sport was greatly enjoyed by the many visitors present as well as by the members of the team.

"The third and last match of the summer's contest will be held at Coatesville on Thursday, Aug. 15 next, where some excellent shooting may be expected, as both teams are determined to win the championship."

Denver Rifle Club.

Denver, Col., July 14.—The scores shot to-day on the range of the Denver Rifle Club were as follows:

Two hundred yards, off-hand, American standard target:

J N Lower	10	10	8	6	6	6	10	7	6	5—74
G C Schoyen	7	9	6	7	8	5	7	5	6	10—70
A W Peterson	7	6	4	6	8	7	10	8	7	10—70

F Speth	4	4	5	0	5	5	4	4	4	5—40

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Aug. 3.—Rutherford, N. J.—Boiling Springs Gun Club, shoot for benefit of the cyclone sufferers. All invited. W. H. Huck, Sec'y.

Aug. 3-4.—Lake Geneva, Wis.—Tournament of the Lake Geneva Gun Club; targets.

Aug. 7.—Baltimore, Md.—Tournament of the Maryland and District of Columbia Trap-Shooters' League, under the auspices of the Standard Gun Club of Baltimore.

Aug. 7.—Plainfield, N. J.—Seventh monthly tournament of the New Jersey Trap-Shooters' League, under the auspices of the Climax Gun Club. League contest at 2 P. M.

Aug. 7-8.—Binghamton, N. Y.—Tournament of the Binghamton Gun Club; targets.

Aug. 7-9.—Kankakee, Ill.—Tournament of the Kankakee County Gun Club; $300 in cash and merchandise added to the purses.

Aug. 8-10.—Rome, N. Y.—Tournament of the Ro e Gun Club; targets. W. P. Rayland, Sec'y.

Aug. 9-10.—New Orleans, La.—Tournament of the Inter-state Association, under the auspices of the Louisiana Gun C ub; $800 added money.

Aug. 14.—Marlin, Falls County, Texas.—All-day sh.ot of the Marlin Gun Club.

Aug. 15.—White Plains, N. Y.—All-day shoot of the White Plains Gun Club; live birds and targets. Chas. H. Banks, Sec'y.

Aug. 19.—Paducah, Ky.—First annual tournament of the Paducah Gun Club. T. J Moore, Sec'y.

Aug. 20-24.—Holmesburg, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

Aug. 27-29.—Charlotte, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 28-29.—Frederick, Md.—Two days' tournament of the Frederick Gun Club, at targets.

Aug. 29-31.—Hot Springs, S. D.—Hot Springs Gun Club's second annual tournament.

Sept. 2.—Marion, N. J.—Annual tournament of the Endeavor Gun Club; targets.

Sept. 2-3.—Newark, N. J.—Tournament of he South Side Gun Club; targets. New Jersey Trap Shooters' League contest at 2 P. M. on the second day. W. R. Hobart, Sec'y.

Sept. 4-5.—Utica, N. Y.—Two days tournament; live birds and targets.

Sept. 4-5.—Shepherdstown, W. Va.—Morgan's Grove Fair Association's tournament, under the management of the Interstate Association

Sept. 5.—Michigan City, Miss.—First semi-annual tournament of the Michigan City Gun Club.

Sept. 10-12.—Indianapolis, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 10-13.—Detroit, Mich.—The Des-Chree-Shos-Ka annual tournament, under the management of Jack Parker.

Sept. 11-12.—Frankfort, Kansas.—Tournament of the Frankfort Gun Club.

Sept. 11-13.—Lancaster, Pa.—Tournament of the Lancaster Gun Club; first day, targets; second day, live birds.

Sept. —.—Fredonia, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Sept. —.—Rochester, N. Y.—Fourth annual tournament of the Rochester Rod and Gun Club; three days of the week following the Clover tournament.

Oct. 9-11.—Newburgh, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Oct. 23-24.—Elizabeth, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Oct. 23-25.—Atlanta, Ga.—Annual tournament of the Clarke Hardware Company; targets; $600 added money.

Nov. 5-7.—Kewanee, Ill.—Annual tournament of the Kewanee Gun Club.

1896.

Jan. 4-5—Phœnix, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—San Antonio, Texas.—Grand mid-winter tournament, under the management of Texas Field; $2,500 added.

April 1-3.—New York.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—New York.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week).—Memphis, Tenn.—Tournament of the Memphis Gun Club. $2.000 added money.

May 26-28.—Frankfort, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—Milwaukee, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 17-19.—Cleveland, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Speaking of the series of matches now being shot for the club championship of Georgia-South Carolina, the Charleston (S. C.) *News and Courier* says: "The Forest City Gun Club has scored its first point in the Georgia-South Carolina championship series for 1895. It won the first of the two matches shot in Savannah by a score of 137 to 135, while the Palmettoes captured the second with a total of 138 to 133. The race now stands three to one in favor of the Palmetto Gun Club, with one tie and two matches yet to shoot. The Palmetto team was greatly handicapped by the absence of its captain, Mr. B. H. Worthen, who has been quite sick for several days past. The Forest City boys were unfortunate in expecting too much of Mr. Harry Lemcke, who had just returned from the New York State tournament with a record of 89 per cent., but with a voice so changed that the trap-puller could not understand him when he said 'pull'."

The Limited Gun Club, of Indianapolis, Ind., through its president, O. F. Britton, and its secretary, Royal Robinson, sends us the following: "Mr. Jack Parker, of Detroit, having claimed four days in the second week of September, and thus come in conflict with dates which we claimed long ago, this club has decided that its first tournament shall be for amateurs only. This leaves the professionals and agents free to go to Detroit—as they would probably do anyhow—and we can devote our energies to the entertainment of the amateurs without being troubled to protect them from the other class. The improvement and equipment of the model shooting grounds will be completed by that date, Sept. 10-12, and we promise a model tournament in the way of conveniences, management, attractions, etc."

Annie Oakley will no longer be known by her title of "Little Sure Shot." Mr. Frank E. Butler, her manager, has issued the following: "Annie Oakley respectfully requests managers and friends not to use the title 'Little Sure Shot' in connection with her name hereafter. Although it was originally conferred on her by the late Sitting Bull in 1881, at St. Paul, Minn., she will now present it to the five self-titled "Sure Shots," who when not engaged cleaning guns in shooting galleries or washing dishes in cheap boarding houses, endeavor to make a living by posing in museums, using some one else's reputation, but not being a good freak or a good shot, they soon die the death of all fakes and would-be imitators." There's only one Annie Oakley.

The programme of the Binghamton (N. Y.) Gun Club's tournament, Aug. 7-8, is to hand. Its main feature is the solid entrance money in each event. On the first day there are six 10-target races, $1 entrance; four 15-target races, $2 entrance, and two 20-target events, $3 entrance. On the second day the programme is exactly the same, except in Event No. 6, which is a team race at 25 targets per man, instead of a 20-target race. All events are shot at unknown angles. No entries will be taken in any event after the first squad has shot. Shooting commences at 9 A. M. sharp. We hear from Binghamton that there is every prospect of this tournament being a success. With such a programme it can hardly be a failure.

The handicapping in the Forehand Arms Co.'s trophy contests of the Worcester Sportsmen's Club must be pretty good. Read the following from the Worcester (Mass.) *Spy* of July 21: "The Forehand trophy was won by Emory W. Burbank, of Whitinsville, with a score of 29, he being the third man to win it with that score, and one of the nine different men to win it in ten shoots. The other scores were as follows: Parker, Randall and Ide 27, Eastbrook 26, Bucklin, Snell, Mascroft and Harvey 25, Goodell 24, Allen 21, Holmes 19, Hoyle 18."

The King Powder Co., of Cincinnati, O., have issued a circular, in which they announce that: "We have purchased all Mr. Lindsley's patents and his latest improvements; and, what is more, we have contracted for his entire services. He is to remove at once to the vicinity of our mills, superintend the putting up of suitable works, and personally supervise the making of his powder. * * * We expect to have it on the market before the end of the present summer, and within easy reach of every dealer and sportsman." The Mr. Lindsley referred to is, of course, Milt F. Lindsley, late of the American Wood Powder Co.

We understand that it was intended to formally open the new shooting grounds at the Elkwood race track, near Branchport, N. J., on Aug. 7, Wednesday of next week. As, however, that date finds New Jersey shooters at the Climax Gun Club grounds, and New York sportsmen at Binghamton, N. Y., the date will in all probability be changed. Frequent tournaments will be a specialty at Elkwood.

In regard to the clashing of the Endeavor Gun Club's annual tournament at Marion, N. J., on Labor Day, Sept. 2, with the date already chosen by the South Side Gun Club, of Newark, N. J., we learn that the annual tournament of the Endeavors has always been held on Labor Day, and that that date has been looked upon in local circles as appropriated by that club. The Endeavors will therefore be found at Marion on Sept. 2.

The Climax Gun Club, of Plainfield, N. J., will in all probability give a two-days' shoot toward the latter part of September or beginning of October. The first day will be devoted to targets; the second to live birds. The club is assured of a good attendance of shooters from New England, while Jersey herself always furnishes a round dozen or so who will shoot through a tournament.

The Paducah Gun Club, of Paducah, Ky., advertises its first annual tournament for Aug. 19. The programme of events is one that will draw a good attendance, while there will be any amount of fun in shooting off the ties in the merchandise events. Write to T. J. Moore, secretary, for a programme if you have a day to spare.

A. L. Ivins, of Red Bank, N. J., the winner of the Hollywood Futurity Handicap, is matched to shoot a race with Leonard Finletter, of the Riverton Gun Club. The conditions are: 100 live birds, 30yds. rise, 21yds. boundary, $250 a side, the match to be shot on the Hollywood grounds.

The Lancaster, Pa., Gun Club, will hold a two days' tournament, Sept. 12, 13. The first day will be devoted to targets; the second to live birds. Lancaster is centrally located in good trap-shooting territory, and her tournaments are always pleasant, sociable gatherings. The shoot in September should therefore be well attended.

In regard to the junior live-bird championship of America (boys under fifteen years of age) "our own" Conny Furgueson of the New Utrecht (L. I.) Gun Club, would give the contestants for that honor a close race. It's a pity that Watson's Park is so far from Long Island.

W. F. de Wolf, secretary of the Garfield Gun Club, of Chicago, Ill., writes: "The Garfield Gun Club has quickly taken up the Eureka Gun Club on its proposal to shoot a large team race. We have offered them a race, 18 men on a side, 25 targets per man, unknown angles. How is that for the Eurekas?"

The interstate shoot at New Orleans on Friday and Saturday of next week (Aug. 9 and 10) is attracting a lot of attention in the South. Among the Northerners who will be present are U. M. C. Thomas and N. E. Money.

The Kankakee County (Ill.) Gun Club will hold a three days' tournament on Aug. 7-9, at which it will add $300 in cash and merchandise prizes. This is an open shoot; everybody is invited, nobody barred.

The Lake Geneva (Wis.) Gun Club will hold a two days' shoot at targets on Aug. 3 and 4. Targets will be thrown at 2 cents each. Ed. Bingham, of Montgomery Ward & Co., Chicago, will act as manager.

In our account of "The Vernons and the Cyclone," which appeared in last week's issue, a palpable error slipped in. "Saturday, June 13," should manifestly have read "Saturday, July 13."

Everybody wants to know what Jack Parker's Des-Chree-Shos-Ka programme will contain. There is a suspicion abroad that Jack contemplates something new and attractive.

The seventh shoot of the New Jersey Trap-Shooters' League will take place next Wednesday (Aug. 7) at the Climax Gun Club's grounds near Fanwood, N. J.

The Shooters will be busy next week at Baltimore, Md.; Plainfield, N. J.; Binghamton, N. Y.; Kankakee, Ill.; Rome, N. Y., and New Orleans, La.

The return match between the Maplewood Gun Club, of Maplewood, N. J., and the Peekskill, N. Y., Gun Club will take place Aug. 17 at Maplewood.

Don't forget the Boiling Springs Club's shoot for the benefit of the Cherry Hill, N. J., cyclone sufferers. The date is Saturday, Aug. 3.

Edward Banks.

Trap at Little Rock.

Little Rock, Ark., July 25.—Perhaps two more interesting and closely contested matches have never taken place than those that were shot on the club grounds here to-day.

The first was a live-bird match between Jno. J. Sumpter, Jr., of Hot Springs, and Dr. J. H. Lenow, of this city; conditions: 25 live birds per man. Contrary to expectations, this race was highly interesting, and closely contested from start to finish. It was generally conceded by those who were acquainted with the abilities of both of the contestants, that the Doctor had once more ventured out of his class, and would be beaten rather easily. But the Doctor had evidently not over-estimated his ability very much, as he shot a great race, in fact the best he has ever shot, and kept his opponent guessing from start to finish as to the outcome of the match. Possibly, but for an oversight on his part, he might have defeated his man. He lost his second bird by neglecting to shove his safety up, and this evidently cost him the match, as he afterwards managed to tie his opponent; each scoring 21 birds. In the shoot off he went all to pieces, only scoring one out of five, while Sumpter scored four, and won the match. The pigeons were an excellent lot of summer birds; the weather was also in their favor, it being a delightful day for this season of the year, cool and bracing, with a good stiff breeze to help the birds along. The Doctor shot a 12 ga. Purdey hammerless ejector gun, 47 grains E. C., 1⅛ oz. No. 7 chilled shot, in U. M. C. Trap shells; Sumpter shot a 12 ga. L. C. Smith hammerless ejector Pigeon gun, 53 grains E. C., 1¼ oz. No. 7 chilled shot, in Rapid shells.

Immediately after the above match, a team race at targets was shot between Sumpter and Hughes, of Hot Springs, on one side, and Dickinson and Duley, of the local club, on the other. The conditions of this race were 100 targets per man, unknown angles. This race, like the previous one, was a spirited contest, and the saying that a match is never won until the last gun is fired was never more forcibly illustrated.

When each contestant had only one more target to shoot at, the Hot Springs team led by one bird, and all looked for this to be the final result. Dickinson and Duley each broke their last target, while, to the surprise of all, Sumpter and Hughes both broke theirs, and with them also the match. Little Rock winning by the narrow margin of one bird. The shooters were evidently in great form, as the scores of the teams and also those who shot along with them will show. W. A. Leach came up from Pine Bluff and shot along with the boys, but was hardly up to his form. Scores:

	5	3	1	3	1	2	1	4	4	1	2	5	2	5	4	5	1	2	4	2	4	5	2	4	1	
	↑	↗	↖	↑	↗	↑	↗	→	↗	↗	↗	↑	↗	↗	↑	↑	↑	↑	↗	↖	↑	↗	↖	↖	↖	
J Sumpter, Jr.	2	0	1	2	2	0	1	2	1	2	1	•	2	2	2	1	2	1	2	0	1	2	2	2	2	—21
	1	3	3	5	4	2	4	3	3	2	5	4	1	3	5	1	5	3	2	3	1	3	5	4

Dr J H Lenow	1	0	2	0	2	1	1	2	1	2	2	1	2	2	2	•	0	1	2	1	2	1	2	1	—21	

In shooting off the tie at 5 birds, Sumpter won easily, killing four to his opponents one.

Team race, 100 targets, unknown angles:

Paul R. Litzke.

A New Monte Carlo.

Lieutenant Peter Gibson writes from Cincinnati, O., as follows: "Through the kindness of Mon. A. Blondin, Secretary of the Tir aux Pigeons of the Monte Carlo Shooting Park, who has just forwarded me a copy of the programme and rules, I am able to give you the following details of the new (this is the first season) Grand Tir aux Pigeons International Tournament, to be held at Sarajevo-Bosnie in Austria-Hungary this coming autumn.

"Sarajevo is an oriental city; it is the capital of Bosnie and Herzegovina; population about 30,000. It has excellent hotel accommodations. This city is about one day by rail from Vienna. Further information and railroad tickets can be had at 3 Place de l'Opera, Paris, or 14 Cockspur Street, London. For all particulars in regard to the shoot, write to M. A. Blondin, Secretary, Tir aux Pigeons, 16 Rue Dufreney, Paris, France.

"The tournament is given under the management of the Tir aux Pigeons de Bosnie & d'Herzegovine. The committee is composed of well-known gentlemen, such as M. le duc De Ralibor, Lord Dudley of London, and le comte Ferdinand Trautmansdorff of Austria. It will also be under the patronage of the Government.

"There will be a great many American sportsmen in Europe this autumn, many of whom would no doubt like to know of this opportunity to measure their skill with European sportsmen a this new Monte Carlo. The list of large prizes will be I think worthy of their consideration.

"The tournament begins Sept. 8 with the Prix d'Ouverture. The first prize is 2,000 francs, with an *objet d'art;* second prize, 500 francs and 25% of the entrance money; third prize, 300 francs and 20% of the entrance money; fourth prize, 200 francs and 15% of the entrance money; 6 pigeons, miss and out. The entrance fee is 50 francs ($10).

"On Sept. 10 the Prix des Bains will be shot. In this competition the first prize is 3,000 francs and an *objet d'art;* second prize, 700 francs and 25% of the entrance money; third prize, 500 francs and 20% of the entrance money; fourth prize, 300 francs and 15% of the entrance money; entrance 50 francs ($10); 6 pigeons, miss and out. Matches will continue each day, ending with an event on Sept. 23, with purses ranging as in the first two events.

"The Grand Prix will be shot on Sept. 16-17. The first prize is 25,000 francs ($5,000); the entrance fee is 150 francs ($30); 12 pigeons, miss and out; the second prize is $1,000 and 25% of the entrance money; third prize is 3,000 francs and 20% of the entrance money; fourth prize is 2,000 francs and 15% of the entrance money.

"I am informed by another source that shooters will, if they desire it, have an opportunity to do some shooting in the forests. The game consists of deer, bear, small birds and small fur.

"Mon. Guyot, of Paris, will be armorer and will supply cartridges. From what I know of European shooting tournaments, I feel confident that all American sportsmen will be treated right and have an enjoyable time."

Trap at Washington, D. C.

BALTIMORE, Md., July 20.—The Maryland and District of Columbia Trap-Shooters' League held its second tournament to-day in the city of Washington on the grounds (or rather over the waters) of the Capital City Gun Club. In the language of the immortal Cæsar, the out-of-town visitors can say, "We came, we shot, we sweltered." Why it is necessary for a shooting match to be held in such close proximity to the sulphur regions (inferring that they were not far distant, judging from the superabundance of high temperature) is a problem I have not yet been able to solve. Surely, however, not because it is "Smokeless."

Washington, at its best in summer, is conducive to cooling drinks; at its worst, and that is over in southern Georgetown on the flats (where mosquitoes grow so big that a visitor shot one, mistaking it for a snipe)—at its worst, the effects are such that nothing short of a Keely Cure will enable one to again properly take one's nourishment. It is a strange though kindly providence, however, which, notwithstanding the conditions, enables the human frame to accommodate itself to its environments; and while the Washington shooters are, as a rule, a cadaverous-looking lot, they are an awfully unsafe crowd to place your money against when shooting on their own, or, in fact, on any grounds. There were about thirty shooters in attendance, most of whom participated in the majority of the events.
